sketch, 10*l.* 10*s.*; 'George IV.'s entry to Holyrood House, 10*l.* 10*s.*; 'The Serenade, Seville,' 16*l.* 5*s.* 6*d.*; 'The First Ear-ring,' 21*l.*; 'Arab Servant of the Austrian Consul at Alexandria,' 10*l.* 10*s.*; 'Arab Dragoman,' highly finished, 12*l.* 1*s.* 6*d.*; 'Study of an Arab Family,' 13*l.* 13*s.*; 'On the Danube—Men bringing in Stores,' 12*l.* 1*s.* 6*d.*; 'Two Women, Vienna,' 14*l.* 3*s.* 6*d.*; 'The Porter at the Victoria Hotel, Pesth, an old soldier of Napoleon,' 11*l.* 0*s.* 6*d.*; 'A Post Rider,' 31*l.* 10*s.*; 'First Sketch of the Letter Writer,' 30*l.* 19*s.* 6*d.*; 'A Black Slave and White Child,' 18*l.* 18*s.*; 'The Sheikh who accompanied the travellers from Jaffa to Jerusalem,' 66*l.* 3*s.*; 'The Muleteer from Jerusalem to Jaffa,' 51*l.* 9*s.*; 'A Turkish Family, with a Slave lighting the Chebouck,' 14*l.* 14*s.*; 'A Woman giving her Child drink at a Fountain,' 27*l.* 6*s.*; 'Mr. Moore's Dragoman,' 30*l.* 9*s.*; 'Portrait of a Circassian Lady,' 45*l.* 3*s.*; 'The Dragoman of the Austrian Consul at Alexandria,' 37*l.* 16*s.*; 'Madame Josephine, the Lady of the Hotel, Constantinople, in a Turkish Dress,' 45*l.* 14*s.*; 'Ditto, in a different Dress,' 19*l.* 19*s.*; 'The Dragoman of Mr. Colquhoun, Consul at Bucharest,' 56*l.* 14*s.*; 'A Persian Prince, his Slave bringing him Sherbet,' 57*l.* 10*s.*; 'A Young Lady at Pera,' 38*l.* 17*s.*; 'The Daughter of Admiral Walker, in Turkish Costume,' 73*l.* 10*s.*; 'A Jewish Lady at Pera,' 44*l.* 2*s.*; 'A Coffee Shop,' 44*l.* 2*s.*; 'A Jewish Woman,' 30*l.* 9*s.*; 'A Jewish Child and Mother,' 53*l.* 11*s.*; 'A Jew Dragoman of the British Consul teaching Children,' 32*l.* 11*s.*; 'Reading the Talma,' 34*l.* 13*s.*; 'A Study of Camela, made in the Garden of Mr. Whittall, Smyrna,' 40*l.* 19*s.*; 'The Dragoman of Mr. Abbott, Smyrna,' 37*l.* 1*s.* 6*d.*; 'Mehemet Ali, from the recollection of a picture, 14*l.* 14*s.*; 'The Travelling Tartar to the Queen's Messenger,' 32*l.* 11*s.*; 'Three Greek Sisters at Therapia,' 32*l.* 11*s.*; 'Mrs. Moore in an Arab Dress,' 37*l.* 16*s.*; 'The Dragoman of Mr. Moore, Consul at Beyrout, his Daughter, and Woman of Lebanon,' 94*l.* 10*s.*

SKETCHES IN OILS.—'Diana and Calisto, with Nymphs, in a Woody Landscape,' 48*l.* 6*s.*; 'The Queen on Horseback, with several Figures,' 36*l.* 15*s.*; 'The Queen in her Robes, with a Tiara of Diamonds,' half length, 42*l.*; 'Three Bacchantes, with a Fawn and Group of Fruits, in a Classical Landscape,' upright, 53*l.* 11*s.*; 'Small whole-length Portrait of George IV. in his Scotch Dress,' 63*l.*; 'Head of Talleyrand,' 22*l.*; 'John Knox administering the Sacrament,' 84*l.* 1*s.* (the heads and the principal figures in an advanced state); 'John Knox administering the Sacrament' (the picture on a larger scale, the hands and portions of the figures finished), 189*l.*; 'Five Heads, part of a Design for a Picture of Samuel and Eli,' 54*l.* 12*s.*; 'Royal Portraits, whole Length,' 'George IV. in his Highland Dress,' 103*l.*; 'William IV. in his Robes,' 58*l.* 16*s.*; 'Queen Adelaide, State Picture,' 55*l.* 15*s.*; 'Queen Victoria,' ditto, 120*l.* 15*s.*; 'Oil Sketches on Panel,' made during Sir David Wilkie's last Journey: 'A Design for the Nativity,' 26*l.* 5*s.*; 'The Tartar relating the News of the Capture of Acre,' in a very advanced state, 183*l.* 15*s.*; 'The Letter Writer,' parts very highly finished, 446*l.* 5*s.*; 'The School,' 756*l.*—Total proceeds of the sale are 7200*l.*

At the sale of a selection of Pictures from the gallery of R. Vernon, Esq., the undermentioned works realized the accompanying prices:—

'A Scene from the Barber of Seville,' Stephanoff, 37*l.* 5*s.* 6*d.*; 'View of Margate, from the Sea,' Chambers, 27*l.* 10*s.* 6*d.*; 'Return from Market,' Shayer, 29*l.* 18*s.* 6*d.*; 'Head of a Child,' Uwins, 22*l.* 1*s.*; 'View of the Town and Church of Dort,' 16*l.* 5*s.* 6*d.*; 'A Landscape, with a Mill, &c., Stark, 27*l.* 6*d.*; 'The Doge's Palace at Venice,' Bonington, 28*l.* 7*s.*; 'A View near Readleaf,' Lee, R.A., 29*l.* 8*s.*; 'The Ghost Story,' Liveridge, 37*l.* 5*s.* 6*d.*; 'A Road Scene,' 30*l.* 9*s.*; 'A River Scene,' Shayer, 26*l.* 5*s.*; 'View of Hastings,' &c., Creswick, 30*l.* 9*s.*; 'Don Quixote Wounded,' 32*l.* 11*s.*; 'The Waggon,' Bonington, 32*l.* 11*s.*; 'A Woody Scene in Italy,' R. Wilson, 23*l.* 2*s.*; 'A Neapolitan Girl,' Uwins, 35*l.* 3*s.* 6*d.*; 'The Elements,' Stothard, 28*l.* 17*s.* 6*d.*; 'View of the Cathedral of Abbeville,' Roberts, 37*l.* 5*s.* 6*d.*; 'The Dose of Physic,' Webster, 48*l.* 6*s.*; 'English Nobility receiving the Sacrament from a Catholic Priest,' Hart, 52*l.* 10*s.*; 'Shrimpers at Folkstone,' Collins, R.A., 101*l.* 17*s.*; 'Gaston de Foix taking leave of his Mistress,' Eastlake, 199*l.* 10*s.*; 'The Battle of Naseby,' Cooper, R.A., 27*l.* 6*s.*; 'Female Bathers,' Turner, R.A., 57*l.* 15*s.*; 'A Fête Champêtre,' Stothard, R.A., 58*l.* 16*s.*

May 13th. The property of John Turner, Esq.—'A Sea Shore,' Cooper, R.A., 24*l.* 13*s.* 6*d.*; 'The passing Shower,' Linnell, 27*l.* 6*s.*; 'A Nymph, withholding the Bow from Cupid,' Hilton, 77*l.* 14*s.*; 'The Rabbit on the Wall,' Wilkie, 735*l.*

SALES TO COME.—Messrs. Christie and Manson will, on the 1st of June, dispose of Drawings and Sketches by Sir David Wilkie, the property of Benjamin Godfrey Windus, Esq.

Mr. Phillips will, on Tuesday, 31st of May, sell a valuable Collection of Pictures, the property of the late Allan Gilmore, Esq., wherein are many rare specimens of the Italian schools.

## THE ART-UNION OF LONDON.

A Sunday paper lately lent its columns, we hope unwittingly, to a series of attacks on the committee of this excellent association, full of errors, misrepresentations, and bad feeling. So certain are we of the implicit confidence worthily reposed in the committee by the subscribers generally, that we deem it quite unnecessary to attempt to correct the statements put forth, or to render more apparent the ignorance of the subject displayed by the author of them. The extraordinary progressive, and still progressing, increase of the association, is an evidence of the ability with which its affairs are conducted not easily to be controverted, and was evidently recognised as such by the vast multitude who filled Drury Lane Theatre at the general meeting, and responded with such unanimity and enthusiasm as they did, to every passage of the report which was read, and to every resolution which was proposed; indeed we should not have referred even to this ebullition of spleen, did we not wish to prevent misconception in the mind of our readers touching one point in the report which is perhaps liable to be misunderstood: we allude to the formation of a reserved fund. The passage in the report is as follows:—"With this amount (resulting from the sale of catalogues during the exhibition of the prizes), your committee propose to commence the formation of a Reserved Fund, to be increased hereafter by the addition of all moneys accruing to the Society, other than the actual subscriptions of the current year. By this means the future stability of the Art-Union will be rendered more certain, the trustees secured with regard to prospective engagements with engravers and others, which it may be desirable to make, and a fund will be provided wherefrom Art in the abstract may ultimately be aided without any sacrifice of the subscribers' pecuniary interests." Now to this most excellent idea as thus plainly stated, who can possibly object? The full amount of the annual subscriptions will be appropriated amongst the members, and yet from the interest of the money deposited, the amount of prizes allowed to lapse to the Society (should such occur), and from other sources, a fund may be accumulated of the greatest importance to Art and to the nation. The establishment of a Gallery of British Art, the institution of periodical lectures, perhaps even of a professorship at one of the Universities for its advancement, are some amongst the excellent results to be expected, and by which hereafter, we may all be benefited. The Committee will earn our gratitude by properly carrying out the proposition.

The question of immediate payment to artists for the pictures purchased by prizeholders has been lately discussed at great length in the committee. The desire of the majority of the committee was, that the artists should be paid forthwith; but this course was found by their legal advisers to be incompatible with their duty as trustees, and they were therefore compelled to forego this wish. Payment will, however, be made immediately on the close of the various galleries. Before terminating this notice of the Society's present proceedings, we feel compelled to mention that Mr. Thomas Allom has made a very charming drawing of the interior of Drury Lane Theatre, as it appeared on the 26th April, when, by the kind permission of Mr. Macready, the members of the Art-Union of London met to receive the Committee's Report and to distribute the prizes. Of this extraordinary meeting, a detailed account has already appeared in our columns: never before in England was there such an assemblage gathered together for such a purpose. The moment selected by the artist is the declaration of the prizes, and the excitement which characterized the scene is well depicted. To those who had the good fortune to be present on that occasion it will form a pleasing reminiscence of the day; and to those who were not, it will give a more perfect notion of the ceremony than anything that can be written on the subject. Independently, however, of its special interest, it is a very pleasing work of Art, and is worthy the walls or portfolio of any print collector. We trust it will have an extensive circulation, not merely amongst the members, to whom it will be more peculiarly acceptable, but amongst the public generally.

## LIST OF PICTURES CHOSEN BY PRIZEHOLDERS OF 1842.

(The Title of Picture, Artist's Name, and Price.)  
From the Royal Academy.

The Flight into Egypt, J. Martin, 500*l.*  
Departure of Charles II. from Bentley, C. Landseer, 318*l.*  
The Money Lender, R. M'Innes, 300*l.*  
The Microscope, G. Lance, 150*l.*  
The Cavalier, A. Cooper, R.A., 150*l.*  
The Watering-place, F. R. Lee, R.A., 113*l.*  
Inquiring for the Ferry, T. S. Cooper, 100*l.*  
Scene from the Vicar of Wakefield, W. P. Frith, 103*l.*  
Highland Scenery, F. R. Lee, R.A., 126*l.*  
Taking up Eel-pots, J. Stark, 90*g.*  
Who'll serve the Queen, R. Farrier, 70*l.*  
The Challenge, F. P. Stephanoff, 60*l.*  
Devonshire Scenery, F. R. Lee, R.A., 120*g.*  
A Scottish Dinner, A. Fraser, 60*l.*  
Samuel and Eli, J. H. Wheelwright, 50*l.*  
The Traveller Tinker, G. Williams, 50*g.*  
Gravesend Reach, G. W. Butland, 50*l.*  
Sunset, A. J. Woolmer, 70*l.*  
The Market Girl, F. P. Poole, 50*l.*  
The Timber Barge, J. Tennant, 50*g.*  
Summer, H. J. Boddington, 25*g.*  
The Alehouse Door, H. J. Boddington, 47*g.*  
Whitby Pier, A. Clint, 40*g.*  
A River Scene, T. Creswick, 40*l.*  
On the Borders of Herefordshire, A. Montague, 40*l.*  
Una and the Lion, H. Le Jeune, 50*g.*  
Landscape, H. Jutsum, 35*l.*  
Landscape, R. R. Reinagle, R.A., 50*g.*  
Beach at Hastings, A. Clint, 25*g.*  
Scene from the Vicar of Wakefield, A. Solomon, 40*g.*  
The Jewess, A. Geddes, A.R.A., 30*l.*  
Floretta, R. Farrier, 25*g.*  
East Indianman off Blackwall, W. C. Smith, 25*g.*  
The Broken Pitcher (in plaster), W. C. Marshall, 30*g.* \*  
The Highland Girl, A. Cooper, R.A., 25*g.*  
St. Benedict's Abbey, Norfolk, P. W. Klen, 25*l.*  
Tired Pilgrims, P. F. Poole, 32*l.*  
On the Scheldt, H. Lancaster, 20*g.*  
Notley Brook, Bucks, J. Dearman, 27*g.*  
Lady Rachel Russell, H. M. Cooper, 25*g.*  
Florizel and Perdita, A. D. Cooper, 20*l.*  
Yarmouth, Isle of Wight, A. Vickers, 20*g.*  
The Village Oak, J. Stark, 25*g.*  
The Cobbler, J. Crane, 20*g.*  
Market Bar, S. R. Percy, 20*g.*  
Carisbrook Castle, A. Vickers, 20*g.*  
A Young Greek, T. Mogford, 20*g.*  
Loch Catrine, Scotland, J. Dobbin, 20*l.*  
Coast, at Ambleside, H. Lancaster, 15*g.*  
Flowers, W. W. Hardy, 15*g.*  
A Suffolk Errand Boy, G. G. Bullock, 16*g.*  
"Suffer little children to come unto me," F. Howard, 15*l.*  
Cottage on Woolpit Heath, C. Ward, 15*g.*  
Dorothea, H. Le Jeune, 15*l.*  
Portsmouth Harbour, W. C. Smith, 10*g.*  
Dover, D. H. M'Kewan, 10*l.*

## From the British Institution.

Charles I. and the Infanta of Spain, F. Stone, 200*l.*  
Landing of Jeanie Deans, A. Johnston, 110*g.*  
Coast of Yorkshire, A. Clint, 60*g.*  
Cattle and Figures, W. Shayer, 60*l.*  
A Fairy Tale, Mrs. W. Carpenter, 60*l.*  
Old English Hallad Singer, W. B. Scott, 80*g.*  
Arab's Prisoner, J. M. Leigh, 100*g.*  
Buccaneer's Daughter, Mrs. M'clan, 40*l.*  
The Young Falconer, G. Lance, 65*g.*  
Scene in the Highlands, Montague and Joy, 60*l.*  
Dead Game, G. G. Bullock, 20*l.*  
Edward the Confessor's Chapel, Percy Carpenter, 16*g.*  
Windsor Castle, J. Stark, 40*g.*  
A Greenwich Pensioner, H. J. Pidding, 20*g.*  
Milibank in 1810, E. Williams, 10*l.*  
The Ready Reckoner, R. Farrier, 10*l.*  
St. Clement's Reach, G. W. Butland, 25*l.*  
Near Boulogne, H. Lancaster, 10*g.*  
Scene in Windsor Forest, J. Wilson, 50*l.*

## From the Society of British Artists.

Departure from Martindale Castle, J. F. Herring, 150*g.*  
The Holme Wood, J. W. Allen, 70*g.*  
Redhill, Surrey, J. W. Allen, 70*l.*  
Donnez moi un son, G. Stevens, 70*l.*  
Peasants' Nest, Cheddar, J. B. Pyne, 70*l.*  
Ploughman's Dinner, W. Shayer, 60*l.*  
Consolation, E. Prentis, 50*l.*  
Boppard on the Rhine, E. F. Tomkins, 50*l.*  
Dover Harbour, J. Wilson, 50*l.*  
Bexley Heath, Kent, J. Tennant, 40*g.*  
Blacksmith's Shop, J. F. Herring, 40*l.*  
London from Waterloo-bridge, W. C. Smith, 40*l.*  
Sheep-washing, H. J. Boddington, 30*l.*  
The Favourite Haunt, H. J. Boddington, 30*l.*  
Weighing Hay for the Friesland Boats, W. Baker, 30*l.*  
Hungarian Shepherd, J. Zeitter, 25*g.*  
Mayence on the Rhine, C. F. Tomkins, 25*l.*  
Fruit Girl of North Holland, J. Zeitter, 25*l.*  
At Anchor on the Texel, J. Zeitter, 25*l.*  
A Woody Lane, near Otford, H. J. Boddington, 25*l.*  
View from the Pier Rocks, A. Clint, 25*l.*

\* The prizeholder has commissioned the sculptor, we understand, to execute this in marble, an example worthy of imitation.

An Irish Village Fête, H. McManus, 25s.  
Music, J. Stewart, 25gs.  
Runswick, A. Clint, 20gs.  
Windsor Castle, J. B. Pyne, 20s.  
Near Canterbury, J. W. Allen, 20s.  
Ma chere petite Sœur, R. J. Hamerton, 20s.  
Blind Man's Buff, H. E. Dawe, 21s.

Gate of Lambeth Palace, J. W. Archer, 12s.  
Oh dear, what shall I do, A. H. Taylor, 15gs.

# CORRESPONDENCE.

## THE QUESTION OF FRESCOS.

SIR,—As one cordially interested in the Arts, and especially in the progress of English Art, I have given great attention to the discussions which have arisen, out of the project for embellishing the Parliament Houses, on the comparative merits of oil and fresco painting. It is useless to continue a controversy, the results of which are already decided; but I venture to avail myself of the only right left to those who are in a minority, that of entering a protest. How, with whom, or with what motive this fresco project was first started in England is a curious question; but I believe, that from the time of the publication of the first report of the Parliamentary Committee, there has been a general impression among the artists, that Government had already decided on the adoption of fresco; and that they thought it better to fall in with this predetermined intention than to run the risk of compromising the whole scheme by a useless opposition. That any artist possessing competent knowledge on the subject can really prefer the dull, husky, intractable material of fresco, to the boundless and beautiful capabilities of the oil pencil, it is difficult to believe; nor have I seen a single argument in support of the inferiority of fresco, which I consider to be anything else than a downright fallacy. Why is fresco better adapted (as is asserted) than oil painting to fill large spaces? The proper way to look at a picture is to place yourself directly opposite the centre of it; if it be too large to be commanded at a glance, you must pass from one side of it to the other; and this is just as much the case with fresco as with oils. But fresco is lighter in effect. On what evidence? Where is there a fresco possessing half the lightness of effect of Paul Veronese's immense picture of the 'Marriage of Cana.' in the Louvre? A hundred instances might be multiplied. To lightness, oil painting adds brilliancy in which latter quality fresco is, and ever must be, wholly deficient. But if this boasted quality of lightness be of such paramount importance, why not cover the walls with French paper, which would save a vast deal of expense, and have a very pretty effect; nor do I think that we should be one jot more humiliated in adopting French manufactures than in trotting after German caprices. The French at least go forward; the Germans travel backward; and we, with stultified perverseness, delight in following them. If mere declamation could pass for argument, the fresco people would not leave their antagonists a leg to stand upon. Not only, they say, is fresco superior to oils in colour, tone, and harmony, but it is more durable also, and is actually all the better for being burnt. I hope that none of our forthcoming English frescoes will prove that there is more truth in this last assertion than, perhaps, was intended. A few of the more modest of those proselytes of mortar do, indeed, admit that *chiaro scuro* must be given up as a quality not very admissible in fresco. The government advertisement gives a hint that artists are to be cautious in the use of it. *Chiaro scuro* is, to be sure, a mere trifle. As the Frenchman said, on Richmond Hill,—"It is a fine prospect, no doubt; but take away the wood and the river, and what is it?" We discard *chiaro scuro* with just as little remorse; nevertheless, the works of Corregio, Rembrandt, and Sir Joshua Reynolds, would suffer a good deal by the deprivation of this quality: nor do I think that these masters would have excelled much in making cartoons. They were great painters, nevertheless, and I hope that the best of our cartoon makers will prove great painters also; and that the results may not convince the public that this all-sufficient quality of drawing (in which our artists are to be forced to accomplish themselves) will go no further towards making a great artist than an acquaintance with the grammar of his language will make a man a great poet.

On one point I sincerely congratulate the profession and the public; the project of employing foreigners has been thrown overboard, and the glory and the shame will be all our own. Our artists are compelled to turn round to a process with which they are unacquainted, and by every rule of rational estimation, an inferior process; but that public recognition of the claims of Art which has so long been demanded from Government, has at length been accorded; and for the rest, we may safely trust to the strength and stamina of the national genius. It may be hoped, too, that the impediment which stands perpetually in the way of public undertakings, the preference of class, or corporate to general interests, will be avoided. The exalted station and character of the individuals composing the com-

mission, affords the best guarantee that the competitors will meet with impartial arbitration; and it may be added, that all who are acquainted with the distinguished artist who fills the office of Secretary, will concur that, as far as his influence extends, the interests of the profession could not have been consigned to better or more honourable keeping.

Yours, &c.,

A LOOKER-ON.

## THE ART-UNIONS OF GERMANY.

A taste for the productions of the schools of Germany is growing up among us, in proportion as our progressive education in Art prepares the many to understand its higher purposes. We find even among our artists some who follow the German manner; but this, as a mere imitation, does not succeed; whereas in others a style similar, though by no means German, but traceable to the same pure source as the latter, is not only esteemed by ourselves, but adds to the list of those imperishable names, which are familiar to all civilized nations. It is a part of our national character to imitate and adopt as much as we can of the good we find in other nations; and with this, is very often admitted a strong amalgam of the other—the evil; but for reasons, that we shall presently state, we shall be secured against self-betrayal in the indulgence of a taste for German Art, in that form in which it is likely to be most known in this country—we mean engraving, which enhances the best points of German productions, and veils some of their principal defects. We do not, be it understood, rank the German schools before our own—for at best they are but imitative, while ours is original: we can at any time, under encouragement, rival them in their own style, but in ours they can never approach us. Our artists frequent, and study in, all the schools of Europe where anything is to be learned; and it is continually asked of them what the British school has done? To which their answer should be, that the British school of Art has done comparatively more in half a century than any of the others in two centuries; that it could, at a short notice, be prepared to dispute the palm with any modern school in history and poetry. Of religious painting we say nothing; in the first place, because those artists qualified for the two former styles are equal to this, since it requires less display of the figure. We therefore place it after the two others in the scale of practical difficulty. Although the works of the German schools are not a worthy sequel to those of the great masters, they are yet, in some sort, an appendix—a varied and increasing series of comments upon them, which our own school might examine and profit by, but not follow; for if we are to imitate, it were better we should apply to the same source which stimulated German genius, and consult for ourselves the oracles on the walls of the Vatican. It is proposed to extend the benefits of the Art-Unions of Germany to this country, an enterprise which must cause a considerable circulation of German engravings among us, and whence can result nothing save improvement; because our painters do not seek to imitate, but to emulate and surpass. Had there been the spirit of imitation among us, it would surely have shown itself before; for Europe is surcharged with British artists, who visit all the famous cities of Italy, and paint after all the celebrities of the various schools. They look at the French school in the Louvre and the Luxembourg; go to the Low Countries, and copy Rembrandt, Rubens, and the *minor* masters of the north; and, finally, return to England, and settle down to work in a style as orthodox and English, as if they had never seen a picture elsewhere than on the walls of the Royal Academy.

The councils of the Unions of Germany can annually adduce substantial evidence of prevalence, to a certain extent, in England, of an admiration of the productions of German artists; and, with a view of gratifying this feeling, it has been determined, by the respective committees of the Art-Unions of Berlin, Düsseldorf, and Dresden, to establish in London a direct agency and dépôt for the reception of the names of subscribers for the exhibition of the works selected, and for the distribution of the prizes. Arrangements have accordingly been effected with Mr. Henry Hering, 9, Newman-street, Oxford-street, whereby he is appointed to the sole agency and direction for the

United Kingdom; and at whose office a series of prize engravings are on exhibition.

The complaint urged against the Art-Union of this country is, that the selection being left to the discretion of the prize-holders, many of these, from the want of a sufficient knowledge of Art, make choice of inferior works, and so give encouragement to artists of indifferent pretensions. This is, undoubtedly, a reproach, but it must be remedied with judgment and forethought; for a less charitable error it would be, to substitute, as a corrective, the selection of only the high-priced works of men of long-established reputation, entrusted to the hands of a committee. We mean to convey that every artist has, in his early progress, received prices necessarily lower than those subsequently obtained for the works of his maturity. We would not, therefore, that in our Art-Unions any regulation should be adopted that could exclude rising artists of talent from a participation in the benefits accruing to the profession from these institutions. The selection of the prizes in Germany is vested in a committee. Of the pictures chosen we have no opportunity of speaking; but some of the prize engravings we have inspected at the offices of Mr. Hering.

In 1839 the Art-Union of Düsseldorf presented to subscribers an engraving by Professor Keller, from a picture by Bendemann, entitled 'Girls at the Fountain.' The title, which might admit of a much less refined illustration than exists in this beautiful engraving, is not worthy of the work; for, in the composition, the fountain is a mere accident, the whole force of the theme being settled in the expression of the countenances of two girls, which involves a tale of the heart. The engraving is in line, and in the perfection of that style.

In 1840 the same Art-Union presented to its subscribers an engraving by Felsing, from a picture, by Köhler, entitled 'Poetry.' The subject is made out by a figure in a sitting position, winged and draped, and writing in a book the inspirations she is invoking. This figure is also in line engraving, and is as much superior to ordinary allegory, as good poetry is to bad. In 1841 this was followed by 'The Queen of Heaven,' engraved also by Felsing, from a picture by Deger, exhibiting the most exalted feeling for religious painting.

In 1839 the Berlin Art-Union presented its subscribers with 'Die Lurley,' an engraving by Carl Begas, from a picture by Mandel. The subject is from one of the legends of the Rhine, in which a maiden is described as luring by night, passengers out of their way by the sweetness of her music. The figure is on a cliff supposed to overlook the Rhine, and a traveller is seen ascending the rock. The figure is admirably drawn, and is characterized by much of the beauty of the greatest works. The same society, in 1837, gave to its subscribers 'Das Trauernde Königspaar,' engraved by Lüderitz, from a picture by Lessing, and enforcing the moral, that no "flesh" is exempt from sorrow—"Das Königspaar" a king and queen are seated lamenting the evils of humanity, from which their high estate cannot secure them.

Each of those works is of a high standard of Art, but they carry with them the strongest evidences of their school and its origin. We find in them aims to approach the most celebrated works of the Italian school; and it must be confessed that they do excel works to which attach even celebrated names of that school. It is proposed, we see in the prospectus, to exhibit in London all the prize pictures of the German Art-Union, if the subscriptions obtained in the United Kingdom will warrant such an exhibition.

We anticipate the most favourable results from a nearer connexion with schools that have studied so closely the great models: we are sufficiently firm in a style of our own to benefit by their experience whilst we avoid their errors. Further information on this subject will be found among the advertisements.

## REVIEWS.

**A DRAWING BOOK; CONTAINING ELEMENTARY INSTRUCTIONS IN DRAWING, AND ILLUSTRATING THE PRINCIPLES OF DESIGN AS APPLIED TO ORNAMENTAL ART.** Published under the immediate Superintendence of the Council of the Government School of Design, at Somerset House. First Division, Part I. Publishers, CHAPMAN and HALL.

The appearance of the first part of the Drawing Book of the Government School of Design is particularly welcome, as being the first publication that has emanated from authority, having for its object the dissemination of the elementary principles of the art of ornamental design. This work, comprising both examples and instructions, is published at a cheap price, and will find its way, we hope, into every school where linear drawing is taught. This first part comprises fifteen sheets of examples to be copied by the learner; beginning with parallel lines divided to practise the eye in measuring; proceeding next to angles, and intersected lines to geometrical figures, rectilinear and curvilinear, from the square to the polygon, and the circle to the ovoid and parabola; and then to the intricacies of combined figures.

This drawing-book of introductory studies for mechanical or pattern-draftsmen, is intended for students progressing individually, not in classes; and aims at practising the eye and hand in perceiving and delineating with accuracy and neatness the geometrical rudiments of form. Even our correspondent who advocates the exclusive use of models, or solid forms, to draw from, could hardly object to this course of study; these forms being merely outline diagrams, so that the exercise of the pupil's eye and hand would be the same whether he drew them from these chalk lines on paper, from Dupuis' wire outlines, or from the planes that he advocates: the planes and wire outlines, indeed, seem particularly calculated for teaching numbers in classes, where all the pupils progress simultaneously; while these examples on paper are especially adapted for the use of pupils proceeding individually: for pattern-draftsmen, who do not absolutely require to learn perspective, these preliminary studies of exact linear drawing would be more directly inductive than solid forms. We are far from undervaluing the use of models for teaching perspective drawing, especially to classes; and, as an introduction to the practice of picturesque sketching from nature, they are essential; but it is questionable if in the case of merely ornamental drawing where the ordinary amount of projection is basso relievo, and objects are only viewed on one plane, the study of perspective is necessary. That the pupil, when he has acquired facility in drawing outlines, and shading from examples on paper, should be set to draw from plaster casts of ornament, is necessary; and such is the course pursued at the School of Design; but this may be accomplished without the study of perspective, to which the pupils at Exeter Hall devote so much time, to the neglect of neatness of hand.

We shall take an early opportunity of referring to this important work at greater length.

**A SERIES OF DIAGRAMS, illustrative of the PRINCIPLES OF MECHANICAL AND NATURAL PHILOSOPHY, and their Practical Application, with short Descriptions and Explanations, adapted to the several purposes of Instruction.** Drawn on Stone by HENRY CHAPMAN. Printed in Colours by C. F. CHEFFNIS. Published under the Superintendence of the Society for the Diffusion of Useful Knowledge. No. 1. The Lever. Publishers, CHAPMAN and HALL.

The object of this admirable publication is to supply the class-rooms of teachers with a set of figures on a large scale, representing the mechanical powers in their various actions, as illustrated by different machines; that exemplified in the first number being the lever. The three plates forming the number are 26½ inches by 19, and the various kinds of lever balances are delineated in a very bold and exact style, in neutral tints, imitative of the iron and wood of which the real machines are made. The effect of rotundity and metallic surface is almost illusory; and the prints are as striking as it is possible to render them; their size, too, is such that they would be distinctly visible from a considerable distance, being so very strongly

relieved by the shading and the tinting. As specimens of lithographic printing in coloured inks, they are remarkable for force and distinctness; being equal in these respects to the coarsest wood-cuts, with a degree of finish and neatness not to be looked for in them.

**THE HAND-BOOK OF NEEDLE-WORK.** By Miss LAMBERT. Publisher, JOHN MURRAY.

Although we confess ourselves opposed, on principle, to the everlasting multiplication of "stitching"—the perpetual sortings of "blues," and "drabs," and "pinks," and "greens"—though we are decidedly averse to "tacking" young ladies' minds to their embroidery frames—yet we honour the time-ennobled art of tapestry too highly not to welcome such a volume as the present; not only as containing a pleasing and succinct description of the rise and progress of an art which, if not legitimately pictorial, is very near akin to it; and which hands us down upon well-wrought canvasses much of the chivalrous history of the olden ages. Moreover needle-work is a graceful and feminine employment, pleasant, and it may be profitable.

The pretty volume now before us, has been compiled with exceeding care, and strict attention to the most minute details—all is well arranged, and if the fair compiler attaches more import than we do to the poetry of the needle, we quite agree with her in thinking that the useful and ornamental works produced by this "little" instrument of pointed steel, are well worthy the attention of all fair ladies. Certainly there are evidences of industry, patience, and cheerfulness in this womanly hand-book, which lead to the belief that in every respect the author will be "an honour to the sacred name of wife." We would recommend in the future editions a chapter on "white-work." By "white-work" we mean the every-day sort of occupation which ladies of small incomes must attend to. The cutting out and management of various articles for domestic service—the necessary quantity to use, and how it can be best employed—would be information of real value to many of our fair friends, some of whom we have heard lamenting that a book that has done so much to illustrate the beautiful, should have neglected the homely English "*work*"—a few hints upon which would have afforded so much additional pleasure. We know ladies are hard to satisfy—but we submit the hint to the fair author, believing there is "much in it." The illustrations are a valuable addition to the interest and information of a volume which deserves a place on the table of every lady.

**THE (LATE) LORD CHANCELLOR COTTENHAM.** Painted by C. R. LESLIE, R.A. Engraved by H. T. RYALL. Publisher, F. G. MOON.

A fine portrait and an excellent likeness; a work, in all respects, worthy of the accomplished painter. It is admirably engraved by Mr. Ryall. Although "fallen from his high estate," the distinguished lawyer and estimable nobleman has "troops of friends," and they are not confined to the profession of which he is the ornament. This copy of his features and form (for it is full-length) will be a most desirable acquisition to many. As a work of Art it is of very great excellence.

**PARGA; during the Awful Ceremony that preceded the Banishment of its brave Christian Inhabitants and the entrance of Ali Pacha.** Painted by GEORGE and JAMES FOGGO.

This is a very remarkable lithographic work; of considerable size, but a mere miniature compared to the picture from which it has been copied, which, we learn from the prospectus, measures 26 feet by 16. It is unquestionably a grand composition—of the class about which we have been raving, and raving idly, for years past, in the foolish hope that great things might be undertaken by artists at their own risk; and yet it would seem that this has been actually done; for this picture must have been conceived, arranged, and painted, without a prospect of any other result than the honour of completing so vast an undertaking. The attempt is most creditable, to say the least—a worthy effort of enthusiasm; and if the performance be not altogether perfect, it is entitled to high respect, not alone for the ardour, industry, and immense labour it exhibits, but for its own merits, which are striking and considerable. There is amazing grandeur in the design; a well-sustained interest throughout; skilful and "scientific" grouping; great power and

pathos in the expression; and the frightful story is admirably told.

At any other time we should enter at greater length into the subject, but, this month, we have exhausted both space and strength.

**THE EMBARKATION OF REGULUS.** Painted by J. M. W. TURNER, R.A. Engraved by DANIEL WILSON. Publisher, F. G. MOON.

This is a noble work of Art, full of interest, and of the richest character. The fame of Turner is, firmly established, and will endure—in spite of himself. Not so, as yet, that of the engraver; to him, therefore, it is our more especial duty to direct attention. Modern Art has produced few works superior to this; and we can scarcely refer to one that is superior. The name of "Daniel Wilson" comes upon us suddenly, appended to a plate of the rarest excellence and of great size; upon inquiry, we learn that he was a pupil of Miller, of Edinburgh, and is now resident in London; where we trust his abilities will not be overlooked, for they are of a very high order; no matter what may be the magnitude of the undertaking, it may be safely confided to his hands. In this print there is evidence of matured power; a capability of dealing with difficult materials seldom to be met with; a combination of force and delicacy of the happiest kind. The magnificent buildings, the numerous groups, the ancient shipping, and, above all, the water, are all put in with marvellous skill. The engraver may rest his fame upon this noble print—we hope it will be succeeded by that which usually, but not always, follows fame; and have no doubt that it will be so, even in these times, when fine engravers of landscapes have far too little to do.

**HER GRACE THE DUCHESS OF RICHMOND.** Painted by SIR THOMAS LAWRENCE, P.R.A. Engraved by G. R. WARD. Publisher, M'LEAN.

One of the happiest efforts of Lawrence's graceful pencil—a fine and beautiful woman, richly endowed by nature as well as by fortune. The copy is valuable, not alone to those who know the original; it is exquisite as a work of Art, and will even rank among the most famous works of the great painter. It has been very skillfully engraved by Mr. Ward, few modern prints in mezzotint are superior to it. There is amazing delicacy and refinement in the countenance, and the engraving of the satin dress has been seldom surpassed.

**THE CORONATION OF QUEEN VICTORIA.** Painted by E. T. PARRIS. Engraved by WAGSTAFF. Published by F. G. MOON.

The size of this important and valuable plate is 37 inches by 28½; a scale, evincing on the part of the publisher, a determination to do justice to a representation, so faithful, of this national ceremony, as well in this respect as in all others connected with its execution and publication. The precise period selected by the artist; is the moment when the brow of the sovereign is about to be girt with the diadem of these kingdoms; the crown is uplifted in the hands of the Archbishop, while all eyes are turned upon the Royal occupant of the chair of Edward the Confessor. The disposition of the figures is most judiciously managed, since each more or less relieves the other; and all direct the eye of the spectator to the centre of attraction. The light falls as it should upon the Queen, and is thence most skilfully distributed throughout the surrounding groups, so as to show perfectly the lineaments of each countenance without injury to the integral effect. From the solemn foreground the eye is led to the innumerable heads in the distance, which are faintly visible in the light that enters through the more remote windows, and which, by the most felicitous *finesse*, is made to contribute an inconceivable force to the main point of interest. The scene as here represented is most imposing, and even brilliant; for in the profound sacredness of the ceremony we scarcely miss the colour of the original picture, and the general groupment and composition seem to have been designed for yielding the very best effects in engraving. The light dresses of the female nobility are forcibly thrown off by the deep tones of the robes of ceremony, by which they are surrounded, and the latter again tell in powerful contrast with the lights in the nave of the Abbey. Works of this kind constitute portions of the histories of nations; and this amounts in importance to a passage of the history of our

own, being one of the most moving events of the current reign. It is more than a record of the coronation, or a memento of the order of the ceremony: for, as well as containing a perfect portrait of the sovereign, it affords studied and correct likenesses of all who assisted at the solemnity. It may be here stated that, during the august occasion, Mr. Parris was permitted to make preparatory sketches from situations the most favourable for observation, and has since enjoyed every facility that could contribute to the pictorial success and substantial truth of his great work; of the labour attending the execution of which some idea may be formed, when it is stated that seventy-seven portraits are given, most of the persons present having sat to the artist expressly for this picture. An enterprise so spirited as the publication of such a work as this, cannot fail to render an ample return; since, on the part of Mr. Moon, no obstacle, no consideration of cost, has for a moment operated against bringing to a happy issue, the publication of a contribution so valuable to the national collection of historical engravings.

**THE PRINCESS AUGUSTA OF CAMBRIDGE.** Painted by KRUS, MAYENCE. Engraved by E. W. WASS. Publishers, H. GRAVES & CO.

The original picture from which this print is taken is now in the Royal Academy. The portrait there appears hard; the tone of colour—the flesh-tints, more especially—being by no means agreeable; yet it is, undoubtedly, a very striking likeness; although, as an example of German art, it is not calculated to elevate the school, or induce us to abate a jot of our claim to pre-eminence in the class of art to which it belongs. As an engraving, however, we can speak of it in terms of the most unqualified praise; it is not, indeed, too much to say that as an example of portraiture, it may rank among the more successful efforts of modern times. The artist has a free and vigorous hand, yet his work is painted with the greatest possible delicacy. He has gone as near to produce colour as any modern engraver; while, in brilliancy of tone, his work is surpassed by few.

We hope that opportunity will be given him to produce a work of more ambitious character; for we know of no engraver in this "dotted" style (with one exception) who might be more safely entrusted with a picture of magnitude and high value. Sure we are that he would do it ample justice.

[We have already made some reference to a work, explanatory of the recent operations of the British army in Afghanistan, about to be published by Messrs. Graves and Co. Of this publication, several specimens have been sent us; they are of the deepest interest, not alone as regards the unhappy catastrophe they principally illustrate, but as pictures of a very wild and singular country, abounding in the picturesque, and a people in every sense of the term "peculiar." It will be, moreover, valuable as a work of Art; for the subjects are remarkably well chosen, and the groups are "put in" with consummate skill; "the drawings on stone" are by Mr. Haghe, who enjoys pre-eminence in this department of the Art.

Taken altogether few modern publications are calculated to be so extensively popular.]

#### TO READERS AND CORRESPONDENTS.

Our subscribers will observe that we, this month, supply them with an additional half-sheet; and they will, we hope, take care that no mistake occurs in its delivery, either by hand or by post, for it is stamped, in order that it may go post-free.

We are bound in justice to adopt this course occasionally, for our advertisements increase; and we are, each month, compelled to devote to the advertiser a page or two rightly the property of the reader.

A question from Norwich.—In no society is a mere exhibitor a member of a "Hanging" Committee.

A letter from Edinburgh gives us a list of several pictures, for which the "Society" there, offered, and paid, less than two-thirds of the sums asked by the artists. We submit to our correspondent that it be neither wise nor fair to publish it.

E. C.—We cannot find room for so long a letter; but the subject shall have our earliest attention; we fully admit the justice of his view.

"A Portrait Painter."—We find it difficult to give advice on such a subject. An artist, a portrait painter, living some hundred miles from London, wishes to obtain instructions in his art, by letter, and by the loan of paintings to copy, from some competent professor, whose "works and charges would suit his means."

**AQUAOLEUM, or a new Preparation of MOIST COLOURS** to give the effect of either Oil or Water-Colour Painting.

Invented by GEORGE ROWNEY and CO., Colour Manufacturers to Artists, 51, Rathbone-place, London.

These Colours may be used either on Canvases, Millboard, Panel, or Paper. If used as Water Colours, water is the only medium required; but if to present the effect of Oil Painting, a magneulp prepared expressly for the purpose is necessary: they are applicable to any style of painting, but most particularly useful in sketching from nature. The dislike that many persons (especially ladies) have to oil colours, on account of their smell, is here entirely avoided, as they have rather a pleasant odour, and any stain or soil from them may be removed with water. They dry nearly as fast as water colours, but if the evaporation be too rapid, it may be controlled by the use of the magneulp. The sketches, if done to represent oil colours, may be varnished as soon as dry.

These Colours are sold in compressible tubes, or in small earthenware pans, and are called Aquaeolum, or a new Preparation of Moist Colours, and sold at the usual charges of Cake Colours generally.

N.B.—Specimens may be seen in the different styles to which they are applicable, and printed directions furnished with the article.

**A CASE OF EXTREME DISTRESS.**—An

Artist of great merit, and just rising into very lucrative practice, has been suffering for Eight Months from illness so severe as to render him perfectly helpless. His little property has been expended to support him and a family of five children and their mother, whom they have this morning had the misfortune to lose by sudden death. Known as a man of talent and of most irreproachable character to the respectable houses whose names are at the foot, the present Appeal to the benevolence of the affluent is made by their recommendation, and with consent on their part to receive subscriptions for him. Messrs. Colnaghi and Puckle, 23, Cockspur-street; Paul and Dominic Colnaghi and Co., Pall-mall East; Graves and Co., 6, Pall-mall; W. R. Sams, &c. &c.

**THE LATE GEORGE BARRET.**—To the

lovers of genuine Art, who happily are increasing in this country, the Works of the late GEORGE BARRET are well known and highly appreciated. He was appropriately styled "The English Claude," and, like that great master, assiduously devoted himself to the study of nature, in which pursuit he evinced great feeling and fidelity. He was one of the founders of the Society of Painters in Water Colours—an institution universally acknowledged to have given a stimulus to the Arts and a sterling character to Water-colour painting—to which object his own works greatly contributed.

His father was one of the original members of the Royal Academy, but died while he was very young, leaving him and a large family totally unprovided for: thus he commenced life under difficulties, and struggled through it with exertion, though with patience and content. At its close, he has left a widow, who had been a faithful and excellent wife, two sons, and a daughter, without any provision; the sons may ere long be able to support themselves, but the daughter, from her age, must still remain dependent on her mother.

As an artist, Mr. Barret's talents, combined with his frugal and industrious habits, ought to have produced him a handsome competency, but he was stimulated more by the love of excellence than the love of money; and though he toiled incessantly at his profession, he earned only sufficient to supply the daily wants of himself and his family; a long illness, too, and subsequent decease of his eldest son, whom he had educated as a surgeon, added to his embarrassments, and, it is feared, accelerated his death. Of a naturally mild and amiable disposition, he contemplated his approaching dissolution with calm and pious serenity; and his last work, entitled 'Thoughts in a Churchyard,' in the present Exhibition, which is replete with mind and feeling, was studied in the Cemetery at Paddington, on the site of which once stood the Manor House, the residence of Barret's father in his prosperity, where George Barret's early days were passed, and where his remains are now deposited.

To those who delight in the pure and exalted gratification of alleviating distress, as well as to the patrons and lovers of Art, this brief appeal is addressed in behalf of the Widow and Daughter of so talented and estimable a man; and it is earnestly hoped the pleadings of adversity may not be uttered in vain.

Subscriptions will be received by Messrs. Coutts and Co., Bankers, 59, Strand; by Mr. Ackermann, Publisher, 96, Strand; or by any one of the Members of the undermentioned Committee.

It is proposed that the funds that may be raised shall be laid out in an Annuity on the life of Mrs. Barret, and a Committee of the following friends of the late lamented Artist have undertaken to carry it into effect:—

Edward Swinburne, Esq., 32, Great Castle-street, Cavendish-square.

Thomas Uwins, Esq., R.A., 41, Charlotte-street, Fitzroy-square.

Joshua Cristall, Esq., 44, Robert-street, Hampstead-road.

F. O. Finch, Esq., 51, Charlotte-street, Fitzroy-square.

James Elliott, Esq., 32, Berwick-street, Soho.

Henry Harrison, Esq., 1, Percy-street, Bedford-square.

May, 1842.

HENRY GRAVES AND COM<sup>y</sup>, Printsellers and Publishers to HER MAJESTY and H.R.H. PRINCE ALBERT, have the honour to announce that they will publish during the present Season the following

### SPLENDID WORKS OF ART.

## THE CORONATION OF HER MAJESTY, QUEEN VICTORIA, IN WESTMINSTER ABBEY.

Engraved in the finest style of Art by H. T. RYALL, Esq., Her Majesty's Historical and Portrait Engraver, from the magnificent Original Picture, most superbly painted by GEORGE HAYTER, Esq., M.A.S.L., Painter in Ordinary to Her Majesty.  
Prints, £4 4s. .... Proofs, £8 8s. .... Proofs before Letters, £12 12s.

### A MOST BEAUTIFUL SERIES OF ORIENTAL SKETCHES,

MADE BY THAT LAMENTED AND HIGHLY TALENTED ARTIST, SIR DAVID WILKIE, R.A.,

During his late Tour in the East; and consisting of Twenty-six of the most splendid Drawings of his latest Compositions, Lithographed in the finest style of Art, in exact imitation of the Superb Originals, mostly in the possession of the Publishers, by Messrs. LOUIS HAGHE and JOSEPH NASH.

Messrs. GRAVES and COMPANY, in announcing the Publication of a Work comprising the latest productions of that talented and much esteemed Artist, the late Sir DAVID WILKIE, feel confident that no eulogium is necessary to enhance it in the public estimation, neither do they deem it fitting to revert to an elaborate detail of its merits, being convinced from the high estimation in which the late Artist stood, that a notice of their determination to publish a volume compiled from his latest and most choice productions, lithographed under the experienced judgment of Mr. HAGHE and Mr. NASH, is sufficient alone to ensure it its merited patronage.

The Volume will consist of Twenty-six Plates, royal folio, price £4 4s. .... A few Copies coloured and mounted as the Original Drawings, £10 10s.

### A SPLENDID AND HIGHLY FINISHED WORK OF HADDON HALL, DERBYSHIRE,

Consisting of Twenty-six of the most beautiful Interiors and Exteriors of this interesting Remain of the Olden Time: Drawn on the Spot, and on Stone, by DOUGLAS MORISON, Esq., of a uniform Size with the Work on Belgium and Germany, by LOUIS HAGHE.

The Volume will consist of Twenty-six Plates, imperial folio, price £4 4s. .... Coloured and Mounted, in a Portfolio, £10 10s.

### A BEAUTIFUL AND MOST INTERESTING WORK ON THE RECENT OPERATIONS OF THE BRITISH ARMY IN AFGHANISTAN,

Consisting of Views of the most beautiful Scenery and Passes through which the Troops marched, with Figures illustrative of the memorable events which occurred during the Campaign, and descriptive of the Manners and Costumes of the Natives.

Drawn on Stone by LOUIS HAGHE, Esq., from the original and highly-finished Drawings executed on the spot by JAMES ATKINSON, Esq., Superintending Surgeon of the Army of the Indus.

The Volume will consist of Twenty-six Plates, royal folio, price £4 4s. .... A few Copies coloured and mounted as the Original Drawings, £10 10s.

### THE BEDALE HUNT.

Engraved in the finest style of Mezzotinto by W. H. SIMMONS, from the beautiful Picture painted by ANSON A. MARTIN, Esq., and presented to Mark Milbank, Esq., by the Gentlemen of the Hunt.

Price: Prints, £3 3s. .... Proofs, £5 5s. .... First Proofs, £6 6s.

This splendid Engraving contains on less than Forty-two Portraits of the most distinguished Sportsmen connected with the Hunt.

"One of the best works of the kind; a Sportsman's picture every inch of it; and he must indeed want taste who does not add it to his choicest collection."—*Sporting Review*.

### THE GAMEKEEPER'S RETURN.

Engraved in the finest style of Art by G. H. PHILLIPS, from the beautiful Painting by T. SIDNEY COOPER.

Price: Prints, £1 1s. .... Proofs, £2 2s. .... Before Letters, £3 3s.

"This Print is intended as a companion to J. F. Lewis's 'Highland Hospitality'; and a more pleasing pair of Engravings we do not remember to have seen."—*British Queen*.

### A BEAUTIFUL ENGRAVING OF THE PORTRAIT OF LIEUT.-GENERAL SIR HUGH GOUGH, G.C.B. COMMANDER-IN-CHIEF OF HER MAJESTY'S TROOPS IN CHINA.

From the original Portrait painted by a Chinese Artist, and engraving in the finest style of Mezzotinto by J. R. JACKSON.

Price: Prints, 10s. 6d. .... Proofs, £1 1s. .... Proofs before Letters, £1 11s. 6d.

Subscribers are most respectfully requested to forward their names to the Publishers at their earliest convenience, as only a limited number of impressions will be taken from the plate.

### THE CHILDREN WITH RABBITS.

Engraved in the finest style of Mezzotinto, by THOMAS LANDSEER, Esq., from the interesting Picture painted for the Honourable Mrs. Bathurst, by EDWIN LANDSEER, Esq., R.A.

"Of all Mr. Landseer's portrait pictures, this is the most striking, and displays the most unquestionable marks of genius. The composition is very simple, but very sweet. It is one of those home pictures that must delight all classes, because all will understand and appreciate it."—*ART-UNION*.

Price: Prints, £2 2s. .... Proofs, £4 4s. .... Proofs before Letters, £6 6s.

SPECIMENS OF THE WORKS MAY BE SEEN AT THE PUBLISHERS'.

LONDON: PUBLISHED BY HENRY GRAVES AND COMPANY, PRINTSELLERS AND PUBLISHERS,  
BY SPECIAL APPOINTMENT, TO HER MAJESTY, AND HIS ROYAL HIGHNESS PRINCE ALBERT, No. 6, Pall Mall.

**DRAWING AND PAINTING, No. 14, TOTTENHAM COURT-ROAD.**—Artists, Artisans, and others, are respectfully informed that a Large Room, furnished with Casts from the Antique, Ornaments, &c., has lately been opened for STUDY, every Monday, Tuesday, Thursday, and Friday Evenings, from 6 o'clock till 10. Subscription, 4s. per month.

A Class for the Study of the Living Model meet on Wednesday and Saturday Evenings.

**ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.**

**C. J. ECKFORD, 45, FLEET-STREET,** corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. **ESTABLISHED 1793.**

**CEMENT.**—Most important and valuable Invention.—To Architects, Engineers, Contractors, Builders, Masons, Plasterers, and the Trade, and also to Shippers.—The PATENT STUCCO PAINT CEMENT, surpassing every article hitherto introduced, possesses the following extraordinary and valuable properties: Remarkable adhesiveness, fixing most tenaciously to the smoothest surfaces (even to glass). It is perfectly impervious to wet or damp. The more it is exposed to the atmosphere the harder and more durable it becomes. It is perfectly free from any of the caustic qualities of lime; and it may therefore be painted upon as soon as dry, as it is impossible that it can vegetate or change colour, nor can it be affected by frost or heat, or crack, chip, or peel off. To merchants and shippers it must form a most important item of commerce, as it will keep for any length of time as fresh as delivered from the manufactory. With regard to price, it is cheaper than any other cement; and its lasting qualities render it a fortune to builders and others investing capital in building speculations. The Patentees have appointed Messrs. MANN and Co., 5, Maiden-lane, Queen-street, Cheapside, their sole Agents, at whose warehouses any quantity may be had, specimens may be seen, and every information afforded.

Pictures of the Highest Class.—By Mr. RAINY, at the Gallery, No. 14, on the east side of Regent-street (in the division between Piccadilly and Pall-mall), on THURSDAY, JUNE 2, at Two precisely,

**THE** very valuable and select COLLECTION of PICTURES, chiefly of the Italian school, well known in Scotland as purchased by the late Mr. Irving for the late Sir William Forbes, Bart., from the Tenari and Zambecari palaces at Bologna, from Count Lecchi at Brescia, and other noble families at Venice, Florence, &c., for whom many of them were painted. They are generally in a pure state, and among them are specimens of fine quality, by the following great masters:

Gian Bellini	Salvator Rosa	Guido Reni
Titian	Canaletti	Rembrandt
Paolo Veronese	Lud. Carracci	Morone
F. Francia	Ann Carracci	Sasso Ferrato
Luini	A. del Sarto	

Particularly the 'Virgin and Infant Saviour, with St. John,' a grand gallery picture by Guido; the 'Martyrdom of St. Giustini,' by Paolo Veronese; 'Portrait of the Doge Grimani,' Titian; 'View on the Great Canal, Venice,' Canaletti; 'St. John in the Wilderness' (after Raffaele), A. del Sarto; a splendid Landscape, Albano, &c.

To be viewed three days preceding the Sale, and Catalogues may be had one week previously at the Gallery; and in Edinburgh at the office of the "North British Advertiser," Melbourne-place.

Valuable Miscellanies, removed from a Mansion at the West-End, a Fine Toned Finger and Barrel Organ, suitable for a Chapel or Concert-Room, a Grand Pianoforte, by Broadwood, &c.

**BY** Mr. RAINY, at the GALLERY, No. 14, on the East Side of REGENT-STREET, on FRIDAY, JUNE 3, 1842, at Two o'clock precisely, SUPERB BUILT and OLD MARQUETERIE TABLES, CABINETS, and GARDE ROBES; some fine Old Bronzes, Carvings, particularly a Crucifixion in Ivory in one piece, by Fiamingo; a Crystal Dessert Service, superbly mounted in Or-molu, by Denieres; a Beautiful Dessert Service, by Feuillet, finely painted; Oriental China Vases, Large Bisquet Groups, a Florentine Mosaic Slab, a Curious Mechanical Clock, representing a Nigger with Moveable Eyes, which mark the Time; a Marble Figure of Cleopatra, by Bartolini; and other items of value. Also, a superior Finger and Barrel Organ, by Flight, removed from a residence on Clapham-common (recently sold); it is near 12 feet high by 7 feet wide, in an elegant Mahogany-case, the compass from G to F in Alt, with seven stops.

To be Viewed on Tuesday and Wednesday preceding the Sale, and Catalogues had at the Gallery.

# SCOTTISH UNION FIRE AND LIFE INSURANCE COMPANY.

Instituted 1824, and incorporated by Royal Charter.

## LONDON BOARD.

Charles Balfour, Esq.	Robert Murray, Esq.
J. Deans Campbell, Esq.	R. Olverson, Esq.
J. Gordon Duff, Esq.	Davie Robertson, Esq.
Robert Gillespie, Esq.	H. F. Sandeman, Esq.
James Gooden, Esq.	John Small, Esq.
John Kingston, Esq.	Daniel Stoddart, Esq.

SUTHERLAND MACKENZIE, Esq., Manager.

London Offices, 449, West Strand, and 78, King William-street, City.

## LIFE DEPARTMENT.

**THE** additions made to the LIFE POLICIES granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 14 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premiums charged by this Corporation are taken into consideration.

The next division of the profits will take place in December 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William-street, City.

F. G. SMITH, Secretary.

The usual commission allowed to Solicitors and Agents.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. No firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

**PICTURE FRAMES, LOOKING GLASSES, CONSOLE TABLES, WINDOW CORNICES, SCREENS,** and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer, by P. GARIBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane.—P. G. manufacturing every article on the premises, is thereby enabled to offer them at such low prices that he defies competition. An extensive assortment of Ornamented Gilt and Fancy Wood Picture Frames kept ready. Registering in all its branches in a superior manner, at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given free of charge. A list of the prices of Plate Glass, &c. can be had at the Manufactory (gratis), or sent prepaid to any part of the Kingdom.—P. G. is now supplying Cheval Glasses, the best brilliant plates, 45 inches by 25 inches, in noble French-polished Spanish Mahogany Frames, at £7 10s. each.

## PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.**—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water 63, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

**TO MINIATURE PAINTERS, &c.—W. WARRINER, 39, GREAT CASTLE STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.**

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

## SPLENDID AND SUPERIOR GILT FRAMES.

**C. CHARLES McLEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attained.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

## WINSOR AND NEWTON'S COMPRESSIBLE METALLIC TUBES TO SUPERSEDE BLADDER COLOURS FOR OIL PAINTING.

**W** and N.'s Compressible Metallic Tubes are made on an entirely novel plan, of a series of layers or rolls of extremely thin metal; they are extremely light, yet have great strength and toughness, so that they are not liable to split and leak, as is the case with all Tubes made on any other plan.

By a process peculiarly original, W. and N. line every Tube with a thin membranous substance, and thereby prevent the very injurious effect occasioned to colours which are long kept in direct contact with a metallic surface. The most delicate colour is thus effectually protected from any chemical action that might otherwise cause its deterioration.

The oil colour is ejected from these Tubes in a manner similar to that in which colour is expressed from the common bladder colour, by squeezing or compressing between the thumb and finger, so that the colour is always kept gathered up in a compact state; the empty part of the Tube remaining closed or compressed behind it.

The bottom of the Compressible Tube is cemented in a manner entirely new, which gives a security to the Tube not before obtained, and renders it impossible for the contents to be forced out through accident or imperfect closing.

W. and N. beg to apprise their Patrons that their new manufacture of Compressible Metallic Tubes is entirely original and, excepting the tubular form (which has been generally adapted in various contrivances for preserving oil colours for the last fifty years), their Tubes are not similar in their manufacture to any of the numerous other tubes applied to the preservation of oil colours now in existence.

They are light and portable, and may be packed with safety among linen or paper. They preserve oil colour for any length of time, are peculiarly adapted for expensive colours, and offer the most perfect mode of sending oil colours to warm climates.

*The advantages of these Tubes may be thus enumerated.*

The preservation of the colour free from skins. The cleanliness with which the art of painting may be pursued, either by artist or amateur.

The readiness with which the colour may be pressed from the tube without the necessity of laying down the palette and brushes.

Freedom from smell, and danger of breaking or bursting.

Economy in use, and moderate price.

TO BE HAD, WHOLESALE AND RETAIL, AT

**WINSOR AND NEWTON'S ARTISTS' COLOUR MANUFACTORY, 38, RATHBONE PLACE, LONDON.**

Price 6d. each, to be filled with colour (Cobalt, Madder, Lakes, &c., extra as usual).

UNDER THE SUPERINTENDENCE OF THE SOCIETY FOR THE DIFFUSION OF  
USEFUL KNOWLEDGE.

Just published, to be continued every alternate Month, the First Number, price 7s. 6d., of

## A SERIES OF DIAGRAMS,

Illustrative of the PRINCIPLES of MECHANICAL and NATURAL PHILOSOPHY, and their Practical Application.—PRINTED IN COLOURS.

\*.\* Each Number will contain Three Plates (26 inches by 19), and the Series will commence with MECHANICS, which will be comprised in Seven Numbers. No. 1. THE LEVER.  
CHAPMAN and HALL, 186, Strand, London.

UNDER THE IMMEDIATE SUPERINTENDENCE OF THE COUNCIL OF THE GOVERNMENT  
SCHOOL OF DESIGN AT SOMERSET HOUSE.

## A DRAWING-BOOK;

Containing Elementary Instructions in Drawing, and illustrating the Principles of Design as applied to Ornamental Art.

This work will be published in Numbers, and the Council have arranged that it should be sold at a price little exceeding the cost of production; so that, as far as possible, it may come within the reach of all classes of persons desirous of instruction in Drawing and the Art of Design.

### THE FIRST DIVISION

Is to be devoted to elementary instruction, and will exhibit a course of Outline Drawing (including both geometrical and free-hand drawing) and Shadowing, illustrated by numerous examples, as well modern as ancient, so as to form a complete course of instruction preliminary to drawing from the ancients. This will consist of FOUR PARTS, each containing Fifteen sheets, of Examples and Letter-press, price 3s. 6d.

### THE SECOND DIVISION

Will contain examples illustrative of the Principles of Design, and also Designs applicable to particular branches of Manufacture. It is intended that each Division should be accompanied by an explanation of the figures, and also directions as to the mode of teaching, so that the work may be used in schools, or by persons intending to learn without the assistance of a master.

\*.\* The First Part was published this day, June the 1st, and the others will follow at regular intervals of Two Months.

CHAPMAN and HALL, 186, Strand.

This day is published, in 8vo., price 21s., a few on large paper (royal 8vo.) for colouring, price £2 2s.,

## HERALDRY OF FISH.—NOTES of the principal Families bearing Fish in their Arms.

By THOMAS MOULE.

Nearly 600 families are noticed in this work; and besides the several descriptions of fish, fishing-nets, and boats, are included also mermaids, tritons, and shell-fish. Nearly 770 ancient seals are described, and upwards of 220 subjects in stained glass. The engravings, 205 in number, are from stained glass, tombs, sculpture, and carving, medals and coins, rolls of arms, and pedigrees.

John Van Voorst, 1, Paternoster-row.

Just published, in royal 4to., price £1 5s. bound, **RUSTIC ARCHITECTURE—PICTURESQUE DECORATIONS OF RURAL BUILDINGS in the USE of RUDDH WOOD, THATCH, &c.** Illustrated by Forty-two Drawings; consisting of Plans, Elevations, Sections, and Perspective Views; of Doors, Windows, Chimney Shafts, &c., drawn geometrically to a large scale; with descriptions and estimated costs. By T. J. RICCAUTI, Architect.

"We have repeatedly and strongly recommended this elegant and useful work, and can safely say, that we think no gentleman who purchases it will be disappointed."—*London's Gardeners' Magazine.*

James Carpenter, Old Bond-street.

### A NEW HAND-BOOK FOR THE PEOPLE.

**THE HAND-BOOK of the ELEMENTS of PAINTING in OIL,** with an Appendix, containing Sir Joshua Reynolds' Observations and Instructions to Students. Imperial 32mo., 1s.

The object of this work is to place within the reach of all classes the means of attaining proficiency in the divine art.

**THE ENGLISH MAIDEN;** her Moral and Domestic Duties. Second edition, fcp. 8vo., 4s. 6d.; silk, 6s.; morocco, 8s.

"To every English maiden, to every English wife and mother, this book will be an invaluable monitor."—*Yorkshireman.*

Clarke and Wilson, 66, Old Bailey.

A New Edition, corrected, with a Supplement, containing above 160 additional pages of Letter-press, and nearly 300 new Engravings, bringing down the work to 1842; in one very thick vol. 8vo., of above 1300 pages, and 2000 Engravings on Wood, £3 3s., bound in cloth, An

**ENCYCLOPÆDIA of COTTAGE, FARM, and VILLA ARCHITECTURE and FURNITURE;** containing Designs for Cottages, Villas, Farm-houses, Farmsteads, Country Inns, Public Houses, Parochial Schools, &c., with the requisite Fittings-up, Fixtures, and Furniture, and appropriate Offices, Gardens, and Garden Scenery; each Design accompanied by Analytical and Critical Remarks illustrative of the Principles of Architectural Science and Taste, on which it is composed, and General Estimates of the Expense.

By J. C. LONDON, F.L.S., &c.

\*.\* The New Supplement separately, 7s. 6d. sewed.

"No single work has ever effected so much good in improving the internal arrangement and the external appearance of country dwellings generally."—*Times.*

London: Longman, Brown, Green, and Longmans.

**THE PEOPLE'S EDITION of the WORKS of BURNS.** Embellished by no less than Thirty-three fine Plates (after Wright and other Artists), illustrative of the principal subjects of his Poems. With a new Life of Burns, and Explanatory Notes preceding each Poem, by ALLAN CUNNINGHAM. In one handsome volume, super-royal 8vo., cloth extra, price 18s.

This will be found the most complete and best edition of the Works of Burns yet offered to the public, and the only one edited by and published under the superintendence of Mr. Cunningham.

London: George Virtue, and sold by all Booksellers.

\*.\* Be careful to order the "People's Edition."

Published in 4to., Price £4 10s. in French Boards; and on Royal Paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, Price £7 7s.

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Engravings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNEL, F.R.S.

1. On the EDUCATION of the EYE. Second Edition. Price £1 3s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Students in Art in the New Edition of the *Encyclopædia Britannica*—See the article on Drawing.

James Carpenter, Bond-street.

VI. **THE SAME.** Royal Octavo, 12s. cloth, or 15s. plates, half-bound Morocco.

VII. **THE COOK'S ORACLE.** A New Edition.

VIII. **MRS. DALGARNS COOKERY.** A New Edition.

\*.\* Part IV. of Abbotsford Edition on 11th of June.—Part V. on 25th of June.

## MILLER'S SILICA COLOURS.

The SILICA OIL COLOURS are prepared in collapsible tubes, and can be forwarded per post to any part of the country, on receipt of an order, for any of the under-mentioned tints, viz.:

Pale and Deep Red.

Pale and Deep Blue.	Pale and Deep Yellow.
Pale and Deep Orange.	Pale and Deep Purple.
Pale and Deep Green.	Pale and Deep Brown.
White and Half Tint.	Grey and Black.

### VAN EYCK'S GLASS MEDIUM FOR OIL PAINTING.

This Medium, having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'guelps, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

### Glass Medium in Bottles.

No. 1. For first and second painting.

No. 2. For rubbing up powder colours with.

No. 3. For third painting, finishing, and glazing, and for mixing with colours already prepared in oil.

Any of the above Media may be thinned, according to the taste of the Artist, with Miller's pure Florentine Oil.

T. MILLER, being the original preparer of this INVALUABLE MEDIUM, has the honour of supplying the President and Members of the Royal Academy.

The SILICA WATER COLOURS are prepared in small squares, which possess many and great advantages over the Cake and Moist Water Colours, at present in use; and can be forwarded per post to any part of the country, on receipt of an order for any of the under-mentioned tints, viz.:

Pale and Deep Red.

Pale and Deep Blue.	Pale and Deep Yellow.
Pale and Deep Orange.	Pale and Deep Purple.
Pale and Deep Green.	Pale and Deep Brown.
Pale and Deep Grey.	White and Black.

### MILLER'S GLASS MEDIUM.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after; this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints uninjured; in durability it will approach nearer to Oil Painting than anything hitherto in use.

### Glass Medium in Bottles.

No. 1. For first colouring or laying on masses of colour. This dries so hard that the second colouring or finishing will not disturb it.

No. 2. For second colouring, glazing, and finishing.

T. Miller respectfully directs the attention of those artists and amateurs who have not had an opportunity of witnessing the gem-like lustre of the Silica Colours and Glass Medium to a picture painted by E. Corbould, Esq., 'The Woman taken in Adultery,' No. 66, in the present Exhibition of the New Water Colour Society, 53, Pall Mall, and lately purchased by H.R.H. Prince Albert, for two hundred guineas.

MILLER'S ARTISTS' COLOUR MANUFACTORY,  
56, LONG ACRE, LONDON.

## THE ART-UNIONS OF GERMANY.

## Berlin, Düsseldorf, and Dresden.

UNDER THE PATRONAGE OF H. R. H. THE DUKE OF CAMBRIDGE AND THE NOBILITY.

The extraordinary popularity and success which have attended the transactions of the Society, denominated "The Art Union" in this country; the great benefit derived from its operations, both to Art and Artists; the talent which it has been the means of eliciting and fostering, and the feeling for Art which it has caused to be engendered in many cases, and in many others improved; the liberality with which it has been supported, and the various channels that have by its agency been opened, for compensating the labours of British genius; stamp this Institution as the most important existing evidence of the rapid growth of a taste for Art in this kingdom.

It was indeed a happy idea that a trifling individual Subscription might accumulate a fund, sufficiently large to purchase annually some of the best productions of the English School of Painting, the chance of possessing which should be within the power of every supporter of the Institution, at the same time that he had a *certainly* of an equivalent for his contribution in a specimen of Graphic Art, well worthy of acceptance.

England cannot, however, claim the credit of having originated this plan of promoting the interests of the Fine Arts; for as far back as January 1829, a Society having similar objects, and whose operations were conducted upon nearly the same principles, was established in *Düsseldorf*, under the title of the *Art-Union for the Rhenish Provinces and Westphalia*. The success which attended this Society, far exceeded the most sanguine expectations of its founders, and the splendid Engravings published by them as presentation plates to the Subscribers, are tolerably good evidence of the taste and spirit which animate its Councils.

The remarkable and substantial benefits diffused by this Society did not fail to attract the notice of the Prussian Sovereign, under whose immediate patronage and countenance, similar institutions have been formed in Berlin and in Dresden. These three Institutions form now a confederation of Art-Unions in Germany, under the especial favour of this patriotic King, who aids their funds by an annual subscription of £100 sterling; and they further enjoy the protection and encouragement of all the Foreign Courts.

In alluding again to the Art-Union of England, it cannot but occur to every lover of Art, that however great its popularity and success as an Institution, and however appreciable are the benevolent and patriotic motives which originated and have supported it, yet, that its sphere of comprehension must necessarily be of a limited character, restricted as its operations are to the exclusive patronage of *British Art*; but it cannot be doubted that the feeling for Art which it has created will seek to soar beyond the confines of this Society, and that an appetite has been already created for a more extended and discursive exercise of taste than the British School, with all its excellences, can present.

In reply to this demand, the immensely varied and inexhaustible resources offered by the different Schools throughout Germany, the Communities of Artists of Berlin, Düsseldorf, Dresden, Frankfort, Munich, and other cities, afford annually a rich and endless variety, including productions of genius of that transcendently beautiful character, for which the Schools of Germany are so justly famed.

That there exists a strong desire in many of the Members of the English Society to become asso-

ciated with those of Germany, is manifested to the Councils of the several Unions, by the number of applications that have been made for admission to the subscription lists; and to such an extent has this feeling evinced itself, that the establishment of a direct British Agency has at length been determined on. The Councils of the Art-Unions of Germany have, at their respective Meetings, at Berlin, Düsseldorf, and Dresden, come to the resolution to establish in London a direct Agency and Dépôt, for the reception of the names of Subscribers, for the exhibition of their works, and for the distribution of their prizes; thus affording to the English nation an opportunity of enjoying all the privileges of *their Associations*.

They have therefore to announce that they have completed an arrangement with Mr. Henry Hering, 9, Newman-street, Oxford-street, London, appointing him as their Sole Agent and Manager for the United Kingdom.

For the Reception of Subscribers' Names;  
For the Issue of Tickets;  
For the Distribution of the Prospectuses and Prizes;

For the Exhibition of the Engravings which, from the Establishment of their Institutions to the present time, have been selected as the presentation Prints to the Subscribers; and for the management of the general business of the German Art-Unions in Great Britain; and they beg to acquaint the Nobility and Gentry of England, Ireland, and Scotland, that from Mr. Hering can be obtained every information respecting their Institutions, and that to him all communications are to be addressed.

MR. HENRY HERING, in pursuance of the Resolutions of the Councils of the German Art-Unions, has the honour to intimate to the Nobility and Gentry, the Lovers and Patrons of Art in the United Kingdom, that he has just returned from Germany, whither he had proceeded upon a mission connected with the British Agency for these Associations, and that he has accepted at the hands of the Council the trust they have been pleased to confide to him in undertaking the management of their business in this country, and that, for the furtherance of this object, he has established an Office at No. 9, NEWMAN-STREET, for the express purposes of the Institution, where will be exhibited daily, from Two o'clock till Six, Specimens of the Engravings which have been published by the Unions and presented to the Subscribers from year to year, and where Books are opened for the Names of Subscribers in England, Ireland, and Scotland.

Correct Translations from the German of the Prospectus issued by each of the Unions, viz., Berlin, Düsseldorf, Dresden, Munich, and Frankfort, will be also registered for inspection, the main features of each of which so nearly assimilate to each other, and to those which form the groundwork and management of the English Association, that to reprint and circulate them in detail would incur an unnecessary expense to the Proprietary, and entail a troublesome task upon the reader. It may suffice to say, that the general Rules for the conduct of such Societies in all their sub-divisions of Management, Correspondence, and Finance, have been adhered to. Probably the only essential particular in which the Unions of Germany differ from that of England, is the manner in which a selection is made of the Pictures which are to form the Prizes. In England, this important point

is left to the discretion of the fortunate holder of a Prize Ticket, giving him a latitude of choice from among a number of productions, *good and bad*; whereas in the German Associations one principal object is kept in view—that of improving the public taste, by delegating to a competent Committee of known judgment, Twelve in number, the choice and selection of such Pictures as will form the Prizes. A double advantage is thus gained; no encouragement is given to inferior productions of Art, nor is the Public taste left without some guidance by Professors of acknowledged experience in Art.

It is further intended, that if the amount of the Subscriptions in England shall realize the expectations of the Council, a Gallery shall be opened for Two Months in each year in London, for the reception and exhibition of all the Pictures that will form the Prizes at the next ensuing distribution, to which exhibition free access will be given to every holder of a Ticket.

A liberal proportion of Tickets will be appropriated by the Councils of the several Unions for disposal to the British Subscribers, each of which Tickets will bear the Signature of the accredited officers of the Institutions, and must be countersigned by Mr. Hering as their Agent.

The price of the Subscription Tickets in either of the Associations, viz., Berlin, Düsseldorf, or Dresden, will be 20s. each; which sum will cover every expense of postage, duty, freight, and delivery at the Repository in Newman-street, of the Prizes that may be awarded, and also of the Engraving which will be presented to the holder of each Ticket.

The price of each Ticket to be paid in advance, for which a Receipt Ticket will be given, which Ticket will entitle the holder to all the advantages of the Institution to which it appertains.

For the convenience of Subscribers residing at a distance, Share Tickets will be forwarded in course of post, upon the receipt of a cash order, payable in London, or a Post-office order, or a crossed cheque.

Each Subscriber will be entitled to one Copy of the Annual Presentation Engraving, from the date, and during the continuance, of his Subscription, which will be delivered within from One to Three Months after the close of every drawing; and a Subscriber for more than one Share will be entitled to on Proof, and also be at liberty to purchase at the rate of 20s. each, an impression of any one of the Engravings that have been already distributed.

One Month's Notice will be given in the daily journals of the day of appropriation of the Prizes in each Union; and it is Mr. Hering's intention to proceed to Germany, in order to be present at the Drawing, and to represent the interest of every one who has, through his agency, subscribed to these Institutions.

A similar notice will also be given of the latest day on which Subscriptions can be received, after which the Lists for that year will be closed, and the numbers forwarded to various Committees of Management.

Mr. Hering begs most respectfully to assure all who may honour him with their names as Subscribers to the German Art-Unions, that the utmost endeavours shall be exerted by him to protect their interests, and to prove himself worthy of their confidence.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 42.

LONDON: JULY 1, 1842.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE TO ALL PARTS OF THE UNITED KINGDOM.

**THE EIGHTH ANNUAL EXHIBITION** of the NEW SOCIETY of PAINTERS in WATER COLOURS is NOW OPEN, at their Gallery, Fifty-three, Pall-mall. Admission, 1s.; Catalogue, 6d.  
JAMES FAHEY, Sec.

**BRITISH INSTITUTION, PALL MALL.**  
**THE GALLERY**, with the WORKS of the late Sir DAVID WILKIE, R.A., and a Selection of Pictures of the Ancient Masters, is Open Daily, from Ten in the Morning until Six in the Evening.—Admission, 1s.; Catalogues, 1s.  
WILLIAM BARNARD, Secretary.

**THE THIRTY-EIGHTH ANNUAL EXHIBITION** of the SOCIETY of PAINTERS in WATER COLOURS, at their Gallery, Pall-mall East, WILL CLOSE on SATURDAY, 9th instant.—Open each day from Nine till Dusk.—Admittance, One Shilling. Catalogue, Sixpence.

**MANCHESTER ASSOCIATION FOR THE PATRONAGE OF THE FINE ARTS.**—The Committee will be open, up to the end of September next, to the offer of an UNPUBLISHED ENGRAVING, for distribution amongst the Subscribers of the present year; size not to be less than 15 inches by 12 inches.—Applications in the meantime, and up to the said period, stating the lowest price per 100 for plain and proof impressions, to be addressed to the Honorary Secretary, at the Royal Institution, Manchester, to whom specimens, complete or in progress, may also be sent.  
T. W. WINSTANLEY, Hon. Sec.

**LIVERPOOL EXHIBITION.**  
**THE EXHIBITION of the WORKS of MODERN ARTISTS** will take place in AUGUST next. All Works of Art sent for Exhibition to arrive at the Gallery not later than the 7th of August. No carriage expenses will be paid by the Academy except on works from those artists to whom the Exhibition circular has previously been forwarded.  
MR. GREEN, 14, Charles-street, Middlesex Hospital, is the Academy's Agent for the transmission of Pictures.  
JAMES F. EOLINGTON, Exhibition Rooms, Church-street, Liverpool, Secretary to the Academy.

**WEST OF SCOTLAND ACADEMY OF THE FINE ARTS.**  
**THE SECOND ANNUAL EXHIBITION** of the WEST OF SCOTLAND ACADEMY for the WORKS of LIVING ARTISTS, will open in SEPTEMBER next, in the DILKATTANI BUILDINGS, 51, Buchanan-street.  
No carriage or expenses will be paid by the Academy except on works sent by those artists to whom the Exhibition circular has previously been forwarded.  
The 17th of September the last day for receiving Pictures.  
By order of the Council,  
J. A. HUTCHISON, Secretary.  
Glasgow, July 1, 1842, Committee Rooms, 68, St. Vincent-street.

**TO ARCHITECTS, ENGINEERS, AND ARTISTS.**—Mr. J. SMITH (late of the Royal Polytechnic Institution), Professor of and Lecturer on Perspective, is fully prepared to give PRIVATE LECTURES and PRACTICAL LESSONS on Plan Drawing, Isometric, Military and Common Perspective, as applicable in the Architectural, Engineering, and Fine Arts; and which he will illustrate by a series of original and beautiful Models.  
All applications to be forwarded to 50, Mortimer-street, Cavendish-square.

**THE ART-UNIONS OF GERMANY.**—UNDER THE PATRONAGE OF His Royal Highness the Duke of SUSSEX, His Royal Highness the Duke of CAMBRIDGE, And the Nobility.

BERLIN, DÜSSELDORF, and DRESDEN.  
The price of the Subscription Tickets in either of the Associations, viz., Berlin, Düsseldorf, and Dresden, will be 20s. each, which will entitle the holder to one copy of the annual presentation Engraving, which will be delivered immediately after the drawings, free of duty and carriage, and also a chance of obtaining a Work of Art, value of from £10 to £300.

The Engravings, which from the first establishment of these Societies have formed the presentation Prints to each Subscriber, and which are executed in the very first style of Art, are exhibited daily at the German Repository, 9, Newman-street, between the hours of Two and Six.

A Prospectus detailing the plans of management of the German Art-Union can be obtained or forwarded free, upon application to HENRY HERRING, Sec., 9, Newman-street, Oxford-street, London.

**WEST OF ENGLAND ART-UNION.**—The WEST OF ENGLAND ART-UNION is established to promote the interests of Art in the Western Counties.

The following is an outline of the plan upon which it is proposed that the Society shall be conducted. It will be found to embrace many improvements, which the experience of other Art-Unions has suggested as desirable.

A Subscription of Half-a-Guinea to constitute Membership.—A part of the fund raised to be expended in the production of an Engraving, to one copy of which every Subscriber shall be entitled for each half-guinea subscribed.

The surplus fund, after paying the necessary expenses of the Society, shall be divided into Prizes of various amounts, which will be distributed by lot among the Subscribers; so that each Subscriber, besides receiving a Print fully equal in value to the amount of his subscription, will also have a chance of obtaining a valuable Work of Art as a prize.

The winners of prizes will be allowed to select one or more Works of Art, to the amount of their prize, from either of the Exhibitions in Plymouth or Exeter, or from the Polytechnic Exhibition at Falmouth; or they will be allowed to have Portraits of any members of their families, painted by an artist chosen by themselves.

It is believed that this latter regulation will be found very acceptable to many prizeholders, and will afford encouragement to a class of artists who have hitherto been very much excluded from the benefits of Art-Unions.

The drawing for 1842 will take place at a Public Meeting, to be held in Plymouth, the last week in August.

To obviate the objection so frequently expressed by Subscribers to Art-Unions, of having to wait many months after the distribution of prizes, before the Print is delivered, arrangements have been made with Mr. Ryall, the eminent engraver, to complete an engraving in his best style, from a very beautiful picture by Mr. A. Penley, entitled 'The Spring of the Valley,' the Prints to be ready for distribution to the Subscribers within one month of the time that the prizes are drawn. It is believed that this Print will be one of the most attractive that has ever yet been issued by any Art-Union. The impressions are to be delivered strictly in the order of subscription.

Subscribers' names received at Messrs. Ackermann and Co., 96, Strand; Messrs. Reeves and Sons, 150, Cheap-side; Messrs. G. Rowney and Co., Rathbone-place; Mr. E. Ramsden, 12, Finch-lane, Cornhill.

**ROYAL INSTITUTE of BRITISH ARCHITECTS.**

16, Lower Grosvenor-street.  
The Medals of the Institute will be awarded next year to the Authors of the best Essays on the following subjects:—

1. Are synchronism and uniformity of style essential to beauty and propriety in Architecture?
2. On the principles of Framing which directed the Gothic Architects in the construction of Roofs of great span to cover large Halls, such as Westminster, Croydon, Eltham, Hampton Court, and those of some of the Colleges of Oxford and Cambridge, accompanied by diagrams, particularly showing the construction.

The Soane Medallion will be awarded for the best design in illustration of the description of "A Princely Palace," by Lord Bacon, in his Essay of Building, containing all the parts specified therein.

The competition is not confined to members of the Institute.

Each Essay and set of Drawings is to be delivered at the Rooms of the Institute, on or before the 31st of December, 1842, by Twelve o'clock at noon.

Further information may be had on application to the Secretaries.

**ROYAL POLYTECHNIC INSTITUTION.**

—The NEW ROOMS, which extend to Cavendish-square, are now OPEN, and the Bude Light most successfully introduced. During the Midsummer Holidays the Morning and Evening Public Lectures of Dr. Ryan, Professor Bachhoffer, and the other Lecturers, will be particularly adapted for the Youthful Visitors, and the means will be used by which amusement and instruction can be conveyed in all the useful branches of practical science. The weekly list of lectures is suspended in the hall. On Mondays, Wednesdays, and Fridays, at Twelve o'clock, a Lecture on Galvanism; on the alternate days, the Orrery. The Colossal Electrical Machine, Dissolving Views, Diving-bell and Diver, &c. Admission, One Shilling; Schools half-price.

Just published, in 4to., price £2 2s., in French boards, and on royal paper; with proof impressions of the Plates, price £4 4s., half morocco, gilt tops,

**DISCOURSES delivered to the STUDENTS** of the ROYAL ACADEMY, by Sir JOSHUA REYNOLDS. Illustrated by Explanatory Notes, and Twelve Plates. By JOHN BURNET, F.R.S., Author of "Hints on Painting," in 4to., price £4 10s.

James Carpenter, Old Bond-street.

Published in 4to., Price £4 10s. in French Boards; and on Royal Paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, Price £7 7s.

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Students in Art in the New Edition of the Encyclopædia Britannica—See the article on Drawing.

James Carpenter, Bond-street.

## ASSOCIATION FOR THE PROMOTION OF THE FINE ARTS IN SCOTLAND.

AT the EIGHTH ANNUAL GENERAL MEETING of the ASSOCIATION for the PROMOTION of the FINE ARTS in SCOTLAND, held in the Assembly Rooms, George-street, Edinburgh, May 28, 1842, on the motion of Sir William Newbigging, Andrew Rutherford, Esq., M.P., was called to the Chair.

The Report of the Committee of Management having been read by the Secretary, the following Resolutions were thereupon moved, and unanimously adopted:—

Moved by Robert Whigham, Esq., Sheriff of Perthshire; seconded by Sir George M'Pherson Grant, Bart.,—

1. That the Report now read be approved of, and that this Meeting, after an experience of eight years of the practical operation of the system upon which the Association is founded, are fully convinced that the constitution which was originally adopted, is the best which could have been chosen, combining, as far as it is possible, in any society of the kind, the promotion of the Fine Arts in Scotland, with an anxious attention to the interests of Art generally.

Moved by Sir Gilbert Stirling, Bart.; seconded by E. D. Sandford, Esq., Advocate,—

2. That in pursuance of the plan of annually engraving a Painting by a Scottish Artist, and with the view of securing the delivery of each Engraving, within the annual period of the subscriptions out of which its cost is defrayed, the Committee of Management for the year 1842-43, be authorized to make the necessary arrangements to obtain a Line Engraving of Mr. R. S. Lauder's beautiful picture of the 'Glee Maiden,' to be distributed among the Members for the year 1843-44.

Moved by H. Glassford Bell, Esq., Advocate; seconded by Archibald Swinton, Esq., Advocate,—

3. That the thanks of the Meeting be given to the Committee of Management for the year 1841-42, for the able and judicious manner in which they have discharged the duties with which they were entrusted; and that thanks be also given to the various Honorary Secretaries in Scotland, England, Ireland, and foreign countries, to whose spirited and patriotic exertions the Association greatly owes its continued prosperity.

Moved by Sir William Drysdale; seconded by John Borthwick, Esq., of Crookston,—

4. That the following gentlemen be appointed the Committee of Management for the year 1842-43, viz.:—

The Right Hon. the Earl of Stair.  
The Hon. Lord Meadowbank.  
The Right Hon. Sir George Warrender, Bart.  
Sir Gilbert Stirling, Bart.  
The Hon. and Reverend Grantham York.  
Professor Wilson.

William Murray, Esq., of Henderland.  
Thomas Maitland, Esq., yr., of Dundrennan.  
Professor Trail.

E. D. Sandford, Esq.  
David MacLagan, Esq., M.D.  
John T. Gordon, Esq., Advocate.  
Arthur Forbes, Esq.

Mark Napier, Esq., Advocate.  
J. A. Bell, Esq., Secretary and Treasurer.  
Sir William Forbes, J. Hunter & Co., Bankers.

Moved by William Stewart, Esq., of Glenormiston,—

5. That the thanks of the Meeting be given to Mr. Rutherford for his conduct in the Chair.

Now ready,

**DICKINSON'S RUSTIC FIGURES**, chiefly executed with the Brush in Litho-Tint.

These are the Author's Fac-similes of his Sketches. There are 24 Plates, printed on imperial 4to., bound in cloth, price 21s.

Dickinson and Son, 114, New Bond-street.

## SCOTTISH UNION FIRE AND LIFE INSURANCE COMPANY.

Instituted 1824, and incorporated by Royal Charter. LONDON BOARD.

Charles Balfour, Esq.	Robert Murray, Esq.
J. Deans Campbell, Esq.	R. Oliverson, Esq.
J. Gordon Duff, Esq.	Divie Robertson, Esq.
Robert Gillespie, Esq.	H. F. Sandeman, Esq.
James Gooden, Esq.	John Small, Esq.
John Kingston, Esq.	Daniel Stoddart, Esq.

SUTHERLAND MACKENZIE, Esq., Manager.

London Offices, 449, West Strand, and 78, King William-street, City.

## LIFE DEPARTMENT.

**THE additions made to the LIFE POLICIES** granted by this Corporation for the last seven years vary from 41 to 65 per cent. on the premiums paid, and average 14 per cent. on the sums assured—a result, it is believed, far more favourable to the assured than any other Company has hitherto accomplished, when the low rates of premiums charged by this Corporation are taken into consideration.

The next division of the profits will take place in December 1846, being an interval of five years, and persons entering before the 1st of August next will enjoy one year's additional rating, and rank at next division of profits for five complete years.

Forms of proposals may be had at the offices, 449, West Strand, and 78, King William-street, City.

F. G. SMITH, Secretary.

Valuable Pictures by Sebastian del Piombo, Titian, and Poussin, Berchem, Vandereuer, Greuze, and other distinguished Artists, the Property of a Nobleman and Connoisseur.

**MR. PHILLIPS** begs leave to announce that he will sell by AUCTION, at his GREAT ROOMS, NEW BOND-STREET, on THURSDAY, JULY 7th, at ONE precisely, the VALUABLE ANCIENT PICTURES of the Italian and Flemish Schools, in particular a work of Sebastian del Piombo, representing a theological disputation between Martin Luther and Melancthon, in the presence of a Cardinal of the period, and his secretary, who is standing by his side: the manner in which the subject is treated, and the historical recollections attached to those distinguished reformers, render it a most interesting picture. Also, a picture of 'Christ Mocked,' by Titian; 'St. John,' by Bronzino; 'Portrait of Bianca Capella,' by Allor; two 'Cabinet Landscapes,' by Gaspar Poussin; a 'Landscape and Cattle,' of high finish, by Berchem; a 'Moonlight,' by Vandereuer, of high quality; a whole-length Portrait of the 'Duke of Monmouth,' by Sir P. Lely; a subject, 'Endymion and Diana,' by Greuze, of beautiful execution; and other works of great interest by

F. Veronese	Swanevelt	Gardi
Murillo	De Witte	Boucher
Tintoretto	Teniers	Wilson
C. Barratti	P. Neefs	Morland
Cuyt	Canaletto	&c.

May be viewed two days preceding the sale, and Catalogues had at Mr. Phillips's rooms and office.

**TWO LETTERS to an AMATEUR or YOUNG ARTIST, on PICTORIAL COLOUR and EFFECT**, and the means to be employed for their production. By ROBERT HENDRIS, Esq., jun. Price 5s.

Published and sold by Simpkin, Marshall, and Co., Stationers' Hall-court; and T. Miller, Artists' Colourman, 56, Long-acre.

Just published, imperial 8vo., handsomely bound, 24s.

**THE USE of a BOX of COLOURS.** By

HARRY WILLSON, author of "Fugitive Sketches in Rome, Venice," &c. &c. Being Practical Instruction on Composition, Light and Shade, and Painting. Illustrated with beautiful Patent Lithotint examples, plain and coloured. Also a Box of general Landscape Tints have been prepared to accompany the same.

London: C. Smith, 34, Marylebone Quadrant; Tilt and Bogue, Fleet-street; and all other Publishers, Stationers, &c.

Just published, in royal 4to., price £1 5s. bound,

**RUSTIC ARCHITECTURE—**

PICTURESQUE DECORATIONS OF RURAL BUILDINGS in the USE of ROUGH WOOD, THATCH, &c. Illustrated by Forty-two Drawings; consisting of Plans, Elevations, Sections, and Perspective Views; the Doors, Windows, Chimney Shafts, &c., drawn geometrically to a large scale; with descriptions and estimated costs. By T. J. RICAUTI, Architect.

"We have repeatedly and strongly recommended this elegant and useful work, and can safely say, that we think no gentleman who purchases it will be disappointed."—London's Gardener's Magazine.

James Carpenter, Old Bond-street.

**UNDER THE SUPERINTENDENCE OF THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE.**

To be continued every alternate month, the Second Number of

**A SERIES of DIAGRAMS**, illustrative of the Principles of Mechanical and Natural Philosophy, and their Practical Application. Drawn on Stone and printed in Colours.

\*Each Number will contain Three Plates (264 inches by 19), and the Series will commence with Mechanics, which will be comprised in Seven Numbers, No. I.—THE LEVER. No. II.—WHEEL and AXLE. Chapman and Hall, 186, Strand.

Just published,

**THE BRITISH and FOREIGN REVIEW**, No. XXVI.

1. Autobiography of Henry Steffens.
2. The Church and the State.
3. Borrow's Gipsies in Spain.
4. Pope Boniface VIII.
5. The Quarantine System.
6. The Sephardim, or Jews in Spain.
7. Lady Athol's. — Books of Travels.
8. The Speeches of Daniel Webster.

London: R. and E. Taylor, Red Lion-court, Fleet-street.

Now ready, for the Sketching Season,

**SHADE'S NEW PATENT PERSPECTIVE DELINEATOR and SKETCHING APPARATUS**; by means of which Landscapes and all other objects can be drawn in true Perspective, with the utmost facility, without failure, and with the same ease as writing a letter.

Also, **SHADE'S PATENT METALLIC SKETCHING SEATS**, combining the usual strength with a tenth part only of their bulk and weight.

Sold at SMITH and WARNE'S, ARTISTS' REPOSITORY, 34, MARYLEBONE-STREET, QUADRANT, LONDON.

**THE PEOPLE'S EDITION of the WORKS of BURNS.** Embellished by no less than Thirty-three fine Plates (after Wright and other Artists), illustrative of the principal subjects of his Poems. With a new Life of Burns, and Explanatory Notes preceding each Poem, by ALLAN CUNNINGHAM. In one handsome volume, super-royal 8vo., cloth extra, price 18s.

This will be found the most complete and best edition of the Works of Burns yet offered to the public, and the only one edited by and published under the superintendence of Mr. Cunningham.

London: George Virtue, and sold by all Booksellers.

\*Be careful to order the "People's Edition."

**NOTICE.—PATENT RELIEVO LEATHER HANGINGS and CARTON-TOILE OFFICE.** 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foilage, Patteras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c., &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufacture.

L. COMETTI and CO., 10, Rue Basse du Rempart, Paris.—May 25, 1842.

### WINSOR AND NEWTON'S COMPRESSIBLE METALLIC TUBES TO SUPERSEDE BLADDER COLOURS FOR OIL PAINTING.

**W** and N.'s Compressible Metallic Tubes are made on an entirely novel plan, of a series of layers or rolls of extremely thin metal; they are extremely light, yet have great strength and toughness, so that they are not liable to split and leak, as is the case with all Tubes made on any other plan.

By a process peculiarly original, W. and N. have every Tube with a thin membranous substance, and thereby prevent the very injurious effect occasioned to colours which are long kept in direct contact with a metallic surface. The most delicate colour is thus effectually protected from any chemical action that might otherwise cause its deterioration.

The oil colour is ejected from these Tubes in a manner similar to that in which colour is expressed from the common bladder colour, by squeezing or compressing between the thumb and finger, so that the colour is always kept gathered up in a compact state; the empty part of the Tube remaining closed or compressed behind it.

The bottom of the Compressible Tube is cemented in a manner entirely new, which gives a security to the Tube not before obtained, and renders it impossible for the contents to be forced out through accident or imperfect closing.

W. and N. beg to apprise their Patrons that their new manufacture of Compressible Metallic Tubes is entirely original and, excepting the tubular form (which has been generally adapted in various contrivances for preserving oil colours for the last fifty years), their Tubes are not similar in their manufacture to any of the numerous other tubes applied to the preservation of oil colours now in existence.

They are light and portable, and may be packed with safety among linen or paper. They preserve oil colour for any length of time, are peculiarly adapted for expensive colours, and offer the most perfect mode of sending oil colours to warm climates.

*The advantages of these Tubes may be thus enumerated*

The preservation of the colour free from skins. The cleanliness with which the art of painting may be pursued, either by artist or amateur.

The readiness with which the colour may be pressed from the tube without the necessity of laying down the palette and brushes.

Freedom from smell, and danger of breaking or bursting.

Economy in use, and moderate price.

TO BE HAD, WHOLESALE AND RETAIL, AT  
**WINSOR AND NEWTON'S ARTISTS' COLOUR MANUFACTORY,**  
38, RATHBONE PLACE, LONDON.  
Price 6d. each, filled with colour (Cobalt, Madder, Lakes, &c., extra as usual).

ENCAUSTIC PAINTING.  
HISTORY AND PROCESS.

THERE is no subject upon which our information is, probably, more uncertain than on the rise and progress of the Fine Arts in Greece. The general impression which the Homeric pictures of society leave on the mind of the reader is, that the useful and the decorative Arts were so far advanced as to enable the wealthy to live not only in plenty but in splendour. The delicious gardens of Alcinoüs, the magnificence of his palace, the introduction by the Phenicians of ivory, purple, and incense from Arabia, the rich presents made to Penelope by her suitors, the voluptuous baths of Circe, chariots of war—especially that of Priam—and the care evidently evinced in dress, all argue a state not merely of local, but of general cultivation and refinement. But apart from the much debated question, as to the origin of the Iliad and Odyssey, age, nay very existence, of Homer, which Vico, Wolf, and Heyne, have argued with such profound learning and wonderful talent, it is to be considered that these views of the social state may be drawn, rather by the force and skill of the poet's imagination, than by a mind conversant with the existing features and relations of life. In the early period of society, memory and imagination are more cultivated than reason or judgment, the known is exaggerated, the unknown magnified; men are, at this period, "bodies without reflection, all feeling for peculiarities of character, all imagination to seize and enlarge them, all invention to refer them to classes which the imagination has created;" the poetic faculty is more general, less fettered, and assumes the state it depicts, by the comparison of the associations and characteristics of the present with those of an age preceding. Every account of the origin and progress of nations has been hitherto essentially mythic; either the god has

descended to earth, or the first instructor has been considered as divine; for as speech and memory precede the means of narration by written or arbitrary signs, the fact is embellished by fiction, and tradition is recorded as history. If correctness of detail, as regards the advancement of Art, might be expected, it would surely be so from the Greeks; for their literature was extensive, national, and original; they advanced the Arts, they borrowed or invented, and combining taste with judgment, beauty of form with the impression of duration, they made them at once characteristic of their genius, and the necessary guides, the very discipline of our own. Yet of this intellectual development the details must be traced from the fragments which time, and far more the passions of man have spared, or from the compilations of Greek and Latin writers of comparatively modern date. The cause of this is at once seen; education was for the most part oral, and there was no press. The Greek lived under the influence of an all pervading, all enlarging public life, by which the knowledge of one became the property of all; drawing and painting were regularly comprehended within the circle of a liberal education, and together with other branches of instruction, they formed the class of the *ἐγκύκλια παιδεία*.

Thus, works of theoretical or technical detail were less requisite or became the property of the rich; their number, originally limited, could hardly escape the destruction which ensued upon the subjugation of the land, even if we exclude from our consideration, not only the lapse of time, but the perishable nature of the materials on which they were written. Proof, or the evidence, therefore, of any such process as that which now forms the subject of inquiry, must rest greatly upon references found in one author to the works of another, the validity of these depending upon their amount, copiousness, and incidental character. Thus, error here will be—

"velut stylis, ubi passim  
Palantes error certo de tramite pellit,  
Ille sinistrorsum, hic dextrorsum abit, unus utriusque  
Error, sed variis illudit partibus."

Encaustic is derived from the Greek *Εγκαίνω*, and is applied as a term in painting to such works as were chiefly executed through a wax medium, and in which, by heating or burning, the colours were fixed in their original splendour. But the use of this term seems to have been considered as of doubtful correctness; as Pliny, speaking of the artist Nicias, says, "Nicias scripsit se inussisse: *tali enim usus est verbo*." It is evidently an art of great antiquity, and was employed for tabular pictures and for mural decoration. We have evidence of many celebrated painters by whom it was practised, Arcesilaus, Polygnotus, Apelles, and Lala Cyzicena, who was eminent for her portraits of women executed on ivory with the *cestrum*. Notices of its general use are to be found in authors, from the earliest period to the reign of Justinian. This the reader may verify by reference to the passages quoted by J. C. "Bulengerus de Pictura," &c., in the collections printed by Gronovius; or in those works which will be subsequently mentioned in connexion with this inquiry. Pliny and Vitruvius are the authors upon whom we must principally rely; and guided by them, I shall consider Encaustic as used for tabular pictures, as employed for mural decoration, and narrate in both cases the attempts which have been made to recover the ancient process. In book 35, cap. 11, s. 41, Pliny says, "Encausto pingendi duo fuisse antiquitus genera constat, cera, et in ebore, cestro id est veruculo, donec classes pingi cœperent. Hoc tertium accessit, resolutis igni ceris penicillo utendi,"—from this modern writers have chiefly derived their information, to this they all refer; and hence we shall consider four modes—encaustic on the tablet with wax, on ivory, ships, and on walls. Of this, as applied to ships, the process may be at once described. It may not have been unlike what is called breaming, for brenning or burn-

ing in, when resin, tallow, tar, and brimstone, are melted together and put on while the ship's sides are made hot by a fire of reeds. It was used also for decoration, as we find in Ovid—

"Et picta coloribus natis  
Cœlestam matrem concava puppis habet."  
Fast. Book 4, 276.

In this manner the various forms of gods, animals, plants, &c., were usually described, and these were often added as ornaments to other parts also of the ships, as plainly appears from the treatise by Lazarus Bayfius de Re Navali; which the reader will find among the collections of Gronovius.

The first mode of tabular encaustic appears to have been no more than a deep drawing upon a coloured ground of wax, by the removal of which where the outline was, by means of a stylus (*cestrum*, *veruculum*), the bright or polished surface of the marble, ivory, or wood, on which the wax was spread, became visible. The second was a kind called "Stiello," which consisted in engraving by means of a sharp heated pointing iron upon ivory tablets, and likewise by means of the broad part of the stylus of filling up the incisions with coloured wax, which was then apparently fixed more carefully by heat. The third, if not the same, was greatly similar to the modern process, inasmuch as upon a waxed ground on which the drawing was sketched by the stylus, the wax colours were laid on by means of a brush or hair pencil, and then blended more evenly and intimately together by the stylus, and finally fixed by the heater (*cauterium*), passed before the surface. In this respect another method may have prevailed: either the wax thoroughly blended with earths, was divided by the heated stylus, softened; arranged upon the ground of the picture, according as it was requisite for local colour, half tints, or shadow, and then toned more carefully and artistically by means of the brush; or else the wax was dissolved, the colours mixed therewith, and then laid upon a prepared coloured wax ground, either immediately from the melting pot, or through the employment of a volatile oil by the brush, and to this, after a superficial coating had been given, heat was applied. This might, therefore, be strictly considered as painting with the brush; which certainly was not solely used for ship decoration, and in which the stylus, so variously described, seems also to have been employed. Ship painting was a custom of greater antiquity than Pliny intimates; or why has Homer used, as regards the Greek vessels, the terms *μυλωνάρης* and *φοινικονάρης*, and the discussion on the term, *ράβδος* or *ραβδιον*, seems after having served many purposes, to be finally admitted to be the brush. Recent German writers are of opinion that with respect to the third method, it could hardly be employed for mural decoration, or even for tabular paintings requiring a careful and delicate treatment. In reply to this, an analogy has been attempted between this stylus-wax, and crayon painting; but the stylus is opposed to a light, free artistic use, yet, although this is the case, and therefore unsuited for easel painting, it was, according to many, nevertheless, employed for wood and marble furniture and parts of architectural decoration, though for this latter purpose, as well as for statues, a resinous wax-coloured coating was used. I trust, however, to be enabled to show that while the stylus was employed in easel-pictures, the process of mural decoration was conducted in a different manner. The Abbé Zumbo, and a Spanish artist, Palomino, were among the first who sought to restore this ancient art. But Zumbo, who is reputed to have discovered the process, was a man of a morose, jealous, and frivolously sensitive disposition, who avoided society, fettered his heart by the selfishness of its own pulsations, and occupied his time in the composition of subjects, the reflected image of his own semi-crazed imagination. He refused his secret to the world, but betrayed it to a friend,

whose genius limited his powers to the construction of anatomical figures. Palomino added much to knowledge in his treatise "dell' Arte della Pittura;" he was followed by the erudite Louis de Montjosieu (Demotiocius) in his "Gallus Romæ hospes," 4to, 1585, partly reprinted by Gronovius, but complete; of the greatest rarity, by Le P. Hardouin in his commentaries upon Pliny, 1723; by Bachelier in the "Memoirs of the French Academy;" and Charles Nic. Cochin with Jer. Ch. Bellicard, in 1754, "Réflexions sur la peinture des Anciens," &c., chiefly with reference to Herculaneum. But it is to Count Caylus, and to the Abbé Vincenzo Requeno that we are chiefly indebted for such approach to certainty of information as we may possess; and it is upon their theory, and the experiments they instituted (Montabert and Fernbach, perhaps, excepted), that all modern methods have been founded. Endowed with a well educated and intelligent mind, and to the last hour of his life indefatigable in the pursuit of a favourite subject of inquiry—the "Arts of Ancient Greece," Count Caylus, in addition, possessed the means of instituting an extensive series of experiments, and of obtaining the co-operation of the most eminent continental scholars and artists of his time. Of prior methods, Bachelier's was considered, by the Académie des Sciences, as the most worthy of attention. It consisted in dissolving the wax, and reducing it to a soft soap by means of salts of tartar. An account of this the reader will find in an elaborate article in the "Dictionnaire Encyclopédique," article, "Encaustique." Self confidence is the basis of success; a feature not deficient in the character of Caylus. He obtained the assistance of M. Majault, an eminent chemist of Paris, and on the 25th July, 1755, he read his first "Mémorial on Encaustic Painting" to the French Academy. It is tedious to trace the narrative of unsuccessful effort, but progress of any kind, to be certain, must be gradual; of human acquisitions much may be the gift of circumstance, but more is obtained by the silent experience of time; we possess, and we extend our possessions, we establish principles and verify details, learn

"What reinforcement we may gain from hope,  
If not, what resolution from despair."

And thus experiments, properly conducted, are not only valuable, as regards the specific result at which they aim, but with respect to the collateral truths and deductions which they develop or maintain. The particular object of his attempts must, however, be strictly kept in view. It was not to discover a method of encaustic painting, but the method of the Greeks. To employ wax as a vehicle for colour; oil of turpentine was suggested as a dissolvent; but as Pliny is silent on this, it was not reasonable to assume it to be the means adopted; and as he mentions wax, colour, and heat alone, any assimilation to the ancient mode must, of necessity, depend on or bear strict reference to this description. Now, to do this with exactitude, the colours were to be blended with the wax and kept sufficiently fluid for the brush. However simple their apparent fusion by heat, yet the difficulty of doing this without burning, and of maintaining them always prepared for use in works of an extensive nature, induced Count Caylus to try warm water for this purpose. A tin vessel was made, the lower part filled with boiling water, and to this a piece of grained glass was attached, on which the colours were mixed by a heated molette of marble. Thus prepared, they were removed in a fluid state and placed on plates to dry. To maintain them sufficiently fluid, a tin stand was made, the upper part of which held a series of glass cups immersed in hot water. A thick piece of glass in a frame similarly heated served for the palette and the picture; the panel being first thoroughly saturated with a coating of wax, was suspended in a brass stand, at the back of which hot water as before was placed. A head of Minerva thus painted, by

M. Vien, so far realized expectation, as to induce increased exertion. For the second method, wax prepared as above was employed, as if in distemper painting, either on the bare panel or on a prepared ground of wax, and when the picture was finished, a heater passed before it, the wax was fixed on the panel, and greater brilliancy imparted to the colours. But this process was found to be tedious and difficult, and the result but slightly in advance of the preceding. The third method was conducted on the principle of combining distemper with encaustic. The panel first rubbed over with pure wax, this was worked into the grain by heaters applied to the surface. The colours employed were those used in oil-paintings, but prepared in pure or slight gum water. But not readily adhering to the wax, Spanish chalk or white was lightly spread upon it, and then they were laid on; and the picture finished, heat was variously applied until they were absorbed and fixed, and came out in brilliant tones. This process, the heat excepted, was early adopted by the Egyptians; and Gough, in his "Sepulchral Monuments," mentions a coffin which had been covered with a portrait not very dissimilarly painted. The count's fourth method differed from the preceding but in the place the wax occupies. The picture, painted in water-colours on the panel, was covered over with a coating of wax, which was then fixed by heat. These experiments soon attracted attention; various communications were made to different societies; and Pliny and imagination were alike tortured to ensure success. In 1759, Mr. Josiah Colebrooke read a paper to the Royal Society, by which it appeared that of seven experiments, founded on the third method of Count Caylus, all more or less failed. He recommends the use of mineral and metallic colours, as the acid in many water-colours, when painted on an alkaline ground, as chalk, cimolia, &c., totally changed their shades. Some specimens of the results obtained by Count Caylus's third method were exhibited. It consisted of pictures painted in water-colours upon paper or panels prepared with a ground of Spanish white and fish glue, over this a coating, of three parts white wax and one part white resin melted together, was lightly but evenly spread with a brush; the picture was then placed before the fire until the varnish became entirely absorbed and looked dry, when it was gently rubbed with fine linen cloths. This process was successful, and for some time a fashionable amusement. Such was the state of our information with respect to encaustic painting, until 1787, when the Abbé Don Vincenzo Requeno commenced his pursuits, not only by a diligent collation and examination of former opinions, but by a rigid test of the validity of the methods that had been either before adopted or recommended. As he did more than any by whom he was preceded, and as the history of his opinions and experiments is that of encaustic, I shall endeavour, in so far as space will permit me, to explain them. He follows the statement of Pliny, admits the three methods of encaustic, two of which were practised with the stylus, and one with the brush (Julius Pollux may be also cited as an authority for the first). The difference between the stylus and the brush-encaustic process was this—in the former case the colours were worked by a hot graver, and in the latter they were fixed by heat. The wax used was punice-wax—in point of fact bees-wax bleached and purified; and this opinion will be found zealously maintained by Requeno in his controversy with Signor Lorgna. The colours employed were partly natural and partly artificial; but as upon this point late research has added much to knowledge, I would refer the reader rather to "Stieglitz ueber die Mahlerfarben der Griechen und Römer," and other more extensive German works. The liquefaction of the wax, so as to render it sufficiently fluid as a vehicle, was effected by bitumens, or resinous gums, answering to our oils; this he

supports by Pliny, book 12, cap. 2, and Julius Pollux, book 7, cap. 8. Upon these general views of the encaustic painting of the Greeks, deduced from an extensive survey of ancient and modern criticism, and the opinions of several chemists and eminent artists, Requeno, as Caylus had recommended, conducted his experiments, still limiting himself to the solution of the question—in what consisted the encaustic process of antiquity? Those experiments I now propose to detail.

After various attempts to complete encaustic pictures, by means of bitumens and Greek pitch, combined with wax, he resolved to recommence his experiments with gum mastic; this, in conjunction with wax, being one of the processes by which statues were varnished and preserved by the Greeks. For this purpose five ounces of gum mastic were mixed with two of white wax, and kept in motion over a slow fire until thoroughly dissolved. This mass was then blended with the colours usually employed in oil-painting, and kept in glass cups. The picture was painted on panel or linen as before, and when finished a superficial coating of white wax was laid upon it; heated by a brazier; and finally rubbed with silk or fine linen, until the colours were absorbed, and the surface became hard and polished. Another, and probably more perfect method was the following:—Two parts of white wax and four of Greek pitch were placed in a vessel, and when well dissolved, white lead in proportion was mixed therewith. A panel, well polished and smooth, was covered with this in its most heated state; and when cold, all irregularities on the surface were removed by the spatula. The surface being then polished, the outline is traced either by charcoal or the stylus. The colours are prepared with gum mastic, with which, and water, a kind of water-colour painting is produced, to complete which, a coating of white wax is placed over it; and then subjected to heat by a brazier of live coals.

This is not dissimilar from the third method of Count Caylus, and according to Requeno, the third mentioned by Pliny; the first and second being those referable to the heated stylus. The advantage of this consisting in the duration of the painting, protection from damp and alteration of colour is therefore considered to be the "Tertium accessit, resolutis igni ceris penicillo utendi, quæ pictura in navibus nec sole, nec sale, ventisque corrumpitur." I must here conclude the remarks offered upon encaustic pictures, painted by the brush, and endeavour to explain the method indicated by Pliny under the terms, Cera . . . cestro id est veruculo. It was a mode undoubtedly practised by the Greeks and Romans during the most flourishing period of Art, until the time of Pausias; and difficult as it may be to trace the lost Arts of antiquity, there is a pleasure in noticing the few vestiges which time and neglect have spared. The following appears to have been the process:—Dissolve white wax and gum mastic in equal parts, with this the colours in powder are next mixed in sufficient quantity to absorb the hot wax. A polished board, rubbed with a coating of wax, serves as the ground of the picture; on this the outline is traced. The stylus is made of iron, or of finer metal: on one side sharp and pointed, on the other flat and conical; an ordinary erasing knife will represent it. A brazier is kept at hand to heat them; as they must be of various sizes. The colours should be kept arranged in glasses, as according to Varro, "Pictores loculatas habent arculas in quibus discolores sunt ceræ." With the point of the stylus heated so as to melt, but not to burn the colours, a portion of wax is taken, laid on the ground, and the different tones are formed by blending the colours with the broad conical side of the stylus, taking care to keep it regularly heated. In this manner pictures have been painted by Don Joseph Ferrar. The method upon ivory in ebores, cestro with the heated stylus

has been described; it was chiefly applicable to portraits, or the decorative parts of furniture.

There was also another application of encaustic, which, though not immediately connected with this subject, is too interesting to escape attention. It was as applied to architecture and statuary. That a Polychromic system of external decoration greatly prevailed in Greece there seems reason to believe, although whatever was constructed of Parian or of Pentelic marble, was allowed to preserve its natural appearance: but when works were executed in the grey Eleusinian stone, or in materials of a baser description, that a coating of white stucco was laid on, upon which colour was employed, seems to be now generally admitted. The statues appear to have been covered with a solution of wax and bitumen, or some resinous gum, to which, probably, a small portion of white lead or of marble dust was added, and this in a fluid hot state was applied to the statue until every porous part was saturated. Then equalizing the surface by a brazier, full of coals; and after this for the minuter portions, by the heat of lighted candles; the whole was finally rubbed by fine linen, until it acquired an equal polished coating. This process is asserted to resist heat, wet, and frost; and if we admit colour to have been applied to statuary or architecture, it was equally requisite as in pictures. It is one well deserving of consideration, for in a climate such as this, the effect of which nothing but ebony or granite can resist; in a metropolis of stucco, it may be desirable to ascertain whether modern science could not so improve the practice of antiquity, that we might be spared the annual disfigurement of the streets, if not of the buildings, by the economical, tasteless official process of scraping the architecture, or bedaubing it with whitewash.

The various systems of encaustic as applied to ships, pictures, and statues, being now considered, I shall attempt to trace it as applied to mural decoration. Count Caylus, and the Abbé de la Nauze, are of opinion that the Greeks painted on wood, linen, vellum, stone: and on walls upon the wet mortar, with colours &c., *prepared exactly as at the present day*; but this at best is an extremely doubtful fact, the Count cites no authority, and the inference to be derived from the statement of the Abbé, as regards the works of Pantenus and Ludius, is rather that the former were distemper paintings intensely varnished; and the latter finished by the encaustic process. Count Caylus, indeed, admits that distemper was not only the first known, but the most practised process, and the forerunner of the encaustic; the discovery of fresco, it appears to me, would result, though research does not sanction the statements of its extensive application. With regard to encaustic, for the purpose of mural decoration, it will be sufficient to give the method first employed by Ludius in the time of Augustus, and a slight outline of its prevailing use until the discovery of oil-painting, and of the recent attempts at Munich, for its restoration as a branch of monumental Art. Ludius discarded the use of the resins and bitumens of the Greeks, and adopted animal glue; and this mixed with wax, together with chalk, formed a stucco not dissimilar to that in ancient frescoes and pictures of the eleventh and twelfth centuries; of which, as I have stated, Gough mentions even the employment upon a coffin. This process of Ludius is thus given by Requeno:—When the colours are prepared, you paint as in distemper, and the encaustic completion is thus conducted. White wax and a little oil are melted together in an earthen vessel; with this the painted ground is covered, the heater is next applied, commencing from the top, this coating becomes in part absorbed, and the surface is finished off, by the application of less heat, as by candles, and then by gentle friction until the whole space is even, firm, and polished. This is stated to be in conformity with Pliny and Vitruvius, and to be the process

mentioned by Seneca, Boethius, Procopius, and the anonymous author of the *Hortus Sanitatis*; and from them and others its employment may be traced to A.D. 1500. And the period indicated was singularly favourable for its introduction and continuance. The luxury of the Romans led to the decoration of their vast palaces, villas, and public edifices; and the taste of the capital soon became the prevailing ambition of the province. Christianity employed mural decoration in symbolic representation; the Goth was not insensible to the claims of Art, Theodoric advanced what Justinian still patronized but debased. But it was Charlemagne who most promoted it; whether this arose from ambition or religion, it is useless to discuss; we too frequently ascribe to others the motives which are our own, and write the history of the past, not from facts, but our persuasions. His will became the zeal of the clergy; the opinion that churches should be decorated throughout was adopted: and what at first was munificence became pety. But the system was not solely encaustic; mosaic, distemper highly varnished (an imperfect method of encaustic), and fresco, were employed for this purpose. Fresco and encaustic were at times used in the same edifice: fresco prevailed in the ninth, and encaustic was disused about the tenth century. In the eleventh century, we with difficulty observe the predominance of the old, or the adoption of the new process of oil-painting. This might be introduced by Van Eyck, but various processes prevailed; and according to an excellent recent author, those of Guido de Sienna, Cimabue, and Margaritone, were similar to those of Theophilus and of Eusebius. From the twelfth to the sixteenth century the history of monumental painting is the triumph of fresco. The restoration of this Art by the abilities of Cornelius, Overbeck, and Schnorr; the extensive works commenced and continued under the patronage of the King of Bavaria, very naturally led to the reconsideration of that sister branch which was so long dominant in Greece, had been so extensively employed at Rome, and unto so late a period of the Christian era. It is ever thus with the mind, we cultivate, cherish, and neglect, and return to that which we have neglected. Novelty consists less in the invention of that which is new, than in the re-production of the forms and opinions of the past. The "Inquiries" of Requeno, 1787, were continued by Walter, Benjamin Calau, Roux, and Doctor Geiger, by Grund in his "*Malerei der Griechen*," 1810; Leuch, and Field in his "*Chromatographie*," 1836; and more particularly by M. P. de Montabert, "*Traité complet de la Peinture*," Paris, 9 tomes, 8vo., 1829. This work is written less with the desire of investigating the ancient method than for the discovery of a new mode applicable for pictures and for mural decoration. He is an enthusiast, like Requeno; but indifferent as to what might have been the cestrum, veruculum, or cauterium: he advocates encaustic painting from love of Art, not from erudition. He considers it highly suited for monumental works, as unaffected by heat, damp, or air. Pictures thus painted never alter, they can be retouched; they are luminous and transparent, and possess all the excellence, combined with greater durability than oil. Of the resins employed in combination with wax, he recommends gum elemi (*amyrin elemifera*) or copal (*Rhus-copalinum*); but the artist will find the most valuable information, by consulting this work, tome 8, chapitre 508. He considers the process of mural painting by the ancients to have been thus conducted. They painted on stucco, white, polished, and impermeable. The first portion of the work was conducted by a wash of sarcocolla, or of gum mixed with egg; between each coat wax was applied, heat passed over it, and then polished. By this the first colours were physically fixed, and their transparency preserved. They recommended by richer vehicles in which

wax or resin were more abundant; this was again treated as before. The difficulty of applying the second to the preceding colours was surmounted by a slight caustic wash, then they retouched with naphtha or petroleum, and afterwards wax was again used and polished, thus giving to a distemper painting the effect of those conducted in oils. Klenze, who sought to ally painting with architecture, and to decorate the edifices with which his genius has adorned Munich, in the ancient manner, had applied for assistance to Conservator Fernbach, who united to a correct knowledge of the Arts of Greece, great acquirements as a chemist and an artist. His first attempts were approved of by Dillis, the Director of the Royal Gallery; but Heltenperger and other artists, and finally Klenze, influenced by the very excellent restoration of some paintings at Fontainebleau, by Alaux, through one of the processes detailed by Montabert, recommended the King of Bavaria to propose to Professor Schnorr, the employment of it for the purpose of decorating the new rooms in the Festsaalbau. Schnorr, fully impressed with the importance of the undertaking, felt, however, the necessity of a more careful consideration of the mediums submitted to his choice. For this purpose he painted two pictures, by two processes detailed by Montabert, and by that of Fernbach. And, although he was from the first convinced that the process of the latter argued the greater probability of success, an opinion which later observation and successive experiment have confirmed, yet, that decision should be unprejudiced, and opinion properly canvassed, he resolved to test it by chemical analysis. A commission was therefore appointed, over which Professor Fuchs presided, and the following was the result of the experiments. After the employment of weaker tests, powerful acetic, and next sulphuric, acid were poured on parts of the picture most liable to injury by their action. In both experiments, the process of Fernbach was less injured, and the commission thereupon reported the result to the King, who authorized its employment. In what it may consist, it is at present impossible with correctness to describe; for the King, anxious to give to artists the benefit of well tested experiments, and aware that many modifications of it must ensue, has not hitherto permitted its publication. But from observation, and the opinions of artists, it may be assumed, that the following is a general statement of this method. On the wall the preparation is apparently the same as in fresco, but the setting coat presents a perfectly even, though unpolished surface. Upon this an impression of wax, or of a composition in which wax prevails, is laid, this is melted in by heat, and afterwards a slight colour is used, presenting the appearance of canvass prepared for painting. The features completed possess great force, delicacy, and beauty; the colours are highly transparent, and although the surface is slightly shining, yet it does not prevent the picture being seen at one glance, and from any point of view. In no case, even where colour exists in its greatest mass, do clefts or rigidities appear, as so often witnessed in other methods; and the pictures, when complete, are dry and hard to the touch. As a medium it is perfectly manageable; and although from its rapid drying, and other minor inconveniences, Rottmann, who had commenced his works with this, subsequently adopted that of Knirim, of which copaiva-balsam is the chief ingredient, yet later observation has shown that the adoption of Fernbach's process, by admitting the use of all colours common to oil-painting, and being capable of producing pictures of great richness and power of effect, has advantages over any other that modern research has placed at the disposal of the artist. Still it was not to be expected, that success would uniformly result; hitherto many obstacles have arisen, for either from the wall being improperly prepared, the mode of imbedding the first wax impression

being carelessly executed, or from facts not previously ascertained, the mortar broke away upon the application of heat, or the colours were absorbed, and mixed together, appearing as a skin stretched over an uncongenial surface. Damp has been, however, the principal cause of defeat, as upon the final application of heat, blisters have arisen, or a dew has spread subsequently upon the surface; and although encaustic, like wax, admits of retouching, painting and glazing, no adequate prevention against this evil has been found, nor will works in which lake colours predominate bear exposure to the sun. Encaustic, therefore, is at present unsuited for monumental purposes, of which the essential character is duration; but by the ability so great, and research so persevering as Germany has evinced for the recovery and establishment of this branch of Art, it would be impossible not to argue, as not to hope, for success. Man is ever at war with time, and his spirit either reclaims the spoils its past history reveals, or wrests richer treasures from its course. In concluding this article I may, I trust, be permitted to observe, that I am well aware of its numerous imperfections; yet those who are conversant with the subject will remember that its details must be traced from ancient writers often obscure, frequently contradictory, and always brief in their remarks; and that modern literature has added little to knowledge, but much to discussion; and that *quotation*, rather than *experiment*, has been its aim. It is for this reason that I have sought to glean facts from the best Italian, French, and German authors, among whom *experiment* has preceded *opinion*; the difficulty of combining and condensing facts many have experienced, but of those dissatisfied with performance, few have considered the weariness of the labour they despise.

S. R. H.

NOTE.—As it may be of use to cite the authors among others I have consulted for this compilation, I subjoin them:—“Memoires de l'Académie Royale des Inscriptions,” tomes 19, 25, 28—“Saggi sul ristabilimento dell'Antica Arte de' Greci e Romani pittori, del Signor Abate Don Vincenzo Requeno,” 2 tomi, 1787—“Émeric David Discours Historiques sur la Peinture Moderne,” Paris, 8vo., 1812—“Münchener Jahrbücher für bildende Kunst, herausgegeben, Von Dr. Rudolf Marggraff,” 8vo. 1840—“Traité Complet de la Peinture, par M. p. de Montabert,” Paris, 9 tomes, 8vo. And for incidental reference, “Boech. Corpus Inscript,” and “Raoul Rochette Peintures Antiques inédites,” “Pliny, Hist. Nat.” Ed. J. Sillig, &c. &c. I may add also, that in the “Transactions of the Society of Arts,” vol. 8, 1787, vol. 10, 1792, two papers will be found by Miss Emma Jane Greenland: the process there detailed is that recommended by Requeno, although communicated to Miss Greenland by a Signora Parenti, who has claimed it; it is exceedingly valuable, and the instructions clearly given. A picture painted by this process is in the rooms of the Society.

#### AN EXAMINATION INTO THE QUALITIES AND NATURE OF THE GROUNDS ADOPTED BY THE OLD MASTERS FOR OIL PAINTINGS.

TO THE EDITOR OF THE ART-UNION.

SIR,—I do not think that the subject of grounds for oil paintings has met, from your correspondents, with that deliberate consideration which it really deserves, and which, indeed, the present advanced state of Art in this country positively demands. Many of them have undoubtedly taken up the matter with earnestness and in good faith; but in effect more, as I conceive, for the purpose of advocating the merits of some favourite tint or composition, than of pointing out and explaining intelligibly the principles upon which the quality of good and enduring grounds depend. This is undoubtedly to be regretted, especially as they possess acquirements particularly proper for such an investigation, requiring patience and research; and which, if they had been more judiciously directed, would have led to the most useful and practical results. I have therefore ventured to take up the subject in a more comprehensive way, well knowing how much better qualified are the individuals to whom I allude than myself, for conducting the inquiry now under my consideration.

Comparatively speaking, *colour* is of little moment; it may and always has been varied accord-

ing to the fancy, or to suit the method or working of each individual master. To Rembrandt perhaps, it mattered little of what his grounds were composed, for latterly he laid on such loads of colour of any kind, and mixed in any fashion, trusting entirely to glazing for clearing up and producing his effect, that if he had worked upon the bare canvass or panel itself, probably his pictures would have stood equally well as if the ground had been of the best materials. He is therefore an exception to the general rule, and must not be imitated by any one of inferior talent or less experience. His friends frequently complained even of his carelessness way of laying on his colours, which gave a disagreeable ruggedness to his pictures; and upon such occasions his answer was equally characteristic: “I am a painter, not a dyer.” The style of his pupil, Gerard Dow, did not admit of bad grounds; neither did that of Rubens, Correggio, P. Veronese, or any of the good colourists of Italy and the Low Countries. In fact, clear and transparent colouring requires that the original tint of the ground should be unchangeable; for if the latter changed, the whole effect of the picture would be changed with it. This opinion, though perfectly reasonable, can only be established, I admit, by an examination of the actual works of the greatest masters of colour; a desideratum not easily arrived at, seeing that no judicious person would be prevailed upon, for such a purpose, to submit a genuine work by a fine old master to the tender mercies and manipulations of a chemical adventurer of this kind; and he would be less inclined to do so, as experience would prove to him that the possibility of reproducing a work of equal merit in the present day is not attainable. I wish it to be clearly understood, however, that this remark applies exclusively to colour. However, it is not my intention to enter the lists with those who think lightly on the subject of grounds. I look upon it to be of vital importance, and I trust, Sir, that you and your correspondents will join in the endeavour to place the matter upon a sound basis, and thereby to save our present race of talented artists from the calamity, which may well be considered a national disgrace, of having their choicest and most deeply studied works faded or destroyed by the introduction of those corroding and perishable materials which at this time are too often admitted into the grounds, and, indeed, combined with the pigments sold by our cheap, and consequently inferior colourmen, and which have been the occasion of the premature decay of some of the most valuable productions of modern Art.

Architecture, sculpture, and painting are the kindred Arts which have at every period engaged the attention and the affections of mankind, and which have formed a home for the sister Arts of poetry and music; and it is an established fact, that the decline of any one of these three, has been immediately followed by a decline of the other two; and that, on the contrary, an improvement of either of them has had its corresponding effect upon the rest. In the former case, the cause may be ascribed, though not always as I shall show, to the absence of that fostering care which is necessary to their existence, on the part of those who have been placed by Providence at the head of nations. An example of this kind is afforded by the history of the times of Commodus, the Roman Emperor, and that of his immediate successors:—“La Monarchie Romaine du temps de la République, et des premiers Césars, étoit dans une haute réputation, parce qu'ils avoient porté les Arts à leur plus haute perfection. Mais cette monarchie depuis la mort de Marc-Aurèle commença de perdre la grandeur qu'elle avoit acquise. Car plusieurs empereurs succédant en peu de temps les uns aux autres, ternirent l'empire par leurs cruautés, par leurs débauches, et les guerres civiles, ce qui causa tout ensemble et insensiblement la ruine des Arts du Dessin.”

At a later period of the Roman history, and during the Pontificate of Gregory XIII. and of Sixtus V., the art of painting sustained signal disasters:—“Qui veramente cominciò un'epoca men felice per la pittura; e peggiora nel tempo di Sisto V. successore di Gregorio. Questi Pontefici eressero o fecer dipingere tante pubbliche opere, che appena in Roma si dà un passo senza vedere uno stemma pontificio con un drago, o con un leon.” In the pontificate of Clement VIII. the evils were aggravated, when the few remaining artists of talent, who still endeavoured to maintain

the dignity of their art, though enduring every species of privation, had the mortification of daily witnessing a new inundation of barbarisms, in the shape of paintings of the most contemptible character, and with as little forbearance on the part of their producers and promoters, as did the poets in the time of the Emperor Domitian, and the philosophers in that of M. Aurelius, the father of Commodus.”\*

Indeed, under the Pontificate of Innocent X. the employment of artists was very precarious, and the “orribile peste” of 1665 put a merciful termination to the moral catastrophe, and will bring home to our memory the observation of Sallust—

“Omnia orta occidunt et aucta senescunt,” &c.

The calamities which have befallen “Le belle Arti” at various inauspicious periods, would in themselves be sufficient to fill a large volume; and they offer a humiliating example of the frail tenure upon which the things best calculated to civilize and adorn human society are held, and with what rapidity the labour of ages and the workings of the finest imagination pass away! I have thought it necessary to allude to some of those which bear upon the subject of the Art generally, and on the preparation of grounds more particularly. I would willingly enlist in favour of what affects artists so seriously, every diligent searcher into cause and effect, and every one who is interested in the advancement of the Fine Arts, since its true principles are now beginning to be felt and understood; and since also there is a disposition on the part of our Government to encourage whatever is calculated to promote their interests. Let us not lose the opportunity now afforded by the exertions making by Art-Unions established throughout the kingdom in favour of artists of talent; but unite our efforts to lay the foundation of a great national structure, the brightness of whose lofty pinnacles shall dazzle the eyes long after the sun of Great Britain shall have set for ever! Let us, in short, endeavour to search out the real causes which occasioned the loss of the traditions of the studio, and the decay and, finally, the extinction, of all the ancient schools. But I must not forget the maxim of Davus, “Næ quid nimis.” I will therefore, after this digression, again return to the subject of GROUNDS.

One of the most important works which has appeared of late years is that of M. Mérimée, on “the Art of Painting in Oil and Fresco,” a translation of which, by Mr. Sarsfield Taylor, appeared in 1839. M. Mérimée was both a good artist and a good chemist; and although his treatise is not free from objection on the score of want of sufficient facts to support some of his hypotheses, it is nevertheless the most interesting work of the kind which has appeared in the present century. It is of course difficult to please everybody, and works of the greatest merit will occasionally excite the opposition of cavillers at any or everything. To those who feel otherwise it will be regarded with favour, and they will be lenient to its faults, for the latter may admit of remedy. It is not necessary to pull down a useful building in order to add to its dimensions, or repair its defects; nor need we abandon the cause of truth, though one of its champions unintentionally cast a veil over its fair proportions. In other words, we must receive it thankfully, and turn what is good in it to our account.

I trust this will be to the reader an introduction of the work of M. Mérimée, for the subject under our consideration is one which he has taken infinite pains to investigate. The rules he has laid down, and the recipes he has given, are of the highest interest, although the limited extent of his treatise did not admit of this subject being so amply discussed as was to be desired. And it will be my endeavour to supply many of those notices, with respect to grounds, of which his work is deficient. My inquiry will be first directed to the duration of ancient Grecian paintings.

The brightest period in the history of ancient Grecian Art was that of Alexander the Great, who died B.C. 323. The most celebrated painters, taking them as they stand in the “Lives” of M. de Piles, are the following:—Zeuxis, Parrhasius,

\* “Sotto questi pontificati i pittori d'Italia e altretante che i poeti sotto Domiziano, o i filosofi a' tempi di M. Aurelio.” And he adds, “Ognuno vi recava il suo stile: molti per la fretta vel peggioravano.” As the extract would be too long for insertion I must refer the reader for the remainder of it to Lanzi, vol. ii., p. 106.

Pamphilus, Temanthes, Apelles, and Protogenes. They were for the most part accustomed to paint on panels of larger or smaller dimensions; perhaps also upon canvases. These panels were prepared with a ground composed of chalk or magnesian earth, and some kind of size. It is thought that the pigments they employed were similar in most respects to those now in use, and which also the ancient Romans used; such is the opinion of Sir Humphry Davy. Apelles, however, discovered a splendid kind of varnish, of which we know nothing, except that it possessed a brown tint, and with this varnish he covered parts of his pictures, which gave to the shadows a marvellous lustre. It is not likely that this varnish consisted of wax, because the encaustic of those days were in the habit of using this substance upon their works. It must therefore have been essentially different from that; and probably the contemporary artists of Apelles made use of the discovery of the latter, as he was a man of a noble and communicative disposition. Be this as it may, it is not to be doubted that they took the best precautions in their power for the preservation of their works.

Subsequent to the death of Alexander, the Romans subjugated Greece, and despoiled it of its pictorial treasures to adorn the capital of Italy. "From the time of the Consul Memmius, foreign pictures were daily brought to Rome, and the public buildings of the city were hung with the works of Apelles, and all the most famed artists of Greece. In the Temple of Peace was placed the most valued of all the works of Protogenes, i.e., the hunter Jalyus with his dogs and game. This picture was at Rhodes, where the artist lived, when Demetrius laid siege to the town; and, it is said, that he abstained from an attack which could not have failed of being successful, lest in the confusion of the battle the picture should receive injury. The Cyclops of Timanthis, and the Scylla of Nichomachus, were also deposited in the Temple of Peace. Some of the most precious works of Zeuxis adorned the Temple of Concord, and the private villas of Rome." The greatest work of Apelles was his *Venus Anadyomene*. It was painted on wood, and was totally destroyed by insects in the time of Augustus, A.D. 14. It is hardly to be expected that the works of other contemporary artists should have survived this *capo d'opera* of Apelles. Supposing this to be the fact, it would appear that the period of duration of the great Grecian paintings was about 400 years. Of the encaustic paintings, which, being done on walls, could not be transported to Italy, they were probably buried in the ruins of the temples of Greece which they adorned. I will therefore only notice the names of Pansias and Euphranor, who were the best encaustic painters.

I must now direct the reader's attention to the duration of ancient Roman paintings, which I will do in the shortest way I can.

We do not gather from Pliny that the vast influx of the choicest works of Grecian Art into Italy, exercised any decided and beneficial influence upon the Romans. Indeed, there seems to have been something in the mind of the *ancient* Italians, which rendered them incapable of following with any advantage the art of painting. Four hundred years before the birth of Alexander the Great, Bupalarchus introduced the art into Rome; he brought it out of Greece. This painter represented, in his most famous work, the 'Battle of the Magnesians or Magnetes'; and so highly was it thought of by Candaulus, King of Lydia, that he gave for it as much gold as would cover its surface. So competent a master, and one, too, who had established the principles of an Art in the capital of Romulus, must have created many pupils, to whom these principles would be communicated, and by tradition they would descend to their successors. Yet, after the death of this celebrated painter, the art must have languished: we hear of it no more for centuries. Whereas, the *ancient* Greeks seem to have had a natural genius for it. Its very commencement in that country is interesting, though it may shock the female mind of the present day. "Corinthia, a girl of Sicyone, being in love with a certain youth, and finding him asleep near a lamp that was burning, the shadow of his face, which appeared on the wall, seemed so like him, that she was incited to draw the extremities of it, and thus made a portrait of her lover." It passed through the several stages of skiagraph,

monogram, monochrom, and polychrom, till it arrived at its highest state of perfection under Apelles, nearly 400 years before the Christian era. Apelles was not only the most accomplished artist of ancient Greece, but the author also of a Treatise on Painting, which was extant in the year A.D. 1100; and Theophilus, who lived about that time, may have derived the chief materials from this treatise for his own "De omnium Scientiarum Artis pingendi." This work may therefore be considered of the highest authority and value, and ought to be translated for the benefit of the general reader. Margaritone was born in 1198. He was indebted to the Greeks of his time for his earliest instruction in painting, and it is very probable that he may have derived further information from the treatise of Theophilus, and thus we may trace the progress of Grecian Art, and connect it with the revival in Italy in the twelfth century.

It may, however, be worth our while to glance at the effect of the introduction into Rome of the paintings of Apelles and Protogenes, in order to show that, though a taste began to show itself on the part of the Italians at this period, it was not corresponded to by the development of any talent whatever on the part of the natives of that country.

In the time of Augustus, Ludius is spoken of as the first who decorated the walls of houses with representations of rural scenery; and Aurelius, Cornelius Pinus, and Actius Priscus, were employed by Vespasian to decorate some temples which he rebuilt: but their pictures had no pretensions to any kind of merit. The magnificent Hadrian gave great encouragement to artists, but there was still a dearth of genius. With this Emperor and the Antonines ended the prosperity of the Arts. It will therefore be seen that patronage alone is insufficient for the development of talent. The hand of a beneficent government may be extended in vain if a genius for Art do not exist in a nation; and we know that, though a talent for painting may not exist at one period, it may spring up at another.

In the first century of our era the cities of Pompeii and Herculaneum were buried under the lava which issued from the bowels of Mount Vesuvius. They remained buried for upwards of 1600 years. But the paintings on walls, which have been discovered, are not possessed of any merit, and will not bear exposure, unprotected, to the air. It will not therefore be possible to assign a longer period for the duration of Roman paintings than we have given to those of Greece, namely, about 400 years. And yet the case is different with respect to Egyptian paintings. In the specimens of the artists of that nation, which have been preserved in the inner coffins of mummy cases, the colours are perfectly bright and fresh. Some of the designs must have occupied weeks in the elaborate outlining and colouring in water-colour or distemper, and in the fixing and varnishing the subject. The *grounds* are very fine and pure white, resembling stucco. The parts that are drawn on are those only which have been afterwards varnished. "This white ground may be disturbed by a wetted finger, which is not the case with the varnished parts. Their varnish must have been of excellent quality, as it retains its transparency and gloss in a most extraordinary degree; in some instances appearing as if only executed a few days." It would therefore appear that *grounds, if well prepared and laid upon a lasting material*, may endure for at least 3000 years. I would refer the reader to the interesting essays of Mr. Callcott for further information upon this and other subjects connected with ancient art and manufactures.

The woods which the ancient Grecian artists, as well as the "old masters," made use of for their paintings, were panels of cedar, larch, cornel, cypress, box, holly, sycamore, and oak, and upon them they applied their grounds. But a great difficulty must have been felt by the want of a cement sufficiently strong to hold at the joints. Directions for the manufacturing of panels are given by Theophilus, or, as Vasari calls him, Ruggiero. He recommends that the panels be prepared with a tool, such as vat-makers use, which was probably a plane, or it might have been a rabbit-plane, as M. Mérimée conjectures. He recommends that the planks should be cemented at the edges with a glue made of cheese, the way of making which he describes. He adds, that panels

thus cemented could never be separated by either moisture or dryness. Vasari says, that Margaritone was the first to glue linen bands over the joints; but this could not be so, for Theophilus describes it. It is, however, curious, that the very difficulty felt with respect to the fastening of the joints of panels was eventually the cause of the discovery made by Van Eyck of oil-painting.

In Venice, the custom of painting on panel seems never to have prevailed to any extent; probably, says Vasari, among other reasons, because of the convenience afforded by canvases, which may be had of any size. I will, however, give his explanation of it in his own words:—"Si costuma dunque assai in Venezia dipingere in tela, o sia perchè non si fende e non intarla, o perchè si possono fare le pitture di che grandezza altri vuole, o pure per la comodità di mandarle comodamente dove altri vuole con pochissima spesa e fatica."

It is a singular fact that there are few pictures by old masters which have not been lined, and at an early period. The necessity of relining presupposes some injury, or, at least, a bad appearance about a picture, and proves that the old masters were occasionally beset with misfortunes similar to those which are experienced in the present time. Let us inquire what are the causes which were likely to render relining necessary.

In the first place, all kinds of wood are liable to be infested and destroyed by worms; and I shall not, therefore, trouble the reader about panels. My remarks at present I will confine to canvases, which, being by nature porous, is capable of absorbing moisture from the atmosphere, and of communicating this moisture by capillary attraction to the material, if absorbent, of which the ground of a picture is composed. In heated rooms, or dry seasons, the moisture absorbed at one period, would be as readily parted with at another; and these frequent changes would operate unfavourably upon the picture itself. Another cause of injury may arise from dissimilarity in the materials used in the ground, and on the picture. Even the texture and thickness of the several varieties of paint might occasion injury: for if the different degrees of expansion and contraction of two surfaces or substances in contact, whether occasioned by heat or cold, moisture or dryness, are unequal, there will be a constant struggle and tearing asunder of the two substances, which may cause the paint to chip from the canvases which a succession of moisture and dryness had made to bag. All these causes, or any one of them, may be sufficient to call for a relining of a picture. On the other hand, the varnish is soon acted upon by the atmosphere, and when its surface is corroded, the subject beneath it is rendered obscure. Add to this, the changes which may take place in the colours by the action beneath of a ground composed of lime; or of light and darkness, confined air, or gaseous exhalation from without, and we shall admit that the office of a REPAIRER, as well as a RELINER, may be equally necessary. But the very act of removing the varnish of a picture, even by the most cautious repairer, may disturb the glazings and finishing touches of the artist, and hence the necessity for another officer, that of RESTORER. I will, therefore, give a few historical notices of this class of persons.

It is nowhere stated, that I am aware of, that the Greek artists, of whom Margaritone learned in Italy the first principles of his Art, were employed at Arezzo, in the twelfth century, to repair as well as to paint pictures; but after the middle of the following century, we read that "the governor of Florence invited some Greek artists to that city, who were employed in one of the churches to repair the decayed paintings." It was from watching these artists in the progress of their work, that Cimabue imbibed that ardent love for the Art by which he was characterized. Cimabue died in 1300.

The next account we find in Lanzi, who states that there is a document preserved in the Archives of the Confraternita de' Bianchi, at Rome, relating to the repairing of a picture of S. Biagio, by one Donato, in 1374.

I find no further account of a repairer for the space of, at least, two hundred and fifty years. We then read that Pietro Vecchia, who was born in 1605, and died at the age of 73 years, distinguished himself by his talent in repairing old pictures, and from this circumstance, Melchiori conjectures, he obtained the name of *Vecchio*: "Il

vero suo casato, come notiamo nell' Indice, par fosse *Muttoni*."

After 1634, we have an account of Giuseppe Ghezzi, whom Pascoli praises for his skill in repairing old pictures, and adds, that the Queen of Sweden employed him *exclusively* for that purpose: "Per cui la Reina di Svezia per tali occorrenze si valse di lui solo." Ghezzi was of the Roman school, and contemporary with Vecchio, who was of the Venetian; and Francesco Polazzi, also of this latter school, is spoken of by Lanzi as "buon pittore e miglior restauratore di quadri antichi."

Of the Sienese school was Niccolò Franchini, whom Cavaliere mentions as having discovered a new art in the repairing of old pictures, without even once using the point of a brush, by making use of paint obtained from other old pictures of inferior value. He was distinguished for his skill in knowing the pencilling of old masters: "E per la prerogativa, dice il Cavaliere, di ristorare le lacere tele, e ridurle all'antica loro perfezione senz' adoperarvi pennello: dove manca il colore supplisce con altri colori tratti da altre tele di minor prezzo; invenzione che non è stata da altri scoperta."

The state of the pictures in Venice were found to be so bad, that it became necessary, in 1778, to open an academy for the express and sole purpose of restoring them. The worthy Sig. Pietro Edwards was elected president; and it is incredible what pains were taken, under his management and with the assistance of his associates, in renovating the injured specimens of Art belonging to the state and to private persons. "Le operazioni," says Lanzi, "che si fanno intorno ad ogni quadro, sono molte e lunghe, ed eseguite con incredibile accuratezza; e ove la pittura non venga allo studio *troppo pregiudicata* (com'era il S. Lorenzo di Tiziano), torna al suo posto ringiovanita, e capace di vivere molti più anni."—Note. Lomazzo gives an account of a picture by Bramante in 1486, which the former repaired.

I have not given any account of the repairs done to the 'Last Supper' of Leonardo da Vinci, because it has undergone the operation at so many different periods; and I should not notice it at all in this letter, had it not been supposed to be done in oil; I shall, however, have occasion to allude to it further on.

Vasari informs us that Margaritone d'Arezzo, born in 1198, and who died in 1275, painted upon a gold ground. "The Art of gilding with leaf-gold upon Armenian bole was first invented by him; and at Pisa he painted the legendary history of St. Francis, with a number of small figures, upon a gold ground." It is to be presumed that other artists of his time adopted the same kind of grounds.

Bernard Van Orley, born in 1490, in order "to give lustre to his tints, usually painted upon a ground of gold-leaf, which preserved his colours fresh." This expression, "usually painted upon a gold ground," implies that the practice of Margaritone had, after the lapse of 300 years, somewhat declined. There is a 'Last Judgment,' by Van Orley, at Antwerp, which is painted on a gold ground, which gives to the sky much clearness and transparency.

Lanzi informs us, that during the fourteenth century grounds were gilded, the gilder's name being inscribed upon it. Towards the end of the fifteenth century the practice of making gold grounds declined, and that metal was carried to the fringes (which were made very broad), of the draperies. Gold was more sparingly used towards the end of that century, and in the sixteenth wholly declined. Dominico Corradi (Ghirlandaio) was the first to lay aside gold fringes to draperies.

Even in fresco painting the inconvenience to which I have alluded, namely, the injury sustained by colours when in immediate contact with lime, was sensibly felt by artists in that style, and they adopted means to lessen, or wholly guard against, the evil; it is probably owing to a neglect of this precaution that so many of the old frescoes have faded in their colours, and that some have been wholly obliterated. The hint has been taken by the fresco painters of Munich, they adopting the practice of the old masters, by covering the plaster with gold-leaf.

One of the most striking examples of the advantage afforded by a protection of this kind, is afforded by the frescoes of the Carloni (Batista

and Giovanni), in the church of La Nunziata del Guastato, at Genoa. "In these frescoes the colours are so brilliant that we might almost mistake them for paintings on glass or enamel." "It has been attempted to examine more narrowly the method of his colouring, and it has been found, that upon the dry surface of the ceiling and the walls he previously laid on a coat of strong colour ('un intonaco di tinta, che le riparasse dalla calcina')." The account will be found in "Lanzi," vol. v., p. 325, and it is worthy of being consulted.

Dentone is another example of this kind. He was a painter of perspective at Bologna. "His representations of cornices, colonnades, balustrades, lodges, arches, and modiglioni, seen in perspective from beneath (di sotto in su), give the notion that he availed himself of stuccos and other substances in relief; while the whole effect is obtained by a chiaroscuro, brought by him to a facility, a truth, and a grace, never before seen." It was a practice with him to lay gold-leaf over part of his works in fresco, and also to avail himself of a covering composed of baked oil, turpentine, and wax. He even inlaid part of his work with pieces of real marble.

M. de Piles informs us, that Sebastiano del Piombo found out the way of painting in oil upon walls, so that the colours should not change. This was by a coating, upon the plaster, of pitch and mastic. The subject, however, requires further investigation, now that there is a hope that the fresco style may gain favour in England. For we find that the 'Last Supper' of Leonardo, who was always seeking after novelties ("che tentava sempre nuove vie"), covered the wall with distilled oils ("oli stillati"), as a protection to his work; in consequence of which insufficient protection, this masterpiece of Art, so far as original paint is concerned, is lost to the world.

At one time artists seemed to have been possessed with a kind of panic respecting the safety of grounds of any kind, and accordingly we find them distrustful even of gold! and actually painting upon the bare canvass or panel. A Dutch lady, of the name of Rooze, painted portraits upon the rough side of a panel, and in such a manner, that at a little distance the picture had the effect of the neatest pencil. And Domenico Maroli painted in like manner upon bare canvass.

Alessandro Turchi, of the Venetian school, painted upon black marble. It is said that in the laying of his colours he had discovered a great secret, which has excited the envy of posterity. Francesco Bianchi Buonavita also painted upon stone; as did Adrian de Bie, making use of jasper, agate, porphyry, lapis lazuli, and other precious stones, ingeniously contriving to leave the natural markings for outlines of clouds, mountains, or figures.

Baldinucci, in his "Lezione Accademica," alludes to the subject of grounds in these words,—"Varnish is applied to pictures done in oil, *not for the sake of improving and brightening the colours, which require no such assistance*, but in order to remedy any defect that might arise from the priming or composition laid upon the canvass or panel. These are his words: Se poi sarà detto, che i moderni Pittori usano anch'essi talvolta vernice sopra le lor pitture a olio; io rispondo, che tale usanza (*che è di pochi*) non è per supplire al mancamento, della pittura a olio, cioè, per render più profondi gli scuri, ma bensì per remediare ad un' accidentale disgrazia, che occorre talora a cagione dell' imprimitura, mestica, o altro, che dassi sopra le tele, o tavole, p. 95.

As a further proof that the old masters were apprehensive of the grounds they used, we may mention that Titian, Tintoretto, P. Veronese, Guido, Rosa Tivoli, and most others of the good colourists of every school, frequently changed them, as will be more clearly shown when I come to speak of colour of grounds. But Ludovico Caracci, who persevered to the last with his chalk grounds, has paid the penalty of having scarcely a picture by his hand which has come down to us, that has not changed so much in colour as to be scarcely recognised as the performance of a man who had varied the whole system of painting throughout Italy by his genius and exertions.

The value of white-lead, when pure, as an ingredient for priming, was well known to the old masters. No mineral substance, perhaps, covers so well as the carbonate of lead, and that for a priming is less likely to undergo any alteration. Many persons think that there is danger in the

employment of white-lead; but I imagine their fears are without foundation. In the pictures by old masters we never, or very rarely, observe any change in the lights which are entirely made of white-lead. It may destroy some colours which are laid upon it certainly, such as preparations of arsenic, as have been experienced in the faded pictures of Sir Joshua Reynolds. But in no other cases. And even if, by the action of hydro-sulphurous vapours, the lead of the lights should have returned to the dull metallic grey, a washing with oxygenated water will restore its former whiteness. This discovery, M. Mérimée tells us, was made by M. Thenard.

But as my letter has already been drawn to a greater length than I anticipated, I will now close my remarks, desiring to be permitted to continue the subject in reference to the colour of grounds and the adulteration of colours, in a future number of your valuable periodical.

I am, Sir, yours, &c., A.

## DECORATION OF THE NEW HOUSES OF PARLIAMENT.

### ON HISTORICAL PORTRAITS AND INVENTION WITH REFERENCE TO PAINTING.

It is the peculiar merit of monumental works of Art, that they require the exertion both of intellectual power and of moral elevation. A mind fettered by the trammels of every-day life, whose ambition is the praise of the hour, and the petty sphere of whose pursuits is limited by the artificial feeling, the conventionalism of society; to whom the past is as a sealed book, and the thought, energy, will to know, determination to possess, the tenderness, affections, passions of man, are as disregarded truths, soon yields to the genial will and the imperial pleasure; like a slave decorates the fetters which degrade it, resigns the last sad refuge—right of thought; stoops to the extension of its own wrong, and becomes the victim of the materialism that it serves. To be great we must preconceive greatness in ourselves. To portray we must comprehend its qualities, analyze its secret springs, and inquire if power and duration are, or have become its attributes, by the impression of its own intellectual superiority, or, from the silent gradual subservience, of thought and feeling in the mass.

"—There is a fire  
And motion of the soul, which will not dwell  
In its own narrow being;"

It preys on high adventure—here rest is death; but this is not greatness, it bears an affinity to the chivalrous ignorance of the middle ages, the ready valour of the condottieri, the lust of conquest, and the Roman pride of worlds to conquer. In what then does true greatness consist? In that spiritual elevation of the mind which makes the past even as the future, present; which gives to time the reflected spirit of eternity; which unveils the face of nature, subdues matter to its will, or gives it form, and either in relation to himself or society is the cause, the ruling principle of the beneficent actions of man. The first may be considered as the active, the latter as the moral power; both afford appropriate motives for the compositions of the artist: either subjects of a picturesque character, which influence generally the common classes of mankind, to whose conceptions the usual assemblage of things is adequate; or incidents, in the highest degree illustrative of the intellectual grandeur, of reason united to the moral sense. Scenes of this description are presented to us by history, where man appears either as conducting, or in contrast with event.

History is the biography of society; modern history, exhibiting a fuller development of the human race and a richer combination of its most remarkable elements, gives a greater scope to the highest mental creations of the artist. And as every nation has an external and internal character, as it cannot be indifferent to good or ill, and as history must have a moral end, the artist should select such points as are mostly illustrative of its general ruling principle. Conceptions descriptive of individuals, must please in proportion to our interest in their fortunes, or our conviction of the benefits they have conferred; but every man is interested in the greatness of his nation, for apart from more ennobling principles, pride teaches him to feel with the mass, and to consider its influence as his own. Historical pictures must not, there-

fore, possess the character of dramatic representations; for the primary rule of the former is, that invention should be subordinate to fact, whereas, in the latter, the chief interest is transferred to the actors, and the facts are moulded into mere situations contrived for their exhibition. Historic invention must administer to truth; no subject can be proper that is not of general interest, that can be treated only by minuteness of detail, or of which excellence, either as acting or suffering, is not the predominant idea. The great end of Art is to strike the imagination, and to remind the reason, and this by veracity: virtue should be represented, not as above probability, for what we cannot estimate we shall not imitate, but such as the claims of humanity teach us to practice; and vice should disgust, not by meanness of form, but by the illustration of its effects. Every historical subject should be in itself complete, the significant should predominate over the beautiful, it should at once unfold its fact: as it is often upon the first glance of a work of Art that the greatest effect depends—the domain of the poet is time, that of the painter is space; one may narrate, the other must embody; for the eye is soon gratified by variety of form, and turns with indifference from the canvass, of which the story is either uninteresting or unknown. There are men who will for ever represent their heroes as gods; incapable to depict truth, they debase fiction, and are great only in proportion as they are misunderstood. There are others who are only inspired by allegory and mythology—who reduce Art to a mere mechanic trade, who bid us admire the labour of the hand, but exclude us from the higher enjoyments of the mind. The illustrations of life, should reproduce its accidents, lights, and shades; they should contain, as an epic poem, a distinct moral, or something instructive; they should teach us—

"Neque enim fortuna querenda  
Sola tua est, similes aliorum respice causas  
Mitius ista feres."

Can allegory or mythology do this? But it is said, may not history be employed as it was by Sophocles or Shakspeare? It may be replied; there is no sin so common as the sin of great examples, but genius is no shield for mediocrity; the terrific energy of M. Angelo is no excuse for the distracted distortions committed in his name. Genius has its own law, but laws are not less requisite. It seems to be also in general admitted, that in the delineation of the passions, the effect should be subdued and restrained, to give a free scope to the imagination. It is possibly for this reason: in the contemplation of a work of Art, sight and fancy must be permitted to act upon each other; excitement once depicted, leaves nothing beyond; fancy is imprisoned; the mind grasps the subject, it has nothing to learn, it has no fluttering throb of expectation, the transitory character of the scene is destroyed, and the impression of the duration of passion becomes revolting.

"Non Liber æque, non acuta  
Sic geminant Corymbæ sera  
Tristes at ire."

Yet a picture that should represent "this furious anger" could hardly please; if the fact be remote, the feelings it should awaken have become neutral; if of recent occurrence, it is not enhanced by the adventitious aid either of memory or of imagination; for the events of which we are the contemporaries, so completely invest the mind that no fancy can allure the attention, no Art can imitate the truth; and thus an historical has more the character of a material picture as opposed to poetic conception. If beauty breathe upon the canvass, the idea of deformity is with difficulty admitted; it is a poetic licence, form and expression become governed by the imagination, which heightens or controls effect, not that there should be less truth but more general harmony. "Alexander," says Sir Joshua Reynolds, "should not be represented of mean stature, nor Ageilaus lame:" in portraits it is the intellectual resemblance, in history it is the action which masters; it is the feature of the warrior, the strife of passion and of force we desire to witness; the mind portrays the subject, and realizes without minuteness the event. Nor is depravity of character increased by degradation of form; Edmund, in "Lear," may speak as a demon in the form of an angel of light; Richard the Third—

"Cheated of feature by dissembling nature,"  
could not be less odious by ideal treatment. The

disgusting and the frightful, however remote the scene, or imaginary the accident, are rather admitted by their probable reality, or dependent circumstances upon the scene. Thus, Hector, dragged at the victor's car,—

"Squalentem barbam et concretos sanguine crines,"  
is still Hector. Thought which creates time, for time is but an arbitrary division of extension, comprises in one moment the events of years. We consider the hero great in council, eloquent in debate; we hear his herald shout of victory, borne above the sweeping tumult of the battle-cry, or opposing the onset with the calmness of conscious strength, as a tall cliff stands unmoved amid the tempest surge which idly dashes, or rolls backward from its base; and in him hope, esteem, feeling, and affection are so concentrated, that the higher emotions of the mind are alone awakened; and every unpleasant sensation, existing in the details of his death, becomes either subsidiary or removed. Where this is not the case, where the main action of the scene is not relieved, and the eye rests on physical suffering alone, the subject may be narrated but not depicted. Thus, the punishment of Mæstas—

"Clamanti cutis est summo derepta per artus;  
Nec quicquam nisi vulnus erat; crur undique  
manat:

Detectique patent nervi; trepidæque sine ulla  
Pelle micant venæ: salientia viscere possis  
Et percutentes numerare in pectore fibras,"

is in itself not more terrible than the death of Hector, but it is unrelieved; our sympathy is attracted to his suffering, in which our thoughts concentrate: the effect, which is lost in the co-existing details of poetry, obtains in painting a predominantly independent power, and from the influence of the disgusting and the frightful, the mind instinctively recoils. The cause of this may be traced, it arises from the association of ideas; a picture is suggestive of facts with which we are familiar, we are insensibly transferred to the scene, and we judge as if in actual relation with its event. There is no point, however, of more frequent discussion than the mode of composition more suited to the historical portrait; it is upon correct decision in this respect that the character of the picture will depend. If it be neither an exact minute representation of the individual, nor yet completely ideal, every other circumstance may correspond; the fact may then be treated as the romance of history, costume may be neglected or employed for the sake of colour, and the accessories of the scene may be obtained from every period, or transferred from any clime.

The French, who in real life illustrate the great truth, that—

"All the world's a stage,  
And all the men and women merely players;"

who consider perfection to exist in sculptured form, and artificial situations, produce effect, not reflective of the ease, simplicity, and truth of nature, but of the prescribed, regulated, and heightened situations of the drama. Now the power of the stage rests on the approximation of the remote to the spectator, but the aim of the artist is to recall the mind to the scene of the action. The common events of life are the materials, but do not constitute dramatic situations: these arise from the combination of human passion with ideal circumstance, where exact truth is not required, and where fiction does not exclusively prevail. But an historical picture must be truth, whether representing the individual, the event, manners, or costumes of the times. Thus, in portrait, identity does not exclude ideality; but identity should prevail over the ideal; all minor details must be strictly characteristic and accordant, and the

"—— individual be  
A chord, that in the general consecration  
Bears part with all in musical relation."

The opinion of the necessary identity of the portrait is now so generally admitted, that objections have been urged against the decoration of the New Houses of Parliament with subjects selected from English history, upon the plea that, even as regards our kings, the portrait must be ideal. I trust that the details that I shall now give will prove the want of authority for this assertion. The portraits cited are in works of the highest authority, and have been taken from the sculpture on the tomb, missals, stained glass, and mural paintings, either of the time or shortly subsequent.

Alfred, King—in Asser. Men. Annales, edited

by Wise; from an ancient sculpture;—and Portrait in Spelman's Life of Alfred.

Harold in full costume (two portraits); William the Conqueror and Mathilde his wife; William Rufus in youth—in Montfaucon, Monarchie Française.

Robert, Duke of Normandy, from Gloucester Cathedral.

Henry II. and his queen Eleanor de Guenne—in Montfaucon, Monarchie Française.

Henry III., from Westminster Abbey; Henry IV. and his queen Joan of Navarre, Canterbury Cathedral; Henry V., Westminster Abbey—in Gough's Sepulchral Monuments.

Henry VII. and his Queen, painted window, St. Margaret's Church, Westminster.

Edward I. and his queen Eleanor, from Westminster Abbey—in Gough's Sepulchral Monuments.

Edward II., in Gloucester Cathedral—Stothard's Sepulchral Monuments.

Edward III. and his queen Philippa, from Westminster Abbey—in Gough's Sepulchral Monuments.

Edward the Black Prince, from Canterbury Cathedral; Richard I., from his effigy at Fontevraud; Berengaria his queen; John, from Worcester Cathedral; and Isabel d'Angouleme his queen—in Stothard's Monuments.

Richard II. and Anne his queen, from Westminster Abbey—in Gough's Sepulchral Monuments.\*

Thus, from the time of Harold to Henry VII., very casual research and limited means have enabled me to select an almost historical series of royal portraits. They are taken from monuments, some still existing, others destroyed, particularly those of France, but by which, even so late as Stothard, the engravings were corrected. If it be objected that portraits such as these are not sufficiently authentic, it should be recollected they were executed by men of great merit as artists, when the term *portraiture* was distinctively applied to works of this description; and the trophies of death were made to reproduce, in so far as wealth and Art permitted, the resemblance of the past magnificence of life. Monumental painting is capable not only of encouraging the highest tendencies of Art, but to impress upon the mind a more just idea of the gradual development of the social state. The present, like the gigantic halls of the Egyptians, should be the legendary and historical guide to the great sanctuary of the future; and as that reflective people sought, in their public works, not merely to recreate the sense or the imagination, so should we, upon whom a higher destiny is bestowed, seek from time its storied lesson, humanity its ennobling principles, and from life its varied scene; not reproducing impressions, which rapidly succeed each other as the flitting shadows on the mountain side, but those moral truths, deep and abiding, which direct the energy of youth, and solace the decrepitude of age; without the due observance of which genius is a misdirected passion, and the force of nations a selfish ambition; truths, that do not solely determine the character of individuals, but the right that a nation possesses for respect, not only from contemporaneous opinion, but the silent award of time. I hear it said, "We are the motive cause of the civilization of the world;" worlds, unknown to the Roman, now advance in the social scale beneath our sway: if we have a greater power, we have then a greater responsibility for its exercise; there is a higher claim that Britain, once described, "et penitus toto divisos orbe Britannos,"

"—— should shed her laws, her polity,  
Her cultured language, and her peaceful arts,  
All she had stored from her own toils, and all  
That came from Rome or Greece transmitted down.  
A glorious gift! o'er half the peopled globe  
There to survive, when she, perchance, may be  
What Rome or Greece are now."

S. R. H.

\* In addition to the works here cited, that by Mr. Shaw, "Dresses and Decorations of the Middle Ages," contains some very useful information, and coloured illustrations.

## THE WILKIE TESTIMONIAL.

On Saturday, the 11th ult., was held at the Thatched-house Tavern, a meeting of subscribers to the Wilkie Testimonial, for the purpose of finally resolving upon the best method of doing honour to the memory of the late Sir David Wilkie. Among the gentlemen present were the Right Hon. Sir R. Peel, Sir M. A. Shee, the Bishop of Llandaff, Sir Peter Laurie, Sir Charles Forbes, Sir Thos. Baring, Dr. Lander, the Hon. W. Leslie Neville, Mr. Peter Laurie, and Mr. Allan Cunningham.

Sir R. Peel was, at one o'clock, called to the chair; when he stated that he believed every gentleman present was well acquainted with the object of the meeting, and that it was to select what should be considered the most suitable memento to the distinguished talents of their late revered friend and countryman, Sir David Wilkie. He apprehended that the most regular course for him, in the first place, to pursue, would be to read to the meeting the resolutions passed at the last general meeting, held in August last. Although the committee were fully authorized to carry out the objects of a testimonial to Sir David Wilkie in any way they thought proper, still they were bound, he thought, by the resolutions of such meeting to erect a statue. He (Sir R. Peel) was not aware that they were bound to expend the whole sum raised for that purpose; and therefore it would be competent for any one to propose that day, if he thought proper, that some portion of the subscription should be expended in a testimonial of any other description.

The resolutions of the previous meeting having been read,

Mr. P. Laurie stated that he had the pleasure to announce, as joint-treasurer with Sir P. Laurie, that the amount of subscriptions, up to the present time, were £1903 15s., of which sum £1555 13s. 6d. had been already received by them. He (Mr. Laurie) had no doubt but the remaining, or unpaid amount of £377 1s. 6d. would be promptly paid, and that, taking into consideration all further contemplated disbursements, they might with safety calculate upon the sum of £1600 to be applied solely to the purpose of a testimonial to the late Sir David Wilkie. (Hear, hear.) He had forgotten to observe, that amongst the contributions, the British Institution and the Scottish Society, in both of which Sir David Wilkie was a most distinguished member, had munificently subscribed the sum of 100 guineas each to the testimonial (hear, hear); and it had been suggested that it would be advisable that one or more medals should be introduced, to be called the Wilkie Medal.

Sir P. Laurie said, he considered that the sum of £1200 would be sufficient to erect a statue, either of marble or bronze, to Sir David Wilkie in the National Gallery; and he would suggest that the remaining £400 be appropriated to the institution of a medal in the Scottish Society and British Institution, to be called the Wilkie medal.

Mr. A. Cunningham trusted that they would not think of starving the statue for the sake of the medals. He thought that the sum subscribed was not more than sufficient for the erection of a statue worthy of the merit of Sir David Wilkie. (Hear, hear.)

The Chairman said of course he did not wish at all to say anything that might influence the meeting, but his strong opinion was, that £1600 ought to be applied to the erection of a statue. He thought it ought to be a work creditable to British Art; and he did not think that they ought to expect an artist of distinguished merit to take it without being fairly remunerated for it. (Hear, hear.) Ambition in the artist, and a desire to distinguish himself by having his name coupled with that of Wilkie, might induce him to undertake the work for £1200; but then, they must all deeply regret his not being fairly remunerated. (Hear.) It would cause the statue to be unworthy of the name of Wilkie. (Cheers.) This statue would be the first thing strangers and foreigners would look at, as the monument of one of the greatest of British artists; and he should be very sorry if that monument did not sustain the reputation of British Art, and therefore he thought certainly that £1600 was not at all too much; indeed, he should be unwilling to refuse £2000. (Hear, hear.) His own opinion was, that the statue should be as worthy of the artist as possible.

Sir P. Laurie took the liberty of suggesting that the resolution should say the amount of subscription, specifying the sum of £1600, as they might obtain more than that sum.

The Chairman said he thought the resolution ought to be worded, that the whole sum collected should be appropriated to the erection of a statue, as a question might arise if the specific sum of £1600 was named, and they got £1700, of how they were to appropriate the remaining £100.

The Bishop of Llandaff said that the authorities of St. Paul's cathedral would not allow any statue to be erected in that cathedral unless the artist was paid a minimum price of £1000, therefore he thought that the sum of £1600 could not be considered too much.

The Chairman then put the resolution, which, it appeared, had been previously moved by Sir P. Laurie, to the effect that the amount of subscriptions be applied to the erection of a statue.

The Chairman said they had then to consider a most important question, namely, to whom the execution of this work was to be committed, and what steps they should take with a view to the selection of an artist to whom the work should be entrusted. This was the next question they had to consider.

After some discussion the appointment of a sculptor was deferred until a future meeting of the Committee, which was determined for the 2nd inst.

We cannot help remarking and lamenting the continual divisions that take place in all committees charged with the direction of public works of this kind. An impression is gone forth, that the artist is virtually determined upon—all but publicly appointed to the work—yet others are invited to compete; should this turn out to be the case, is it just in this committee to trifle with the valuable time of artists? Should it be so, what a farce is all competition under such auspices!

## ROYAL IRISH ART-UNION.

THIS Society has progressed most marvellously. The lists, which closed on the 30th of June, gave the amount of subscriptions for the year 1842 at about £3500, an increase of nearly double the sum collected last year, and about five times that of the year preceding. Much of this success is attributable to the issue of the print of 'The Blind Girl,' engraved by Mr. Ryall in a very masterly manner; and which is certainly superior to any work of Art hitherto issued by an Art-Union Society in this country. The print now in progress will be greatly superior to it, considered as a work of Art, and also in reference to the interest of the subject; moreover, it will be a line engraving. The etching is rich in produce; and an impression will, we have no doubt, be of much greater value than the guinea it will cost. We understand that plans are in operation for rendering this branch of the Irish Art-Union really serviceable to the cause of Art, and that, ere long, engravings of a truly NATIONAL character will be announced as "in progress;" the committee not desiring to content themselves, and satisfy the public, by multiplying mere water-colour drawings, which are but little calculated to advance the great purpose of the Institution.

The Committee of the Irish Art-Union have, very properly, resolved upon destroying the plate of the 'Blind Girl,' when the stipulated number of prints have been taken from it. This is keeping faith with the subscribers, and preventing the issue of bad impressions. The copper has yielded above 1300; and the print having become rare has increased in value. Confidence is thus established; and there can be no doubt that to this circumstance, mainly, this augmented list is to be attributed.

The project was, however, strongly opposed; a very warm discussion took place upon the subject; but the following resolution was ultimately carried:—

"Resolved—With a view to the keeping strict faith with the original subscribers of the Royal Irish Art-Union for the years 1839 and 1840, who have each received an impression from the steel plate of 'The Blind Girl at the Holy Well,' that said plate be now destroyed, to prevent the possibility of the print getting into general circulation at any future time; and also to satisfy the sub-

scribers at large that, with the exception of a few complimentary impressions, such as those voted for presentation to her Majesty the Queen, Prince Albert, &c., no one but an original subscriber has or can become possessed of that print, as by a rule of said Society established."

The Committee have, we repeat, acted not only in strict honour, but in perfect wisdom; and have, by this act, gone far to establish the Institution. To the hon. sec., Stuart Blacker, Esq., we have had occasion to make frequent reference. To his exertions we are indebted for the existence of this Society; and to his zealous and persevering industry we are to attribute its present high and palmy state.

Unfortunately, however, the supply is not equal to the demand. A sum of about £3500 has been contributed, in guineas, to be expended in the purchase of pictures exhibited in Dublin; and the exhibition from which the selection must be made is now open in the gallery of the Royal Hibernian Academy. A leading feature in the plan of the Art-Union is to encourage native talent by the purchase of works by native artists. This is, in all respects, just and wise; but they do not, as the Scottish Society does, exclude the works of artists of England or Scotland. Notwithstanding that this fact is extensively known, the contributions of English and Scottish painters have been singularly few: we notice, indeed, in the collection, the works only of Creswick, Stark, Pyne, Clater, Jutsum, the Wilsons, sen. and jun., and two or three others whose works have each and all been purchased by the Society. But even these artists have not sent to Dublin their best works; having transmitted, we believe, without exception, pictures that have not found purchasers in places where they have been previously seen. On many accounts this is to be lamented; chiefly because it forces upon the Committee the necessity of expending their money in buying works that are comparatively worthless.

The Royal Hibernian Academy have long been proverbial for doing nothing to promote the Arts in Ireland. They are the only body of the kind in Great Britain, who receive an annual grant from Government—a grant of £300 a year; and their gallery and apartments (a very handsome and convenient structure) they hold rent free; the building having been erected for them by a patriotic gentleman, an architect of Dublin. The Society consists of 12 members and 10 associates; and with some two or three exceptions, they are painters of the veriest mediocrity. A few years ago, when the Arts were in a low state in Ireland, and there was neither public encouragement nor public recompense for their professors, this was an evil of which it would have been scarcely just to complain; but during the last three or four years, the popularity of the Irish Art-Union has made the Arts popular, and a large annual sum has been subscribed to reward the labours of the artists. Yet the results have been by no means satisfactory—there has been little or no perceptible improvement in the Institution, and no one man of great ability or good promise has arisen out of the fosterage of the country. On the contrary, some men who were formerly members, but are now pursuing their profession in London, seem desirous of cutting all connexion with it; and appear to have scrupulously withheld their contributions from its annual gatherings.

This is greatly to be deplored; the members are content with achieving mediocrity, because it is rarely contrasted with excellence; and the inevitable consequence is that there will be no important improvement.

Our remarks will be idle if they do not stimulate the better Irish artists to exertions for the arts in Ireland; and almost equally so if they do not stir up the English painters to contribute to these annual exhibitions—so as to create a right spirit of rivalry, to show good models, and to instruct the public mind in appreciating what is excellent, that inferiority may be neither desired nor tolerated.

We shall in our next offer some comments upon the Exhibition, selecting for observation such of the pictures as are prominent for something approaching "the good," amid a mass of inferiority.

## THE BRITISH INSTITUTION.

## EXHIBITION OF THE WORKS OF THE LATE SIR DAVID WILKIE, R.A.

This is to the public the most interesting, and to artists the most profitable exhibition that has for years been submitted to them; indeed, since the works of Reynolds and Lawrence were collected and simultaneously shown, we remember no similar exhibition equal in attraction. We find here works from the earliest to the latest period of Wilkie's career, wherein we trace not his progress to excellence—for he attained to it at once—but those changes in his method of working, which, although the result of greater confidence, were not productive of improved effect; as also a radical change in his style of subject, effected with an ardent wish to base his fame upon something morally higher than domestic painting. Most of his famous pictures now hang on the walls of the British Institution (with the exception of those in the national collection, and one or two others); an exhibition which, in a late number of the ART-UNION, we expressed a hope to see, before, we believe, it was determined upon by the governors of the Institution. The world is familiarized with every one of these compositions by means of engraving; but this is not enough to the artist, whose inquiries extend to colour, handling, &c., and the many niceties which they involve; nor to the lover of Art is the mere sight of these extensively circulated prints enough, for we cannot well conceive one who, possessing an engraving from any particular picture, would not embrace a convenient opportunity of examining the original. Such reasons alone will render this a memorable exhibition. We have of late seen much of Wilkie in every style which he practised; and all must concur with us in the opinion, that had he not in earlier times produced better pictures than those of which he was more recently the author, never had he achieved the high place he occupied in the consideration of the world.

This assemblage affords an opportunity of collating the works of all the periods of one of the most celebrated men that ever practised painting—an occasion which, with all its attendant circumstances, has never been surpassed in interest to those who appreciate such qualities as those whereby Wilkie rose to eminence.

In saying that Wilkie attained at once to excellence, we mean not, be it understood, that he did not graduate from bad to better and thence again to perfection, but we mean that his advance had in it none of the halting of ordinary progress to excellence. His earliest picture in the present exhibition bears date 1802, and is a production as indifferent as might be expected of him at that time. We cannot, in these pictures, recognise a variety of styles: a style requires to be confined by more than one picture painted in a particular taste. There were but two great epochs in Wilkie's professional career, in the former of these he was great and alone, and it was then that he secured such a hold of the affections of his countrymen, that although he forsook himself, their love yet abode with him, and they themselves knew not its strength until death divided him from them. As the tribes of old forsook their own salvation so he forsook himself, and like them set up unto himself idols of wood. We may, changing the time, apply to him the stern truth of Cicero, "*tanti fuit aliis quanti sibi fuit*;" but although he thus, like the shadow in the Persian fable, passed by his own substance, he was yet followed for what he had done. When he had produced even some of his best pictures, his experience in oil painting was comparatively nothing; we find him, therefore, in his early works casting about and feeling for the best methods of expression; he certainly found it, but like all true genius he was never satisfied with his own work. Some of his first pictures have a strong leaning to the Dutch style, yet they all differ, and succeed each other in the manner of some modern novels, as "*Hardness*, by the Author of *Softness*," and *vice versa*. Take the exhibition, however, as a whole, there is no modern school of Art that can muster a similar collection with even one picture comparable to some of these. A chapter were necessary to do justice to each of Wilkie's famous productions—they are so well-known that we attempt, in the little space we can

devote to them, to do little more than enumerate them.

No. 1. 'King George the Fourth's Entrance to his Palace of Holyrood House, the 15th of August, 1822,' painted in 1830; her Majesty. This picture partakes much of the latter method of the artist, but is by no means so free and so abundantly glazed as subsequent works. It contains a multitude of figures, but all subservient to that of the King, who wears a military uniform. The keys of the Palace are presented by the Duke of Hamilton, first peer of Scotland; and on the right of the King is the Duke of Montrose, Lord-Chamberlain, pointing to the entrance of the Palace, where is stationed the Duke of Argyll in his family tartan, as Hereditary Keeper of the Household. Behind the last is the crown of Robert the Bruce, borne by Sir Alexander Keith; and on the left of the picture are the Earl of Hopetoun, near to whom is Sir Walter Scott in the character of historian, or bard. The likenesses are striking to a degree, and the Duke of Argyll, wearing the tartan of his clan and the ensigns of chieftainship, is a most noble figure: the Highland garb sits well upon him, and seems not to have been assumed merely for the nonce.

No. 2. 'The Siege of Saragossa,' painted in 1828; her Majesty. Better known as 'The Maid of Saragossa,' and familiar to the art-loving public through the engraving. Many conflicting opinions have been pronounced on this picture, but we cannot concur in those which would depreciate its merit in any marked degree. 'The Maid of Saragossa' was not beautiful, but, like Waverley before his aunt Rachel, resolved that he should see the world, Wilkie also has endued his heroine with grace and beauty, and very properly so; indeed, he seems to have filled his mind with the spirit of the lines, beginning—

"Ye who shall marvel when you hear her tale,  
Oh, had you known her in her softer hour," &c.

The picture declares a decided and successful effort to break away from the domestic style of the heads prevalent in other works. The movement and passion of the figures—the instant so well defined that the spectator awaits breathlessly the report of the gun, and other important matters—sink into nullity all subordinate faults.

No. 4. 'Her Majesty Queen Victoria,' painted 1841; Sir Charles Forbes. This is a full-length portrait, a style of Art which Wilkie's friends wish he had never adopted. It is embrowned with that fatal glaze which seems to send all these portraits into their own backgrounds.

No. 9. 'Her Majesty Queen Victoria at her First Council,' painted 1839; her Majesty. This picture must be so fresh in the public remembrance as to require no particular description; it is, however, remarkable, that wherever we find, in these works, portraits constituting anything like a subject, they are always better painted than if the same heads had formed individual portraits. We should have liked to have heard this anomaly accounted for from the lips of Wilkie himself.

No. 10. 'John Knox Preaching,' 1832; Right Honourable Sir Robert Peel, Bart., M.P. We are glad of having had such an opportunity of examining this picture as is here afforded. It will, at once, strike the spectator that in the engraving there is a higher light thrown on the Queen than is found in the original, even allowing for the sinking of colour, &c. The glazing matter lies in welds on some parts of the surface, and many of the background heads are flattened into the canvass by it. In painting this picture, Wilkie seems to have been actuated by a determination to show that, although he painted domestic scenes, he was not unfitted for a higher walk; there is everywhere evidence in the work that he felt himself driven to this in what he, perhaps, deemed self-justification. Like all things which are good it has its declaimers, but these are not to be heeded; every competent judgment must admit it to rank with the very best of its kind.

No. 11. 'The Penny Wedding,' 1818; her Majesty. This is the most remarkable of the last pictures painted by Wilkie in his really characteristic manner; all his celebrated works, 'The Blind Fiddler,' 'Distraining for Rent,' 'The Rent-day,' &c. &c., preceded this production. The shadowed parts of the work are not so transparent as the same in earlier works, but it is,

notwithstanding, a first-class specimen of the master.

No. 14. 'Chelsea Pensioners reading the Gazette of the Battle of Waterloo,' 1822; Duke of Wellington, K.G. It is curious to observe how faithfully the *locale* is described in this picture. It is the entrance to the Hospital as it is now, and as it was twenty years ago; there is no change save in some of the actors themselves, who have retired for ever from that and every other stage, for the figures assure us that Wilkie peopled his canvass, in a great measure, from Chelsea. This picture is brilliant and will remain so as long as it hangs together: it contains some of the most expressive heads that were ever designed by an inspired pencil.

No. 15. 'Blind Man's Buff,' 1812; her Majesty. Another of the famous series whereon the great name of the author rests; the picture is in admirable preservation and is distinguished by all the care and nicety of his finest works.

No. 16. 'The Sick Chamber,' 1808; F. G. Moon, Esq. This composition may not be so well-known as many others of the same and a later period; it is, however, second to none in the pathos of its narrative.

No. 19. 'The Rabbit on the Wall,' 1816; T. B. Brown, Esq. This picture has lately been purchased at a high price; and if such declaration of its value be compared with the prices of others of the artist's works lately disposed of, it will sufficiently show that the public taste is just in the estimation of them.

No. 25. 'The Errand Boy,' 1818; Sir John Swinburne, Bart. The subject will be remembered as a boy mounted on a very *Morlandisch* pony; and having arrived at his destination, is about to draw from his pocket the note which two female figures are waiting at the door to receive from him.

No. 26. 'Death of the Red Deer,' 1821; Miss Rogers. The fat buck is extended on the ground, while the piper (for the scene is in the Highlands) celebrates "the death" with the accustomed triumphal music.

No. 27. 'The Newsmongers,' 1821; Robert Vernon, Esq. This picture was engraved for one of the *Annals*, as were many other of Wilkie's minor works: it consists of a group listening to one of the party reading a newspaper.

No. 28. 'Portrait of Sir Peter Laurie,' Sir Peter Laurie. A three-quarter portrait; the likeness is perfect and the head is among the best of this class ever painted by Wilkie.

No. 31. 'The Jew's Harp,' 1807; William Wells, Esq. A small picture containing only three figures, and in parts somewhat more free than other works of its time. The earnestness of the player is admirably expressed.

No. 32. 'The Bagpiper,' 1812; Robert Vernon, Esq. A single figure, who, unlike most of his calling, wears a hat; but it is sufficiently evident that it is a study from the life, and coloured in a manner as masterly as anything the author ever painted.

No. 33. 'Scene from the Gentle Shepherd,' Thomas Wilkie, Esq. Every figure in the composition is a study from rustic life; but if the artist reach not the sentiment of the poet, he is doubly at fault, since the most common-place incidents described in poetry, come to him with a double refinement. We know of few painters of celebrity less fitted for poetical painting than Wilkie; yet we ought not to speak thus of him individually; for where is there a painter who has not, at some period of his career, attempted a style of Art in which he was in every way unfitted to succeed?

No. 34. 'The Cut Finger,' 1809; W. H. Whitbread, Esq. The flesh shadows in this picture are much more red than we find them in other pictures; and the head of the child is too large; other parts of the composition are sufficiently Wilkie-like.

No. 35. 'The New Coat,' 1807; M. Stodart, Esq. Of the three figures composing this work, the tailor is the most intelligent; indeed, the head is forcible to a degree. The student looks as if he had been baited into dulness by examination—he is at any rate a dull craft, a heavy sailer over the text of Sophocles.

No. 40. 'Benvenuto Cellini and the Pope,' 1841; Henry Rice, Esq. This is one of Wilkie's larger pictures; all of which that contain a display

of drapery will remind the spectator of Rubens' method of dealing with this part of his compositions. Cellini is presenting to the Pope one of his highly-wrought vases.

No. 42. 'The Parish Beadle,' 1823; Lord Colborne. Most of the figures in this picture are in little, precisely what so many of the portraits of this distinguished artist are in large. The manner of the work is so different from those of a better period, that it might be pronounced a bad foreign imitation. The shadows are black and opaque, and, but for some of Wilkie's own children, scarcely should we recognise the authorship.

No. 43. 'The Breakfast,' 1817; Duke of Sutherland, K.G. A much more luminous production than the preceding, consisting of four figures—an elderly couple, a visitor, and servant, all incomparably made out, especially the old lady, who is superintending the making of the tea.

No. 44. 'Distraint for Rent,' 1815; W. Wells, Esq. Certainly one of the most valuable of Sir David Wilkie's works. No language can excel the perspicuity with which the story of distress is told; for every figure is in unison with the whole. This work is so well known through the engraving, that no description is here necessary.

No. 45. 'George the Fourth in Highland Costume,' 1832; Duke of Wellington, K.G.; and No. 46, 'His Royal Highness the Duke of Sussex in Highland Costume,' 1836; her Majesty—are two of the best of the full-length portraits.

No. 47. 'Duncan Grey,' 1814; J. Sheepshanks, Esq. It is to be regretted that Wilkie did not further cultivate this tone of sentiment; for nothing that has ever been painted comes home to the heart with a force equal to this. Throughout these works the narrative is generally aided by action, but here the auxiliary is thrown aside, and the argument is detailed in language intelligible to the most obtuse sense. The distinctive expressions of persuasion, obduracy, and disappointment, place the artist, albeit his picture is neither heroic nor historical, upon a rank with all those who have best succeeded in painting the emotions.

No. 48. 'The Card Players,' 1808; Charles Bredel, Esq. The background is beautifully liquid and transparent, in contrast to which the figures come out somewhat hard. The laugh of the man who holds the best cards is more rigid in the picture than in the engraving.

No. 49. 'Guess my Name,' 1821; Frederick Perkins, Esq. A marked difference is here observable between this and the preceding picture. 'The Chelsea Pensioners' was in progress about this time, but the styles of work in those two pictures bear no relation to each other.

No. 50. 'The Pedler,' 1814; Miss Baillie. The pedler has asked too much for a gown-piece which he is displaying; and the angry remonstrance of the housewives, met by his look of deprecation, is equal to the best things of the artist.

No. 51. 'Queen Mary Escaping from Lochleven Castle,' 1837; E. R. Tunno, Esq. This picture pronounces itself at once one of Wilkie's latter works. There is somewhat too much ceremony for an escape.

No. 55. 'The Rent-day,' 1807; Countess of Mulgrave. An error in the composition of this famous picture is, that the grouping is not sufficiently rounded. All the figures are placed nearly upon one plane. Like the early and simply-painted pictures of the collection, it remains in a fine state of preservation, and must ever maintain the high place it holds in the public estimation. It is true that, like the oysters in the 'Chelsea Pensioners,' it contains contradictions, as some of the tenants wear great-coats and cloaks, while another is exhausted by a harassing cough, all of which would argue that they are paying the Christmas rent; but, on the other hand, the wine is subjected to the process of cooling, a circumstance which points out that it is the Midsummer quarter. These, however, are incidents which, although frequently noticed, are beneath the serious observation of the critic, since they in nowise compromise the value of the picture.

No. 61. 'The Highland Family,' 1824; Earl of Essex. This composition is even more distant in style than in years from the bright and beautiful works, 'The Penny Wedding,' 'Blindman's Buff,' &c. The family consists of a Highlander, his wife, and child; but the "gudeman" looks out of place, being too well dressed for the cottage he inhabits; the "gudewife," too, looks more than the

mistress of the chattels about her; in short, the pair seem to be persons of a higher rank rusticating for amusement. Everything in the composition is kept in shadow, the tones of which are of that heavy and opaque character seen in too many otherwise beautiful productions.

From No. 64 to No. 107 inclusive are preparatory studies, sketches, and unfinished pictures, many of which we recognise as having been disposed of at the recent sale by Messrs. Christie and Manson, as the 'Head of Talleyrand,' the 'Encampment of the Sheik and Arabs,' 'Samuel and Eli,' the 'Turkish Letter Writer,' &c., &c., besides other sketches executed at many periods of the artist's life. Of these one only is a finished oil picture, No. 84, 'The Whiteboy's Cabin,' 1836; Robert Vernon, Esq. It is a large picture, composed of three figures, and painted for distant effect. The subject is one which would have been adapted for a picture for the early series; but how differently would Wilkie have then painted it! The whiteboy is sleeping, while his wife and another female seem to be watching in apprehension of his being apprehended. This production, which, in its kind, is a return to the style of subject which won for the author his high reputation, we cannot help comparing with the works in that style. The cabin and its still-life contents are as they must have been then; the treatment is changed only in light and colour, and the change is not an improvement; but the place, as a whole, is a cabin of the meanest standard—a hovel. Thus we find the quality of interior sunk, while that of the figures is so much raised, that they assort but ill in character with the scene of action. Had this picture been painted a quarter of a century earlier, the figures would have been to the purpose; as it is, they are inconsistently dramatic. Yet the picture is a masterpiece, but not as a Wilkie. The foreshortening of the whispering figure cannot be excelled.

No. 109. 'Portrait of Mrs. Moberley.' Among the larger portraits by Sir David Wilkie, the colouring of this approaches the life as nearly as any we have seen. In many of the female portraits of the collection we find half the faces lost in broad shadows, a most infelicitous manner of painting ladies; but here the face is in a full light, whereby the picture is advantaged far beyond others of its class, but is yet, in other respects, far from ranking as a superior portrait.

No. 115. 'Digging for Rats,' 1811; the Royal Academy. This, we believe, was the presentation picture to the Academy, and although consisting of few figures, and simple in composition, is, perhaps, the finest of its immediate class ever painted. Some urchins, aided by a couple of terriers, are engaged in hunting rats, and the exemplification of eagerness and impatience, as well on the part of the canine as the human kind, is beyond all praise. The background is in clear shadow, and the colouring of the figures is rich and harmonious.

No. 114. 'Subject from Burns' Poem of the Vision,' 1802; James Wardrop, Esq. As a work of Art this production is of no value; it is only to be estimated from associations, and as an early effort of a subsequently great artist. From the youth and inexperience of Wilkie at the time of his painting this picture, we do not consider it open to remark.

No. 118. 'Sunday Morning,' 1805; Countess of Mulgrave. The subject is the preparation for church; the washing of the children, &c.; a home scene so familiarized to young Wilkie that he has rendered it with the utmost fidelity; but the work is like those of others of the same period; some of the heads are too large.

No. 118. 'Village Politicians.' One of the most celebrated of these compositions; but it is to be regretted that it is not in such good preservation as many others equally famous. Anything as forcible as the noisy and emphatic earnestness of the group round the table has never been seen in any work of Art, either prior or subsequent to this; but the colour in comparison with that of 'Digging for Rats,' is somewhat hard and dry. The detail throughout is elaborated to the utmost nicety.

No. 121. 'The Cotters' Saturday Night, 1837; G. F. Moon, Esq. Another of those subjects which, in earlier years, would have been treated in a manner entirely different. The figures and circumstances are wrought to some grades higher than the images which the verse of Burns calls up;

but from all similar subjects latterly painted by Wilkie, the natural truth and force have been refined away: this we can term nothing but a disease caught by the artist of society, the symptoms of which were most markedly shown in his works; he was looking continually upwards, and seemed to forget the phases of simpler nature. The candle-light effect is admirably painted, although the whole has been flooded with a brown glaze.

No. 124. 'Alfred in the Neatherd's Hut, with portrait of Sir David Wilkie in the background,' 1806; Sir Thomas Baring, Bart. The texture of this is different from that of any other of these works we have had an opportunity of examining, from its being painted on a ticken. Alfred is the most remarkable figure in the composition, which is by no means equal to the domestic histories.

No. 125. 'Landscape with Sheepwashing,' 1817; Sir Thomas Baring, Bart. Remarkable as the largest landscape Wilkie ever painted. The scene is a composition, if we may judge from the circumstance of its having been modified from the preparatory sketch which hangs near it. It is a solid and sensible picture, valuable in its solitary state as the production of a man unrivalled in another walk of Art.

No. 128. 'The Recruiting Party,' 1805; Wynn Ellis, Esq., M.P. This is one of the most Dutch-looking pictures in the collection, and very unlike the 'Village Politicians,' and other pictures that were executed about the same time. It is free in touch, and unambitious in sentiment; indeed, there is an entire want of that narrative which distinguishes even the earliest of these productions.

In addition to the works of the late Sir David Wilkie, there were exhibited others by celebrated artists, to a few of the titles only of which we can afford space. These are—'A Fête Champêtre,' by Watteau; 'Adonis going to the Chase,' Titian; 'Interior,' Teniers; 'Dutch Boors,' Teniers; 'Portrait of Mrs. Robinson,' Sir Joshua Reynolds; 'A Cottage Girl,' Gainsborough; 'Portraits of John Bellenden Ker and his brother Henry Gawler,' Sir Joshua Reynolds.

Beautiful, however, as some of these and others that hang upon the walls, the great charm of the exhibition is centred in the works of Wilkie; and we congratulate the public and the profession on this opportunity of seeing thus assembled the works of a man who has enjoyed, during his life, a more extended and unaffected popularity than any other artist, whatever may have been his distinction in his avocation.

## THE ROYAL ACADEMY.

### SEVENTY-FOURTH EXHIBITION.—1842.

THIS portion of our review of the Exhibition was unavoidably postponed last month; albeit our notice has been unusually long. We are aware of having passed by many works advancing claims to consideration, but we yet look forward to other opportunities of rendering justice to merit of every degree.

No. 455. 'A Highland Reel,' W. KIDD. A reel in which the dancers are all men is a heavy affair; there is, however, instead of grace, energy and exceeding emphasis. Nothing in the whole round of models could come up to the action of the figures; we have, therefore, reason to congratulate the artist on their perfect success.

No. 456. 'The Village Oak,' J. STARK. This is surely suggested by the "Deserted Village," though the artist does not tell us so; or has he been reading Crabbe or Bloomfield? for the little picture is in a vein of rural poetry, which moves recollections of all these, and more—of the scenes they describe.

No. 457. 'Remains of the Temple of Kosm Ombos, Upper Egypt,' D. ROBERTS, R.A. The charm of these desert scenes, by this distinguished artist, is the perfection of their day-light effect. There is little here substantially picturesque, but the little that there is, is treated in a manner to form a beautiful picture. A few columns are the remains—and the life of the composition consists of some men and camels.

No. 458. 'The Trial of Charles I. in Westminster Hall, Jan. 27, 1648-9,' W. FISK. This work depicts the proceedings of the last day of the trial; and the moment chosen, is that when Lady Fairfax interrupted the court, by exclaiming "Oliver

Cromwell is a rogue and a traitor, and not a hundredth part of the people are in favour of the trial." This incident illustrated in the work created much confusion in the court, and all eyes were turned to the gallery, whence the voice proceeded. Herein should have been the force of the composition; instead of which the interest is broken and divided; in fact the only sign of surprise and movement, is in the action of the colonel directing his men to fire into the gallery. The king is well made out, but rather too conspicuous, a circumstance arising from the court appearing thin. Many of the figures are admirably painted, and acquire value from the care bestowed in making them likenesses.

No. 469. 'A Family Party,' T. ROODS. The method by which this picture has been painted is free and effective. The colour has settled with a transparency which will rather gain than lose with age.

No. 478. 'Portrait of a Lady,' T. ELLERBY. It is coloured even to the life, and carefully made out in all its parts.

No. 479. 'Portrait of Lieut-General Sir John Macdonald,' R. S. LAUDER. The likeness here is particularly striking, and the head is altogether one of extraordinary power and energy.

No. 481. 'The Lesson neglected,' E. A. GIFFORD. An interior with figures and accompaniments, rivaling in finish the *ménage* pictures of the Dutch school.

No. 483. 'On the French Coast at Ambleuse,' H. LANCASTER. A coast-view is somewhat of a trial for a landscape painter; for consisting generally of so little, the want of objects must be atoned for by the finest feeling in leading the eye over the generally flat surfaces of which these scenes are composed. This example of coast scenery has been painted under impressions most favourable to the delineation of such subjects.

No. 484. 'The Watering-place,' F. R. LEE, R. A. The objects in this picture are varied *ad infinitum*—yet familiar as they are, we cannot help yielding to their appeal, when brought forward with such reality as in this picture. A screen of trees, through which we see a cottage, confines us to a vividly painted fore-ground, traversed by a stream of living water, over which is thrown a rude stone bridge. And this is the 'Watering-place' now under notice—a subject which has occupied all the landscape painters, majors and minors, of our school at least once in their respective lives.

No. 485. 'The Covenanter's Marriage,' A. JOHNSTON. The book entitled 'The Lights and Shadows of Scottish Life,' affords the material for this picture; but the subject is sufficiently national to have dispensed with reference to any descriptive text. Here are seen at a glance all the perils to which the Covenanters were exposed in the exercise of their religion and its ceremonies. The figures of which the group is composed are sufficiently distinct in the outward signs of the inward essence.

No. 491. 'Alfred dividing his last Loaf with the Pilgrim,' W. SIMSON. This trait of the wise and excellent king cannot be forgotten;—his queen Elswortha remonstrated upon reducing their slender store to its half; but King Alfred nevertheless shared his all with the pilgrim. The figures are painted with much truth, and the story stands at once declared.

No. 492. 'Floretta,' R. FARRIER. A picture of a disappointed maiden lamenting, apart from her companions, her lonely state. The treatment is simple, and the figure, like those generally of this artist, is touchingly descriptive.

No. 495. 'An English Dell Scene,' J. WILSON, jun. A snatch of the green-wood glade, selected with taste, and painted with a breadth and effect to do nature ample justice.

No. 496. 'The Tees,' T. CRESWICK.

"Condemned to mine a channell'd way  
O'er solid sheets of marble grey."

These two lines from "Rokeby" accompany the title. Surely to be thus "versed" by Scott, and painted by Creswick, the Tees must become a stream as famed in poetry as the renowned Guadalquivir. The water is discoloured by a flood, or in the language of the north, by a "red an' jawin' spaet." The trees are, as usual, better than nature.

No. 506. 'Meg Merrilies and the Dying Smuggler,' R. S. LAUDER. The artist has thrown much of the spirit of the text into his impersonation of the gipsy sibyl; but the picture generally

is not so forcible as others he has recently produced.

No. 507. - - - - C. W. COPE.

"The hawthorn bush, with seats beneath the shade,  
For talking age and whisp'ring lovers made."

When Goldsmith penned these lines, it did not occur to him that he would ever be so fatally misconstrued as in this picture, wherein we find a pair of lovers under the hawthorn, and side by side with them a triad of ancient village gossips, discussing the contents of a newspaper. Either group would have sufficed for the picture, but thus brought together, they destroy each other like two antipathetic chemical principles.

No. 510. 'Broeckenhaven, a Fishing Port on the Zuyder Zee,' E. W. COOKE. Art has done everything for this picture, for the subject is sufficiently barren. The artist has essayed to give interest to a scene where little occurs save a breakwater of piles; and has succeeded to admiration. A vessel is leaving the harbour, and this object is a real and substantial representation.

No. 514. 'The Giauour,' C. DU VAL. The style of this work is classically severe: it is a picture of deep passion, wherein everything is kept down to give effect to the head; the lights of which are coloured with truth, but the shadows are rather affected.

No. 519. 'The Earl of Cardigan,' F. GRANT. The largest canvass we have ever seen from the easel of this artist. This portrait is equestrian, and Lord Cardigan wears the rich uniform of his regiment. The horse is in spirited action, to account for which, the background reminds us of a field-day. It is, on the whole, a grand effort, which cannot be pronounced otherwise than perfectly successful.

No. 523. 'The Sunny Days of Old,' W. S. P. HENDERSON. Dante affords the subject of this picture—it is the well-known story of Francesca da Rimini: the lovers are seated, and, of course, reading, but they might have been circumstanced more according to the feeling of the poetry. In the heads there is much intelligence, but the drapery wants clearing up.

No. 525. 'Termination of the Ravine leading to Petrea, or City of the Rock, the ancient capital of Arabia Petrea, and the Edom of Scripture,' D. ROBERTS, R. A. On each side towering rocks shut in the view of this approach to the city of the rock. A few figures are thrown in to show by comparison the height of the masses that rise over the rugged and winding path. In the distance a thin stream of water descends from one of the cliffs, and by a sinuous course finds its way down the ravine to the supposed position of the spectator. The foreground is in shadow, and contrasts well with the other parts of the picture, that are lighted by the sun.

No. 527. - - - - R. DADD.

"Come unto these yellow sands,  
And then take hands,  
Curst'sied when you have and kissed,  
(The wild waves whist)  
Foot it feathery here and there,  
And sweet sprites the burden bear."

Accustomed as we are to see the poetry of Shakespeare painted, we are taught to look for nothing beyond the powers and substance of mortal beings, in the compositions declared by their authors to embody his conceptions. The gnomes, sprites, and fairies which we have seen drawn after the works of our great dramatist, have always been more akin to ourselves than to that world whence have dropped the creatures that move in the "Midsummer Night's Dream" and the "Tempest," for our poetry in art generally partakes more of the living model than of the ideal. These remarks are drawn from us by the present picture, which approaches more nearly the essence of the poet than any other illustrations we have seen. The "sweet sprites" have joined hands, and are footing it in a manner to show that they are not of this earth. The thought has its source in the purest sentiment, and it is wrought out with much modesty; but the author will do well to guard against the prevalence of the colour of the figures. The picture is fraught with that part of painting which cannot be taught—in short, the artist must be some kind of a cousin of the muse Thalia.

No. 528. 'La Maladie Decouverte,' S. DRUMMOND, A. A young lady, extended on a couch, has been suffering from some malady difficult of discovery; on a visit, however, from the physician,

who with her mother enters the room while she is asleep, the cause of the illness is found to be a letter which lies open by her side.

No. 529. 'Dominican Monks returning to the Convent—Bay of Naples,' W. COLLINS, R. A. The convent is situated on a rock overhanging the sea, but the view here presented is from the foot of the acclivity, which the monks are about to ascend. The sea and sky of this picture are extremely beautiful; the atmosphere of the one and the marine effects of the other are the perfection of Art.

No. 530. 'Portrait of the Right Rev. Dr. Wiseman, Bishop of Melopotamus,' J. R. HERBERT, A. The severity of the style of this work will lead the spectator to the conclusion that the artist is vying with the great names of an earlier period of art. In the head Mr. Herbert rejects all the trick of portrait painting; it is distinguished by a solidity which throws us back upon ourselves, seeking for "reasons," and "upon compulsion," too; for it is absolutely all argument.

No. 531. 'My Grandmother,' M. CLAXTON. Portrait of a child in an old-fashioned costume: it is brilliant, and comes forward from a well-managed background.

No. 533. 'Returning from Market,' J. C. TIMBRELL. A single figure made out against a sky background, by a very well judged arrangement of colour. The picture is high, but it seems skilfully painted.

No. 535. 'The Death of Romeo and Juliet,' H. PICKERSGILL. The death of the lovers is clearly told; the artist, in disposing them in death, has felt the circumstances of their sad fate. The vault is well painted; but the most valuable point in the work is the head of the old man.

No. 536. 'Faint Heart never won Fair Lady,' N. J. CROWLEY. A proverb which, under patient treatment, would afford abundant matter for an excellent work. Much power is displayed in the manner in which it is here illustrated, but we would have seen it invested with a more refined sentiment. The artist sees his shadows generally too black; this, in practice, gives a heaviness to pictures which nothing can relieve.

No. 537. 'Who'll serve the Queen?' R. FARRIER. Some boys are reading a bill which has been posted up to signify the want of recruits. This is a picture in the genuine style of the artist, painted with perhaps less brilliancy, but not less character than we have seen in others of his works.

No. 538. 'Scene from the "Bourgeois Gentilhomme,"' T. M. JOY. The scene is between Mons. Jourdain and Nicole; the former delivering to the latter, with respect to her work, a caution, which is received by her with the "hi, hi" of the text ably depicted in her countenance.

No. 539. 'Morning on the Beach at Hastings,' A. CLINT. This little unassuming picture is characterized by infinite sweetness; it is warm and mellow without glare, and

"Its light is sunshine and its shadow shade."

No. 541. 'Portrait of Sir Thomas Baring, Bart.' J. LINNELL. A work admirably adapted for engraving, as then its manner and colour would be sunk.

No. 548. 'Cromwell discovering his Chaplain, Jeremiah White, making love to his daughter Frances,' A. EGG. The chaplain is on his knees, grasping the lady's hand, and this Cromwell sees as he enters the room from behind the arras, which hangs before the door-way. We are not to believe Frances Cromwell accustomed to many such protestations, therefore would it have been better had she received the vows of Jeremiah White with something more of emotion. The rage of Cromwell is too dramatic, and his daughter is too much dressed; but the manner of the chaplain is earnest enough.

No. 549. 'Deer-Stalking,' T. DUNCAN. This picture contains two portraits in a Highland landscape, accompanied by all the circumstances of deer-stalking. One of the figures is disproportionately too long; it may be the portrait of a very tall man, but the artist should have qualified the figure in such a manner as to preserve the resemblance, without conspicuously offending against proportion.

No. 550. 'An Old Water Mill—approaching Shower,' J. WILSON, jun. The materials of this landscape compose admirably. The whole is in shadow, and it must inevitably rain, for the teeming clouds are already riding up on the wind.

No. 554. 'Alfred Montgomery, Esq.,' J. WOOD. A portrait distinguished by an excellent taste; everything is subservient to the head, which is brought forward under the best principles of Art.

No. 556. 'Heroes of Waterloo,' J. P. KNIGHT, A. The subject of this picture is the reception by the Duke of Wellington of his guests, on an occasion of the anniversary of the Battle of Waterloo. In looking at this enterprise (for such it is, duly considered), it must be remembered that the artist has not been able to deal discretionally with effects, but every head and figure was to be brought forward, individual resemblance being the grand object. The number of portraits of which the picture is constituted is upwards of thirty; the treatment and posing of which has been, as can easily be imagined, a business of much labour and study. As many of the likenesses as are known to us are striking to a degree; and with respect to the style of execution, it is such as courts examination.

No. 371. 'Ruth and Naomi—Portraits of a Lady and her Daughter,' H. L. SMITH. It is a singular taste that has dictated this manner of circumstancing portraits. The artist in his view of it has invoked the spirit of scriptural illustration; and if the heads be wanting in apposite force, he is by no means in fault. The design is distinguished by much of the greatness of classic art; and in such parts as require perfection of drawing, the play of line is in the highest degree graceful.

#### OCTAGON ROOM.

No. 1204. 'A View on the Rhine,' C. R. STANLEY. The scenery on the Rhine is different from that of every other river, and any acquaintance with its character leaves an impression never to be obliterated. Every river has its own features, and those of the Rhine are, at the water's edge, the Rhine towns and villages, and on the towering cliffs such castles, or the remains of such, as those of Rolandseck and the Drachenfels. This view is perfectly Rhenish, and executed with much care.

No. 1210. 'Portrait of an Officer of the Blues,' W. YELLOWLEES. The figure is standing in an easy position, and represented of course in the uniform of the regiment; the head is well painted, and establishes at once an understanding with the spectator.

No. 1213. 'Near Woodbridge Farm, Wiltshire,' T. F. WAINWRIGHT. A small and unpretending landscape, having the high merit of resembling nature very closely.

No. 1214. 'Sonning Oaks, near Reading,' E. HAVELL. Under this title we find portraits of two or three children and a large dog: parts of the picture are carefully painted, but for want of gradations of light the figures are hard in the background.

No. 1217. 'The Return from Gretna,' T. CLATER. A hasty marriage having been contracted, the pair are returned from Gretna, and the lady supplicates forgiveness of her father. The description is terse and leaves nothing untold, and the composition of the picture agreeable.

No. 1218. 'Chaucer with his friend and patron, John of Gaunt, and the two sisters, Catherine and Philippa, their wives,' W. B. SCOTT. Judging from all that can be seen of this work it merits a lower site than that in which it has been placed. The composition seems well-balanced, the colour harmonious, and the figures well-characterized.

No. 1220. 'A Coast Scene,' A. B. MONRO. The view is of a flat shore entirely without incident; but the force of the picture lies in "the stormy afternoon," which is dull and cloudy, apparently wet; and the scud is driving before the wind, in a manner to indicate that it will be "worse before it is better."

1224. 'Summer,' H. J. BODDINGTON. A green lane overhung with trees; painted with a care which amounts to sharpness and niggling. Some shaded portions of the foliage are full and rich, but the manner of the near trees is not an improvement upon what we remember of previous works of this artist; the whole, however, composes admirably, and the general effect evinces a fine feeling for this style of art.

No. 1226. 'The Timber Barge,' J. TENNANT. A work in which the most simple management has been followed by a most beautiful result. The picture glows with a warmth of tone, reminding the spectator of Cyp; the bright sky repeats its colour in the water, and at length mingles its tones with the distant land with infinite harmony and

sweetness. A barge is moving slowly up the stream, on the shore of which, a little higher up, a horse is in waiting to tow it.

No. 1227. 'Interior of Penshurst Castle, with Portraits,' A. MORTON. This is a room with figures, furnished in the modern taste, but not so well executed as other works we have lately seen by the same hand.

1228. 'The Temple and Acropolis of Corinth,' W. LINTON. A work of high merit, signalized by many of the rarest beauties of landscape art. In the middle distance are the remains of a temple, the columns of which come off from the distant sky with astonishing reality of effect. To the near portions of the picture, a solidity is communicated by an admirably managed mass of shadow.

1231. 'Widder Park, on the Teign, near Drewsteignton, Devonshire, with Chagford and Dartmoor in the distance,' E. JEFFREY. The manner of this picture would induce an opinion, that the artist was more accustomed to water-colour painting than oil. The view is extensive and varied; but there is in it an absence of a main purpose, diminishing the value of the materials of the work.

No. 1246. 'Queen Katherine's reception of the Cardinals,' H. COOK. The subject of this picture is found in the third act of "Henry VIII.;" it is one to draw forth the powers of the most experienced in Art. If the artist be young, as we apprehend he is, we congratulate him on the position he has already taken up.

No. 1250. 'Harold the Dauntless, Mitchell, and Gunna,' R. R. M'LAN. The figure of Harold, in this picture—

"A knight in plate and mail arrayed," startles the spectator, at first sight, almost as much as did the weight of his iron hand the maiden whose glee he wished to hear continued. The composition is brought forward by a firmness of manner which we would gladly see more extensively followed; and the feeling of the lines quoted from the poem is admirably sustained by its general management; indeed, the work is impressed with all the romance of the poetry, much of which lies in the treatment of the female figures; and the drawing of Harold is a fine example of foreshortened effect.

No. 1260. 'Nell and the Widow, Master Humphrey's Clock,' FANNY M'LAN. This passage from Mr. Dickens' work is illustrated in a manner fully worthy of his most pathetic descriptions. Nell and the widow are in the churchyard, the latter shaded by a sombre yew-tree, which imparts solemnity to the scene. A narrow examination of this picture elicits testimony of powers rarely seen in the productions of ladies; indeed, in substantial handling, it is an example that many of our artists might follow, with benefit to themselves and pleasure to their friends.

#### THE ARTS IN CONTINENTAL STATES.

ITALY.—TURIN.—*Professor Rasori's Works.*—Our readers may remember that we described last year a picture by Professor Rasori of Bologna and R.A. of Turin, the subject of which was the first meeting of Buondelmonte with the beautiful daughter of the Donati, the fatal source of the long wars of the Bianchi and Neri in Florence. At the exhibition of objects of the Fine Arts here on occasion of the marriage of the hereditary prince, Professor Rasori exhibited three new pictures, each consisting of a single figure with accessories, but so full of character and expression that each is in itself a history. The subjects are, 'Peter the Hermit,' 'Marino Faliero,' and the unhappy 'Lisabetta di Messina,' as described in Boccaccio's tale. Peter the Hermit is painted as the chronicles describe him, not as he is idealized by Tasso, a robust indomitable old man; and we see expressed in this picture the high enthusiasm that made him believe himself the instrument to execute the will of God. Marino Faliero is also an old man, but the character essentially different. Here also is passion, but deep and repressed, for the head of the Venetian republic was habitually accustomed to conceal what he felt; but in the frowning brow and compressed lip, and the hand that seems unconsciously to crush the paper which contained the writing of Steno, we see the vindictive and indignant spirit of him who was wounded both in his affection and his pride. The unhappy Lisabetta is represented as a beautiful

girl in the deepest grief, but which has not yet lasted long enough to destroy her loveliness. Her tears fall into an urn, that urn contains the head of her lover, which she had secretly dug out of the pit where her brothers had buried after murdering him. Boccaccio says she sat always near this urn and watered it with her tears; there seemed all her thought, as if her Lorenzo were there. The Lisabetta of Rasori is indeed the Lisabetta of Boccaccio, and we cannot praise it more highly. If the Professor Rasori continues to do all his works with such care and taste, truth and conception, he well deserves the title not only of a great artist, but the name of "a philosopher painter."

VENICE.—*Aqueduct.*—M. G. Grimaud, author of an essay entitled "Essai sur les Eaux Publiques et sur leur Application aux Besoins des Grandes Villes," has at last obtained the consent of Government to bring into Venice the water of the river Sile. The length of the aqueduct will be six leagues—four on terra firma, and two on the lagunes. It is a work worthy of the Roman times. The architect and engineer is G. Benvenuti. The works will be conducted by Signor C. Lapito, known in France as having executed the fine canal of the Oise, and having completed the other at St. Maur, near Paris.

FRANCE.—PARIS.—*Sculpture.*—The historical commission, named by the committee of arts and monuments, has replaced in the absides of the church of Notre Dame de Paris, the statue of the Bishop Matiphias de Bussy, who died in 1304. This statue, of white marble, of the fourteenth century, had been concealed during the revolution in the crypts of Notre Dame, and its existence was made known by M. Gilbert, the keeper of the towers of the cathedral. Matiphias de Bussy was the erector of the chapels of the absides. The historical commission contains, among other distinguished names, that of M. Victor Hugo.

*Sculpture in the Louvre.*—We have not earlier been able to make some observations on the works of sculpture exhibited this year, and we shall only mention a few of the more prominent ones, premising that it is the general opinion that this fair and noble daughter of Greece was not richly represented in the past exhibition. One of the most important works was the 'Statue of Henry IV.,' executed by M. Raggi, for the town of Pau, and he obtained permission to place it in the court of the Louvre, where it was seen to great advantage. The attitude is easy and noble, the head characteristic, and all the details of the dress and armour are treated with care and talent. There are two excellent models of statues: that of 'Dunois' by M. Duret, and 'Charles of Anjou' by M. Daumas. From the well-known powers of execution possessed by both these artists, we do not doubt that, finished in marble, both these statues will be very fine. 'La Place,' the mathematician, also a model, is an excellent work, by M. Garraud. There are many good busts—excellent both in execution and faithful as portraits; among them may be named 'Marshal Maison,' by Dantan; various busts by M. Elshost; 'M. Alfred Vigny,' by M. Etex; 'Boissy d'Anglois,' by M. Husson; and the fine busts, which are the productions of a young female artist, Mme. E. Dubufe; three of these are executed in marble, with great truth and expression. There are many religious works: amongst these, five statues of 'The Virgin Mary'—a most difficult subject, no tradition nor type remaining to guide the artist. If our artists do not succeed in these representations, they may console themselves with the thought that Michael Angelo himself was not quite successful in his works on this subject.

'The Judith' of Mlle. Faveau is the object of the most various opinions, some critics find that the moment is unhappily chosen, being that in which Judith fixes the head of Holofernes on a pike to show it to the people; a painful and somewhat revolting act in the detail, and that the frowning brows of 'the Judith' of Mlle. Faveau have an expression of excited anger, which does not belong to the calm and high-minded widow of Bethulia. Others find the attitude, expression, and style of the work, all admirable, and that the small fingers of Mlle. Faveau have more power to animate marble than the strong hands of all the other sculptors—both parties agree in allowing great merit to the execution of this work, which is

called a bas relief, but in fact the figure of Judith advances from the balcony. It is fifteen years since M. Ary Scheffer finished the portrait of Mlle. Faveau; it is a charming picture; the lively and delicate features yet bear the expression of a determined will and powerful imagination; such qualities as have produced in Mlle. Faveau a singular devotedness to the art she selected, and which she has studied with unwearied perseverance during fifteen years of voluntary exile in Italy since that portrait was painted.

'The Psyche and Sleeping Love,' of M. Triquetti is a graceful and charming work. 'The Neapolitan Woman Teaching her Child to Pray,' is a natural and pleasing composition by M. Hussan. 'The Awakening of the Soul,' allegorized as 'a Woman employed in Catching a Butterfly,' by M. Legendre Herald, appears to us also a good work, and there are others worthy of observation; still, as a whole, the exhibition is less strong than usual: we believe, in part, because several of the best sculptors have not contributed, being otherwise occupied.

**BEAUFORT (MAINE ET LOIRE), MAY 23rd.**—*Statue of Jeanne de Laval.*—Yesterday took place, with great solemnity, the inauguration of the statue of 'Jeanne de Laval,' Countess of Beaufort, and wife of René, Duke of Anjou and King of Naples and Provence. From five in the morning the roads of Angers, Saumur, Baugé, &c., were covered with carriages of every description, horses, and pedestrians; the number of carts filled by working people was very great. We need not trouble our readers with the description of the procession, which was magnificent, nor the speeches made on the occasion. 'Jeanne de Laval,' after the death of her husband in 1430, devoted herself to charitable works; she founded a church, schools, hospitals, and infirmaries. She was the benefactress of the country on a most munificent scale, and in a most liberal spirit. Her school attached to the hospital "for very young children" may almost be regarded as the first infant school. The statue now erected to her honour is by M. Fragonard, a sculptor of distinguished talent. We admire the noble and graceful attitude of the statue: the dress is not strictly in the costume of the times, the mantle only is quite correctly so; the execution is vigorous, one fault only we find, the face has a severe and strong expression, which does not accord with the character of Jeanne universally given in the Chronicles. The statue is of bronze; it is placed on a pillar, whose fine proportions do great honour to the architect, M. Launay Pieau. The pedestal contains a fountain, always a great difficulty for an architect, from the necessity of enlarging the pedestal: but it is admirably managed by M. Launay Pieau without destroying the symmetry.

*Honours to Artists.*—The King of France has presented a gold medal to M. Jules Varnier, on account of his brilliant picture of the 'Martyrdom of St. Sebastian,' exhibited at the Louvre this year.

Many promotions have taken place in the royal order of the Legion of Honour; their object is to reward the artists whose works were most distinguished at the last exhibition. M. Triquetti, the sculptor; M. Perrot, the landscape painter; M. Hesse, historical painter; M. Simeon Fort, and M. Gigoux, are amongst those named as promoted.

M. Meyer, marine painter, has received a gold medal from the king for his 'Fishermen on the Coast of Normandy,' and his 'Burning of the India.'

M. Louis Bauderon, author of various portraits exhibited this year, has received the same reward.

The Pope has named M. Raoul Rochette, secretary of our academy, a knight of the order of Constantine.

**SWITZERLAND.—GENEVA.**—Messrs. Calame and Diday, the two most distinguished painters of this city, have been received in the most flattering manner by the King of the French, who has presented them both with the Cross of the Legion of Honour, on account of the pictures they have this year exhibited in the Gallery of the Louvre.

**GERMANY.—PRUSSIA.—BERLIN.**—The state Gazette contains a royal command for the establishment of a new order of merit for the sciences and arts. Annexed are the regulations for the

foundations of the order. We shall content ourselves with naming some of the knights—the number of German knights is limited to thirty. Messrs. Metternich, de Savigny, de Humboldt, Gans, de Schelling, de Schlegel, Schoemlin, Tieck, Cornelius, Lessing, Meyerbeer, Schadow, Arago, Chateaubriand, Gay Lussac, Listz, Rassun, Thorwaldsen, Horace Vernet, Ingres, Letronne, Daguerre, Fontaine, Mendelssohn Bartholdy, Thomas Moore, John Herschel.

**COLOGNE.—Antiquities.**—In digging under the foundations of a house adjoining the cathedral, in preparation for the works there, there was found twenty feet under ground, a part of the shaft of a fluted column, apparently of Roman workmanship, of a whitish hard stone, not belonging to this country.

The exhibitions of works of Art, at Prague, Berlin, Frankfurt, and other towns in Germany, have taken place, all exciting much interest, and giving proofs of progress; but we do not give a list of works and artists at present, as we could only give a catalogue, which is neither interesting nor profitable.

**GREECE.—NAUPLIA.**—Oberst Touret, a French Philhellene who has resided sixteen years in Greece, has undertaken, under the King's auspices, to erect a monument in memory of the Philhellenes who fell fighting in Greece.

**AFRICA.—ALGIERS.—Antiquities.**—General Bugeaud in his last campaign has discovered many Roman antiquities. Near Aia Tuka a beautiful ancient well has been cleared out; beside it were found many lamps, urns, &c. Shaw considers the Via Ptolemæa to have passed by this place.

**RUSSIA.—ST. PETERSBURGH.**—*Isaac's Church.*—The exterior of the Isaac's Church is nearly finished. The cupola is complete, except some bronze which will be finished in the course of the summer. Until the scaffolding is taken down, the beauty of the building cannot be appreciated. The height is so great that it commands a circumference of six miles, and the golden cupola appears from Cronstadt like a true beacon-light for mariners. Nothing can be more striking than the light of the setting sun reflected on the cupola and the walls; and by starlight the cupola is still bright, especially the higher part of the cross. The marble walls of the four bell towers are nearly finished, and will be so in July. The sculpture and castings for the great front are nearly completed. His Majesty the Emperor has commanded that the metal doors, the design for which is chosen, shall be executed by Professor Jacobi, and that he shall use in their construction his new invention of Galvanoplastic. The doors are to be of very rich workmanship, and their height is fifty-six feet. The building has been examined by the commission appointed for the purpose, who have pronounced it of extraordinarily solid workmanship, and in every respect executed according to the orders given.

*Painting in Russia.*—We regret to say that the journal devoted to the Fine Arts which was commenced in 1836, and continued, with only a short interruption in 1840, until now, has this year ceased to be published from want of sufficient encouragement. It is the more to be regretted because the flourishing state of the Arts in Russia at the present time seems peculiarly to call for such a publication. The last number contains an interesting sketch of the progress of painting in Russia, dividing the subject into three periods. From the latter part we extract a few sentences, adding some particulars from another source. In the earlier half of this period, our best artists came from foreign countries and bore foreign names; but many settled amongst us, and we do not separate these from the family of Russian artists. Many good works remain, the fruit of the labours of those painters, some of whom were the teachers of academies. Some native painters also belong to this period: amongst these Lossenkoff, regarded as the founder of the Russian school of painting; he entered the academy as a student in 1759, and became professor in 1773. A large picture by him, with a great number of figures, is in the Imperial Gallery at the Hermitage; the subject is the 'Miraculous Draught of Fishes.' In the reigns of the Emperors Paul and Alexander, painting advanced rapidly. Belonging to this period are Chebouieff, who still lives, and is now rector of the Imperial Academy

in St. Petersburg, Vorobieff, Schedrine, Warnet, and others. Vorobieff excels in interiors; four pictures by him are in the gallery of the Hermitage of that class. There are also there pictures by Chebouieff and Schedrine, &c. Of this race of painters many are dead, but some, still living and continuing their labours, see another generation of artists around them, all of the Russian school. The two professors of the Imperial Academy, Bruni and Bassyne, Tyranoff, Moller, Lebedieff, the brothers Cernekoff, and many others, are able painters. Specimens of the works of the greater number are to be seen in the Hermitage. Of Bruloff we do not speak; his genius belongs not only to Russia but to the history of painting in Europe. Many young artists are also rising into eminence—Stupin, Alexieff, the students of the Academy of Painting in Arsamas, and the newly organized school in Moscow. Of the enterprising brothers Cernekoff we shall be able to give hereafter some account.

*Imperial Gallery.*—Two magnificent pictures are just now purchased for this gallery at Bologna. One is the celebrated 'Madonna' of Guercino, from the Marquis Tanari; the other, a 'Holy Family' by Giacomo Francia, son of Francisco, from Prince Ercolani. Very large prices were given for both.

#### METROPOLITAN IMPROVEMENTS.

A most important step, with a view to the improvement of the metropolis, has just now been taken, and cannot but lead to useful results. On the 15th of June a deputation, comprising Lord Robert Grosvenor, Sir Charles Lemon, Bart., Mr. Gally Knight, M.P., Mr. Wyse, M.P., Mr. H. T. Hope, Hon. Mr. Elphinstone, M.P., Col. Sykes, V.P., F.R.S., Mr. W. E. Hickson, Mr. T. L. Donaldson, Mr. Mills, Mr. Fowler, Mr. George Godwin, jun. F.R.S., Mr. J. Martin, K.L., Dr. Southwood Smith, and several other gentlemen interested in the subject, had an interview with Sir Robert Peel, in Downing-street. The chief object of the deputation was to induce the Premier to turn his attention to an inquiry into the measures which government ought to originate for the improved health, comfort, and convenience of the metropolis; instead of leaving the matter wholly in the hands of private speculators and sectional interests, as is now the case. The immediate steps suggested to him were, to obtain an Ordnance survey and map of London, on the same scale with that of Dublin, lately executed (five feet to the mile); and a report from men of the first ability in the country, on what could be, and ought to be done in London, considered as a whole, within the next 10 or 15 years. Sir R. Peel, with whom was Lord Lincoln, head of the Woods and Forests, assured the deputation of his entire concurrence with their views, and expressed his intention, forthwith, to comply with their requests, and not to allow expense to stand in the way of inquiry. The deputation pointed out a variety of imperfections in the plans proposed to be carried out, in the extension of Coventry-street to Long-acre, the new street from Bow-street to Holborn, and the new street from Oxford-street to Holborn, all of which were caused by the bit-by-bit system of improvement at present pursued. Lord Lincoln promised to use efforts to remedy the evils complained of, but feared the arrangements were too far completed to admit of alteration. We trust speedily to be able to announce the names of the gentlemen to whom the very important duty of preparing the report alluded to will be confided, and shall then return to the subject, and submit a variety of suggestions for their consideration. A general meeting of the committee was held on the 23rd, Mr. W. Tite in the chair, and it was resolved that petitions to the Lords and Commons, pointing out a variety of crying evils and calling for the general report above alluded to, should be forthwith prepared for signatures, in order to strengthen Sir Robert Peel's hands.

## SIR JOSHUA REYNOLDS.\*

THE fame of Reynolds has long conferred a proud and honourable distinction upon his country. Born at Plympton in 1763, of respectable though humble parentage, he owed his subsequent elevation less to those efforts of genius which take possession of the mind as by a kind of violence, than to an enlarged observation of nature; a deep insight into character, a disposition assiduous, determined, and united to a zeal which ever proposed the highest honours of his profession for his reward. There was always in his mind a contest between the spiritual conceptions of the past, and the dull materialism of his age; he studied, he reflected, he discoursed upon the greatness of M. Angelo and Raffaele—the great style was ever on his lips; the glories of its masters would not suffer him to sleep—yet he subsided into a sphere immeasurably humbler, yet great, by its technical power and conceptive spirit. This arose from the influence that things necessary must invariably possess over things chosen; he appealed to an age which had suffered Wilson to starve, and during which the fluctuation of taste was so great, that the widow of Hogarth outlived the interest felt in her husband's works, and was reduced to want, until the interposition of the King secured her an annuity of forty pounds, from the Royal Academy he had founded. The quick sensibility of Wilson was worn unto dejection by the success of the miserable Barret; and even Sir Joshua might have sunk before the influence which encouraged Liotard, had not his calm, patient, unsubsided spirit, his love of Art, and energy in its pursuit, combined with his inherent powers, finally mastered the indifference of his contemporaries, and secured him the consideration of one "who was the first Englishman who added the praise of the elegant Arts to the other glories of his country." In the estimation of his character these facts should be considered; for if he praised works which he did not evince the ambition to rival; if there were no struggle to approach the greatness of M. Angelo, or the might of Raffaele; it was not that the desire was a false fever of the mind, the hectic ambition of the student, but the conviction felt by him through life—that when genius cannot impart its own elevation to the age, it has still a high destiny in the attempt to direct the predominant thought and tendency to greatness. Reynolds succeeded to the honours of Vanduyck. He gave to portrait,—truth, character, expression; to attitude,—grace and natural ease; he was forcible, yet chastened; free, yet submissive to rules. He had no competitor in colour, no rival in design; the child's growth was succeeded by the giant's strength, he became more bold and more diversified, and his fame increased with his ambition. He aimed at elevation and refinement; and concealed by this direction his defects; his portraits suppressed the naked nothingness of Kneller, the courtly meretriciousness of Lely; they were instinct with life, chaste in composition, and ceased to reflect the depravity of a court, or the depressing influence of uneducated opinion. We must now consider him less as the artist than the writer on Art. His Discourses have long delighted the educated, and improved the student; they were delivered at the annual distribution of prizes, in the belief that something should then be said to animate and guide attempt, to direct assiduity, and to impart those general rules, which observation teaches, philosophy enlarges, and experience has confirmed. To these much objection has been raised; they have been declared illogical, contradictory, inconclusive; the contributions of Johnson, Mudge, and Burke, blended with his own theories and technical experience. It is easy to condemn; the authorship, however affiliated, is his own. There will be ever a class of men ready to assert—

"Most authors steal their works, or buy;  
Garth did not write his own DISPENSARY;"

and the difficulty of reconciling many of his conclusions is overcome, if we reflect, that while he felt the existence of genius, he knew the necessity of study; that to him the observation of nature was the law, industry the prophet, of success. On Compositions so well known it is unnecessary further

\* The Discourses of Sir Joshua Reynolds, illustrated by explanatory notes and plates, by John Burnet, F.R.S. London, Carpenter, 4to., 1842.

to enlarge; therefore we shall consider them chiefly with reference to the notes appended by Mr. Burnet, feeling assured that the attention of our readers will be amply repaid by their perusal. When Osenstern parted from his son, he is reported to have said, "Go, my son, into the world, and see with what little wisdom it is governed." In a similar spirit, as regards Art, we might add, "Go, young student, into an exhibition, and see with what little consideration, by what actual beggary of thought, many pictures are painted." It is at intervals as if chaos were transformed into colour. A few hours snatched from the pleasures of the day, a month of idleness, a week of occupation, the hurried crude idea, rapidly sketched in, or Art forced by its brilliant trickery of artificial contrast, and masterly power of execution to conceal the rapid imagination which lurks beneath; such are the indications of the minds of many, at once of the highest genius, and the meanest pretensions:—

"Thus bards in Bedlam, long in vain tied down,  
Escape in monsters to amaze the town."

But it is said—do not fetter genius; do not limit these early emanations. It is facility of composition. "A facility of composing," says Mr. Burnet, (page 12), "is the ruin of everything excellent; and accordingly we perceive at all times, as the Art declined, that mediocre painters were the most dexterous—expert at gratifying the eye: we look in vain in their works for a happy union of skill and thought; such specious performances captivate the ignorant, whose praises confirm the artist in his vicious habit, and when just criticism removes the deception, he in vain endeavours to deprive his works of a meretricious character, by clothing them with the efforts of study: deprived of their dexterity and fascinating charm of handling, they become heavy and insipid. . . . The emanations of thought succeed best alone; and until a design is considered well in all its various departments, the hand should be withheld from committing it to canvass; for the first sketch often infuses, in a great degree, all those that follow." No opposition can be raised to the correctness of these opinions, we apprehend, except amongst those who desire to see the canvass merely a bright contrast to the more varied display of the palette. When the eminent painters of the past "conceived a subject, they first made a variety of sketches; then a finished drawing of the whole; after that a more correct drawing of every separate part—heads, hands, feet, and pieces of drapery; they then painted the picture, and after all, retouched it from the life. The pictures thus wrought with such pains, now appear like the effect of enchantment, and as if some mighty genius had struck them off at a blow." (Discourses, page 14.) In the opinions expressed upon many of those by whom pictures are "taken in, cleaned, and done for," to adopt the phraseology most suited to the practice, we cordially agree;—a picture repaired is most frequently a picture flayed—Marsyas without his skin. "As a judgment on Sir Joshua, no works have suffered more in this respect than his own, many of which are cleaned down—to the preparation for glazing; and when pointed out as examples of this destructive course, it is impudently asserted that his colours have fled;" fled! yes, doubtless, to escape the persecution of the *spirits* employed against them. But we pass from these,—

"Terra salutaris herbas, eadem que nocentes  
Nutrit; et artice proxima sæpe rosa est;"

and proceeding to higher points, we would particularly recommend the reader to the notes "on the modes that exist of bringing our own compositions in contact with those of the great masters;" "upon the higher branches of Art," (p. 28); "and on the necessity of study and labour, to give strength and direction to the efforts of genius." Let those who press forward to claim with eagerness the rewards of fame, remember, that though much will be conceded to greatness of talent, but little is refused to study and assiduity; and that if these alone do not form an artist, without them genius is but a meteoric exhalation, wandering, uncertain, or dissipated by variety of pursuit. In these opinions we are strengthened, not alone by the observations of those who have made the characteristics of genius the subject of moral and of metaphysical investigation, but by facts which the daily observation of life educes, and which the history of literature

and Art in its multiplied variety confirms. The much-debated question, of the existence of taste as a distinct faculty of the mind, and which—

"Is, though no science, fairly worth the seven;"

has been thus considered by Mr. Burnet, with reference to Sir Joshua's conviction of the reality of a standard, by which the mind may be guided in its decisions. "Taste, however nearly allied to genius, seems, by general consent, to be a quality totally distinct. Genius implies a creative and inventive power, which is the highest effort of the understanding: taste is more properly the art of selecting and guiding the efforts of genius, and is the offspring of a sensitive and delicate mind; for though capable of high cultivation, it is originally a part of the physical constitution," &c., &c. To us it appears that taste is originally the intuitive perception of the beautiful, in whatever form it exists: in the modulation of sound; the justness, simplicity, and congruity of ideas; the force, precision, and harmony of their expression; in the varied attributes and majesty of nature, in the storm and conflict of the elements; and the spiritual peace which hallows their repose. Cultivated and exercised it becomes judgment, for it supposes principles, draws consequences, and decides; it is the harmony of the mind and reason, and we have more or less taste as this latter quality exists. Of any abiding accurate standard we are doubtful; taste is the criticism of imaginative excellence, and this must vary, as a rule, more or less by the progress of human cultivation. We must now direct the reader's attention to the Eighth Discourse, upon the effect which we observe in the works of the Venetian painters. "It ought, in my opinion (Reynolds, page 154), to be indispensably observed, that the masses of light in a picture be always of a warm mellow colour—yellow, red, or a yellowish-white; and that the blue, the grey, or the green colours be kept almost entirely out of these masses, and be used only to support and set off these warm colours, and for this purpose a small proportion of cold colours will be sufficient." Upon which Mr. Burnet remarks, and we select but a portion of a long note,— "As I have differed from Reynolds on this subject, and explained my reasons at large in a former work, viz., 'Practical Hints on Colour,' I shall refer the reader to what I have already said, and here only avail myself of setting the matter in a stronger light, more especially as it is a point on which there are many conflicting opinions. The late Sir Thomas Lawrence, in a letter to me, says, 'Agreeing with you in so many points, I still venture to differ from you in your question with Sir Joshua. Infinitely various as nature is, there are still two or three truths that limit her variety, or rather that limit Art in the imitation of her: I shall instance for one the ascendancy of white objects, which can never be departed from with impunity; and again, the union of colour with light. Masterly as the execution of that picture is (viz., the 'Boy in a Blue Dress'), I always feel a never-changing impression in my eye, that the Blue Boy of Gainsborough is a difficulty boldly combated, not conquered. . . . Opposed to Sir Thomas's opinion I might quote that of Sir David Wilkie, often expressed, and carried out in his picture of the 'Chelsea Pensioners'; indeed, one of the sketches which that lamented artist made in Spain, after Titian's 'Apotheosis of Charles V.:' for there the principal light is composed of pure white and celestial blue, surrounded by yellow and grey, while the figures which form the base of the picture are glazed with the richest brown and warm tones. In fact, most painters of landscape, from Titian to the present day, rub in their shadows with rich brown, which they preserve transparent to the last, introducing the cool and opaque colours into the lights and half tones." We should gladly transfer to our pages the remainder of this note did our limits permit, but we are anxious to present to our readers as varied a selection of the matters discussed as may be in our power; we must, therefore, consider the remarks appended to the Tenth Discourse on Sculpture. After some observations, in which we coincide, upon Sir Joshua's opinion, "the familiarity of the modern dress by no means agrees with the dignity and gravity of sculpture," instances of which exist in the statue of the Duke of Cumberland in Cavendish-square, and, to quote Mr. Burnet, "in the pig-tailed Monarch of Wyatt," "et parvis componere magna," in a work at least referable to the

same class, if we may quote it, the elevation in honour of George IV. at King's-cross:—

—“*cui turpe caput, cui plurima cervix*

*Et faciem tauro proprior.*”

Mr. Burnet gives a very able note, and concludes his annotations with the following remarks, which our readers will peruse with interest, being the opinions of an able and accurate writer upon the works of Sir Francis Chantrey.—“True sculpture, being but a true representation of beautiful nature, affords less scope for criticism than painting, which owes its excellence to a combination of various adjuncts. All dressed sculpture must therefore be a deterioration, as it cannot give harmony of colour as a compensation; and all sculpture must be faulty whose boundary line, taken in mass, is not agreeable, as it wants the assistance of back-ground, in which defective form may be lost.

Perhaps in bust-sculpture a greater union with pictorial effect is allowable; and as we have lately lost one of the greatest geniuses in this department, I shall notice his excellencies in a few words, for though many dispute the superiority of the entire figures of Sir F. Chantrey, none who are capable of judging refuse joining in the universal approbation given to his busts. Beginning life as a painter, he seems to have carried what knowledge he derived from painting portraits into the treatment of his heads in sculpture, as they possess more pictorial effect than any by his predecessors. Those of Roubiliac, which Chantrey praised highly, are deficient in many qualities which Chantrey's exhibit; and in drawing a parallel between them with reference to painting, we should say that Roubiliac's, though giving the finish and delicacy of drawing observable in the pictures of Vandyck, convey a hardness such as we perceive in the ivory-like flesh of Vanderwerf; whilst the hair is defective from being too much in quantity, which was the fashion of the period, and also from its being too much disturbed and cut into, which destroys the effect of the features. In the works of Vandyck this is not the case; it not only serves as the frame-work to the countenance, but harmonizes and combines with the features, by enriching and extending their form, thereby giving dignity, and that beauty which arises from pictorial arrangement. The busts of Chantrey, on the contrary seem to possess all the suppleness of flesh, and while they seem blocked out with the massive breadth of the heads of Raeburn, have all the effect and character of the portraits of Reynolds. . . . . The texture and artistical skill in what is termed handling,—the delicate and elaborate finish in some portions, the breadth and soft character in others, will, however, always secure a reputation to the busts of Chantrey, as long as sufficient taste remains in the country to admire the portraits of Reynolds.”

We must here conclude our extracts; we have perused Mr. Burnet's notes with great pleasure; he is a writer of an enlarged experience, of great earnestness of feeling, and of much picturesque power of detail. His descriptions of the effect of colour are in themselves pictures, the compositions of a mind saturated with the perception of the beautiful; and in this respect his style, always clear, ever thoughtful and reflective, becomes warm, eloquent, and glowing. He relieves the dryness of technical detail by his accurate knowledge and its just expression; what is known becomes enhanced in value, what is new is imparted with a free and graceful simplicity of thought. The eye ministers to the mind, but the mind must discipline its impressions, if we would estimate the charms of Nature, or judge with sensibility and knowledge the imitations of Art. A refined taste can be acquired only by observation, experience, and reflection; but as with many the power of observation must be limited, and reflection unexercised, works such as we owe to Mr. Burnet, and notes such as he has appended to these volumes, must ever be of great value to those to whom the love of Art is a refined feeling, and æsthetic criticism, intellectual pleasure. We trust this edition of the Discourses will be appreciated as it deserves; there is an increasing love of the Fine Arts observable in the land, but unless directed by high considerations and accurate principles, its tendency will be to increase bad taste, nourish the propensity towards mere technical excellence, and engender mediocrity. Of the Discourses we

have already spoken; they are singularly indicative of the author's mind: his education in early life was neglected, and at a later period knowledge was derived from conversation. His principles of Art are sound; they rest no less on moral excellence, than upon assiduous study; the style is clear, seldom elevated, but expressive; there is at times a faint recollection of the rich fluidity of Burke and the laboured structure; the ornate colouring and solemn antithesis of the “*Rambler*.” His temper was even and sedate, manners graceful and alluring, his disposition amiable and kind; even the peevishness of his resignation of the President's office was allied with a kind act. He suffered more in this respect by the poetry of the Earl of Carlisle, and the puerilities of Jermyingham, than by the opinion of the time. Of late years a love of censure has been evinced towards his fame; yet time will ratify what opinion still confirms, he was a “*GREAT ARTIST and a GOOD MAN.*”

#### PUBLIC WORKS IN PROGRESS.

THE Gallery of distinguished Etonians has received a valuable addition, in the bust of Lord North, presented by Lord Guildford, and executed by Mr. Behnes. The work fully sustains the reputation of this sculptor for his posthumous portraiture. It is finished with the nicest skill, and draped in the robes of the Chancellor. The features are full and expressive, and cannot be seen without immediately reminding the spectator of those of George the Third; for so strong is the resemblance that many worse likenesses of that monarch are extant. A bust of the Duke of Newcastle, intended also for Eton, is in progress by the same artist, and is almost a living identity of the noble original. The latter work is presented by a subscription from Eton.

Mr. Bailey, R.A., has nearly completed the model of a statue of the late Dean Dawson, to be erected in St. Patrick's, Dublin. The figure is seated in a posture of meditation, the head resting on the right hand. It is somewhat beyond the life size, and bears in general treatment a strong relation to the life and habits of the subject. Another important work upon which this gentleman is engaged is a sedentary statue of the late Dean of Ely, for St. John's, Cambridge. Like the preceding, it is in course of being modelled, but not so far advanced. The features of the original seem to have been thrown together by nature, without much regard to the beautiful, but the entire head would demonstrate very strong character of some kind.

THE NATIONAL GALLERY.—The Earl of Lincoln, in answer to a question on this subject, put in the House of Commons, said, that the steps and terrace in front of the National Gallery were nearly completed, and might be opened at any time; but he thought that the convenience of the public would be observed by their not being opened, until more progress had been made in the works of the Nelson Monument.

THE NELSON MONUMENT.—The stone for the statue, intended to surmount the column, is arrived from the Granton quarry, and much as it will suffer reduction in carving, it is yet to be feared that the shaft may be unequal to the support of the enormous weight of the statue, which cannot well be less than twenty tons. Sir Robert Peel, in reference to the progress of the monument, expressed in the House of Commons a hope that those concerned in the management would seriously consider the responsibility they were undertaking, and ascertain what amount of funds were either already provided, or engaged to be provided and subscribed, and their proportion to what would be the actual cost of the monument. This was an important consideration, and one which he hoped would be duly weighed by those concerned.

STATUE OF THE MARQUIS OF WELLESLEY.—We announced some time ago a resolution of the board of directors of the East India Company, determining the execution of a statue of the Marquis of Wellesley, to be placed in the board-room of the India House. This work has been confided to Mr. Weekes, who, in the first sketch for the statue, has properly taken for his epoch that period of the life of the Marquis, at which he was Governor-General of India.

#### VARIETIES.

ADDITIONS TO THE KNIGHTHOOD.—Her Majesty has been graciously pleased to confer the honour of knighthood on George Hayter, Esq., W. C. Ross, Esq., A.R.A., and William Allen, Esq., R.A.: distinctions which have been the subject of much comment *pro* and *con*; but which have undoubtedly been bestowed with a feeling that, although all these gentlemen do not take the first rank among our artists, yet their various positions were worthy of the honour.

DRAWINGS BY RAFFAELLE.—The Lawrence Collection of Drawings, by the *divine* master, are at last secured for the University of Oxford. We stated some time ago that the price asked for them was £10,000, and that a subscription had been entered into to raise this sum if possible. Lord Eldon munificently offered £3000 in the event of the remainder being obtained. Only £3000, however, could be raised, and it seemed probable that the treaty would go off, when the proprietor of the drawings was induced to alter his price to £7000. Lord Eldon immediately increased his subscription from £3000 to £4000, and the business was done. All honour be to his lordship!

COLOGNE CATHEDRAL.—At a recent meeting of the Royal Institute of Architects, Mr. George Godwin laid before the members some particulars of the recent restoration of the choir of the cathedral of Cologne, and of the efforts now being made in Germany, Rome, and France, to ensure the completion of the building, according to the intention of the original architect. The restoration and adornment of the choir were commenced in 1829, and are but just completed; the expense has been about £40,000. Beneath the whitewash, with which the interior of the choir was covered, they discovered paintings that had originally adorned it, and in which the colours were applied with singular sobriety and judgment. All the ribs and columns have been re-covered with a yellowish plaster to disguise the cold tint of the stone, the joints of the masonry being, nevertheless, left visible. The smooth surfaces of the roof are painted in imitation of *pierre de Tuf*; the ribs are of a darker tint, and are separated by red bands or fillets. The ornaments of the key stones, the capital, and other sculptured portions are gilt with a backing of bright red colour. Angels are painted in the heads of the pointed arches above the triforium. In the cloisters are paintings of figures on a gold ground, and on a blue ground powdered with stars. In the choir are fourteen colossal statues, which have been re-painted, and are described as models of monumental sculpture, and polychromatic decoration. The whole of this extraordinary assemblage of architecture, sculpture and painting, is rendered harmonious by a series of stained glass windows of the 14th century.

AMATEUR ARTISTS' CONVERSAZIONI.—On the evening of May 11th was held at the rooms of Edmund Antrobus, Esq., the President of the Amateur Artists' Society, the last of the season series of these most agreeable conversazioni. This Society, already distinguished by their extreme liberality and brilliant assemblies, do themselves additional honour by the periodical invitation of lady artists and *amateurs*, some of whom contribute works of much excellence to the exhibitions. The members have not been long thus associated, but the spirit with which the whole is directed, and the evident desire of securing harmony and good feeling at all hands, are a fair earnest of the ultimate success of the main object of the Society, viz. a promotion of taste for fine Art. It cannot be doubted that the cultivation of amateur taste must be a benefit to the artist; for, however well an amateur may paint, he is never satisfied with his own productions, but looks to the profession for the gratification of his taste. If, therefore, painting or a genuine relish for works of Art be propagated as a social accomplishment, the artist has much to be grateful for to those who disinterestedly take up his cause: thus on the occasions of these delectable *soirées* the artist and amateur meet on terms of reciprocal advantage. Among the crowd that thronged the rooms were some members of the Royal Academy, and other artists of distinction; and the exhibition was enriched by works to which are attached the names of Collins, R. A., Roberts, R. A., Cattermole, &c. Among the water-colour works were some groups

of flowers, painted by Miss Jane Burgess in a manner promising the highest excellence in this department of Art; nothing could exceed the reality and beauty of these paintings, which belong to a style not sufficiently appreciated because so little understood. In the course of the evening a paper was read "On the present state of Taste in England," wherein occurred observations, to the effect that amateurs generally are too well satisfied with only reading about Art, believing that the mere study of Reynolds's lectures will qualify them for sound criticism—that the practised artist, even after years of labour and study, experiences, at times, a diffidence unfelt by another less cognizant of the real beauties of Art.

**THE TOWER.**—We have availed ourselves of an opportunity of inspecting a set of casts taken from moulds made on the ancient and quaintly carved inscriptions which exist on the walls of cells and chambers formerly occupied by prisoners within the walls of the Tower. The acquisition under all circumstances of fac-similes of these curious mementos must have been a work of time, great labour, and expense; and to a lady, by whom the enterprise has now been undertaken, the difficulties must have been proportionably increased. These records of captivity whence the casts have been taken, are distributed throughout apartments in "The Bell Tower," the Beauchamp Tower, the Broad Arrow Tower, &c.; and among the autographs that occur, are those of Sir William Tyrrel, cut 400 years ago; Anna Boleyn, Lord Guildford Dudley, the Duke of Northumberland, Lord Cobham, Philip Howard, the famous Leicester, who was implicated in the Wyatt conspiracy; the mother of Lord Darnley, Arthur and Edward Poole, Everard Digby, and Henry Walpole, who were concerned in the Gunpowder Plot, Thomas Peverel, &c., &c. These names, and a multitude of others comprehended in the series, are familiar to us from their association with a succession of plots and conspiracies which have occurred in the history of our country, and which very often stand in the place of legitimate history; they come down to us invested with so grave an interest, that the collection must be desirable to collectors of autographs—to persons curious in such matters, and especially to the descendants of those by whose hands the inscriptions were executed. The impressions have been taken by Miss C. E. Wilson, at whose residence, 63, Newman-street, a set of them may be seen.

**BURFORD'S PANORAMA OF CABOOL.**—The exhibition of this view cannot fail at this particular time to attract crowds of visitors. For distant effects, and purity of tone, it is one of the best of these panoramas we have yet seen. The spectator looks down upon Cabool, the houses of which seem nothing better than an assemblage of cubic masses of baked clay, and from them the eye travels to the barren and stupendous mountains, by which the place is closed in on all sides. The view is taken from the Asha Mahi, the western of the two hills which form its natural defence. The course of the Cabool river is seen dividing the city. On its right bank, stand the greater number of buildings, the principal bazaars, the Chundawul, and the tomb of Timour Shah; together with the Bala Hissar, or fortress of the city; and the royal palace, as also the Koolah-i-Feringee—the European hut. On the left bank of the river is a suburb, and towards the east, the view ranges over a fertile plain divided into meadows, orchards, vineyards, and studded with small villages and the country residences of Afghans of rank and wealth—the distance being closed by mountains backed by the stupendous peaks of the Koh Damon, which is white with eternal snows. Life is given to the panorama by groups, in which appear Mahomed Ukhbar Khan, Abdul Samud, a Persian General, Sir Alexander Burnes, Captain Vicoich, the agent from the Russian Ambassador at Herat, Dost Mahomed, &c., &c.

**THE DULWICH COLLECTION.**—It has been suggested to publish a series of engravings from the works in this collection, or rather an "engraved catalogue," consisting of spirited etchings executed in the characteristic manner adopted in etching by the respective painters, from whose works they are copied. Those from Both in the delicate manner of his etchings; those from Karel du Jardin, Ostade, Berghem, Rembrandt, &c., in their respective styles, and which are as varied as those of their paintings. Nothing can be more

characteristic of the originals than these beautiful representations of them, stamped by the master's hand. They leave something to the imagination, and allow us to "think" of the original paintings which modern engravings, by attempting too much, abstract altogether from the mind's eye. A work of this nature, in addition to its own intrinsic merit, would have all the charm of novelty; and could not fail to be liberally received. Public taste has advanced sufficiently to appreciate *character* and *texture*; tone and delicate execution alone will not satisfy. Some collections from the gallery were a few years ago published by the late keeper, Mr. Cockburn; but they are in colours, mounted as drawings.

**WILKIE'S PALETTE.**—James Hall, Esq., brother of Captain Basil Hall, R.N., has lately presented the palette of Sir David Wilkie to the Royal Scottish Academy of Painting, whereon is affixed the following inscription:—"This relic, one of the favourite palettes of Sir David Wilkie, was purchased at the sale of the effects of that illustrious and lamented artist, and presented to the Royal Scottish Academy by Mr. James Hall, May 1842. The palettes of Hogarth and Sir Joshua Reynolds are deposited in the museum of the Royal Academy."

**MINIATURES ON MARBLE.**—From the "Repertory of Patent Inventions" we borrow information, that thin polished plates of white marble are now strongly recommended, by several French artists, as a substitute for ivory, in miniature painting. The slices of marble are cemented down upon a sheet of pasteboard, to prevent danger of fracture: they are said to take the colour with great freedom, and to hold it with tenacity; and it is obvious, that they are incapable of any change by time, or the effects of heat or damp. Ivory, it is well known, becomes yellow; and, in hot climates, often splits, or warps. It can only be obtained, also, of a very limited size; whereas, these plates of the finest grained statuary marble, can be obtained of any size. Plates of about twelve inches by ten inches are prepared of only about three-sixteenths of an inch thick, and smaller ones thinner in proportion. Marble has been occasionally used, before now, as a plane for painting on *in oils*; but its application to miniature painting is certainly new, and seems valuable. Marble, according also to the same authority, has been recently applied to other purposes; a beautiful mode of ornamenting it having been lately introduced in Paris. It consists in etching, by acids, deeply into the marble, various designs upon a properly prepared bituminous ground. When the corrosion has gone sufficiently deep, the cavities are filled up with hard coloured wax, prepared so as to take a polish equal to that of the marble, when cleaned off. Drawings thus made on black marble, and filled in with scarlet wax, after the manner of Etruscan and certain Egyptian designs, are said to have a very noble effect, and are applied to tables, panelling, stoves, &c.

**SALES PAST AND TO COME.**—Mr. Phillips sold on Wednesday, the 18th of May, and the four following days, an important collection of antique gems, the property of the late Allan Gilmore, Esq., of Portland-place.

Among the most valuable lots were the following:—Cammei, 'A whole-length of Bacchus with his Therses,' 131. 13s.; 'Pan seated, with his Pipes hanging on a Tree,' 61. 10s.; 'A large and fine Head of Cicero,' 67. 15s.; 'Head of Charles I. in high relief,' 71. 15s.; 'Intagli,' a head by Marchant, 131. 13s.; 'Head of Cicero,' 71. 7s.; 'Ulysses before the Palladium,' 121. 1s. 6d.; Cammei, 'A head of Cleopatra,' 291. 8s.; 'Portraits of Earl Darnley and Mary Queen of Scots,' 161. 16s.; 'Bacchus and Ariadne,' 107. 10s.; 'Head of Cicero,' 327. 11s.; 'Cupid and Psyche,' 151. 15s.; 'Head of Ceres,' 81. 18s. 6d.; 'Heads of Marcus Aurelius and Faustina,' 581. 16s.; 'Head of Queen Elizabeth,' 191. 19s.; 'Head of Alexander, reverse Darius,' 131. 13s.; 'A Necklace,' 151. 4s. 6d.

**BOOKS.**—'Galerie du Palais Royal,' 151. 4s. 6d.; 'Le Musée Français,' 801. 17s.

**MISCELLANEOUS.**—'The Twelve Caesars' in ivory, 12 others of Philosophers and Poets, &c., arranged in a case, 161. 16s.; 'A Miniature Portrait of Louis XIV. when young,' by Petitot, 101. 10s.; 'A Gold-box of ancient workmanship with Portraits of Charles I. and box of Henrietta Maria,' 231. 2s.; 'A Massive Gold-box with an Intaglio Head of Cleopatra on the top, 221. 1s.; a curious Silver-gilt Cup and Cover of antique workmanship, 1731. 2s.; a fine Sapphire mounted as a ring, 151. 16s.; a Gold Miniature Frame set with fine Oriental pearls, 161. 6s. 6d.

And on the 31st of May and following day, a portion of the same property:—'The Virgin, Child, and St. John,' Raffaele, 541. 12s.; 'The Golden Age,' Georgione, 521. 10s.; 'The Holy Family with St. Catherine,' 691. 6s.; 'A Landscape,' Cuypp, 1101. 5s.; 'The Ex-

terior of an Inn,' Jan Steen, 501. 8s.; 'The Entrance to an Italian Sea Port,' 571. 15s.; 'A Landscape,' Poussin, 631.; 'A Portrait of a General Officer,' Georgione, 501. 8s.; 'The Marriage of St. Catherine,' Raffaele, 1571. 10s.; 'A Sea Piece, with Fleet underweigh,' Backhuysen, 991. 15s.; 'A Warm Sunny Landscape,' Cuypp, 1051.; 'The Marriage of St. Catherine,' Correggio, 941. 10s.; 'The Feast of Love,' P. Veronese, 781. 15s.; 'The Marriage at Cana,' P. Veronese, 471. 5s.; 'The Cartoons,' after Raffaele, Sir James Thornhill, 3671. 10s.; 'A Family Concert,' Jan Steen, 631.; 'The Virgin and Child, with St. John, in a Landscape,' Lorenzo Credi, 691. 6s.; 'The Judgment Hall, with the Mocking of Christ,' by Di Mazzolino Ferrara, 1621. 15s.; 'Salvator Mundi,' Carlo Dolce, 1681.; 'The Passion of Christ,' an Altar-piece, Sebastian Del Piombo, 2101.; 'The Beatification of the Virgin, surrounded by Angels,' Raffaele, 2881. 15s.

Mr. Phillips will sell on July 7th a collection of valuable ancient pictures of the Italian and Flemish Schools; among which are some admirable specimens of Sebastian del Piombo, Litan, Allozi, Gaspar Poussin, and other masters of the highest reputation.

Messrs. Christie and Manson, on the 1st ultimo, sold a collection of sketches by the late Sir David Wilkie, R.A., the property of Mr. Windus, among which were studies for many of his celebrated works. The following realized the prices affixed:—

'Escape of Mary Queen of Scots,' in colours, 131.; 'Sir David Baird finding the Body of Tippoo,' in colours, 91. 19s. 6d.; 'Alfred in the Neatherd's Cottage,' in chalk, 101. 10s.; three principal figures in 'The Bridal Morn,' and three others, 121. 1s. 6d.

On the 17th, a collection of pictures, the property of Harry Hankey Dobree, Esq., deceased, among which the following by Morland were sold for the prices annexed:—

'A Peasant with a Child feeding a Goat,' 311. 10s.; 'A Bull-dog and Spaniel disputing for a Sheep's Head,' 1101. 5s.; 'The Corn Bin,' 2251. 15s.; 'A Grey Cart-horse and another Horse lying down in a loose stable,' 941. 10s.; 'Three Sheep in a Stable,' 2321. 1s.; 'Interior of an Ale-house with a group of Figures,' 2201. 10s.; 'Three Pigs eating Cabbage-leaves in a Shed,' 2101.; 'A Fishing-boat off Margate Pier,' by Turner, 521. 10s.; 'A Fishing-boat pulling off from the Shore,' 1681.; 'The Letter of Introduction,' Sir David Wilkie, R.A., 4721. 10s.

On the same day, the property of Joseph Delafieu, Esq., deceased:—'Breeze off the Brill,' Kockkock, 281. 17s. 6d.; 'A Squall off a Fortified Town,' Ditto, 321. 0s. 6d.; 'Fruit and Flowers,' Van Oss, 401. 8s. 6d.; 'Cavaliers preparing to depart from an Inn Yard,' by Wouvermans, 2251. 15s.; 'Cologne,' Sir A. Calcott, R.A., 1521. 5s.; 'Sterne and the Grisette,' Leslie, R.A., 711. 8s.; 'The Pricked Finger,' Collins, R.A., 1991. 10s.; 'A Beautiful Landscape, with Arcadian Shepherds in a Valley,' Sir A. Calcott, R.A., 1991. 10s.

### THE SCOTTISH ART-UNION.

The eighth annual general meeting of the Association for the Promotion of the Fine Arts in Scotland, was held in the Assembly Rooms, George-street, Edinburgh, on the 28th of May last, when, on the motion of Sir William Newbigging, A. Rutherford, Esq., M.P., was called to the chair.

The business of the day was opened by a suitable address from the chairman, after which the report was read by the secretary, Mr. J. A. Bell, architect.

Mr. Sheriff Whigham then proposed the adoption of the report, and proceeded to congratulate the meeting on the success which attended the association. It is a remarkable fact, he observed, that there had been realized by the promoters of the Fine Arts in Scotland, a sum not less than £31,000; and that, now, according to the report, they had an income, which he trusted would prove a permanent one, of upwards of £6000. After a eulogy of some length on the laws of the society, the motion of the speaker was seconded by Sir George Macpherson Grant.

Sir Gilbert Stirling moved the second resolution, to the effect, that the committee of management for the year 1842-43 be authorized to make the necessary arrangements to obtain a line engraving of Mr. R. S. Lauder's 'Glee Maiden,' to be distributed among the members for the year 1843-44.

Mr. Douglas Sandford, advocate, seconded the motion.

Mr. Glassford Bell moved a vote of thanks to the committee resigning office, for the efficient discharge of the duties confided to them. He commented pointedly on the difficulties attending the selection of pictures, and then proceeded to point out the advantages of the system pursued by the association. The speaker drew a comparison between the proceedings respectively, of the Edinburgh and London Art-Unions, and concluded by reverting to his motion, which was seconded by Mr. Swinton, advocate.

Sir William Drysdale moved the appointment of the committee, a resolution which was seconded by Mr. Borthwick, after which the drawing commenced.

We cannot concur in the spirit of some of the speeches delivered on this occasion; they had been more graceful without the superficial comparisons which form their substance—"a haggis, God bless her, can charge doon hill"—and nothing is so fluent as argument proffered without the fear of controversy. For ourselves we abstain from lengthened comment on the *animus* of the speeches, but refer our readers to a letter from a Scottish artist on a subject of greater interest—"The Constitution of the Scottish Art-Union." Be it remembered that every Scotsman, when absent from that country north of the Tweed, carries in his heart another Scotland, which, be it in the land of the Southron or of the remote stranger, gladdens or saddens as the news from home raises emotions of pride or otherwise; but without further allusion to the views of the speakers on this occasion, than a hearty concurrence in their good wishes for the continuance of the prosperity which they so exultingly announce—we at once congratulate the Scottish Art-Union on the solidity of its progress. It is sure to make its way upwards; and the list of prize-holders affords ample evidence that it is penetrating downwards into a stratum of society whence incalculable reciprocal advantage must be the result. Prizes were drawn by the under-mentioned subscribers:—

#### LIST OF PICTURES CHOSEN BY PRIZEHOLDERS OF 1842.

*The Title of Picture, Artist's Name, and Price.*  
 Cattle Piece, E. T. Crawford, 25l.  
 The Haunted House, J. C. Brown, 80l.  
 Beach Scene near St. Andrew's, Robert Norie, 11l.  
 On the Coast of Galloway, F. Williams, 25l.  
 Troutling Stream on the Esk, Robert Kilgour, 25l.  
 The Waterside, Miss Stoddart, 20l.  
 Bleaching Green Gossips W. J. Thomson, 15l.  
 View on the Teith, James Stein, 12l.  
 A Harvest Field, Daniel Macree, 60l.  
 Dutch Gallies and Lugger off Lowestoffe, E. T. Crawford, 20l.  
 Bellringers and Cavaliers celebrating the Entrance of Charles II. into London, on his Restoration, W. B. Scott, 25l.  
 The Last Gleam of Light, Horatio M'Culloch, 130l.  
 Pompeii, C. H. Wilson, 35l.  
 The Enthusiast, E. M. Barclay, 25l.  
 Muric, R. S. Lauder, 80l.  
 Distant View of Londonderry, Miss Margaret Nasmyth, 12l.  
 Beach Scene, E. T. Crawford, 30l.  
 Girl and Rabbit, John Robertson, 15l.  
 Sea Piece—Calm, E. T. Crawford, 80l.  
 Miller's House, Saline, John M'Leod, 10l.  
 Study of Pollard Willows, Mrs. Bennet, 15l.  
 A Scene at Newhaven, near Edinburgh, Alexander Fraser, 100l.  
 Aurora, John Ballantyne, 30l.  
 View on the Coast, Lanarkshire, P. M'Laren, 30l.  
 Gateway, St. German L'Auxerrois, J. A. Houston, 6l.  
 Glangarnock Castle, Andrew Donaldson, 18l.  
 Entrance to Ayr Harbour, G. F. Buchanan, 20l.  
 A Study in Arundel Park, Sussex, John Willson, jun., 18l.  
 Loch Asoag, and Ruin, Argyllshire, Andrew Donaldson, 8l.  
 The Pet Rabbit, John Syme, 20l.  
 Distant View of Dunstaffnage Castle, J. Milne Donald, 15l.  
 An Alchemist visited by a Familiar of the Inquisition, 60l.  
 The Martyr's Grave, Alex. Johnstone, 40l.  
 Girl and Fruit, Wm. Rattray, 10l.  
 Lock Vennacher, James Stein, 15l.  
 Moonlight on the Hudson River, North America, A. Richardson, 8l.  
 Coast Scene near Barnbougle, Edinburgh, A. B. Monro, 40l.  
 The First Christian Martyr, by S. Blackburn.  
 The Looking Glass, R. S. Lauder, 80l.  
 Gossips, J. Graham Gilbert, 70l.  
 An English Pastoral, John Wilson, 55l.  
 Daily Distribution of Soup to the Women and Children at a Capuchin Convent, on the Capitol Hill, Rome, E. W. Dallas, 20l.  
 Mary Queen of Scots and her Retinue returning from the Chace to the Castle of Stirling, William Simson.  
 The Gale, by Montague Stanley, 20l.  
 A Distant View of Harrow-on-the-Hill, from Hampstead, Middlesex, John Wilson, jun., 8l.  
 Watermill, near Hendon, Middlesex, R. Mackay, 5l.  
 Approach to Bangor, Montague Stanley, 30l.  
 View at Kirkland, W. J. Thomson, 15l.  
 Beach Scene, John Oliphant, 10l.  
 Entrance to Dunbar Harbour, J. F. Williams, 15l.  
 Arthur's Seat from the Grange, Robert Stein, 10l.  
 The Cove of Dunglas, J. F. Williams, 60l.  
 Orleans, on the Loire, William A. Wilson, 15l.  
 Oakwood Tower, on the Ettrick, H. G. Duguid, 15l.  
 Landscape and Cattle, John Wilson, 25l.  
 Taking a Rest, W. Smellie Watson, 20l.  
 Breeze with Shipping, J. W. Carmichael, 20l.

A Last Look of Home, J. C. Brown, 40l.  
 An Incident in the Crusades, J. A. Houston, 50l.  
 Coast Scene, F. Godby, 10l.  
 Salvator Rosa Sketching in the Abruzzi, William Johnstone, 50l.  
 Study of Red Deer, James Giles, 25l.  
 Silenus praising Wine, Apollo and Mercury Listeners, David Scott, 35l.  
 A Dead Point, William Shields, 12l.  
 Loch-na-Gar, James Giles, 60l.  
 Inch Garvie, on the Frith of Forth, 40l.  
 Scene from the Lucca Mountains, Andrew Wilson, 120l.  
 The Master of Ravenswood parting with Caleb Balderston in the Court-yard, at Wolf's Crag, Gourlay Steel, 60l.  
 Thomas Duke of Gloucester taken into Calais, David Scott, 200l.  
 Watering Horses, E. T. Crawford, 25l.  
 Reverie, William Wallace, 30l.  
 View on the Esk, Robert Kilgour, 20l.  
 View of an Ancient Grave, Isle of Skye, Taverner Knott, 14l.  
 Interior in Key-lane, Sandwich, Arthur Glennie, 12l.  
 Loch Lomond, Dumbartonshire, Miss Jane Nasmyth, 15l.  
 The Watering Place, W. H. Townsend, 40l.  
 Interior of the Kitchen of a Capuchin Convent on the Capitol Hill, Rome, E. W. Dallas, 25l.  
 On the Dochart, near Kellin, Arthur Perigal, jun., 15l.  
 Moonlight Scene in Holstein, by Macneil Macleay, 9l.  
 The Pass Leny, R. K. Greville, 15l.  
 The Orphans, Mr. Lawson, 9l.  
 "Rush, Bush keeps the Cow," scene near a border Peel, D. O. Hill, 15l.  
 The Child St. John in the Wilderness, James Archer, 20l.  
 Sportsman preparing for Home, Charles Gray, 50l.  
 Windsor, Robert Stein, 20l.  
 A Highland Scene, Horatio M'Culloch, 50l.  
 Mill on the River Bran, near Dunkeld, Macneil Macleay, 35l.  
 The Matchseller, John Oliphant, 7l.  
 Head of Derwent Water, Fall of Loudore, Montague Stanley, 30l.  
 The Squall, Montague Stanley, 80l.  
 Kenilworth Castle, D. O. Hill, 10l.  
 Young Highland Wife, Alex. M'Innes, 10l.  
 Erith Reach, on the Thames, Robert Mackay, 5l.  
 Duddingston Lock, Edinburgh, W. H. Townsend, 50l.  
 Light-house on the Old Mole and part of Genoa, Andrew Wilson, 20l.  
 Porta Nuova, Palermo, W. L. Leitch, 10l.  
 Castle near a Border Tower, D. O. Hill, 15l.  
 View in Highlands, Walter Ferguson, 5l.  
 Girl at a Fountain, William Crawford, 17l.  
 La Zingara che Indovina alla Sibilla, Tivoli, James Giles, 30l.  
 "No Surrender," James Giles, 80l.  
 Thirlkane Castle, John Stewart, 12l.  
 Interior of a Wine House in the Campagna, near Rome, E. W. Dallas, 35l.  
 French Fishing-boats, Wm. Nicholson, 12l.  
 View from the Mouth of Kinderhook Creek, North America, A. Richardson, 8l.  
 River Scene on the Devon, near Dollar, Arthur Perigal, jun., 25l.  
 Near Moffat, James Stevenson, 8l.  
 A Border Tower, Wm. Mason, 10l.  
 A Recollection of Backhuysen, J. C. Schetky, 20l.  
 The Anxious Family, Mungo Burton, 30l.  
 Palliano in the Pontine Marshes, W. Nugent Dunbar, 5l.  
 An Armourer of the Olden Time, Henry O. Neill, 15l.  
 The Death of Cardinal Wolsey, S. Blackburn, 100l.  
 The Confidants, James Douglas, 15l.  
 The Turnip Lantern, Wm. Kidd, 10l.  
 Pier End, Burntisland, J. W. Carmichael, 14l.  
 Ponte Vecchio, Florence, Nugent Dunbar, 5l.  
 Landscape, with Dead Birds, Geo. H. Novice, 12l.  
 Argyll an Hour before his Execution, Geo. Harvey, 200l.  
 Moonlight on the Lake of Perugia, Andrew Wilson, 20l.  
 On the Almond Water, Sunset, Robt. Kilgour, 25l.  
 The Wild Flower, Wm. Wallace, 25l.  
 Red Deer Feeding on, James Giles, 25l.  
 A Mother's Grave, Mungo Burton, 25l.  
 Head of Loch Lomond, Miss Stoddart, 60l.  
 Morning—a Scene in Dumbartonshire, Macneil Macleay, 17l.  
 Castle Crag, Borrowdale, R. K. Greville, 25l.  
 The Present, W. C. Linton.  
 Shipping from Grimsby Pier, Wm. Nicholson, 12l.  
 A Gleam of Sunshine, John Watson Gordon, 50l.  
 Still Life, Peter Cleland, 12l.  
 Fish-cart, James Stevenson, 5l.  
 On the Water of Leith, near Saughton Hall, Arthur Perigal, jun., 20l.  
 Part of the Coliseum, Rome, D. Alexander, 20l.  
 Interior of St. Thomas's Hospital, Sandwich, Arthur Glennie, 12l.  
 Road between Arrochar, Loch Long, and Tarbert, Loch Lomond, Montague Stanley, 25l.

## CORRESPONDENCE.

### A NEW VEHICLE.

TO THE EDITOR OF THE ART-UNION.

SIR,—A great deal of very useful and interesting matter has been put forth by your journal on the subject of "vehicles" for the use of artists, but there are two or three important particulars which have been overlooked altogether.

The first, and perhaps most important, of these is the use of *sugar of lead*, of which painters, in general, have a singular dread. An inquiry into the nature and effect of this material would be highly serviceable, and it is to be regretted that it has been passed over unnoticed. It is singular, also, inasmuch as the experiments of the late Dr. Renier, as far as they were carried, went, not only to prove the innocuousness of its use, but its advantage. I had the pleasure of an acquaintance with the Doctor during some years of the time in which he was prosecuting his researches; and I remember perfectly well his showing me two sheets of writing paper which had been saturated with linseed oil—the one *with* and the other *without* any mixture of sugar of lead. That which had been dipped into oil *alone* had become dark and yellow, while the other remained as little discoloured and as white as it was at first. These sheets of paper had remained four years shut within a dark closet. The sugar of lead used was that commonly bought in bladder at the colourman's. One objection to the use of sugar of lead is, that it has a tendency to make its way out of dark colours, where it is most needed, and show itself on the surface; nothing is more easy than to prevent this by a mode of using it which will presently be explained. Another objection is, that it has a tendency to make the pigments with which it is used *crack*. This is altogether a false notion, springing out of a want of understanding of the causes which lead to this mischief, and is easily explained and proved by experiment. If a painter will take a strong solution of gum-arabic and varnish a newly-painted picture, he will find his colour cracked down to the ground of his canvass or panel in three days; and, if he has used much unctuous stuff that dries slowly, in twelve hours. By this experiment the theory of *cracking* is easily explained. If the upper layer of gum or varnish dry much quicker and harder than that which is under it, its contraction will pull apart the under, and the whole will become cracked. I knew an artist, the first of his genera, who used to paint with two media, *separately*, linseed or nut oil and mastic varnish; and there are pictures of his to be found in which the cracks are so wide that the head of one figure is actually shifted upon the shoulders of another. Had these two vehicles been mixed together and thus used, or had either been used separately from the beginning, no such effect would have taken place; indeed, it is very much to be questioned whether a menstrum of *any kind* employed in this way will ever crack.

These observations naturally lead to remarks on vehicles, before the consideration of which it is necessary to take into consideration the previous facts.

Without pretending to decide upon the merits of the vehicle made with oil and a solution of borax, the fact is not to be overlooked that a medium, similar in character, has been known to painters from time immemorial—a vehicle in no way inferior, and, assuming the *innocency* of sugar of lead, in many respects superior to the other. This is the magilp made with a solution of sugar of lead, oil, and a few drops of mastic varnish. Artists, in general, are no great experimentalists, often wanting both time and perseverance, so that out of the few dozens who have attempted to make this mixture, half, or more, have failed.

It is to be remembered that the bane of the *materia pictoria* is oil, and the grand desideratum of a painter is the power of employing as much or as little of this article as he likes with certain and satisfactory results. Now, the use of *water*, through the instrumentality of borax, certainly gives him a greater command over this unmanageable agent; but it is still attended with inconveniences. These inconveniences are greatly lessened by making use of the solution of sugar of lead in the following manner:—

Make a solution of sugar of lead in *distilled* water (distilled, because common water often contains alum), and mix it half and half with oil (linseed, poppy, nut, or drying oil), add to it (before it is stirred) about a tenth proportion of mastic varnish, and then beat the whole together with a *flat long haired brush*. Observe, that upon this operation much depends: if it is continued long enough so as to mix intimately the component parts into one compact mass, the water will never after

separate, however long it is kept. This maglip differs from that commonly made, the more it is mixed the firmer and the better it becomes.

This maglip is entitled to all that is claimed for the other. It contains as little oil, has as fat or rich a texture, and is as agreeable to use. In addition, it dries better, and is far less opaque.

All that has been said about this maglip giving brilliancy to colours or colouring may be regarded as sheer nonsense; clear oil or varnish, whilst it last will give more brilliancy than any semitransparent medium.

There is another mode of making an excellent maglip long practised and used by the late Sir William Beechey, whose incessant experiments for a period of 50 years give them a high value. This is, instead of water, to use spirits of wine for making the solution of sugar of lead and employing oil and varnish in the same way. It is to be observed, however, that sugar of lead is not entirely soluble in spirit as it is in water, and in consequence the maglip made with it is not so smooth and uniform as that made with water. It is, however, equally good, better, I should say, than the borax solution maglip in all respects, and even preferable to the other, as, however much it is rubbed, it does not *lather* and turn white. The use of spirits of wine to any extent is known to be entirely innocuous.

Painters, like other men, must have their toys, and, as silex and borax will have their day, those who like it may find a "*succedaneum*" in the nostrum here recommended.

The use of prepared flint, by the early painters, is an unsupported assumption; and it is more than probable, that what is taken for flint or glass is, in fact, the refuse of the ultramarine—the ash we call it. Artists of yore were in the habit of preparing their own colours and were not likely to throw away a material the use of which was self-evident.

It is not to be overlooked, that whilst the experimentalists and painters of this country are busily engaged in contriving and trying these nostrums, all the other nations of the world are indifferent to them, by which it is proved that pictures can be painted without their use.

Perhaps a more careful consideration of the employment of unctuous matters might be attended with advantage; for whoever will carefully look at the works of the old masters, must perceive that whatever the media were which they used, very little of the merits they exhibit can fairly be attributed to the employment of them.

If we would have an example of the employment and durability of oil-colour, let us look to the common floor-cloth we have under our feet, and what it goes through in the course of the year under the hands of the housemaid, and then think of a picture and its brush of feathers! The medium employed here is of the simplest kind, namely, colour mixed with common linseed oil without drier or any ingredient to harden it. And here it is worthy of remark, that new linseed oil contains a very large quantity of water naturally combined. The combination appears to take place through the intervention of the vegetable *mucilage* which it receives in the process of expressing, and this appears to act much as unctuous matter does in the process of making the water solution maglip. The colour employed in the floor-cloth manufactory dries slowly but firmly, and from the bottom, whereas the ordinary maglip, made with drying oil and mastic varnish and other unctuous matter dries first upon the surface, where a skin forms that prevents the portion beneath from being affected by the air.

It might be of advantage to artists if some scientific persons would examine this matter a little. The subject of colours has received great attention from Mr. Field, but most other departments are in a neglected condition. Some medium for combining oil and water is still desirable.

Oil, as has been said, is the bane of the palette, but as its use is indispensable, the painter requires only a greater command over it. There is a singular property in white spirit varnish (spirits of wine and shellac), which, perhaps, some chemist will explain. A few drops of it poured into a mass of the most unctuous colour and rubbed up with the knife, appear to attach themselves to, or rather to destroy the oil of such a mass and operate in such a way by thickening and drying, as it were, the colour, that after a day or so it can be formed into a kind of *pastille*, which will write like a crayon. If a bladder of white be taken and some colour squeezed out, six or eight drops of the varnish will give it a consistency and render it perfectly opaque, so that when it is dry it will write like a bit of chalk. It has a similar effect on all colours, and more so when

they are mixed with linseed than with any other oil. This peculiarity may be turned to account.

Those who wish to use sugar of lead will find that, employed in the manner here described, it will not come to the surface as it does when ground in the ordinary way. By the way, I have seen a remark on the use of the borax-solution maglip, which appears highly to recommend it, and what is singular it is to be found among the objections made to it. In some remarks upon one of Mr. Coathupe's communications it is stated, that after using the medium the colour was found to wash off. Now, this is exactly the condition in which a painter would wish to find the colour of his picture. He has nothing more to do but to varnish and secure it, and to prevent a similar occurrence mix a few drops more oil with the vehicle.

Although the general reader can feel but little interest in a subject like this, it is still of first-rate importance to the artist. By bringing it under public observation and discussion, great advantages may arise, since those best able to pursue the inquiry are afforded the means of knowing *what it is* that artists require. Notwithstanding some peculiarities in the process of each individual artist, there are certain requisites demanded in common by the whole body. Thus, for example, a picture must be made up of *opaque* and *transparent* parts, and as a matter of common sense and necessity the medium employed in the one must differ from that in the other. For the one a medium as thin as water is demanded; for the other some kind of unctuous matter that will neither crack nor become opaque, and yet, for reasons which have been mentioned, they ought to be of the same or similar qualities, and at all events they ought to *dry* in about the same time.

One grand objection to an unctuous vehicle, in which oil is the principal ingredient, is, that it begins drying at the surface: a thin pellicle forms over, and a blister is left under which never dries. In the case of colour used in the floor-cloth manufactory, mixed as it is with oil, containing a large portion of water *naturally* combined, the process of drying is of a very different character; the whole mass hardens gradually and slowly, the co-operation of the water or the minute particles of *mucilage* keep the colour *porous*, as it were, the mass shrivels and hardens throughout, and the slight skin that is ultimately formed is so thin as to be scarcely perceptible.

Everybody must have observed, that mastic varnish left in a bottle or a gallipot does *not* acquire a skin on the surface as oil does, but gradually thickens and shrinks, and apparently dries throughout.

Here then is a medium having *one property* so desirable to the painter, but there are, at the same time, others very objectionable.

However, it is mastic varnish that I wish to recommend, feeling confident that if used in the way proposed, it will be found more efficient than any known medium, for the reasons already assigned.

Take the sugar of lead solution and good mastic varnish, equal quantities, with a very small portion of (the newest) linseed oil, beat them up together as directed, and a maglip will be formed for general purposes better, perhaps, than any yet tried.

Observe that it is not absolutely necessary to employ *any oil*, the solution and the mastic form, together, a beautiful substance that will not discolour the whitest writing-paper, and thinned with (distilled) spirits of turpentine, and spread upon writing paper, although of the consistency of butter when put on, when dry the paper will be as free as if it had only been moistened with water; so that with this medium a picture may be painted without employing one drop of oil more than what the colours contain, supposing them bladder colours as bought at the colourmen's shops.

The employment of oil, however, is recommended, and for this reason, that a few drops of it serve to modify the varnish in this way:

*For opaque parts*—The MAGILP, with an extra quantity of the solution or turpentine.

*For general use*—The MAGILP.

*For transparent parts*—The MAGILP, with an extra quantity of mastic and a few drops of oil.

It will be seen at once, by every sensible artist, that in this way all the requisites and casualties that can possibly turn up in the process of painting a picture are provided for. The rationale of the thing is clearly explained, the materials are well-known, and the medium recommended is at least worth a trial.

I have said that the subject of vehicles for painting is of first-rate importance to the painter; as a proof, painters are recommended to go and look at the present condition of Sir David Wilkie's fine picture of

'Knox Preaching,' and then refer to their recollections of it only eight years ago, when it was fresh from the easel, and hanging on the walls of the Academy!

Yours, &c.,

SOLOMON CROMB.

#### THE SCOTTISH ART-UNION.

TO THE EDITOR OF THE ART-UNION.

SIR,—I have observed with pleasure, in some of your late numbers that you take an interest in the working and effect of our Scottish Association, or "Art-Union;" and that you have a desire to suggest, or maintain when suggested, any plans proposed for its advancement. You have noticed faults in its constitution, and errors and defects in its management, of which, I think, the following are the principal:—

1st. Exclusiveness in its operation. 2nd. Unsteadiness and fickleness, which has a tendency to discourage high effort. 3rd. Too great striving to bring into notice the immature efforts of young artists. 4th. A disagreeable and embarrassing system of reducing the prices put by artists on their works; and, lastly, the imperfect constitution of the committee of management. At present, when the whole matter occupies much of public attention, I think a few words addressed to each of the above subjects would be much in season. First, then, I quite agree with you, that the exclusion of all works other than those of Scottish artists is decidedly hurtful, and retards "the promotion of the Fine Arts in Scotland;" and I come to this conclusion on other grounds than those hitherto taken up. I do not think the exclusiveness can be justly called illiberal, for when the public of Scotland embraced a scheme for the support of native talent, their Association was the only society of the kind in Britain, and its success remained to be proved; and I think that in deferring any change in its constitution which might endanger that success, that they have shown great wisdom and prudence. I think, however, that the time is now come when works from all parts of Britain may fairly be allowed to compete with those produced by Scotchmen, for we have now a noble field of retaliation in the Art-Unions of London, Dublin, Liverpool, &c., &c., all of which are open to all; and while, by the admission of the works of our brethren of the south, our exhibition would be much improved and varied, any loss sustained by the purchase of their works would be amply compensated by a friendly reciprocity. If the contributors to our Association and their committee of management, could be brought to see that it would tend to their own pleasure and advantage, as well as that of the Scottish artists, that competition should be open to all, they would not delay to invite others to partake of their ample fund, and then it would cease to be said in Scotland, that owing to the exclusive dealing of the Association, the works of Scotchmen are disadvantageously placed in the English exhibitions. England is the richer country, and, therefore, Scotland must gain by the reciprocity.

I think that all the other objections that have been made to the working of the Association are referable to the last, viz., the imperfect constitution of the committee of management: but here I must strongly contend for the principle of an acting committee; for manifold and great as their derelictions may have been, and many and great they were last year, they are small in comparison with what would have been the errors of the public of judging for themselves. I do not believe that undue partiality has ever been shown designedly; leading members may have crotchets and favourites, and indulge both; they may have sometimes been guided too much by names, and perhaps by motives of compassion and even charity; but that they have ever acted from any unworthy motives cannot from their station in society be believed. The great fault of the committee is, that it is too large and too small. It is too large because there are fifteen names, with a secretary and firm of treasurers, among whom the responsibility is divided. It is too small, because of the whole committee very few act, and the few who attend the meetings have the power, without the responsibility, of the whole. Then it is wrong that the office-bearers should have a voice in the selection, for the secretary must always attend the meetings, and must thus obtain more weight in the decisions than any one member ought to have. In saying this, I am very far from impugning the judgment or fairness of the gentleman who holds that office, for I believe it to be good, and I should say much above the average, particularly last year. He may (being an architect) judge more by rule and square, more, in short, from skill and study, than from sentiment and feeling; but in spite of much merit, he should not (on account of his position) have a vote or voice. Then a rule which used to prevail in

the committee has not been adhered to, viz., that every member should go out after two years' service. There is now at least one gentleman who has been on the committee year after year for a length of time: to this I object, on the same ground that I object to the secretary. I think, with a good working responsible committee, the business would be conducted in a manner to satisfy all parties. Artists should not complain that their prices are reduced, when they have the remedy so entirely in their own hands. They should publish a catalogue with the prices affixed, and they should make it a rule of exhibition that the price so affixed should not be reduced. This plan is surely simple, and would have the double advantage when understood, of preventing artists from asking too much, and the committee from giving too little. The committee should also be more open in their dealings, and invite the scrutiny and animadversions of the public, as persons holding a responsible trust for their behoof. They should lay aside every motive of encouragement but merit in the individual works, and I would promise them the continued support of the public and entire approbation of the artists. I beg to subscribe myself,

AN ARTIST.

## ART-UNION PRINTS.

SIR,—As various and loud have been the lamentations expressed by several of the subscribers to the "Art-Union" of London, concerning the bad impressions they have received of their plate, "The Tired Huntsman," allow me, through the medium of your journal, to offer a hint or two on the subject, to the serious attention of the committee of management.

In the first place, I should utterly abolish the system hitherto pursued, of giving proof impressions of the plates as prizes. When the Society was in an infant state, this measure might have been all very well, as it tended, to all appearance, to increase the number of prizes, and give an importance to the drawing; but now, with a large and daily increasing list of subscribers, of what possible use can it be, unless to take up the time of the meeting?

I should recommend instead, that the plan of the Scotch Society be followed in this respect, viz.—To give proof impressions of the plates according to the number of shares subscribed for. For instance, let a subscriber of three, four, or five guineas be entitled to a proof before letters; a subscriber of two or three guineas (as might be arranged) to a proof on India paper, and so on.

In the second place, let the committee determine to deliver every copy of the engraving *strictly* in the order that *subscriptions are paid in*. This would induce an early payment of subscriptions, and grumblers would only have themselves to blame.

These measures would, in my humble opinion, obviate the inconvenience hitherto complained of, and largely contribute to increase the funds of the Society.

Trusting these remarks may meet with your advocacy and support, I remain, yours, &c.

March 15, 1842.

A SUBSCRIBER.

## PROPOSED SOCIETY FOR PRODUCING FINE ENGRAVINGS.

SIR,—There are many lovers of Art (for instance, the Society of Friends) who object to lotteries; there are others who prefer certainty to chance, or who value first-rate engravings above cabinet pictures.

Will you, as the ART-UNION is now above all fear of injury from competition, allow me to suggest to any such persons among your readers, a plan by which I think their taste may be gratified, and the highest forms of the arts of painting and engraving promoted.

The society I would propose would be on the plan of the Granger, Shakespeare, and other such societies; its whole funds to be appropriated to the production of a series of engravings for the benefit of subscribers.

I should hope that such a society might raise enough to produce two engravings at least annually; one from a painting by some one of the old masters, another from some good modern painting. Should they be able to procure a *third*, I would say, let it be from a painting by some foreign artist; so that the works of our Continental brethren may be more known among us. Some degree of uniformity in the size of the engravings would give them the character of a series.

Some portion of the funds, if ample, might be devoted to lithographs, or to the cautious encouragement of new modes of Art, such as tinted lithograph, electrotype, &c.

Should any of your readers enter into my views, I shall feel great pleasure in assisting to work them out, and for this purpose enclose my address.

Yours, &amp;c.

M. D.—, Lee.

## REVIEWS.

THE HOLY LAND. Drawn by DAVID ROBERTS, R.A. Lithographed by LOUIS HAGHE. Descriptive Letter-press by the Rev. GEORGE CROLY, LL.D. Parts 2 and 3. Published by F. G. MOON.

This really magnificent work bears out in its progress the promise of its commencement. The part before us contains six views—three, each filling the very large folio page, and three others as vignettes, but of a size sufficient to occupy the page of a very large volume. In the Second Part they follow in this order: 'The Tomb of Zachariah,' 'Valley of Jehoshaphat,' 'Jerusalem from the South,' 'The Exterior of the Holy Sepulchre,' 'The Pool of Bethesda,' 'The Tower of David,' and 'The Shrine of the Holy Sepulchre.'

To say that this is one of the most valuable works of its kind that has ever appeared, would be saying no more than what is known of it. As the joint production of men of the rarest qualifications in their respective departments, it must be regarded as the *ultimatum*—the last and most perfect pictured history of places held sacred by all sects of Christians—for nothing of the same kind can be attempted after it.

The first plate, 'The Tomb of Zachariah,' is one of the four monumental structures in the Valley of Jehoshaphat, and is so called in allusion to him who 'was slain between the temple and the altar.' The style of its architecture is a mixture of those of Greece and Egypt, possessing somewhat of the classic elegance of the former, with the solidity of the latter. It is a block about twenty feet square, hewn out of the solid rock in such a manner as to leave a considerable space round it. The body of the tomb is about eighteen or twenty feet high, having at each of its sides two columns and two half columns; the latter adjacent to square pillars at the corners and all having Ionic capitals. In the view, 'Jerusalem from the South,' the city seems seated upon an eminence isolated from its 'neighbour hills.' The light falls upon a part of the city, while the rest is in shadow, and in the latter portion the mosque of Omar is a striking object. The general tone of this plate does not exceed a middle degree, but it is worked up with a sweetness which nothing in lithography can ever excel.

'The Exterior of the Holy Sepulchre,' presents a south view, from which quarter only, pilgrims can enter the 'Sepulchre' as it is called—but which is in fact a very large church, the cupola of which is visible from most parts of the city; although the lower exterior is hidden from a near inspection by the number of buildings that have in time clustered round it. With the exception of the facade, there is consequently nothing remarkable in the exterior of this mass of building; but it is presented to us in the plate so as to give a separate interest to every part of the view, which has been taken from the top of a house whereon some Mussulmans are discoursing and taking coffee. The plate entitled 'The Pool of Bethesda,' seems to have been taken from the outside of the walls, and the characteristic of Jewish architecture, the cupolas which form the roofs of the houses, are everywhere visible. The 'Pool,' bearing this name, is supposed to have been a reservoir, and to have been so called by the early monks in their eagerness to distinguish all places of the Holy City, by Scriptural names. At the time of Mr. Roberts' visit to Jerusalem there was water in it, and so it is represented in the plate, but it is frequently dry. We look down upon the Pool, and thence up to the domes and minarets of the city. The view is taken from the street leading to the great mosque, from the inclosure of which a minaret rises on the right of the view, near to which are some ruins supposed to be the remains of the town of Antonia, which was levelled by Titus during the siege, in order to carry on his works for the assault on the Temple. 'The Tower of David' is a beautiful view of the famous citadel of modern Jerusalem, consisting of an irregular assemblage of square towers, and standing on the north-western part of Zion, to the south of the Yaffa-gate. The fortress is defended by a solid sloping wall, which again is strengthened by a fosse. The wall is supposed to be of the time of Hadrian, and secures the place so as to render it extremely difficult of capture. When besieged by the Crusaders, in the year 1099, this was

the strongest part of the city, and here it was, that the garrison made their last stand. The most prominent part of the view is that part of the citadel called the 'Tower of David'—a part of which is supposed to have been built by Herod, and left by Titus when he destroyed the other defences. 'The Shrine of the Holy Sepulchre,' is a magnificent interior, and the throng that presses through the gates of the church, to present themselves before it in weeping humility, is thus eloquently described in the text:—

"But the gate is at last opened, generally after a delay which produces many a murmur, and the multitude, with the rush and roar of a torrent, bursts in. On entering the vestibule, the keeper of the porch, a Turk, is seen sitting, frequently with a group of his countrymen, on a richly coloured divan, smoking, and with coffee before him. But none pause there: the crowd pass on struggling, pressing, and clamouring. But, at the instant of their entering the grand dome, all is hushed; in front of them lies the 'Stone of Unction,' the crowd fling themselves on their knees round it, weep, pray, and attempt to touch it with their foreheads; hands are seen everywhere clasped in prayer, or hiding their faces as if the object were too sacred to be gazed at; tears are rolling down cheeks, and sobs are heard that seem to come from hearts overwhelmed with reverence and sorrow."

'Jerusalem from the Mount of Olives.'—The city is here seen at a distance, and rises above the spectator, who must suppose himself on the slope of the mount. The buildings are seen in opposition to the light, which, falling upon the tops of some, relieves them effectually from the masses with which they mingle. The foreground of this plate is constituted of the acclivity of the Mount of Olives; and whatever be the modern aspect of Jerusalem, we are at least sure that the Mount of Olives is now as it was when "David went up the ascent of Mount Olivet, and wept as he went up"—and as when our Lord ascended it to meditate, to pray, and to prophesy. The Stone of Unction is presented with a most imposing section of the Church of the Holy Sepulchre.—The Stone of Unction, so called, is a long slab of marble, but yet it is said that this is only a covering to protect the true stone from casualties—the true stone, which is said to be that whereon the body of our Lord was laid by Joseph of Arimathea and Nicodemus, when by them anointed preparatory to sepulture.

'Crypt of the Holy Sepulchre.'—This is an underground chamber, wherein Helena, the mother of Constantine, is said to have discovered the cross on which our Saviour died. The vaulting is supported by four substantial pillars, and the whole is dimly lighted by tapers and suspended lamps.

'The Golden Gate.'—The substance of this vignette is what would seem to be a tower in the walls of Jerusalem. Although called a gate, there is no access to the city, the entrance having been walled up. Like most other ancient buildings in the Holy City a strong interest attaches to it, as well in history as in tradition. It was found walled up by the Crusaders, but was by them opened once a year, by their being influenced by a belief that through it our Lord made his entry into Jerusalem as king.

'The Church of the Purification.'—A view taken from the rocks and precipices without the walls. The church, or more properly mosque, rises above the spectator, and from the masterly treatment of the plate, is made the prominent object of the composition. This fabric is supposed to comprehend the remains of the Great Church, erected by Justinian in honour of the Virgin Mary in the sixth century. It has been universally considered by Oriental and Western Christians as a church dedicated to the Virgin Mary, and was by them called the Church of the Purification.

'The Upper Fountain of Siloam' is a remarkable example of the perfection of lithography. The plate exhibits little save the dark descent to the waters of the fountain, but the transparency of the execution can never be surpassed.

THE HIGHLAND WHISKEY STILL. Painted by EDWIN LANDSEER, R.A. Engraved by ROBERT GRAVES, A.R.A. Published by HENRY GRAVES and Co.

This is one of the most valuable of the Landseer

series of engravings: its point does not turn upon animal but human intelligence; in his versions of which he is not less great than in his essays on the sympathies of animals. Between Mr. Landseer and the creatures that he paints there is evidently a show of good terms, of a perfect understanding, for which, perhaps, he may be indebted to some magnetic influence denied to every body else; but independently of this he is fluent in the languages of animals. The man who in *Gil Blas* interprets the discourse of the birds is a mere tyro—he knows nothing else; but Mr. Landseer seems not only to identify himself a citizen of the animal world, but he must have lived in the waters, and held court with the tribes of the air. However, the present engraving is not from an animal picture, although from one of the finest he ever painted. When we last noticed it, it was in an advanced state, but now it is finished, and in a manner to rank it as one of the best engravings of the day. From opportunities we have had of examining the original picture, which is the property of the Duke of Wellington, we are well warranted in pronouncing it one upon which the author has bestowed an amount of care and finish, unsurpassed by similar qualities in any other works of his we have ever seen; and if thus to reproduce all the beauties of a picture, save those of colour, by means of engraving be the ultimate excellence of that art, it is assuredly seen in this plate in its highest degree.

The scene and all the circumstances of the composition are met with in the heart of the Highlands. The former is a secluded nook, clearly in a rugged country, and so managed that little more of space is seen than what the figures occupy. There is no house, nothing even worthy of the name of a shed, although there is between the upper air and the head of the distiller a something professing apology for a covering, but so rude that the air of discomfort had been less without it; and although, as an actual covering, "the better part of it were none at all," it is of high price in the picture, describing admirably a niche in the mountain-side for the safe working of an illicit still far from the haunts of excisemen. Within, then, and about this simple erection, are five figures, the still-man himself, an old woman (his mother, perhaps), two children (boy and girl), and a stalwart son of the mountain, whose limbs are developed to more than even Highland maturity, by having passed one half of his life in walking up hill and the other half in going down hill. But he is only a visitor, the gamekeeper of the *Tighearnach* (Anglice, Chief), who having been long on the hill after venison, has paid a visit to the still for rest and refreshment. He wears the garb of the far north, and his shoulder is draped with the plaid; he has cast himself down in the manner of a man wearied with the toil of sport, and is pronouncing an opinion on the liquor which he has just drunk, and which the old woman who stands by listening, has just handed to him. The graphic language which speaks out from every part of these two figures is the most eloquent in the vocabulary of the pencil, and the relation maintained between them is the real spirit of easy dialogue. The hunter, after having drunk the whiskey, holds the glass, turned down, carelessly between his fingers, while his lips move in the act of tasting; and he nods approbation slowly, but emphatically, while the eye of the old woman is fixed upon his countenance in wistful expectation. The distiller himself is in shadow, under the roof already described, which although of little use in the reality, is admirably available in a picture. This figure in the original is thrown back into a deep and liquid shadow, the transparency of which is imitated in the engraving with the most perfect success; in short, so feelingly has the engraver adopted the spirit of the artist, that no similar work of Art that we have ever seen coincides so entirely with the painted prototype. It has been three years in progress, a space far beyond what is necessary even for the greatest works of Art. Of such productions, a man, be his industry what it may, even during a long life, taking into account wear and tear by those deeply-seated anxieties inseparable from such a profession, can hope to execute but few—a consideration which never strikes the many who are delighted with such a work as this—literally a travail of laborious years. This work must add to the already extended reputation of Mr. Graves. Whatever part of it we examine, the manner of

the work is tempered to the nature of the object; we can, in fine, pronounce it, with the most perfect warranty, a work that alone would beget a fame, as one of the best and greatest productions of our characteristic school of engraving.

#### WAVERLEY NOVELS.—ABBOTSFORD EDITION.

Part III. Published by CADELL, Edinburgh. Of Waverley we are never weary, although jealous we might be of his being, in all that we know of him, illustrated less worthily than he was treated by Tully Veolan, or the noble Glengarry—we lay aside for this once the sounding Gaelic *wom-de-guerre*, Vich Ian Vohr. The engravings to this part are nineteen in number, the first of them being a 'View of Holyrood, from the Calton-hill,' drawn by Stanfield, and engraved on steel by Miller. This is followed by an admirable wood engraving, 'A Highland Feast,' at that part of it where the *bhairdh* of the clan is pouring fourth the "hidden song." The chief sits listening to the praises of the clans, with the Sassenach Duinné-wassel (Waverley) on his right. The twenty-second chapter is accompanied by a fine head of an aged Highland minstrel, whom we may take for "Mac-murragh of the songs," holding the cup presented to him by Vich Ian Vohr. On the rear of each chapter hangs a fragmental woodcut, many of which are interesting, from their having been supplied from the halls of Abbotsford. About the beginning of the number there is a well drawn and well engraved target, garnished with a bunch of business-looking claymores, four of them by the way, but with only two scabbards. May we believe that the sheaths of the other two were thrown away at Preston-pans?

This method of illustration is ingenious and happy, inasmuch as when we are at Glennaquoich we are continually reminded of Abbotsford. For ourselves we object not to be transported thither as it were by certain flourishes of the tool of the engraver (which, after all, is the real magician's wand), ever and anon to examine some relic formerly dear to the great genius of the place. This alternative transport cannot be otherwise than agreeable to all; it is an approach to the enchanted carpet of the Arabian Nights. One of the landscape illustrations is 'Lediard Waterfall,' whence it is supposed that Scott took the description of a cascade, which occurs in Waverley's walk with Flora in the neighbourhood of the castle. The 'Stag Hunt' also supplies a subject, and just at the moment when the whole herd are about to charge down the glen over Waverley and MacIvor. One of the best engravings in the number is 'Glengarry,' it is after Raeburn, and comes well up to the best idea of Feargus MacIvor. Other illustrations are—'The Highland Reel,' drawn by Kidd, and engraved by Sly; 'The Scene in the Smithy,' drawn by T. Sibson, engraved by J. Bastin; 'The Examination Scene,' drawn by Kenny Meadows, engraved by Folkard, &c.

We have much pleasure in announcing that the present number is infinitely better than the first. This is as it should be, for if there be a difference, it ought to appear thus upon the credit side. There has been a want of a new edition of these novels, such an edition we will say as this, which cannot fail to recommend itself most extensively to the admirers of Scott, that is to the entire reading world.

DISTRIBUTION OF THE ART-UNION PRIZES AT THE THEATRE ROYAL DRURY-LANE, APRIL 26, 1842. BY THOMAS ALLOM, Esq. Publishers, ACKERMAN and Co., 96, Strand.

The above is the title of a very beautiful drawing on stone, representing the interior of the Theatre-Royal Drury-Lane, crowded as theatre never was crowded before, to witness the distribution of prizes, and to receive the report of the committee of the Art-Union of London. We referred to it incidentally in our last number, but cannot avoid, now that it is fairly before us and the public, to recommend it strongly to our readers, not merely as a record of a very gratifying and important day in the annals of Art, but as an intrinsically good drawing for the portfolio. It represents the moment of declaring the name of the £400 prizeholder, and gives a most vivid notion of the universal excitement which prevailed through the large multitude there assembled. The chairman, raised above the other figures, the honorary secretaries, at either end of the centre table, the ladies

at the wheel, and the side tables filled with the gentlemen of the press and the scrutineers, all have their place in the picture, and serve to convey at once, to all who see it, the manner of conducting the drawing, and the excellence of the arrangements which were made. The production of this drawing by an artist like Mr. Allom, although it cannot but add to his reputation, is a compliment to the conductors of the Association, of which they may be proud. The drawing is executed in two tints, and is dedicated to the president, committee, and members of the Society, by whom especially there can be little doubt it will be purchased largely.

#### FIRST ADDITIONAL SUPPLEMENT TO THE ENCYCLOPEDIA OF COTTAGE, FARM, AND VILLA ARCHITECTURE AND FURNITURE. BY J. C. LOUDON, F.L.S. Publishers, LONGMAN & Co.

Mr. Loudon's *Encyclopedia of Cottage, Villa, and Farm Architecture*, contains undoubtedly, the greatest amount of information on this subject that is any where to be found, and has effected more good than could be shortly stated. Since its appearance the dwellings of our farm-labourers, especially in the north, have been entirely changed in construction; landed proprietors have been led to see the powerful effect on character which is produced by a man's residence; and moreover, as regards their own dwellings, have learned that taste is not expensive, and that an elegant and commodious structure, wherein ventilation, heating, aspect, and general fitness have been considered, costs little more than one in which none of these things have been regarded.

The supplement now before us is a valuable addition to the original volume, and should be obtained by all who possess the latter. It is arranged under the heads of—1. Cottages for Labourers; 2. Cottage-Villas and Villas; 3. Farmeries; 4. Schools, Public Houses, and Union Workhouses; 5. Construction and Materials; 6. Fittings up; 7. Hints to Proprietors desirous of improving their Estate. Many of the designs (of which there are 300) are exceedingly clever, especially a series by Mr. E. B. Lamb, in various styles of architecture, as applied to moderate sized villas, and to which the author has appended some valuable observations. Summing up the marked differences of the styles generally, Mr. Lamb remarks of the Italian: "The distinguishing character of the Italian style I have adopted, is great breadth of effect, by masses of blank walls contrasted with richly decorated openings, which latter are frequently curved, combining with the horizontal lines in roofs and terraces; columns of different orders placed over each other and only used the height of each story; arches used between columns, and constructed with several stones; small stones generally used in the construction; and internally coved ceilings coffered; arches rising from impost, great richness in the sculptured foliage, and generally much variety of form and masterly execution; a frequent application of colouring and fresco-painting; statuary more varied in form, but not blending with the architecture so well as in the Grecian edifices. In a general view, the Italian manner possesses more appearance of comfort and pictorial effect, but less sublimity, than the Grecian, and its forms are more readily applied to modern architecture."

#### TWO LETTERS TO AN AMATEUR, OR YOUNG ARTIST, ON PICTORIAL COLOUR, &c. BY ROBERT HENDRIE, Esq. SIMPKIN, MARSHALL, and Co.

This work opens with five certainly very important recommendations to the student—the proposed positions of the highest light and the deepest shadow—the extent and degree of the general light prevailing throughout the composition—the depth and form of the shadows with reference to objects—the colour of the principal light as affecting all the objects upon which it will break; and, lastly, the positive hues of objects as affected by the circumstances of the composition. These "Letters" contain many excellent precepts, than which none is more valuable than that which inculcates an avoidance of that kind of finish which fritters away the breadth and importance of the masses of a picture. The author instances the beauties of Turner, and other famous artists of our school, as also the chief merits of many of the early painters. The work concludes with recipes for painting the various diurnal effects; and would be found by the amateur a valuable auxiliary.

**LIEUT.-GEN. SIR HUGH GOUGH.** Engraved by J. JACKSON. Publishers, GRAVES and Co. A capital likeness of the gallant Commander-in-chief of her Majesty's forces in China; and, therefore, a print that will be welcome to all who know him, and to a very large number of "the Army," and also "the Public," who are watching his career with no little anxiety, but with great confidence in his activity, ability, and firm courage. The print is, however, especially curious and interesting, as being engraved from an original painting by a Chinese artist. The skill of the Chinese is notorious in copying literal facts; luckily for the brave officer, he had no pimple on his cheek at the time of sitting, or it would surely have been in the picture. We recollect a story of a lady who once sent to China a drawing, neatly and carefully made, with directions to have it copied upon a dinner service; in the middle was her family coat of arms, and directly under was written in good round hand the words "keep this in the middle." The order was executed, and the service duly sent to England: when the case was opened, guess the lady's horror to find a transcript of her own handwriting upon every plate and dish, in illegible characters—the words "keep this in the middle."

**AN EASY INTRODUCTION TO PERSPECTIVE AND SKETCHING FROM NATURE.** By JOHN CARR BURGESS. Published by SIMPKIN and MARSHALL.

In teaching drawing, a knowledge of perspective cannot be too strongly insisted on as indispensable to facility and accuracy; yet, notwithstanding the fact that an acquaintance with it is as necessary in the art of design, as an attention to mathematical precision in the erection of the edifices which perspective enables us to delineate—we meet with drawings continually, even works of merit, abounding with errors from a want of due study of this essential acquirement. The little treatise before us, consisting of only twenty-six pages, contains eleven plates illustrative of linear and aerial perspective, but dwelling, of course, especially upon the former; and a series of rules so plain and intelligible that as much may be gathered from it as from many much larger volumes. The chapter on Sketching from Nature, is brief; the author judiciously points out the utility of a little practice in the use of the pencil before attempting to draw from nature, and all artists must subscribe to the opinions he expresses. The plates exemplify a firm and free style of sketching, which might be followed with the best results.

#### FOREIGN PUBLICATIONS CONCERNING ART.

**IL COSTUME ANTICO E MODERNO O STORIA DEL GOVERNO, DELLA MILIZIA, DELLA RELIGIONE, DELLE ARTI, SCIENZE, ED USANZE DI TUTTI I POPOLI ANTICHI E MODERNI PROVATA COI MONUMENTI DELL' ANTICHITA' DAL DOTTOR GIULIO FERRARIO.** London: ROLANDI. Milano, 15 tom., folio, 1815—19.

Works of this description are of great importance to all those who desire to obtain an accurate knowledge of the costume, habits and manners, progress of Art and literature exhibited by nations in their career. They detail the history of human nature in the social state, and of its gradual advancement from rudeness to refinement. Thus investigations of this kind, if conducted aright, unfold principles of the highest importance to mankind in every condition, and furnish rules by which we may judge of the wisdom or folly of the systems and measures adopted in that state of society under which we live. For a correct idea of how far the habits and manners of a people are affected by climate, influenced by government, or formed by religion, we can acquire only by the assiduous examination of facts obtained, not from the records of one period, but from many, and from the extensive observation of those external and internal causes, which so greatly operate in the creation of opinion. International intercourse has so much advanced of late years, that by the natural proneness towards novelty, and desire to adopt extraneous customs, which may confer a momentary distinction, together with the more general equalization of wealth; many of those habits and manners incidental to a stricter division of castes; or dating from the Oriental influence over the Western Empire, and the laws of the feudal system; have

become obliterated. Yet it is pleasing to trace the origin of many customs yet existing; or which were once marked features in the social life of antiquity. Thus in Greece we observe traces of many ceremonies peculiar to the Jews; and even the Irish wake may derive its origin from the Greeks, when bewailing their dead with tears, repeating the interjection *εἶ ἔἔ*, from whence, if we may credit the scholiast upon Aristophanes, funeral lamentations were called *εἶρεσι*, elegies. Books, such as the one now under consideration, and "Meyrick's Ancient Armour," &c., are also of great value—first, as supplying to our school of Art correct data for costume particularly important for historical painting; secondly, as they illustrate many passages of classical literature; and even a philologist may extract matter of interest from their pages. Thus, from the circumstance of the standard-bearers of the Venetian army wearing tight hose, that kind of dress came to be called "pantaloons," a corruption of "panta leone," i. e. plant the lion—the standard of the republic being the "Lion of St. Mark." The artist's palette is, *quasi* "epaulette," a term originally given to the circular plates worn to protect the shoulders of the knights in panoply.

To conclude; the work, which forms the subject of this notice, must not be considered as solely applied to the illustration of the manners, habits, and customs of the nations it embraces on its design. It is a vast repository of facts in the Arts, laws, literature, and social life of ancient and modern empires. It is compiled from the best authors; and although we regret the plates are not finished in the style of other more recent works, yet they are fully sufficient, are very numerous, nor is it easy to conceive they could have been produced in a more embellished manner, without an outlay materially enhancing the expense of this most extensive undertaking.

#### TO CORRESPONDENTS.

We crave the indulgence of our correspondents until next month, when the communications of all shall be duly replied to.

#### BOOKS PUBLISHED THIS DAY

BY  
**HOW AND PARSONS,**  
132, FLEET-STREET.

**ENGLAND in the NINETEENTH CENTURY: NORTHERN DIVISION—LANCASHIRE.** Part VII., with Illustrations, price 2s. 6d. (This County will be complete in Eight Parts.)

## MILLER'S SILICA COLOURS.

The daily increasing patronage bestowed on these Colours by Artists of the first eminence, while it is gratifying in the highest degree to the inventor, is, at the same time, an acknowledgment of the soundness of those principles upon which they are manufactured. It will be sufficient to repeat that, being composed of substances identical or similar to those used by the old masters (the brilliancy of whose works, after the lapse of centuries, is an incontestible proof of the superiority of ancient colouring). The Silica Colours will ever retain their freshness, transparency, and gem-like lustre uninjured by atmospheric influence and unimpaired by time.

The SILICA OIL COLOURS are prepared in collapsible tubes, and can be forwarded per post to any part of the country, on receipt of an order, for any of the under-mentioned tints, viz.:

Pale and Deep Red.

Pale and Deep Blue.	Pale and Deep Yellow.
Pale and Deep Orange.	Pale and Deep Purple.
Pale and Deep Green.	Pale and Deep Brown.
White and Half Tint.	Grey and Black.

#### VAN EYCK'S GLASS MEDIUM FOR OIL PAINTING.

This Medium, having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'guelps, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

#### Glass Medium in Bottles.

No. 1. For first and second painting.

No. 2. For rubbing up powder colours with.

No. 3. For third painting, finishing, and glazing, and for mixing with colours already prepared in oil.

Any of the above Media may be thinned, according to the taste of the Artist, with Miller's Florentine Oil.

T. MILLER, being the original preparer of this INVALUABLE MEDIUM, has the honour of supplying the President and Members of the Royal Academy.

The SILICA WATER COLOURS are prepared in small squares, which possess many and great advantages over the Cake and Moist Water Colours, at present in use; and can be forwarded per post to any part of the country, on receipt of an order for any of the above-mentioned tints.

#### MILLER'S GLASS MEDIUM.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after; this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints uninjured; in durability it will approach nearer to Oil Painting than anything hitherto in use.

#### Glass Medium in Bottles.

No. 1. For first colouring or laying on masses of colour. This dries so hard that the second colouring or finishing will not disturb it.

No. 2. For second colouring, glazing, and finishing.

T. Miller respectfully directs the attention of those artists and amateurs who have not had an opportunity of witnessing the gem-like lustre of the Silica Colours and Glass Medium to a picture painted by E. Corbould, Esq., 'The Woman taken in Adultery,' No. 66, in the present Exhibition of the New Water Colour Society, 33, Pall Mall, and lately purchased by H.R.H. Prince Albert, for two hundred guineas.

MILLER'S ARTISTS' COLOUR MANUFACTORY,  
56, LONG ACRE, LONDON.

It is with the highest feelings of gratification Mr. BOYS is enabled to announce the splendid Original whole-length Portrait of

**H. R. H. PRINCE ALBERT, K.G. ETC. ETC. ETC.,**  
IN HIS FIELD MARSHAL'S UNIFORM.

**JUST PAINTED FROM LIFE BY JOHN LUCAS, ESQ.**  
TO BE ENGRAVED BY SAMUEL COUSINS, ESQ., A.R.A., IN HIS UNRIVALLED STYLE,  
AS A COMPANION TO CHALON'S LARGE STATE PORTRAIT OF HER MAJESTY.

Price to Subscribers, previous to Publication: First Proofs, before Letters, £8 6s..... Lettered Proofs, £5 5s..... Prints, £3 3s.

NOW READY,

**THE TRIAL OF THE EARL OF STRAFFORD,**

FROM THE LARGE HISTORICAL PICTURE PAINTED BY WILLIAM FISK, ESQ.,

Is just completed.—The Country Trade are requested to send their Orders immediately to Mr. Boys, or to their usual London Agents.

LONDON: THOMAS BOYS, PRINTSELLER TO THE ROYAL FAMILY, 11, GOLDEN-SQUARE, REGENT-STREET.

**PERSPECTIVE and DRAWING MODELS** for TEACHING ELEMENTARY PRACTICAL PERSPECTIVE DRAWING, LIGHT and SHADE, &c. Acknowledged, generally, as the best possible introduction to Landscape Drawing upon certain principles. Being composed of Geometrical and separate Pieces, are capable of many hundred variations. Illustrated and complete in box, price £1 1s.

C. SMITH'S ARTISTS' REPOSITORY, 34, MARY-LEBONE-STREET, QUADRANT.

**PARLOUR'S PATENT DELINEATOR.**—

This beautiful Instrument, having been greatly improved and simplified by the Patentee, is now offered to the public in its present portable form, at the reduced price of £2 2s. It is universally allowed to be infinitely superior to the Camera Lucida for the purpose of Drawing or Sketching from Nature.—Manufactured and sold, wholesale and retail for the Patentee, by his Agents, Messrs. REEVES and SONS, 150, Cheapside, London; and may be had of all Opticians, Stationers, or at Artists' Repositories.

**TO MINIATURE PAINTING.**

WARRINER, 39, GREAT CASTLE-STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

**POOLCOO'S CHINESE CEMENT.**—The

extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

**THE MAGAZINE of FINE ARTS,** and

Miscellany of Science and Amusements, published every Saturday, price 1d., and in Monthly Parts, 7d., with numerous Woodcuts; containing instructions in all the various styles of Painting, Drawing, Engraving, Colouring, Lights and Shade, Design, Composition, Perspective, Lithography, Miniature Painting, &c., and all subjects connected with the above. A Biographical Dictionary of Painters, Sculptors, &c., valuable receipts, the most recent scientific discoveries, amusing experiments, reviews, galleries of paintings, exhibitions, &c. Parts I. and II. just published.

W. Strange, 21, Paternoster-row; and T. Sloper, 11, Edward-street, Portman-square; and all Booksellers and News Agents.

**SPLENDID AND SUPERIOR GILT FRAMES.**

CHARLES M'LEAN, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**CHIMNEY GLASSES, PICTURE**

FRAMES, CHEVAL and TOILET GLASSES, CONSOLE TABLES, WINDOW COCKNICKS, SCREENS, and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane.—P. G. manufacturing every article on the premises, is thereby enabled to offer them at such low prices that he defies competition. An extensive assortment of Ornamented Gilt and Fancy Wood Picture Frames kept ready. Regilding in all its branches in a superior manner, at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given free of charge. A list of the prices of Plate Glass, &c. sent, pre-paid, to any part of the Kingdom. A quantity of Picture Frames of every size, that have been some time on hand, at reduced prices.

TO be LET, at No. 44, BERNERS-STREET, OXFORD-STREET, an ARTIST'S PAINTING-ROOM, with one or two Bed-rooms, and an Ante-room attached, which have recently been built for a Portrait Painter.

**ELEGANT AND ORNAMENTED PICTURE FRAMES of a SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.**

C. J. ECKFORD, 45, FLEET-STREET, corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain a LARGE and CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

**PAINTING IN OIL.**

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES, for COLOURS, OILS, VARNISH, MARGOLP, ASPHALTUM, &c.**—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE TO ALL PARTS OF THE UNITED KINGDOM.

## ROYAL COMMISSION OF FINE ARTS.

Whitehall, July 22nd, 1842.  
The Commissioners appointed by the Queen for the purpose of inquiring whether advantage might not be taken of the rebuilding of the Houses of Parliament for promoting and encouraging the Fine Arts,—referring to the notice issued by them on the 25th of April last, respecting a competition in Cartoons, have resolved:—

1. That the time therein specified for sending in the finished Cartoons be extended from the first week in May to the first week in June, 1843.

2. That foreigners, practising the Arts, who may have resided ten years or upwards in Great Britain, be considered as coming under the denomination of "British Artists."

3. That no frames to the Cartoons offered for competition be admitted.

4. That the Secretary of the Commission be empowered to give such further explanations as may be required relative to the terms of this and of the former public notice. By Command of the Commissioners,  
C. L. EASTLAKE, Secretary.

BRITISH INSTITUTION, PALL MALL.  
**THE GALLERY, with the WORKS of the late Sir DAVID WILKIE, R.A., and a Selection of Pictures of the Ancient Masters, is Open Daily, from Ten in the Morning until Six in the Evening.—Admission, 1s.; Catalogues, 1s. Wm. BARNARD, Sec.**

**WILKIE STATUE.**—At an ADJOURNED MEETING of the Committee, held at the Thatched-house Tavern, St. James's-street, on SATURDAY, July 2,  
The Right Hon. Sir R. PEEL, Bart., M.P., in the chair, it was resolved,

That a sub-committee be appointed, under whose superintendence the Statue shall be executed, and that such committee consist of the following members:—  
Sir Thomas Baring, Bart. Peter Laurie, Esq.  
His Grace the Duke of Buccleugh, Esq. Viscount Mahon, M.P.  
John Burnet, Esq. (cleuch) Hon. W. Leslie Melville  
Sir A. W. Calcott, R.A. Sir Moses Montefiore  
Allan Cunningham, Esq. Sir W. J. Newton  
Peter Cunningham, Esq. Thos. Phillips, Esq., R.A.  
Henry Hallam, Esq. [M.P.] Samuel Rogers, Esq.  
Right Hon. H. Labouchere, Sir M. A. Shee, P.R.A.  
Edwin Landseer, Esq., R.A. His Grace the Duke of Sutherland  
Sir Peter Laurie, Esq.

The committee then proceeded to select the artist, and at the close of the ballot the scrutineers reported the numbers to be:—For Mr. Joseph, 26; for Mr. Campbell, 13; for Mr. Bailey, 5; for Mr. Watson, 3; for Mr. Weekes, 2; for Mr. Lough, 0; for Mr. Marshall, 0; when the chairman declared the election to have fallen on Mr. Joseph.

The Committee have great satisfaction in stating that the Trustees of the National Gallery have acceded to the request of the subscribers, that the statue be placed in the Inner Hall of that Gallery.

ALLAN CUNNINGHAM, Hon. Sec.  
PETER CUNNINGHAM, Assist. Sec.

Subscriptions (to be advertised) continued to be received by Sir Peter Laurie, and Peter Laurie, Esq., Joint Treasurer, 7, Park-square; Allan Cunningham, Esq., Hon. Secretary; and Peter Cunningham, Esq., Assist. Secretary, 27, Lower Belgrave-place; the Union Bank of London, 8, Moorgate-street; 12, Argyll-place; 4, Pall-mall East; Messrs. Coutts and Co., Strand; and Messrs. Smith, Payne, and Smiths, Mansion-house-street.

## WEST OF SCOTLAND ACADEMY OF THE FINE ARTS.

**THE SECOND ANNUAL EXHIBITION** of the WEST OF SCOTLAND ACADEMY for the WORKS of LIVING ARTISTS, will open in SEPTEMBER next, in the DILETTANTI BUILDINGS, 51, Buchanan-street.

No carriage or expenses will be paid by the Academy except on works sent by those artists to whom the Exhibition circular has previously been forwarded.

The 17th of September the last day for receiving Pictures. By order of the Council,  
J. A. HUTCHISON, Secretary.

Glasgow, July 1, 1842, Committee Rooms,  
68, St. Vincent-street.

## WEST OF ENGLAND ART-UNION.

A finished ETCHING of the beautiful PRINT now engraving, by Mr. Ryall, for this Art-Union, may be seen at either of the local Secretaries, who will continue to receive Subscriptions until the end of August.

Subscription Half-a-Guinea.  
The drawing for Prizes will take place at a Public Meeting, to be held in Plymouth, the first week in September.

Prizes to be selected by the Prizeholders, from either of the Exhibitions in Plymouth or Exeter, or from the Polytechnic Exhibition, Falmouth.

Subscriptions received at the Devon and Cornwall Banking Company, Plymouth, or at any of its Branch Offices; by Mr. E. Fry, Honorary Secretary for Plymouth; or by any of the following Gentlemen, who have consented to act as Local Secretaries:—London, Messrs. Ackermann, Strand; Messrs. Reeves, Chapside; Mr. G. Rowney, Rathbone-place; Devonport, Mr. W. Byers; Truro, Mr. P. Mitchell; Ilfracombe, Mr. Lammis; Teignmouth, Mr. E. Croydon; Torquay, Mr. Elliot, Bookseller; Wadebridge, Mr. Saunders; Stonehouse, Mr. E. W. Cole; Weymouth, Mr. B. Benson; Tavistock, Mr. Roljohans; Bristol, Messrs. Philip and Evans; Barnstaple, Mr. Thomas Hearson; Bath, Mr. Everitt; Falmouth, Messrs. Lake; Exeter, Mr. W. Roberts, High-street; Taunton, Mr. James Barnicott; Devizes, Mr. Ward; Liskeard, Mr. Jago; St. Austell, Mr. Parsons; Fowey, Mr. Lane.

## THE ART-UNIONS OF GERMANY.

UNDER THE PATRONAGE OF  
His Royal Highness the Duke of SUSSEX,  
His Royal Highness the Duke of CAMBRIDGE,  
And the Nobility.

BERLIN, DÜSSELDORF, and DRESDEN.

The Subscription List to the Art-Union of Düsseldorf will close on SATURDAY, the 13th of AUGUST.

The price of the Subscription Tickets in either of the above Associations, will be 20s. each, which will entitle the holder to one copy of the annual presentation Engraving, which will be delivered immediately after the drawings, free of duty and carriage, and also the chance of obtaining a Work of Art, value from £10 to £300.

The Engravings, which from the first establishment of these Societies have formed the presentation Prints to each Subscriber, and which are executed in the very first style of Art, are exhibited daily at the German Repository, 9, Newman-street, Oxford-street, between the hours of Nine and Six.

A Prospectus detailing the plans of management of the German Art-Unions, and explanatory of the advantages afforded to the Subscribers, can be obtained or forwarded free, upon application to

HENRY HERING, Sec. for the United Kingdom,  
9, Newman-street, Oxford-street, London.

Now ready, for the Sketching Season, **SHADE'S NEW PATENT PERSPECTIVE DELINEATOR and SKETCHING APPARATUS**; by means of which Landscapes and all other objects can be drawn in true Perspective, with the utmost facility, without failure, and with the same ease as writing a letter.

Also, **SHADE'S PATENT METALLIC SKETCHING SEATS**, combining the usual strength with a tenth part only of their bulk and weight.

Sold at SMITH and WARNE'S, ARTISTS' REPOSITORY, 34, MARYLEBONE-STREET, QUADRANT, LONDON.

**TO MINIATURE PAINTERS, &c.**—W. WARRINER, 39, GREAT CASTLE STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

Just published, in 4to., price £2 2s., in French boards, and on royal paper; with proof impressions of the Plates, price £4 4s., half morocco, gilt tops.

**DISCOURSES** delivered to the STUDENTS of the ROYAL ACADEMY, by Sir JOSHUA REYNOLDS. Illustrated by Explanatory Notes, and Twelve Plates. By JOHN BURNET, F.R.S., Author of "Hints on Painting," in 4to., price £4 10s.  
James Carpenter, Old Bond-street.

Just published, in royal 4to., price £1 5s. bound, **RUSTIC ARCHITECTURE**—PICTURESQUE DECORATIONS OF RURAL BUILDINGS in the USE OF ROUGH WOOD, THATCH, &c. Illustrated by Forty-two Drawings; consisting of Plans, Elevations, Sections, and Perspective Views; the Doors, Windows, Chimney Shafts, &c., drawn geometrically to a large scale; with descriptions and estimated costs. By T. J. RICCAUTI, Architect.

"We have repeatedly and strongly recommended this elegant and useful work, and can safely say, that we think no gentleman who purchases it will be disappointed."—*London's Gardener's Magazine.*  
James Carpenter, Old Bond-street.

Published in 4to., Price £4 10s. in French Boards; and on Royal Paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, Price £7 7s.

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.

2. On COMPOSITION. Fifth Edition. Price 15s. in boards.

3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.

4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Students in Art in the New Edition of the Encyclopædia Britannica—See the article on Drawing.

James Carpenter, Bond-street.

NOW READY,  
HAGHE'S BEAUTIFUL WORK OF  
**THE PASSES IN AFGHANISTAN,**

Consisting of Twenty-six most highly finished Plates from Drawings made on the spot by JAMES ATKINSON, ESQ., Superintending Surgeon of the Army of the Indus, with descriptive letter-press.

Amongst other most interesting events delineated is,  
"THE SURRENDER OF DOST MAHOMMED TO SIR WILLIAM MACNAGHTEN;"  
"THE STAFF OF LORD KEANE," &c. &c.  
Price, Imperial Folio, half-bound Morocco, £4 4s.

Also, now ready,

**MORISON'S HADDON HALL,**

UNIFORM WITH NASH'S MANSIONS, &c.

Twenty-Six Plates, Imperial Folio, half-bound Morocco, £4 4s.

LONDON: PUBLISHED BY HENRY GRAVES and CO., FILL-MALL;

W. H. ALLEN and Co., Leadenhall-street; and LONGMAN and Co., Paternoster-row.

PROSPECTUS AND CONSTITUTION

OF THE

**GLASGOW AND WEST OF SCOTLAND ASSOCIATION**

FOR THE PROMOTION OF THE FINE ARTS.

**T**HE object of this Association is the promotion of the Fine Arts in Glasgow, and generally throughout the West of Scotland, by giving more encouragement to Artists resident in that part of the country.

Experience has shown that there is no system under which the Arts will more certainly flourish than that which at present exists in Edinburgh; the leading principle being that, while the Artists retain the sole management of their Exhibitions and Academies, the Association has for its object the purchasing of Works of Art selected from the Annual Exhibition, and which are distributed among the Subscribers by lot.

It is proposed to establish a similar system in Glasgow.

The Dilettante Society deserve the best thanks of the public, as they have done much for the Arts in Glasgow; but the want of an Association on such general principles as that now in contemplation, explains why that extended patronage has not been given which is requisite before Glasgow can attain that eminence which other cities have reached.

The highly gratifying results of the London, Dublin, and Edinburgh Associations for the promotion of the Fine Arts, warrant the promoters to hope, that it is only necessary to commence such an Institution in Glasgow, in order to produce similar results. From the well-known enterprise, wealth, and manufactures of its inhabitants, they look forward with confidence for equal success, "well knowing that the germs of good taste are liberally diffused over the whole community, and that nothing is wanting for their being called into action, but the establishment of such an Institution."

In order to support an Annual Exhibition in this great commercial city, steps must be taken by the friends of Art to give liberal encouragement to those Artists who devote themselves exclusively to the higher branches of their profession, and those who are now exerting their genius, and devoting all their time to become eminent: they will thus be encouraged to persevere till they have attained to eminence. The formation also of a School of Design in the West of Scotland, dependent upon the exertions of professional Artists, cannot succeed unless such an Association is commenced and carried on with spirit; and for these objects mutual co-operation will easily effect what would be altogether beyond the reach of individual exertion.

The following are the Rules of the Association:—

I.—Every Subscriber of One Guinea shall be a member of the Association for one year, and the Subscriber of a larger sum will be entitled to the privilege mentioned in Article IX.

II.—The chief portion of Annual Subscriptions shall be devoted, after the necessary deduction for expenses, to the purchase of a selection from the Works of the Artists exhibited in the Annual Exhibition; and the Committee of Management shall have the power to engrave, for distribution among the Subscribers, such Work or Works of Art as may appear worthy to them of such distinction.

III.—A general Meeting of the members shall be held annually in December, when a Committee of Management will be appointed for the ensuing year; each member having an equal vote in the appointment of such Committee.

IV.—This Committee shall consist of Twenty-one gentlemen who are not Artists, five of whom shall go out annually.

V.—The Committee shall be entrusted with full power to purchase what may appear to them the most deserving Works of Art annually exhibited.

VI.—The purchase of these Works shall take place during the period that the Exhibition is open to the public.

VII.—Upon the close of the Exhibition, the different Works purchased for the Association shall become, by lots publicly drawn, the property of individual members.

VIII.—Subscribers, at a General Meeting, shall have power to alter Rules and Regulations.

IX.—The Subscribers of One Guinea shall be entitled to one chance; if Two Guineas to two chances, and so on as the Subscription increases.

X.—The Committee of Management shall annually publish a Report, wherein they shall state the principles that guided them in selection of the Works of Art they may have purchased, and enter into such other details as may appear to them proper.

XI.—At the General Meeting in December, a Secretary and Treasurer shall be appointed, who shall be *ex officio* Members of the Committee of Management, and whose special duty it will be to keep a correct List of all the Subscribers' Names; to collect their Subscriptions; and, under the direction of the Committee, to carry into effect every arrangement for furthering the views of the Association.

COMMITTEE OF MANAGEMENT, FOR THE YEAR 1841—42.

THE HONOURABLE JAMES CAMPBELL,

LORD PROVOST.

ROBERT HUTCHISON, Esq.

ROBERT BARTHOLOMEW, Esq.

JAMES LUMSDEN, Esq., YORKER LODGE.

ARCHIBALD McLELLAN, Esq., GARNET-BANK.

JOHN LEADBETTER, Esq.

PRINCIPAL MACFARLAN, COLLEGE.

ALEXANDER DOWNIE, Esq., CROSSBASKET.

WILLIAM COUPER, M.D., COLLEGE.

ALEXANDER GRAHAM, Esq.

JAMES HUTCHISON, Esq.

JOHN MITCHELL, Esq.

WILLIAM F. BURNLEY, Esq.

A. MACGEORGE, JUN., Esq.

LORRAINE WILSON, Esq.

JAMES SMITH, Esq.

CHARLES HAMILTON, Esq.

GEORGE DOUGLAS, Esq.

GEORGE WHITE, Esq.

DAVID GOODSIR, Esq., BANKER, TREASURER.

JOSEPH SWAN, Esq., 54, ST. VINCENT-STREET, SECRETARY.

SKETCHING SEASON.

**A**QUAOLEUM, or a new Preparation of MOIST COLOURS to give the effect of either Oil or Water-Colour Painting.

Invented by GEORGE ROWNEY and CO., Colour Manufacturers to Artists, 51, Rathbone-place, London. These Colours may be used either on Canvases, Millboard, Panel, or Paper. If used as Water Colours, water is the only medium required; but if to present the effect of Oil Painting, a macgulep prepared expressly for the purpose is necessary: they are applicable to any style of painting, but most particularly useful in sketching from nature. The dislike that many persons (especially ladies) have to oil colours, on account of their smell, is here entirely avoided, as they have rather a pleasant odour, and any stain or soil from them may be removed with water. They dry nearly as fast as water colours, but if the evaporation be too rapid, it may be controlled by the use of the macgulep. The sketches, if done to represent oil colours, may be varnished as soon as dry.

These Colours are sold in compressible tubes, or in small earthenware pans, and are called Aquaoleum, or a new Preparation of Moist Colours, and sold at the usual charges of Cake Colours generally.

N.B.—Specimens may be seen in the different styles to which they are applicable, and printed directions furnished with the article.

BUCKINGHAM PALACE, WINDSOR CASTLE, STAFFORD-HOUSE, WESTMINSTER ABBEY, BELVOIR CASTLE, CHATSWORTH, &c. &c.

**W**M. BROWN, Son-in-law and Successor to the late F. Bernasconi, having been engaged as Principal Modeller and Director in the Ornamental Department of the above Works for the last 26 years, begs to inform Architects, Surveyors, Builders, Decorators, and the Public generally, that he has commenced business as Plain and Ornamental Plasterer, Modeller, and General Decorator, at the Premises of the late Mr. Bernasconi, 10, Chenies-street, Bedford-square; and being in the possession of the extensive and unrivalled Collection of Architectural and other Decorative Models and Ornaments, together with Impressions from all the best Gothic and other edifices in the kingdom, trusts that by practical knowledge, by attention to any orders he may be favoured with, as well as by reasonable charges, to merit and receive support.

W. B. begs an early inspection of his models, &c., and will be willing to contract for the execution of any work that may be submitted to him.

Ornaments of every description executed in Plaster, Roman Cement, Paste Composition, &c. &c.

N.B. Scagliola, Mastic, Keene's Cement, &c., worked in the best manner. Whitewashing, Colouring, &c.

**P**ERSPECTIVE and DRAWING MODELS for TEACHING ELEMENTARY PRACTICAL PERSPECTIVE DRAWING, LIGHT and SHADE, &c. Acknowledged, generally, as the best possible introduction to Landscape Drawing upon certain principles. Being composed of Geometrical and separate Pieces, are capable of many hundred variations. Illustrated and complete in box, price £1 1s.

C. SMITH'S ARTISTS' REPOSITORY, 34, MARYLEBONE-STREET, QUADRANT.

**P**OOLOO'S CHINESE CEMENT.—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razor-makers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

NATIONAL MONUMENTS AND  
WORKS OF ART.

There are men apparently of opinion that, unless the great mass of society be educated at an university, or trained by the discipline of a public school, it is far removed from any rational hope of comparative culture and refinement. There are others who think that, for the poor, and for him that has no other helper, the parish school, or the national system, is all that is requisite for the purpose of education. Upon the view taken by the first, it is unnecessary to remark; biography refutes; daily experience disproves its correctness; we seek in vain for its illustration; every succeeding feature becomes weaker as it is examined,

"And thro' the ivory gate the vision flies."

The second is of more importance; it is not only *what* education is, but *how* it is to be conducted, that is here the question; and as this subject has been incidentally discussed in the House of Commons, upon the motion for admitting the people to the gratuitous exhibition of our public Monuments and Works of Art, we shall venture to submit a few observations to our readers, which appear to be in strict relation with those intellectual pursuits it is the design of the ART-UNION to promote. Strictly speaking, education is a progressive action of the mind, for the moral government of our lives, and the interval between the lisp of childhood to the querulousness of age is one continued lesson. When a youth quits the university, his mind may be richly stored with the imaginative literature of the past, and strengthened by the study of the exact sciences; but education has only commenced, he has merely exchanged the ardent exertion of the scholar, for the more arduous struggle for knowledge we obtain by the harsh discipline of the world.

Leave him, and with the aid only of his college impressions, his course will be at least uncertain. And similarly with the poor man's child. He may be trained up wisely, orderly, discreetly; may have bishops for his teachers, the kindest ladies of the parish for his guides, his mind may be duly influenced by the essentials of religious precepts, but if you send him thus upon the active business of life, with no aid subsidiary or subsequent, we fear it will be found that present scenes have erased former impressions; and that memory increases the remorse of manhood by recalling the long-neglected instructions of youth. For let it be remembered, there is not a faculty with which we are blessed that does not, more or less, promote or govern action. The poisoned fruit may have the witchery of the golden gardens of the Hesperides;—we may be hourly influenced by minute causes, all weakening the impressions of the moral sense; distracting attention from the great destiny of life, or leading us imperceptibly to a low unspiritual career. And here it is the Fine Arts, so connected with cultivated sensibilities, the very offspring of the intellectual powers, offer in their wide sphere objects of ambition, pleasure, of social intercourse, and enlightened recreation. No matter what the rank or station of the man, the works of Raffaele are alike impressive; the peer and the peasant equally acknowledge the greatness of genius, and retire, their minds enlightened, their hearts purified by the contemplation of the power which recalls to their recollection the scriptural truths of religion, the mercy, and the moral government of the Supreme Ruler of the world. This has been denied; and with much elegant imbecility it has been stated, that the Fine Arts have chiefly flourished at the most corrupt periods of civil history. Let it be so; and it is after all but a chronological truth. During the rise and growth of states, commerce and the military arts chiefly prevail; when arrived at their height, the liberal; as they decline, the voluptuary; the Fine Arts advance to perfection with the progress of the state; and relieve the haggard features of that corruption which they cannot systematically check. Had they no connexion with the refinement of Greece? Were not the successive conquests of Etruria, Greece, and Sicily the first cause of the civilization of the Roman? Do not the more excellent arts demand constant meditation, and an accurate inquiry into the powers of nature; and do we not thus acquire true grandeur of mind, with a capacity of performing every thing in the best way?

The degradation of the Roman was caused by the conquests of the republic; they reduced a large population to slavery, which ministered to the habits of luxury—and the wealth of the known world was poured into the capital of *one state*. Moreover the Arts existed under the patronage of an impure creed, and a debased and ignorant population. Now, religion and education are as the spirit—the guide in this respect. The Arts it is true must appeal to cultivated understandings for support—but cultivated understandings are no warrant for religious principles. The intellectual like the sensual faculties are gratified by exercise, and the pleasure derived from the employment of talent is quite distinct from the enjoyment obtained by the secure government of the affections and conduct through the religious impressions of the moral sense. There are not two characters more worthless than Sylla or Julius Cæsar; yet who could connect their degradation with the love of literature, and appreciation of the works of Art?

*Virtus est homini scire id, quod quæque habeat res.  
Virtus scire homini rectum, utile quid sit, honestum,  
Quæ bona quæ mala item quid inutile, turpe, in-  
honestum  
Virtus quærenda rei finem scire modum que.*

Inculcate religious principles with intellectual associations, with those resources which Art and Science alike afford, not only as pursuit, but recreation, and the mind is at once strengthened,

guided, and animated in its career. Schemes of this kind, incumbent on us for the good of any class, are still more so for the improvement of the poor. Impress a man with a proper sense of self-respect; teach him the value of opinion; and show him that advancement is dependent on the right use of the means you place at his disposal, and he will not be slow to choose them, or willing to neglect. The numerous mechanic's institutions prove this; and the societies for the working classes in every country town, show not only that the schoolmaster is abroad, but that his scholars have duly estimated the advantage of his presence. In furtherance of the plan for the education and refinement of the people, it is proposed to give greater facilities for the inspection of our cathedrals, public buildings, and the monuments and works of Art which they contain. For this purpose a committee was appointed in June 1841, and it is to the report of that committee, to exhibit what has been effected, and the results we may anticipate from its adoption, that we must now request the particular attention of our readers. The object then of the committee was this—"To inquire into the present state of the National Monuments and Works of Art in Westminster Abbey, in St. Paul's Cathedral, and other public edifices, to consider the best means for their protection, and for affording facilities to the public for their inspection, as a means of moral and intellectual improvement for the people." The objections urged against those by whom this "desire of affording facilities," &c., has been advocated, have been generally—that it would be attended with detriment to the collections—be an impediment to public service—bring crowds of ill-regulated London people together—was not required—and would not be valued when bestowed. In reply to argument, speculation, and assertion on these points, we shall quote the Report. As regards the British Museum, it appears that from 16,000 to upwards of 32,000 persons have passed through the rooms in *one day*, without any accident or mischief, and that in the course of the three or four years that this liberal system has continued not a single case has required the interference of the police. The National Gallery affords a still more favourable instance of success from free admission, the number has increased from 125,000 in 1837, to upwards of 500,000 in 1840. Children of every age have been admitted; the greatest propriety has been observed; and the policeman's duty is entirely confined to taking into safe custody, parasols, walking-sticks, pottens, and umbrellas. The Tower, with the price of admission reduced to sixpence, has given most satisfactory proofs of the error of those who speculated upon misconduct. In 1840, 94,073 visitors passed through the apartments, and we are pleased to state the sum received enabled the Master-General of the Ordnance to apply £1094 to purchase an additional collection of ancient armour, shields, &c. The reduction of the price of admission to the Crown Jewels has led to a similar large increase in the amount received. Hampton Court by the generous kindness of her Majesty having been liberally thrown open; in 1840, 122,339 visitors, mostly of the working classes, attest their appreciation of this advantage. The admission of the public on Sunday afternoons, sometimes to the number of 3000 persons, and their exemplary conduct in the palace and gardens, is a peculiar and important feature. There is a notice put up in the garden in the following words. "What is intended for public enjoyment the public are expected to protect"—and the Committee have called the attention of the House to the satisfactory result of placing confidence in the people. Greenwich Hospital with its Painted Hall, bears similar honourable witness. From the above detail it appears that the use which has been made of the facilities thus afforded to the public, sufficiently proves the general disposition of the people to

appreciate exhibitions of this nature, and to avail themselves of these means of instruction and innocent recreation. It offers, further, the most satisfactory evidence of the safety with which works of Art and other objects of curiosity may be thrown open to public inspection. With respect to our cathedrals and public monuments, the Committee report—"they do not apprehend that any danger to the monuments in Westminster Abbey and St. Paul's would result from giving to the public under proper regulations the same freedom of admission to those cathedrals which is allowed in the case of the exhibitions above-mentioned. They strongly deprecate any course which could create an impression that churches were at any time to be considered merely in the light of places for the exhibition of works of Art. But it is their opinion that as by increased facilities of admission to the inspection of mere works of Art, civilization has been encouraged, and public taste improved, so a more free admission to religious edifices under proper regulations may be made conducive, not merely to the gratification of curiosity and the acquirement of historical knowledge, but to the growth and progress of religious impressions, by leading the mind of the spectator from the contemplation of the building, to a consideration of the views with which, and the purposes for which, it was originally erected, and is still maintained. Much indeed is it to be desired that the public was more seriously impressed with the sacredness of cathedrals and churches; the evidence given by the Rev. Sydney Smith has fully confirmed his accurate recollection and acquaintance with the transactions which occurred in St. Paul's, the century before this, and fully justified his fears of their probable renewal. But it is to be remembered the disgraceful conduct he alludes to is to be traced to those who sit within the gates of the choir, who desecrate the church and interrupt "the worship of the 15 or 20 very serious pious people, old people, and sick people, who seem quite in earnest," rather than to those who are walking without. Yet it is obvious that religious worship, and the exhibition of works of Art, in the same temple, at the same time, cannot exist together with due regard to decorum. In a vast city like London there ever will be a mass of idleness and folly—and the regulations applicable to York or even Windsor fail of application here. Policemen, Vergers, Canons residentiary and rails may do much; but there is yet more of inconvenience and misconduct than either law, reason, or Deans and Chapters can control. If Sunday be the poor man's day, it is also the Lord's day; and the objection of converting the House of God into an exhibition, and that in the midst of this city during the hours of public worship, is one every good man must feel, and every conscientious mind maintain. We cannot but contrast the behaviour of a Catholic community in this respect; yet we do hope much may yet be done, by increasing the solemnity of public worship, by the religious decoration of our cathedrals, and removing that too prevalent puritanism of thought which induces so many to view them merely as places for the assembly of men for stated purposes, rather than with that holy reverence, which bows us in prayer before the altars of the edifice we were taught of aforetime to consider as the House of God. It is however gratifying to find the relaxation of rules which has taken place, and we cannot but think the small fee now required at St. Paul's and Westminster Abbey, useful in some degree as a check, and not operative as an exclusion. And here it is right to state, that not one shilling of the sum received at the Abbey goes to the Dean and Chapter. It is strictly applied to the building; and from this fund it is intended, as the Abbey is extremely deficient in painted glass, to attempt to revive that Art; in point of fact, to put painted glass into the south transept window. If our churches were more frequently thrown

open; if they could more constantly be made the sanctuary of voluntary prayer; if the poor might at general hours there enter, and seek consolation in the silent petition of the afflicted; if the man of the world might be able to awaken his mind to contrition by one solitary reflection, offered in the place where in the purity of childhood he has knelt; and this not only at stated hours, according to fixed and regulated formularies, but as the thought prompted and the wish induced; the sacredness of a church might perhaps then become an impression endeared to us by much of saddening recollection, but by far more of holy and joyful respect.

"Why are our churches shut with zealous care,  
Bolted and barred against our bosoms yearning,  
Save for a few short hours of sabbath prayer,  
With the bells tolling, stately returning.  
Why are they shut?"

"Are there no wicked whom, if tempted in,  
Some qualms of conscience, or devout suggestion,  
Might suddenly redeem from future sin,  
Or if there be—how solemn is the question—  
Why are they shut?"

The testimony as regards the good conduct of the people has been invariably confirmed, and that of Colonel Rowan one of the chief police-commissioners is most important in this respect. But we trust not to a force of this description, let good order arise from a conviction of the moral benefit it creates and extends; educate, train, and refine the people; and make them the protectors of what you design for their advantage. Good taste, and sensibility to works of Art, are neither exclusive gifts nor entirely the result of study; it is not requisite that every man should be a critic, but it is right that all men should be allured from indulgence in the propensities of idleness, by means which at once nourish their powers and inculcate the respect due to genius, public worth, and the institutions of their country. "You cannot," says Mr. Cunningham, "know what a statue is in a packing-case, but if you set it out on a pedestal and let people look at it, they will tell you." In like manner, you cannot maintain the feeling due to the memory of great men; you cannot keep up the incentive of emulation to acts of heroism and virtue; you cannot give the Arts which refine the moral support of your countrymen, by any other means than by making them partakers of the benefits of education, alleviating the evils of poverty, mitigating the tendencies of passion, and impressing their minds with the conviction, that religion, knowledge, and the Arts, which refine society, increase enjoyment, alleviate misfortune, and form the basis of the happiness of life.

With regard to opening the National Gallery and British Museum on Sunday, we are far from considering it desirable; it would be a step accompanied by much speculative advantage; and one that would take away more rest than it could confer pleasure. Improve and extend your parks; and emulate continental nations in this respect, that even in their casual moments of recreation they are reminded of the actions of great men, by the statues they have erected to their honour. The opinions of the living are impressed with the passions of the living, but in the dead there is no change; their lives are a lesson to all time; no strife can destroy, no heresy mislead their silent influence; and the gradual amelioration of our social condition arises not alone from the knowledge we exercise, but the wisdom which the past has treasured; and in which we have been reared. To blend the elegant and useful Arts with a system of moral instruction is the best safeguard for national as for individual happiness. Design and beauty are united in the works of Creation, and Creation is the instructress of the mind of man.

"Thus was beauty sent from heaven,  
The lovely mistress of truth and good  
In this dark world: for truth and good are one,  
And beauty dwells in them, and they in her  
With like participation."

#### PAINTING AND SCULPTURE, AS CONNECTED WITH RELIGIOUS EDIFICES.

It is a self-evident truth, and admits of no question, that a taste for the civilized Arts, both of painting and sculpture, increases and becomes improved the more the eye and the mind are accustomed to the works of their creation. It is not as with the grosser passions of our nature, where familiarity dulls the faculties, and every day renders them less capable of enjoyment. We know that the drunkard often shudders at the draught he takes, though habit has made it the necessity of his existence; that the epicure becomes palled amid the dainties with which he is surrounded; and that the miser has been found to hate the meanness of his passion, though the materiality of his mind has still urged him on to acquire.

Among the nations of antiquity men will be found pre-eminent, both in public and private virtue, where the sister Arts had reached the greatest degree of perfection. The era of the creation of the magnificent works of Grecian genius, the admiration of posterity, is to be sought for immediately after the Persian war, in the days of Pericles. The constant view of monuments, so exquisite in their execution, formed the taste and excited the emulation of the beholders; and it would seem as if the private worth and public virtue of the citizen, increased or diminished in proportion as the genius of the painter or the sculptor became extended or confined. The disciple of Zeno felt his resolution to bear the ills of life strengthened by the contemplation of the almost living examples which the artist had presented to his view; nor did the pupils of Socrates or Plato find the lessons of those sages less impressive, when taught in connexion with the monuments of foregone and heroic virtue everywhere seen around. We may be told that the virtuous days of Rome preceded the perfection of the Arts in the republic; but we learn from the historian, that if an age of happiness under that dominion could ever be reckoned for mankind, it was during the reigns of Trajan, Adrian, and the Antonines, when the public treasure was poured out, and the exertions of the emperors were directed to the encouragement of Art and the protection of genius.

In the middle ages, which succeeded the swarming of those hives of barbarians who, passing from the north, covered Europe with darkness and desolation, the first gleams of light appeared in that land which principally contained the masterpieces of ancient power and genius—the admiration and study of our times. The fierce and warlike tribes which occupied the various regions of Italy became softened in their manners from the contemplation of ancient Art everywhere displayed; the Hun, the Goth, the Lombard, or the Vandal, whose eyes had been accustomed only to contemplate the monstrous and deformed idols of their gods, could not long resist the force of truth. He saw around him the most perfect forms, and the most sublime conceptions, called forth by the labours of the painter or the sculptor; and perhaps it was fortunate that the fathers of Christianity obtained the aid of both to instruct the illiterate barbarian. The followers of Thor or Odin soon turned with horror from their hideous and blood-stained statues; the natural and rugged virtues of their nature burst forth when they saw the history of their Redeemer visibly placed in the temple of his worship; and their hands grasped, as did that of Godfrey in an after-day, their swords, in genuine indignation of his sufferings; although mistaken in their impulses, yet their faith became unshaken, and their penitence sincere.

However the practice of placing in public buildings, dedicated to worship, works of Art, representing different scenes in the passion of our Lord, may, by some modern writers and divines, be objected to, certain it is in the primitive ages

of Christianity, before and long after the age of Constantine, all the talent which then existed in the empire was almost exclusively devoted to decorate the churches; and there can be no doubt that the impression which was made on the minds of the people by the labours and eloquence of the fathers of Christianity, became more impressive, and more deeply written on the minds of their hearers, when, after the exhortation was finished, the congregation remained with awe to contemplate the mute representation of the stupendous miracles or sufferings they had heard described. It was not till the different schisms which arose in the church, from the pride and ambition of its pastors—each endeavouring to obtain a political pre-eminence over his equal, forgetting whose commission he bore, that the successor of each bishop or patriarch, to gain a greater degree of reverence to himself, attributed to his predecessor the power of working miracles, which he knew were false, caused his beatification, and, taking advantage of the ignorance of his flock, induced them to have more pride in being followers of St. Hierom or St. Ignatius, than followers of Christ. The natural consequences of priestcraft and superstition quickly followed; every church as it arose from its foundations was decorated with the histories of men and not of the gospel; and the rapid progress which the papal power made showed the potency of the weapon employed. The Arts became deteriorated in proportion as the story they narrated was monstrous or absurd; the solemn scenes which the pages of the gospel had described, the history of salvation which they told, and by which the artist seemed as if inspired, ceased to operate on his imagination; he found nothing in the lives of St. Austin, St. Dunstan, or St. Ursula, but earthly mortality and inane superstition, and he degenerated into the barbarous chronicler of a barbarous tale.

It would thus appear, and the facts prove it, that it was the policy of the court of Rome to bring the Arts to its assistance, and that one great engine employed was the introduction of representations of the assumed miraculous power of its supporters in all places, not only of religious worship, but of domestic life; everywhere they met the eye, and the lessons which they told became impressed on the mind and the belief, as much by being made familiar to the sight as by being narrated in the language of the country where they were exhibited, while the real ordinances of Christianity were delivered in a foreign tongue, and the works of Art, whose subjects were taken from the Scriptures, and which would have enlightened the piety of the age, were either discountenanced or suppressed. It is true that the genius of Leonardi, of Raffaele, Michael Angelo, and others, disdained to hand down to posterity the puerile fables of unholy saints, but these exceptions only prove the rule; and the encouragement they commanded but shows, that either the pride of being patrons to men so extraordinarily gifted, prevailed over the policy of princes, or that there were some who had escaped the darkness of the times, and who dared to protect and cherish genius, though displayed beyond the bounds sacerdotally allowed.

To prove with what force the labours of the painter and sculptor may be brought to bear on the operations of the mind, it is only necessary to point out, that in works of civil or religious history, of tracts or of literature in general, those which will admit of them are not only read with greater avidity, but are also with greater facility imprinted on the memory. Some, indeed, there are, the vividness of whose imaginations have the faculty of conjuring up in the mind images which possess all the intenseness of reality; they live in the actions they hear described; and the pictures formed by their imaginations have the same effect as if they were in reality before them: but this is seldom to any extent the case; and it will be found that the greater part of an audience at a theatre will give a more correct and perfect

relation of the tale they have seen performed, and that they feel its moral with greater strength when picturesquely produced, than if they had heard it read or narrated without such additional aids.

In many of our churches sentences from Scripture are painted on tablets affixed to the walls; those which are of the class of prayer or thanksgiving, it would not be possible symbolically to understand, but those which relate to the actions of our blessed Lord and his Apostles, must, through the very nature of our being, acquire double force when shown to us, as if in actual life and performance, through the creations of genius and study. The sacred character of the edifice where the picture is placed, which the master-hand of the painter had produced, also throws a majesty and solemnity around the subject, which will be sought for in vain in the gallery, where, mixed with a thousand others, it is looked upon but as a work of Art, and as such to be criticised or admired, but its moral is forgotten and its utility is lost. The Cartoons of Raffaele at Hampton Court are a proof of this, but little of religious feeling is ever felt in the contemplation of them; the mind of the spectator, after passing through the various apartments of the palace, becomes satiated with the multiplicity of paintings he has seen, however "masterly" they are executed; and his imagination occupied with the portraits of Vandyke, the gods of Verrio, the battles of Wouverman, and the Lely beauties of Charles's court, on entering the gallery which contains them, is in a state but ill calculated to appreciate either the magnificence of their execution, or the awful grandeur of the subjects they contain. The same is felt in the National Gallery: how much of the effect of Sebastian del Piombo's splendid picture of the 'Raising of Lazarus,' and the 'Disputing with the Doctors,' by Leonardi, is lost by the intermixture of other works of Art. The frescoes of Michael Angelo were painted on the walls of St. Peter's and the Sistine chapel of the Vatican; and it is not unreasonable to suppose, that the immensity of the one, and the solemnity of the other, added vigour to the pencil even of that great master. Take the celebrated picture by West, the 'Last Supper,' from the altar of the choir or sanctuary of Winchester; or the painted windows of the 'Resurrection,' and of the 'Wilderness,' by Mortimer and Sir Joshua, and place them in a gallery, their beauties are diminished and their effect is lost, their utility only becoming developed from the localities they occupy: the works of Wilkie would lose as much of their intensity exhibited in the dim mysterious light of a religious edifice, and be as much misplaced, as are the sacred subjects of Scripture when they are contemplated in adjunct positions with the Venuses of Corregio, the rapes of Rubens, or the landscapes of Claude.

Having endeavoured to show that, by the embellishment of our sacred edifices with works of Art taken from scriptural subjects, devotion must be increased, we may consider what a mighty impulse would be given to native talent; what a vast field would be opened to its exertions, if public patronage were employed in decorating our religious edifices with works of Art. To whatever degree of excellence the English school of painting has attained, it is confessed that in the higher walks of scriptural and historical subjects it is far below that of Italy, if not of others. When have a Reynolds, or a West, or any other, been able to animate their saints, and give the Lord of saints that supernatural cast of features, that Promethean light, which a Raffaele or a Rubens would seem to have borrowed from heaven itself, wherewith to inspire them. The Apostles of the English school are ordinary men, or at most thoughtful philosophers, or elegant courtiers, studious of their attitudes: in that which is considered West's masterpiece, at Winchester (and it is characteristic of the school), the figure of our Lord appears more like a physician

prescribing a remedy for the recovery of his patient, than the great Messiah working a stupendous miracle for the conversion of a nation.\*

With our sculptures the case is different; here public patronage has not been wanting; immense sums for monumental tributes to the heroes, the philosophers, and the benefactors of our country, have been expended; yet the same cause has had the same effect. Who, that has contemplated the monuments in St. Paul's, and has seen those in many parts of Europe, but must confess, that however beautiful they may be found in execution, however characteristic in the resemblance, yet the puerile fables with which in general they are encumbered, is to be regretted and deplored? Would St. Paul or St. Peter immediately on entering that cathedral take it for a Christian church? Would not those fathers of our faith recognise in the Britannia the Minerva of Athenian worship? Is not the Neptune of paganism to be found? What are the angels, with extended wings, supporting the dying warriors, but the *numeri inferiores* of antiquity? Such concomitants of monumental respect may be fit for a Pantheon, but are misplaced in a Christian temple; far better than this was the taste of our rude ancestors, the figure of the departed, with hands clasped, as if in prayer!

Neither in this cathedral, or in the Abbey of Westminster, is there a painting to be seen. Can there be any doubt that, if the walls of the former, whose symmetry is now barbarously encumbered and disfigured with so many masses of marble, had been illuminated with masterly representations of the passion of our Lord, the fervour of devotion would not have been increased?

The same cause which has exerted its baneful influence in preventing our countrymen from excelling in the more lofty conceptions of pictorial art, has also contributed to keep that of sculpture from reaching the perfection we hope both are yet destined to attain. The sculptor must necessarily be a painter; the latter, from want of encouragement to carry out the ideas, which in his pupillage he has received from studying the historical and sacred subjects of the great masters, as he becomes more perfect in his art, finds his conceptions bounded by the encouragement he receives; the picture upon which he has lavished his labour and his time must necessarily, as an early attempt, be imperfect, and he is content to labour on. He knows it is only by repeated attempts that excellence can be attained; his efforts are redoubled, and parts of the picture are found faultless, but his pencil is unprofitable, because the subject upon which he is employed imperatively requires that all the resources of the Art should be brought out. He then discovers that in those portions in which he has succeeded and is perfect master of, he has obtained sufficient material to approach perfection in subjects not requiring such diversity of study; he becomes a portrait, a landscape, or a painter of domestic life, and though perhaps in any one of these, he cannot be surpassed, yet, when in his celebrity he is called to produce something of higher and greater design, he is as incapable as when he began his career; perhaps even more so, his imagination by continual action on that particular branch of his Art which he has been necessitated to pursue, having become reduced to the scale of the subjects on which his labours have been bestowed. This is the reason why our monumental sculptors are, in general, poor and heterogeneous in their designs and character; any single part may be perfect, but as a whole, they are mostly failures. The same cause acts with the same effects on these sister

\* We refer to the general character of our school; there are some noble exceptions—and would be many if the art were duly encouraged. The picture of 'Christ looking down upon Jerusalem,' by Mr. Eastlake, will bear comparison with the highest productions of the old masters.

Arts: it is the national patronage which can alone afford remuneration for the years of toil and study, which must be consumed before the full development of genius can be attained. In vain may exhibitions and institutions be opened, where the works of artists are temporarily displayed; the same cause which depresses the painter and sculptor, and prevents them from rivaling the ancient masterpieces of Art, equally disqualifies the spectator from forming a correct judgment of the merits of what is presented to his view: his taste is formed by what he sees, and he criticises the minutiae and the excellence of the execution; but he thinks not of the trifling nature of the subject on which so much genius has been expended and lost; no lesson of importance is instilled into the mind, as no precept of virtue, patriotism, or religion is offered to his view. If any picture possessing these qualities is produced, it quickly disappears and speedily becomes part of some private collection, where it is as effectually hidden from public inspection, and as useless for all improvement of public taste, as if it had never been created.

The best and most extensive field for the encouragement of Art, is that on which the talents of the great masters were displayed in the sacred edifices and on the sacred subjects of our faith. We have endeavoured to show with what powerful effects the Fine Arts were early brought to act against the infidelity or the paganism of the barbarian, and that both constituted for centuries a powerful auxiliary in the extension of true religion and virtue; and that however they may have afterwards been desecrated from their proper ends, their inherent power of good remains, and can never be destroyed.

#### A TOUR FOR THE ARTIST.

July 9, 1842.

SIR,—At a time when artists are arranging plans and settling routes, that they may obtain profitable material with which to fill their sketch-books, I may, perhaps, be permitted to obtrude a few words on the claims put forth to their consideration by a country of which Englishmen in general know much less than they do of the East Indies; for while the latter country has had the benefit of an extensive pictorial publicity, and its architecture, its natives, and its scenery, have become as familiar to the eye as those of our own land, the country to which I would now call attention has never had equal advantages, although part and parcel of our own dominions, its peasantry speaking our own language, and governed by our own laws. Need I name IRELAND—a country possessing as bold and romantic scenery as any nation; its peasantry as intelligent and picturesque as their more fortunate and much more frequently "painted" neighbours—and where "a stranger" is always doubly welcome to the home of the landlord or the hut of the peasant.

I have been prompted to the task I have allotted myself in thus writing to you, from the strong impression left on my mind during a recent visit to that country, and which will of course enable me to furnish the latest particulars concerning roads and accommodation to be met with there; and also from a feeling becoming pretty common, both with artists and visitors to our yearly exhibitions—the desirableness of opening a fresh field for the exertion of the landscape-painter's talent. The Rhine, that fruitful source to the painter, has been exhausted; its scenery has been copied and recopied until it has become so familiarized as to be almost looked on with indifference; and artists have been known to travel long and unpleasantly, with great risk of health, and even of life, to break new ground; and yet a great and a beautiful country—a part, indeed, of Great Britain—has remained a *terra incognita* until lately, and even now many of its lovely glens have been untrodden, and its glorious mountains unlooked upon by the eyes of British artists, who have roamed so perseveringly over almost every other part of the globe.

I never was an unnecessary alarmist. Although as much attached to the comfort and safety of our

own land as any Englishman can be, I have always confided in the innate sense of honour to be found in the people of any country who find a stranger travelling among them merely to view the beautiful in nature. But I know that many of my countrymen would have a great objection to travelling in Ireland, after the events that have recently happened there. I can only say such fears are totally groundless; that while most, if not all of these outbreaks are traceable to peculiarly local sources, there is no country in the world where the traveller may pursue his course with greater safety as a tourist and a stranger, and meet with more respectful and honest treatment. I have been through the wildest parts of Connaght and Connemara at twelve and one in the morning, without injury or molestation, in the midst of an almost famishing peasantry—impoverished many degrees beyond what most Englishmen would believe to be the fact—and have frequently left all I had at inns, unsecured by anything but the rigid honesty of the people, which I have always found its sure defence. Indeed, I have been cured of the alarm produced by distant rumour, since a striking instance of its absurdity occurred to me about two years ago in France. Two ladies, who were exceedingly anxious to revisit England, their native country—for many serious reasons, as well as from the natural one of "love to their fatherland," were effectually deterred, and frightened out of all their arrangements for this purpose by the meeting of Chartists at Holloway Head, and the spread of their principles, which they believed to have rendered England an unsafe country to visit or live in, and they consequently dreaded to cross the channel. Of a similar kind and character are the apprehensions of danger that deter many from visiting the Sister Island; and they are just about as reasonable and as well grounded.

Perhaps some excuse may be found for non-visitors, in the fact that the great changes that have occurred in this country, and the great facilities and advantages that the last few years have given the tourist, are not sufficiently known. Some few years since, and no regular coach-road intersected these wild regions. Certainly the ancient roads are sufficiently uninviting, winding, and tortuous; they straggle over high mountains in rugged uncomfortableness, and tell plain tales of the many disagreeable things a traveller in the "good old times" must have encountered. These things have now passed away, and roads as level and convenient as any in England leave the old mountain track to weeds and solitude. The dirty hovel with "pigs in the parlour," where a "shake down" of straw alone afforded the traveller rest, and a bowl of potatoes "good entertainment," has given place to houses of accommodation, a little too much honoured to be sure in the high-sounding appellation of "hotel," so commonly bestowed upon them, but which are marvellously in advance of their predecessors, and many of them as comfortable as small inns generally are. The car-riding too, is far less cramping and inconvenient than the stage-coach travelling of England; and if it does not get over the ground quite so rapidly, accidents are things very rarely heard of, and that is a pretty fair equivalent. Eight miles an hour is, however, quite rapid enough for one who wishes to see the country he passes through. Railroads show us nothing.

The traveller wishing to visit Connemara and the wild and grand coast-scenery of this part of Ireland, can ride by mail or by Bianconi's car from Dublin to Newport or Westport, going in a pretty direct line across the island; or else, from Dublin proceed to the interesting old town of Galway. By either route he will easily reach the mountains and lakes that are the chief and most attractive features of this primitive portion of Ireland. Supposing him at Newport, the journey thence to Clew Bay and the islands that stud its waters, is exceedingly romantic and picturesque; the ruined abbey of Borishoole, and still further Carrick-a-Hooly Castle, the residence of the famous pirate chieftainess of the sixteenth century, Grana Uaile, or Grace O'Malley; afford picturesque "bits" on the journey, to say nothing of the rude and antique forms of the cottages that occasionally peep upon the road, each worthy of the pencil, and their equally picturesque inhabitants; the girls in their deep-red petticoats and jackets, with their healthy cheeks and richly-clustered hair, that many a lady higher born might envy; confined beneath the

ample hood or capacious mantle, its broad bold folds, as it hangs majestically from the head upon which a load is frequently poised, adding an "antique grace" and dignity to figures that seem to realize Homeric times. Certainly they may be said to be the "finest peasantry in the world" for the painter; a more fortunate admixture of bright colours is seldom to be met with than they display upon themselves. A red petticoat, with a deep-blue body and yellow handkerchief, aids the more sober scenery of the country not a little, and is of much value in landscapes where green and grey alternately abound.

Clew Bay is perhaps as beautiful a thing of its kind as can be seen; when viewed from the mountains that surround it, it is magnificent. The varied shapes of the rocky shore, the towering summits of Croagh Patrick, and the numerous and varied islands that literally crowd this part of the coast, presents a picture worthy any artist's pencil. The lofty rocks and the solemn mountain passes that lead toward Achil are also delightful places for the botanist to ramble; "with gaudy flowers the cliffs are gay," and among the many beautiful plants, the heath only to be met with here and on the shores of the Mediterranean, is deserving of especial notice. The silvery bunches of the bog-flax, waving luxuriantly over the flats, and agreeably dotting their surfaces with its brilliant whiteness, is also peculiarly grateful to the eye. But why stay to enumerate where all is beautiful.

The road from Clew Bay to the Island of Achil crosses the mountains, and gives us a view of a small bay, "Black Sod Harbour," the point of land styled "the Mullet," and the islands of Innisboffin and Innisturck. The savage grandeur of those lonely hills, over which the wild juniper and purple heath spread so luxuriantly, and down whose sides fall the mountain torrents like so many silver threads—the magnificent clouds that encircle their heads, and which claim for Ireland the pre-eminence in cloud scenery—the sea studded with islands, and stretching forth towards America—when combined as we saw them with the glorious arch of the rainbow, to be traced by the eye from one point of land to the other, and typical of the over-ruling power of its Maker spanning these enormous hills, gave a sublimity to the scene that words fail in conveying. "The heavens were telling the glory of God," and man could but gaze and wonder.

The inhabitants of Achil live in a primitive simplicity; their houses are heaps of rude stones rounded by the tide, and procured from the beach, uncemented, and held upon each other "by the force of their own gravity;" a fact of which their inhabitants are no doubt profoundly ignorant. A slight thatch covers them, and no window or chimney is to be seen; the doors let in light and air, and let out the smoke of the small turf fire, and the people like the smoke for the extra heat it imparts. The eagle and fox are their fellow inhabitants, and live and burrow in the high mountains that rise in the island. As they lived centuries ago, even so they live now; more simply and fewer degrees above the cattle of the field many of them could not live. Some of their huts are mere holes dug in the sides of the ground, fronted with sods, and covered with turfs of grass; a bed of heath is all the furniture, and the entrance of one was but three feet high.

From Westport the road runs through a tract of country that has not been unaptly styled the "Irish Arabia Petrea," so stony and uncultivated is the scene. An imagination strong enough to enlarge the small lakes and their surrounding rocky hills into sufficiently ample bounds, might frequently see not unapt realizations of the many views we possess of the Dead Sea. At Leenane is a comfortable inn, this is the head of "The Killerries,"—a name given to an arm of the sea that runs in about four miles here. It is confined by magnificent mountains, one of which, Muilrea, is 800 feet above the level of the sea. Nothing can be finer than the solemn magnificence that seems here to shut you from the world. An hour's ride along this mountain ridge leads you to an open level, and here you obtain a magnificent view of the "Twelve Pins" of Connemara; a gigantic group of mountains of the most fantastic forms, and including in their bosoms lakes of surpassing beauty; one of which, Loch Ina, can scarcely be exceeded for savage grandeur. The Pass of Keilmore that winds around their base, would exhaust a poet's power of

description. The fantastic shapes of the hills, the wild luxuriance of the trees, the picturesque irregularity of the rocks, that fallen, seem to stop the traveller's progress—the beauty of the lake and stream, that irregularly winds throughout—and the varied loveliness of the whole landscape, that shifts like the kaleidoscope, and forms ever-new and ever-pleasing pictures with each movement of the spectator, amply repay the toil of the visitant.

There is at Maam, in the heart of these mountains, a most comfortable and commodious inn which was built by Mr. Nimmo, the celebrated engineer to whom Ireland is indebted for her modern admirable roads. He chose this spot for his own residence, and built this house for his own accommodation; and certainly it would be difficult to fix on a more exquisite site. From its windows it commands views of the "Twelve Pins," of Lough Corrib, and "Hen Castle" upon the small island in its centre, and which has been happily compared to Lochleven, and it is within an hour's walk of Lough Ina, and the most picturesque and beautiful scenery of this part of Ireland.

Let the traveller provide himself well against rain. If there is any rain in Ireland it will be met with among these mountains; and when it does come down it is solid and palpable.

In the hope that these few remarks, manifestly incomplete and desultory, may induce artists of greater ability than myself to visit scenes so grand and magnificent, and in every way so well worth their attention from the circumstance of their being hitherto undelineated, and thus soliciting "justice for Ireland" in a new and different spirit, I beg leave to subscribe myself, &c.

F. W. FAIRHOLT.

[We gladly insert this letter—and can confirm, from our own knowledge of the country described, the opinions strongly and ably expressed by our correspondent. It is just the country for the artist to visit; perhaps in no part of the world could he find more admirable subjects for his pencil—whether he studies the immense varieties of nature, or human character as infinitely varied. Connemara is a wild and almost primitive district of Ireland; civilization has made here comparatively slow progress; until within the last twenty years there was literally no coach-road through it, and he who travelled there was compelled to journey many miles on foot, without meeting any habitation but the cabins of the peasantry. Now, every part is easily accessible: but as yet the originality of the scenery and people remains unimpaired. The artist can have no idea of the surpassing grandeur and sublimity of the district;—go where he will, he finds a subject for his pencil; the lines of the mountains, covered with the heather; the rocks of innumerable shapes; the "passes," rugged, but grand to a degree; the finest rivers, always rapid—salmon-leaps upon almost every one of them; the broadest and richest lakes, full of small islands, and at times clothed with luxuriant foliage along their sides; in fact, Nature nowhere presents such abundant and such extraordinary stores of wealth to the painter—and even now it has been very little resorted to. Add to this, that every peasant the artist will encounter, furnishes a striking and picturesque sketch; and as they are usually met in groups, scarcely a picture will be without this valuable accessory, as an introduction to the landscape. Their dresses, as well as their forms, afford admirable material.

It is no unimportant addition to the advantages to be derived from this tour, that the journey is safely, easily, and cheaply made—by far more safely, easily, and cheaply than a tour up the Rhine, or even into Belgium—places as familiar to the artist's tread as the steps that lead from Trafalgar-square to the gallery of the Royal Academy. About six or seven shillings a-day will be the utmost required for his expenses while in Connemara; and a little more than three pounds will take him into the very heart of the district. If he be an augler his sources of enjoyment will be largely enhanced; it would seem like a fable if we were to tell him of the sport he may obtain in any one of the many noble rivers with which it abounds. To these observations we may add, our willingness to furnish (privately) to any artist desiring to make the journey, full instructions upon all matters concerning which he may require information.]

## THE ARTS IN CONTINENTAL STATES.

**ITALY.—ROME.—Visit of the Pope to a Russian Painter.**—In a beautiful situation beyond the Porta del Popolo, stands the palace which bears the name of Palazzo-del-Papa Giulio: within its walls a Russian painter, M. Heberstetel, now has his studio; and his holiness on the 13th of June paid him a visit in order to see his large picture called 'St. John in the Wilderness.' This picture has made much sensation in the artistic world at Rome, and the journals are alike lavish in their praise of the invention, pure style, correct drawing, truth, and force of colouring. It would seem that to a happy imitation of nature it adds the sweetness of the Florentine school and the majesty of the Roman, the brilliancy of the Lombard, and the rich colouring of the Venetian, in the same manner as in old times was practised by the Bolognese school, especially Annibale Carracci in the famous 'Loggia Farnese.' His holiness and his suite remained a long time contemplating the picture, and encouraging the artist to new labours.

**BOLOGNA.—Exhibition of Paintings in the Streets.**—There is an ancient custom in Bologna, that for certain religious processions that take place yearly in three different parishes, the walls of the buildings in the streets of those parishes are adorned with carpets, flowers, hangings, velvet, gold-embroidered stuffs, &c., in a most elegant and picturesque manner; and when in these parishes there is the residence of some of the proprietors of the magnificent collections of pictures for which Bologna is so famed, it is the custom to exhibit the pictures in arcades, of which there are so many in Bologna, and catalogues are distributed *gratis* to the people. This privilege is never abused; these masterpieces are religiously gazed on and admired; and by the respect of old tradition no one injures or permits to be injured in the slightest degree these treasures of art. We are reminded of the artistic festivals of Sicily in the old times of Greece, called the city of painting, as afterwards Felibien called the city of Bologna. This year the three parishes of the festival were Santa Caterina, San Vitale, and San Benedetto, in which are the palaces of the Prince Hercolani, Marchese Tanari, Conte Brunetti and other noblemen and gentlemen, proprietors of galleries of European fame. On the 5th, 12th, and 20th of June, were three magnificent exhibitions in the streets, which at night were illuminated: above 1500 pictures according to the printed catalogues were exposed, and the night, being lighted by thousands of torches, was more brilliant than that of the day.

It would be idle to attempt a description. This year the success of the arrangements was unusually great, being made in such a manner as to offer a classified series of the great Bolognese school, beginning with Lippo Dalmasio and F. Francia, and continued down to the times of Zanotti and Gandolfi. The specimens of Alessandro Tiarini, Cavedone, Lionello Spada, rivalled the six Carracci, Guercino, and Guido. In the "loggia" of the Palazzo Hercolani under a tent of crimson velvet was placed a magnificent work of Albano, which attracted universal admiration. It were to be wished that there had been present on this occasion some English connoisseur—but a true connoisseur—capable of appreciating the Bolognese School little known in England, because there are few good specimens of it in this country. It is little known as a whole, and not at all in its subdivisions; in which are found Masters of first-rate merit, and whose works are beautiful in themselves, and most interesting as regards the history of painting. We have named only the Bolognese school, but we believe the same observation might be justly applied to the other Schools of Italy.

**FRANCE.—PARIS.—Honours to Artists.**—The king Louis Philippe has been pleased to give gold medals to M. H. Halfeld, painter of history, and to M. A. Barbier, painter of landscapes and interiors.

**Monument to the Memory of the Victims of the 8th of May.**—Three crosses of wood had been provisionally erected in the angle formed by the Versailles rail-road and the road called "des Gardes," to commemorate the victims of the dreadful accident which occurred on that spot.—An architect, M. Lemarie, a most severe sufferer by that catastrophe, has piously determined to erect a chapel on

the spot in memory of all who died, and which shall contain a mausoleum for each of his own family who perished there.—The Archbishop of Paris consecrated the foundation-stone on Monday the 4th July. A multitude of persons assembled spontaneously to view the impressive ceremony. The chapel is dedicated to "Notre Dame-des-Flammes."

**PRUSSIA.—BERLIN.—Royal Academy. Distribution of Prizes.**—The yearly meeting of the Royal Academy for the distribution of prizes was held on the 3rd of June. The director Doctor G. Schadow being president. The report on the progress of art for the past year which was read was highly gratifying, both as regarded the Academy of Berlin dedicated to the cultivation of the highest branches of art, and also the amounts of the subordinate art and trade schools in Berlin, Konigsberg, Dantzig, and Erfurt, were most satisfactory. To these a large proportion of the prizes for the encouragement of art were awarded, and it is right it should be so—but we cannot too strongly warn the youths who excel in the technical arts or in some branch of trade in which a degree of knowledge and practice of arts is required, against fancying that because they have acquired distinction in these, they have the genius or powers to become great artists in an independent walk of art. By this an admirable technical workman is often lost, and a bad painter or sculptor added to the long list of misdirected abilities. The report recalled the losses the Academy had sustained by death in the past year, among these the great and immortal name of Schinkel was mentioned as having caused the bitterest and sincerest regret.

**Cloister Church.**—The admirers of the arts of the middle ages will hear with delight that the restoration of the Cloister Church (formerly a church belonging to Franciscan convent) is now in progress. The style of the church is a severe and simple Gothic, its date the close of the thirteenth century; it contains various pictures—especially a very fine one by Granach.

**King of Prussia's Present to the Prince of Wales.**—The object of art which, however, excites the greatest interest here at present, and which will we might almost venture to say be, when it is completed, the masterpiece of modern times in its style, is the present which the King of Prussia sends to the Prince of Wales as a godfather's gift. This gift is a shield, whose material is gold and gems with every possible resource of ornament which the art of the goldsmith offers. Stuler is the artist, and his graceful inventions for ornaments exceed even those of Schinkel. The gold and gems, however, are secondary to the beautiful designs for the shield, which are by Cornelius, being the first important work he has executed in Berlin.

Its form is circular, and the subjects chiefly religious, containing the principal mysteries of the Christian religion; it might be called "The Shield of Faith." In the middle is a cross, and in the middle of the cross, being also that of the shield, is represented on a medallion the Saviour, a half-figure; at the extremity of each arm of the cross are four medallions representing the four evangelists; and in the space between, the three christian graces, Faith, Hope, and Charity, and to these are added Justice, the peculiar glory of who is to be a Ruler. The two Protestant doctrines are represented, Baptism and the Lord's Supper; each are a great picture as regards the style and beauty of the invention. Our limits only permit us further to add, that the inner circle of the shield represents some event of our Saviour's life; and the last religious design is the descent of the Holy Spirit on the disciples, and their commission to preach the word. By this we are conducted from past to present times; and the rest of the compositions regard the baptism of the young prince and circumstances connected with it. The religious part of the picture is worthy to form a grand altar-piece in fresco, with no alteration but as regards size.

**COLOGNE.**—The ceremony of commencing the restoration of the Cathedral is expected to be a very imposing one; it is said there will be present the Kings of Prussia, Bavaria, Hanover, Belgium, Holland, Wirtemberg, and Saxony, two reigning Grand Dukes, an Archduke, two of the French Princes, sons of Louis Philippe, a Prince of Sweden, &c.

**RUSSIA.—ST. PETERSBURGH.**—*The Brothers Cernekoff.*—These two landscape painters were born on the banks of the Volga, and from their earliest youth devoted themselves to this branch of their Art. Happily a generous lady enabled the two brothers to extend the sphere of the subjects of their pencils, and in 1830 the younger brother, Nicanor, undertook a journey through the Caucasian provinces, beyond Teflis, and along the shores of the Black Sea. He remained for two years, and brought home 200 most interesting drawings. In 1834 he received a commission from Government to visit the Crimea, called the Italy of Russia; here he employed his pencil most happily; and in the great collection of views and sketches which he has executed, we find admirable representations of the scenery, with the peculiar characters of the sky and the country wonderfully preserved, with correct drawings of the more important architectural subjects. The old Palace of the Khan of Tartary at Bakissara, which brings to mind the Spanish Alhambra, the remains of Grecian architecture in the Chersonesus, the ruins of their works. Among the views we may especially remark the valleys of Baidar, of Corolez, &c. Orianda, the beautiful country seat of the Empress of Russia; Sebastopol with its immense pier, the largest perhaps in the world. Uniting great courage and perseverance to their talents in art, these brothers then undertook a journey to Astracan, but instead of making the voyage down the Volga in the usual manner, they travelled separately down its opposite banks, thus producing a series of drawings, which gives a complete panorama of the river, during 3000 wersts, or 430 geographical miles, of its course; these are contained in about 3000 drawings; besides some others of the places most remarkable either for beauty, architecture, or historical interest. There is a representation of the great fair of Nisi-Novgorod, and a view of the ruins of the old capital of Bulgaria, and of Cheri-Serai, the capital of the Tartars of the Golden Horde. The costumes of the various people are also given with great exactness by these industrious artists. Nicanor and Gregory Cernekoff have already visited Italy, and brought many views from it; but it is their intention to return to it again, and to pass from Naples to Egypt and Palestine, and thence to return to their native land. Their collection of views is now at St. Petersburg, the greater part are in water-colours, a few only in oil. The Emperor has expressed his desire that a part of the interesting sketches of the course of the Volga should be engraved and published. The brothers Cernekoff are members of the Imperial Academy of St. Petersburg.

#### ON THE MISERIES AND INCONVENIENCES OF PORTRAIT PAINTING.

SIR,—I beg to venture a few remarks, through the medium of your impartial press, upon the relative situation of portrait painting in reference to almost every other department of Art, and with a view of correcting those mistakes in an otherwise discerning public, which have a most unfortunate influence over the practice of the art as well as over the feelings of the artists themselves. There is scarcely another form of Art or science that does not carry with it the means of its own defence, while portrait painting seems destined to stand unprotected and alone. Other sciences are, for the most part, involved in mental difficulty or obscurity, and require some knowledge of their principles, in order to form a judgment of their respective merits; or an induction into a sort of masonry, which can only be explained by coming into the secret. While this may act as a pointed frieze to keep out presumption and pretence, the art in question is open to every rude attack; and does not partake of the common securities of Art, although possessed of the same elements. It is that unfortunate department which is brought down to the bar of criticism through all its grades, and where a verdict may be pronounced by a jury of old women, and adjudged by the sagacity of young children. It is here that the eyes are allowed to take place of the understanding; where the artist is denied the privilege of seeing for himself; and where he must only look at people with the eyes they behold one another, or regard themselves. We would advert, in the first place, to broken appointments, arising from some trifling change in the weather, the dress, or the complexion, whereby the artist is taught what value is put upon his time; or the perplexity he is frequently under when it is secured,

by finding some who sit, as though they had no other ambition than that of looking like marble statues, and relax from their natural expression till they have really none to take. Others, too, by what is termed "calling up looks," are playing off the graces in succession, and expect the skilful artist will catch each of them flying, and introduce them all into one face at the same time; just as a performer might be called upon to indulge an impatient audience, by singing all his songs at once.

It is not a little remarkable, that an artist will find the most difficulty with the intermediate ages of life; a struggle commences between the periods, which the painter too often attempts to reconcile: to a close observer there is in middle life, an effort of nature to keep that which it feels in danger of losing, and the muscles of the face, as though loth to fix, seem fluctuating between the relaxation of youth and the inflexibility of age; and is manifested just in proportion as the subject is more or less animated. The sitter is seldom long before taking a peep in progress, and is not a little discomfited by certain markings which make their first appearance on the stage, and the absence of some appendages which seem to have left it: hence, such remarks as these—Are those delves so peculiar in my face? Am I so destitute of hair? &c.—questions, one would have thought, the looking-glass had quite settled for them long since. Further, to account for why the sitter so often quarrels with the painter for telling him the truth, is only to look at the new light in which he presents him to himself, and the degree in which he will be disconcerted, may be ascertained by taking it in extent: only remove his familiarity with the glass, then imagine an interval of ten or twenty years between the first and last interview at it, and the individual would be positively scared at the change in his own appearance: if, notwithstanding, he must be obliged by a compromise between youth and age, at the expense of consistency, the most that can be done for him will be, to make him look like an old cherub. Or his subject may be some soft observer, who is continually calling off his attention by the most perplexing un-sheba-like questions about the process; while every movement of the brush is watched with as much jealousy as the application of a tint of yellow ochre: here it is that working-up is likely to be mistaken for finishing; and for want of this spurious substitute, when the portrait is far advanced, it is supposed to be only in an early state; and, when quite completed, may be very well when it is finished. Even this encouragement is all conditional, as it is promised him he shall take little Jenny's likeness in the event of his success, though it ordinarily happens, that if the child's portrait is ever taken, she must take it herself. Whatever the objections may yet have been, only let the picture be left, and they will multiply fourfold; for observe—there is, in almost every family, some one who passes for an oracle, who is consulted on every occasion, and whose decision is final; some dictator in ordinary, or judge extraordinary: it may be some lady who is to be considered in all matters of taste, down to the very arrangements of chimney ornaments; or some gentleman, in whose compass of mind all such minor affairs are included; who is supposed to have outstripped all the sciences, and left them in a condition only to be looked after. The judgment of this infallible is sure to be on the wrong side of charity; universal dispraise gives him a seeming advantage over those who cannot go so far in their discoveries; he is aware he risks nothing, as those who may blunder in their praises upon a bad production; and that the higher the excellence of the picture happens to be, the more refined that criticism will be thought, which is able to slide in between comparative beauty and unattainable perfection.

Then follows, in course, the deriving prejudices of education, even in respectable talent, and the abuse it will necessarily receive from uninstructed artists, commonly called self-taught geniuses; and a host of amateur artists, who, for the most part (for this is to be understood as speaking in the main), have acquired a blindness, by which they have the peculiar faculty of judging in the dark. Having obtained that little learning, which is so dangerous a thing, they have just enough of it to prevent them from knowing how little they know; all the steps of their progress are only so many departures from truth; each of which they must retrace before they recover the natural qualifications of the common eye. From such, no mercy can be expected, whose approbation is limited entirely to what they do themselves. Then, as though this were not enough, there is the suffering competition with ill-judged talent, formed as it were to meet the perverseness of the human disposition, which recognises peculiarity rather than beauty; and in proof of which their productions need only be carried out into caricature

(as seen in the political representations of the day); and they will appear even more like the men than the men are like themselves. Perhaps the worst effects to be apprehended are, the giving of out-door employment to many bad passions that have been long and busily engaged within; which may now provide materials for envy to feed upon, for design to work upon; and afford a cloak and shelter for insincerity against the very storm it may have raised itself: it becomes the medium through which many a grudge is paid off, and many a piece of flattery laid on, which could not be tendered or tolerated in any other way, and brings about that convenient season to insinuate a compliment which otherwise might never arrive; so that, whether the one party should declare that the likeness was flattered away, or the other that justice was not at all done to the original, the luckless artist pays the price of both opinions, and instead of its being the period that should crown his hopes, becomes only the day of his visitation. As a set-off to the foregoing, it is only doing justice to an absolute fact to state, that a gentleman was once reconciled to his picture by the superior intelligence of his little dog, who, upon coming into the artist's room, gave a bark of recognition, or note of admiration, and commenced licking the hands and face of his master's picture; this satisfied him as to its identity, notwithstanding all that had been said to the contrary, and gave him, for the first time in his life, an opinion of his own.

To paint, therefore, so as to please everybody, would indeed be a new thing; to paint so as to please nobody, would be just as new; but to paint in a manner that anybody ought to be pleased with, is the province, and becomes the duty of the able artist, in the conscientious discharge of which he only has to please himself; the only alternative that will remain for him will be, to get his money, leave his picture, and then (as Themistocles says) run for his life! Let those who would dispute this, ask why it has been the practice for painters to frame their terms, as "one-half to be paid on the time of sitting, and the other half on the completion?" unless they had found, before they made such a provision, they were left with such an accumulating stock of unfetched canvases as gave them the choice, either of filling it up for their own pleasure, or of turning it to other account, by commencing dealers in marine-stores.

It may be necessary just to glance at what he has to contend with from ignorance and credulity, for to enlarge upon this there would be no end. What, for instance, can he expect from the judgment of those who see no impropriety in showing the two sides of a drum at the same time, and consequently ought not to wonder why they cannot see through a stone wall? of those, either, who have no more eye for projection than they have for perspective? who think the off side of a three-quarter face should be equally shown, and regard all the auxiliary shadows with the same kind of flat interest they see the grain on marble? to say nothing of one who, being shown the profile portrait of a person she had never seen, asked if the gentleman had but one eye. There is besides, an approving ignorance, more aggravating than all the rest, which helps the artist into many a scrape, by accounting for things that he never intended. The shines on the eyes are by these attributed to blindness, and the shadows under the nose for snuff; their admiration is chiefly confined to the execution of the claw of a table, or the clock of a stocking, while it is with difficulty their eyes can be diverted from the richness of the frame. As to the artist who cannot sympathize with this, he must have a most glorious practice, or a most enviable insensibility: to the credit of the true patrons of Art, the artist concedes the qualities of generosity, candour, and discrimination; and they have shown him how well they know how to use them, but they are the exception and not the rule; and it is only the occasional light which such may shed across his pathway that can cheer his labours, and enable him to pursue his profession with comfort or advantage.

Should these incidental remarks, by meeting the eyes of the lovers of this interesting art, bring back some such recollections, or awaken a suspicion as to the real minds and motives of these kind of umpires, it may have the effect, at least, of chastening the evil it cannot remove; and a greater satisfaction than that of merely laying a complaint, will result to your faithful correspondent,

LIBRA.

## ART-UNION OF LONDON.

The prizes, with two or three exceptions, are selected, and the Committee are making the necessary arrangements for their exhibition to the subscribers in the Gallery of the Society of British Artists, Suffolk-street. The exhibition commences on the 15th instant, to continue open for four weeks, and will doubtless attract large multitudes;—in fact, the first issue of tickets which the Committee make (being five to each member), will amount to no less than 60,000! This is indeed dealing in a large way. We are glad to learn that Mr. Doo has undertaken to engrave for the Society Mulready's picture 'The Convalescent.' Mr. Doo's well-known works give an assurance that the subscribers may anticipate a gem of art. The annual report will be ready for distribution after the 9th of this month; it is elegantly illustrated, and forms, altogether, a most interesting document, calculated not merely to be of service to the Society, but to advance the interests of Art.

The following is a list of the pictures purchased by prizeholders since the publication of our June number:—

*The Title of Picture, Artist's Name, and Price.  
From the Royal Academy.*

Brockenhaven, E. W. Cook, 90l.  
An Italian Widow, Severn, R.A., 100 gs.  
Cromwell Discovering his Chaplain &c., A. Egg, 70l.  
The Schoolmaster, C. W. Cope, 78l. 15s.  
The Death of Romeo and Juliet, H. Pikersgill, 65l.  
The Gipsy Haunt, H. Jutsum, 40l.  
The "Bourgeois Gentilhomme," T. M. Joy, 50l.  
The Two Children, Fanny McIan, 30l.  
Jacharach, on the Rhine, C. Deane, 30l.  
"Soft as dew her tones of Music fall," G. Wells, 25l.  
View of Yarmouth, A. Vickers, 21l.  
The Forgotten Word, T. F. Marshall, 26l. 5s.  
Cottage on Woolpit Heath, C. Ward, 15l. 15s.  
View near Henley on Thames, S. R. Percy, 15l.  
Winchester Tower, F. W. Watts, 15l. 15s.  
A Scene near Saddleworth, F. Rhodes, 15l.  
The Nymph of the Lurley, J. M. Leigh, 21l.

*British Institution.*

The Board of Guardians, W. Cope, 105l.  
Aqueduct on the Campagna of Rome, G. E. Hering, 80l.  
Tasso's Villa at Sorrento, G. E. Hering, 50l.  
The Dancing Dogs, A. Montague, 30l.  
On the Hummer at Hull, T. A. Durnford, 26l. 5s.  
Little Red-Riding Hood, W. Henderson, 15l.

*Water-Colour Society.*

Hastings Beach, Sunset, J. D. Harding, 50 gs.  
Composition, J. Varley, 70l.  
Trepot, Coast of Normandy, C. Bentley, 35l.  
Landscape, J. Varley, 42l.  
Grenville Coast, W. Callow, 26l. 5s.  
Augsburg, Bavaria, S. Prout, 21l.  
Fecamp, Normandy, C. Bentley, 20l.  
Scene from "As you like it," H. Richter, 15l.  
River Scene, J. Varley, 15l. 15s.  
Composition, J. Varley, 15l.  
Nesso, Lake of Como, H. Gastineau, 15l.  
Shoreham, Evening, F. Nash, 21l.  
Bolsover Castle, D. Cox, 10l. 10s.  
At Bamberg, Bavaria, S. Prout, 12l. 12s.  
Falls of the Rhine, G. A. Fripp, 10l. 10s.  
Criciueli Castle, North Wales, H. Gastineau, 10l. 10s.

*British Artists.*

Going to the Fair, Herring, 250l.  
View of Leith Hill, Surrey, W. J. Allen, 135l.  
The Gipsies' Camp, J. W. Allen, 60l.  
The Heronry on the Findhorn, A. J. Woolmer, 40l.  
Lane Scene at Newdigate, Surrey, J. W. Allen, 25l.  
Lavinia, H. Room, 15l. 15s.  
The Last Quatrino, E. Latilla, 42l.  
One of the Buttresses of Snowdon, J. B. Pyne, 26l. 5s.  
The Mountain Torrent, E. Hassell, 15l.  
At Vallery Sur Somme, H. Laucaster, 35l.  
Feeding of the young Birds, G. Stevens, 15l.  
The Village Post Boy, T. F. Marshall, 12l. 12s.  
A Slavonian Wagon, J. Zeiter, 10l.  
Mæcenæ's Villa, Tivoli, W. Havell, 10l. 18s.  
At Stanground, near Peterborough, A. Vickers, 10l. 10s.  
The Vale of Llangollen, J. C. Holland, 10l.  
Landscape and Cattle, J. Wilson, 10l. 10s.  
Windsor Castle, W. Cranbrook, 20l.  
Dead Game, G. Stevens, 10l.  
On the Yare, G. B. Croome, 10l.  
Coast Scene, near Swansea, W. R. Earl, 10l. 10s.

*New Water Colour Society.*

The Ford, C. H. Weigall, 30l.  
Confession before Battle, L. Haghe, 35l.  
View of Durham Cathedral, W. Dodgson, 25l.  
A Bit of Gossip, J. Jenkins, 25l.  
Water Mill, Northumberland, T. M. Richardson, 26l. 5s.  
Susan Holliday, J. Absolon, 21l.  
Bridge over the Pique, W. Oliver, 15l.  
Edinburgh Castle, T. M. Richardson, 15l.  
The sketch, Miss L. Corbux, 15l.  
A Laughing Girl, J. Wehnert, 10l. 10s.  
View on Wimbledon Common, H. Warren, 10l.

## ROYAL IRISH ART-UNION.

The Committee of the Royal Irish Art-Union have presented to the subscribers a "progressional Report," from which we extract the following passages:—

In continuation of the system we have adopted in giving short progressional reports, in order to satisfy the Society from time to time of the various acquisitions we have been enabled to make, and the information we have received, we beg leave to submit, on the present occasion, a statement respecting the final arrangements on the most important subject of the engraving for the subscribers of the year 1842, as also that which we were directed to select in advance for the year 1843. This being the highest compliment in our power to pay to an artist, as also so much of the reputation, not to mention the actual resources of the Society, depending on a judicious selection, it has in each year been the point which has called forth the most anxious care and attention on the part of your committee. In our first year, 1840, considering the acknowledged merits of Mr. Burton deserved the compliment at our hands, we were enabled by his assistance, most readily and promptly exerted in our favour, to place before our members the 'Blind Girl at the Holy Well,' so ably engraved by Mr. Ryall, a work of Art which has earned for us golden opinions wherever it has been seen. In our second year, 1841, we thought this mark of respect was due to the talents of another distinguished countryman, Mr. Rothwell, who, on its being made known to him, came forward and presented, for the purpose of engraving, his celebrated 'Young Mendicants' Noviciate.' The satisfactory progress of this work by Mr. Sangster, an engraver of the highest ability, we lately bore testimony to in a notice of the etching proof lately received, in which there is the strongest assurance of our reputation, as well as that of the artists concerned, being very considerably advanced by the production of such a first-rate work of Art. We have now closed our third year, 1842; and, acting on the same principle, to award the palm of merit to the Irishman who has advanced the reputation of our country most highly in the walks of Art, we have this year considered it our pleasing duty to pay our homage to the genius of MacIse, and by associating his name with ours make it and his merits, so highly and deservedly appreciated elsewhere, more generally known and felt in his native country. Mr. MacIse has most cordially responded to our wish, and has placed one of the subjects of his fertile pencil, peculiarly well adapted for our purpose, at the disposal of the Society for engraving. We allude to his picture of 'A Peep into Futurity,' or an Irish girl trying her fortune—a work simple in its details, but of great power and interest in a national point of view, and one likely to produce a most attractive and popular engraving. With regard to the engraving in advance for 1843, we are sure it will give unmingled satisfaction to our already most numerous and influential members, and add next year very considerably to our list, when it is publicly known that we have made arrangements for the production of Mr. Burton's celebrated work, 'The Arran Fisherman's Drowned Child,' exhibited last year in the Royal Hibernian Academy, and at present in the Royal Academy Exhibition in London. The merits and high and interesting character of this work are too generally known to call for any description or comment on the present occasion. But in thus calling the aid of Mr. Burton's talents a second time in favour of the cause in which we were engaged, we did not think we had a right to do so without offering him something more substantial than the additional eulogium which might arise from the general diffusion of so beautiful and interesting a specimen of his more matured powers. On the first occasion, in offering to engrave the work of an artist, the Society holds itself exonerated, in a great measure, by paying as well as receiving a marked compliment; but should an emergency occur like the present, when for the purpose and general advantage of the Society it becomes necessary and advisable to revert to the same artist, the case is different, and the Society would lay itself in some measure under an obligation, instead of asserting, as it should do, its independence of character. Acting on this principle, we have agreed to award Mr. Burton £100 for the copyright of the above fine work, to be carried on, and form an item in the charge of the appropriate year.

The Society, as we intimated in our last number, continues to flourish; the amount of the year's subscriptions exceeded £3500, a sum, all circumstances considered, very far beyond that upon which the projectors of the Institution had calculated; and so large as, unquestionably, to have created a demand beyond the supply—for the Exhibition of the Royal Hibernian Academy, from which the committee was bound to select the prizes, did not altogether contain pictures to the value of the amount contributed; and the proportion of works worthy of the age and country was unfortunately small indeed. This evil will, we trust, be remedied next year; the Irish Artists resident in London are bound to forward their contributions; and that, too, not merely to have the

semblance of aiding the great and good cause, but really and truly to advance it. They *ought* to do so, from a sense of duty, but they may do so with reference even to their own interests; for now-a-days they are more certain of disposing of them there than they are in London. They may be, indeed, fully assured that if good paintings are transmitted to Dublin none of them will be returned. But it is an essential part of the plan of the Irish Art-Union to invite the aid of English and Scottish Painters; not only for the sake of the Arts generally, but in order to stimulate and improve the native professors, who, with abundant natural capabilities, have been "sleeping" for years past, because their energies have not been roused into action. We say, therefore, and say it advisedly, that a new market has been opened for productions of Art; and that if our better artists will contribute, they will not only answer their own more immediate purposes, but will do that which they are all labouring to do—forward the interests of British Art, by bettering its character, extending a true taste for it, and adding largely to the number of those who covet the possession of pictures. These are proper incentives—we cordially hope they will sufficiently operate. We can name dozens of our painters whose works would be sure to find purchasers in the Committee of the Royal Irish Art-Union. Indeed, no assurance to this effect can be so conclusive as the fact that every good work, and nearly every work, sent by an English artist was marked "sold" upon the walls of the exhibition. It should also be borne in mind that if a sum of £3500 has been subscribed this year, next year the sum will be much larger—probably double; and that the choice, even under improved circumstances, must be much less limited than it will be elsewhere.

It is really "too bad" to find the committee of the Irish Art-Union compelled to expend their funds in the purchase of inferior works, merely because they have not works of a better order offered them for sale.

We hope these hints will not be lost upon our readers; we shall recur to the subject, again and again, as the period of exhibiting in Dublin once more approaches.

There is, however, a topic connected with the Report of the Committee, to which we cannot refer with equal pleasure. They have agreed to give Mr. Burton the sum of £100 for the copyright of a water-colour drawing; while, at the same time, they have accepted from Mr. MacIse and Mr. Rothwell gratuitous loans of pictures for the same purpose. This is not, we humbly think, either prudent or just. For a public body—acting for the purpose of advancing the Arts, and not with a view to any personal profit or advantage—to give money at all in payment for copyright is decidedly and distinctly wrong; it is considering the artist in the light of a mere trader, indisposed to contribute his quota to the public good. But if looked upon in another light, surely that which is granted to one artist should be granted to another, and, at least, Mr. Burton should not be preferred to painters of far higher ability, such as Mr. MacIse and Mr. Rothwell.\* Considered in any light, this preference establishes a most evil precedent. It will be difficult for the Society to procure a picture hereafter without paying a copyright for it; inasmuch as there are few of our more eminent artists who will be pleased at finding a minor class of Art receiving a patronage to be withheld from them. Moreover, the Committee have, we think most wrongfully, led to a conclusion—in thus engraving a second picture by the same painter—that among their countrymen there is less

\* We do not, however, mean to defend the hanging of Mr. Burton's two pictures—one of which is the picture for "the Copyright," of which £100 has been paid—in the miniature room of the Royal Academy; in such miserable places that their merits or demerits cannot be tested. We venture to assert that they were not seen at all by one out of a hundred of the visitors to the Royal Academy. It would have been better to have rejected them altogether than to have thus stamped them with a mark of emphatic disapproval; indeed, we were somewhat surprised to see these pictures hung at all, for it is a primary rule of the Royal Academy not to exhibit any works that have been publicly exhibited elsewhere; the hangers of the Royal Academy were of course ignorant of the fact that these two pictures had both been exhibited at the Exhibition of the Royal Hibernian Academy, where they were both sold, during the summer of last year.

ability and distinction than the world, generally, believes. There are, at least, a score of artists, natives of Ireland, from whose works a selection might have been made more for the honour of the country, the prosperity of the Institution, and the advantage of the Arts. We had been led to expect that the Committee of the Irish Art-Union were about to issue engravings that should be really national—one of the immortal pictures of Barry was mentioned—and we do most unfeignedly regret that they should have resolved upon striving to content the world for which they cater, with an engraved copy of a water-colour drawing, to obtain which no inconsiderable portion of their funds has been sacrificed.

#### MR. HAWKINS'S DRAWING MODELS. TO THE EDITOR OF THE ART-UNION.

SIR—I find in the ART-UNION—the number for April—a second paper on Art applied to manufacture, containing a description of the Drawing Class at Exeter Hall, accompanied by observations displaying such sound judgment and just criticism as induces me to lay before you my own claims to originating an elementary system, containing greater simplicity and more principle than that which you there describe as being on “a grand and comprehensive scale,” but which, in my case, has not been derived from France, and therefore is without the valuable claim to being far-fetched, which is too often thought a merit in itself. In March or April, 1841, I described my system to a gentleman, an officer of the British Museum (whom I then supposed to be a member of the Government Educational Council), and solicited his attention and introduction to give lectures on this subject, as I had prepared diagrams and models, and did not require any remuneration; but he declined giving me any such assistance, when, through the means of a casual acquaintance, I was enabled to offer it to a society at Greenwich, and also at Woolwich; they both accepted it. I lectured at both places in May, and apparently very successfully, and offered it in the same month to the Sunday-school Institute at Stepney, which was accepted in the following September. In October I lectured there to a very respectable audience; the principals I found convinced of the simplicity of the plan, but they did not think drawing sufficiently important to be introduced into their plan of education. Finding it thus difficult and slow, even to give away lectures on this subject, I contemplated publishing my lecture, but the expense of printing made me deliberate, when, at this time (September, 1841), I first saw a set of models by a Mr. Deacon, the same which you describe, which, though highly useful in illustrating perspective, were evidently only on the imitative plan, and did not demonstrate any elementary principle, which, in my own system, I consider the fundamental basis of simplicity indispensable for demonstrating the elements of form to all classes attempting imitation. Seeing this, induced me to explain my scheme, and show my models to an educational publisher, in whose hands I had seen Mr. Deacon's models; the publisher professed to see the difference, admired my plan, and kept my models from September until March last, when, having obtained them with difficulty, I immediately offered them to another educational publisher, who promised to look at them, and attend a lecture which I gave on the 4th of April last, provided I did not expect any immediate compensation or profit on their publication; this I was quite contented to forego, but the publisher's business was in some other channel, and I have not been able to obtain any answer since. By this statement of facts I have no intention to make a querulous complaint against persons or circumstances, but am only desirous of showing to you, who are a conservator of the interests of the Arts and artists, how many impediments may be thrown in the way of that which originates at home, by refusing it the attention which is so much more readily granted to what comes from afar—a prejudice in favour of importations, which too often makes an evil and refuses the remedy. It is necessary to explain the principle on which I first endeavoured to show that the power of representing form, called drawing, was within the reach of all classes, by the most simple exercise of the hand, in conjunction with the thinking faculties.

I first assert and prove that all forms, simple or complicated, are composed of two simple parts

these I call the elements of all form—the cube and the sphere, solid or hollow. The true representation of these forms comprises the power of representing all other forms, as all forms are composed of modifications of these two. This I have endeavoured to prove by using substances as models, considering that the imitation of lines contained a fallacy, which if it did not mislead, must certainly delay the comprehension of the principle on which, during the last year, I have made many experiments by teaching the very young, and the very stupid, and not in any one instance have I found it fail to produce the capability of representing form sufficiently well to stimulate the powers of observation, and increase the desire for more knowledge. You say the “harvest is plentiful and the labourers few;” not doubting the accuracy of your knowledge which induces this assertion, I suppose there may be some defect, causing failure, in the manner of my endeavour to make this system public, as I am convinced that the simplicity of the means will prove infallible in giving any person, of the most limited capacity, just so much comprehension of form as every individual in civilized society absolutely requires, whatever may be his occupation. If I have not succeeded in making my plan sufficiently evident to arrest your attention, I beg of you to afford me some opportunity, *not occupying more than one hour*, to prove it to you more fully, for the sake of the importance of the subject and the credit of English artists, who are capable of originating an elementary system without going to France for it, and, as I hope they will prove, capable of executing works that will merit and obtain for them that fame which has ever proved to be the great ornament to national dignity.

I am, Sir, your obedient servant,  
B. WATERHOUSE HAWKINS.  
57, Cambridge-street, Hyde-park-square.

[We have been much gratified by inspecting Mr. Hawkins's models, and by receiving an exposition of his system of teaching the young learners to perceive and delineate form scientifically by means of them; and we have great pleasure in bearing testimony to the simplicity and soundness of the theory on which his system is based, and to the ingenuity with which his models are adopted to its exemplification. Mr. Hawkins's models are made on a similar scale to Mr. Deacon's, and can likewise be combined into a variety of figures bearing resemblances to real objects, such as buildings, &c.; but they are superior to Mr. Deacon's in this important particular, namely, that they demonstrate the geometrical solids to be the elements of form, and that in all kinds of shapes one or more geometrical forms are traceable in a greater or less degree. Thus the direct bearing of geometry on the study of form is made evident; and the use of that science is experienced by the student, who is thereby enabled to estimate the quantities as well as the qualities of masses, by their analogy to the forms of geometric solids. Mr. Hawkins's models may be described as consisting of four cubes, each cube composed of several pieces, that on being separated disclose respectively a hollow sphere divided, a cylinder with sections, a pyramid, and a cone, with sections; the external pieces making a cube forming arches, and other shapes, susceptible of various combinations. There are other cubes, one divided into four prisms; another enclosing an octangular figure, and so on; but the four cubes first described are the most important; and where the expense and dimensions of the box of models are considerations, a set of four cubes, instead of six or eight, would suffice to exemplify the principle, and compose groups of objects for the learner to draw from. That so compact, scientific, and inexpensive a set of models should have not found a publisher in these days of educational improvements, does indeed surprise us; we hope this testimony in behalf of their merits may conduce to procuring for them that attention they so well deserve. That we, in common with the rest of the press, were entirely ignorant of Mr. Hawkins's lectures, is sufficiently explained by the fact that no public announcement of them was made: this is to be regretted, but the remedy is easy; and we are glad to be able to state that Mr. Hawkins is about to give a lecture, at which we advise him to invite the attendance of the representatives of the different papers, and those who are interested in educational progress. It cannot be too often reiterated that every one may be taught to draw, and ought to learn; for drawing is the power of seeing intelligently and marking down correctly the forms of things.]

#### ART IN THE PROVINCES.

##### GLASGOW ASSOCIATION FOR PROMOTING THE FINE ARTS.

WE refer to this Institution with much pleasure, and direct attention to an advertisement, printed elsewhere, which sets forth the principles on which it is conducted. The first year of its labours has passed; and so successful has been the result that the “Committee were enabled to give an exhibition of acknowledged merit every countenance, by purchasing paintings from it to the amount of nearly eight hundred pounds, about two-thirds of the sum placed in their hands by the subscribers.”

The subscriptions thus extended to upwards of £1200; a very large sum, considering that the project was a new one, and that the Societies in Edinburgh had been for some years flourishing. The engraving issued by the Glasgow Society has been sent to us. It is of very considerable excellence; fully worth the guinea subscribed. ‘The Repose in Egypt’ is from a celebrated picture by Pietro de Cortona. The figures are engraved by Wands, and the landscape by Watt, both Glasgow engravers. Although the subject may not be the most interesting as a work of Art, it is far preferable to many of the prints issued by Art-Union Societies; and does high credit to the abilities of the engravers.\* Out of the first year's collection, the committee have been enabled to purchase pictures to the value of £786 2s.; the number of prizes being 59. As this subject possesses more than common interest to our readers, we shall print the list of pictures selected as prizes:—

‘The Absent,’ by John Graham Gilbert, P.W.S.A., R.S.A., Glasgow; ‘Scene in Cadzow Forest,’ by Horatio McCulloch, R.S.A., Edinburgh; ‘Elisha Restoring the Son of the Shunammite,’ by J. A. Hutchison, W.S.A., Glasgow; ‘In Sight of Home—Return on Furlough,’ by J. C. Brown, W.S.A., Edinburgh; ‘Village of Liddes—Pass of the St. Bernard, with Travellers making the Ascent,’ by Thomas M. Richardson, jun., Newcastle; ‘View off the Dutch Coast,’ by William Wallace, W.S.A., Glasgow; ‘The Benighted Sportsman,’ by William Kidd, London; ‘The Gallery of the Louvre,’ by Patrick Allan, London; ‘Juliet at the Balcony,’ by J. E. Lauder, A.R.S.A., Edinburgh; ‘Garth Castle, Perthshire,’ by D. M. McKenzie, W.S.A., Glasgow; ‘Cattle Returning,’ by John Wilson, jun., London; ‘The Blessing,’ by J. A. Hutchison, W.S.A., Glasgow; ‘On the Coast of Normandy,’ by J. Wilson, sen., London; ‘The Braw Wooer,’ by Robert Innes, Edinburgh; ‘Bridge of Turk, Perthshire,’ by John Fleming, W.S.A., Greenock; ‘At Fisherow, Firth of Forth—Early Morning,’ by William McEwan, Edinburgh; ‘Telling a Secret,’ by Thomas Clater, Chelsea; ‘The Drachenfels, and Island of Nannen Werder on the Rhine,’ by Charles Deane, London; ‘Penmaen Moor, North Wales,’ by Alfred Clint, London; ‘Old Mill, near Kilmartin,’ by J. M. Donald, W.S.A., Glasgow; ‘Gale at Troon, showing the Vessels that were driven in there in January 1837,’ by William Clark, Greenock; ‘A Fresh Breeze—off Bumburgh Castle,’ by J. F. Williams, R.S.A., Edinburgh; ‘Vessels off Bumburgh Castle,’ by Robert Norrie, Edinburgh; ‘Part of an Aqueduct, near Tivoli, said to be the Aqua Claudia,’ by James Giles, R.S.A., Aberdeen; ‘Scene at Blair Athol, Perthshire,’ by D. M. McKenzie, W.S.A., Glasgow; ‘Robert Burns, on turning a Mouse up in her nest with the Plough, November 1785, finished sketch,’ by Gourlay Steel, Edinburgh; ‘Rival Pets,’ by George Simson, R.S.A., Edinburgh; ‘Poor Lucille,’ by Mrs. McJan, Russell-square, London; ‘Old Powder Mill, head of Holy Loch,’ by Andrew Donaldson, W.S.A., Glasgow; ‘The English Protestant Burial Ground, near Portu S. Paolo, Rome,’ the pyramid was erected in memory of Caius Cestius, by F. H. Hinshaw, London; ‘Old Age,’ by Gourlay Steel,

\* We are not advocates for engraving pictures from the old masters, by Institutions of this character; but it is certainly better to multiply copies of a good work by a dead artist than of an inferior work by a living artist. At all events, the practice of limiting the subject to be engraved to the prizes selected is highly objectionable—it is now, however, we believe, pretty generally exploded. The London Art-Union announce two subjects by Mulready and Callcott—not purchased by them. In the case of the Glasgow Association, however, the choice was thus accounted for by Mr. McLellan:—“Mr. Swan has laid the Association under the further obligation of making over to the committee a beautiful plate from a picture by ‘Pietro de Cortona,’ with an impression from which each of the subscribers will speedily be furnished. Had it not been for this arrangement, an engraving could not have been produced in less time than two years, nor at less than double the cost charged for the plate in question.” He added, “I trust arrangements will be made by the committee for engraving, for next year's Association, one of the pictures that was exhibited in this year's exhibition. I believe without this the public will not be satisfied, nor the interests of the Association maintained.”

Edinburgh; 'Loch Fechan,' by J. M. Donald, W.S.A., Glasgow; 'Moonlight,' by J. B. Crome, Great Yarmouth; 'Old Mill,' near Houston, by A. Donaldson, W.S.A., Glasgow; 'On the North River, Yarmouth—Moonlight,' by J. B. Crome, Great Yarmouth; 'Cottage Scene at Luss, Loch Lomond,' by A. Donaldson, W.S.A., Glasgow; 'Campsie Glen,' by A. Donaldson, W.S.A., Glasgow; 'Feeding a Bird,' by Alexander Barron, Edinburgh; 'Cottage Scene—Sunset,' by Francis Slater, Glasgow; 'Cottages at Killin, Perthshire,' by D. M. McKenzie, W.S.A., Glasgow; 'Evening at Clewer, near Windsor,' by A. Vickers, London; 'Cottage Girl Resting,' by J. Pairman, Edinburgh; 'Off the Dutch Coast,' by John Wilson, sen., London; 'A Milking Girl with Cattle,' by John Wilson, jun., London; 'Glasgow Cathedral, from Mason-street,' by A. D. Robertson, Glasgow; 'Scene on Goswick Sands, with Holy Island in the distance,' by Thomas Fairbairn, Glasgow; 'Bay of Quick, near Greenock,' by John Fleming, W.S.A., Greenock; 'Evening,' by John Wilson, sen., London; 'View near Greenock,' by William Fleming, Greenock; 'Thames—Moonlight Evening,' by J. B. Crome, Great Yarmouth; 'A Calm,' by A. Clint, Hampstead-road, London; 'Burleigh Castle, Kinross-shire,' by J. B. Bennett, Glasgow; 'View on Loch-Lomond,' by William Fleming, Greenock; 'St. Killy's Castle, on the Black Water,' by A. Donaldson, W.S.A., Glasgow; 'Lakes of Killarney,' by A. Donaldson, W.S.A., Glasgow; 'Tantallan Castle,' by Thomas Fairbairn, Glasgow; 'Dunure Castle, Ayrshire,' by Thomas Fairbairn, Glasgow; 'Landscape, with Windmill,' by Miss M'Kenzie, Glasgow; 'Composition,' by James Eadie, Glasgow.

It is pleasant to observe that the prizes are by no means exclusively selected from the works of artists natives of Scotland. To this point a generous reference was made by Archibald M'Lellan, Esq., at the first general meeting of the subscribers:—

"This," he said, "will be, I hope, productive of good in two ways, first, by enabling our subscribers to become possessed of the finest works which may be produced in any quarter of the three kingdoms; and, secondly, it is productive of good to our resident artists, by exhibiting a diversity of style and manner, and in tasking their energies by competition, with the greatest talent the kingdom produces. I question much if an exhibition ought to be encouraged in this city, or if it could be maintained upon any other principle? An artist whose standard of excellence is his own works, or who measures himself by his compeers, is not likely to progress, and there is nothing so fatal to the Fine Arts as its professors resting contented in mediocrity. Acting upon these principles this committee have made their selection entirely on the score of merit; and of the 59 pictures which now adorn the walls of this room, two-thirds are by non-resident artists."

The same distinguished gentleman—one of the warmest friends of the Fine Arts of which Scotland boasts—referred the success of the Institution, mainly if not altogether, to the efforts of Joseph Swan, Esq., the secretary, an artist with whose published work, 'The Scottish Lakes,' most lovers of the Arts are familiar. "That gentleman," said Mr. M'Lellan, "has the sole merit of having originated and carried through the subscriptions; and much of his valuable time, for the last six months, must have been devoted to the affairs of the Association."

The very cheering prospect thus exhibited in Glasgow cannot but materially affect the character of the next exhibition in that town; a subject upon which we shall have to speak hereafter.

Meanwhile our readers will recollect that, according to an advertisement in our July number, "the 17th of September will be the last day for receiving pictures."

**LIVERPOOL.**—Our readers will bear in mind that all works intended for exhibition at the Liverpool Academy must be delivered at the rooms, Church-street, Liverpool, on or before the 7th of August; they will be addressed to James F. Eglinton, Esq., the secretary.

**WESTMORELAND.**—We have great pleasure in observing that a taste for the Fine Arts is extending into the wild and mountainous parts of Westmoreland. About 100 yards north of Shap Wells Spa, an octagonal column, standing upon a square base, has been erected in commemoration of Queen Victoria's accession to the British throne; it is surmounted by a statue of Britannia, and on the base are sunk panels, adorned with basso-relievos, the work and gratuitous contribution of Mr. Thomas Bland, of Reagill, a self-taught artist. The panel to the south bears an appropriate inscription, and on the north panel, in rich relief, there is a wreath of palm and laurel, the emblem of peace and plenty, surmounted with a shield containing the Lowther Arms. On the west panel is represented the British lion, with its paw rest-

ing upon a globe, and on the east panel a graceful figure of the goddess Hygeia, pouring medicinal water from a vessel into a shell which is held by an aged invalid. The execution and design of this work does great credit to the sculptor.

**PLYMOUTH.**—The etching of the plate now in preparation by Mr. Ryall for the West of England Art-Union promises very highly. It will be one of the most beautiful prints that has been issued by any Art-Union; and it speaks well for the management of this Society, that with so small a subscription it has secured to its subscribers so fine a specimen of Art.

**BIRMINGHAM.**—We regret to learn that a spirit of disunion has been working mischief among the artists and patrons of Art in this town. We find it difficult to arrive at accuracy on the subject from the *ex-parte* statements that have been transmitted to us; we shall therefore content ourselves, for the present at least, with laying the facts before our readers, and leaving them to form their own conclusions. It appears that a special general meeting of the "Birmingham Society of Arts" has been held, "for the purpose of considering such measures as may extend the advantages of the Society, and authorize its management in future by a single Committee."

The Chairman read a printed statement issued by the requisitionists, in which they adverted to the present School of Drawing from the antique connected with the Society, and the limited scope of its usefulness, the average attendance for some time having amounted to only fourteen pupils; the importance of extending the system of instruction, by the establishment of a School of Design, by which the wants of the manufacturers of Birmingham might be supplied, and the general taste of the town improved. To carry into effect this object, an application had been made to her Majesty's Government, which had been acceded to on the usual conditions; but as much inconvenience was stated to have arisen from the direction of the affairs of the Society being confided to two independent committees of equal power, proposals were submitted for intrusting its management in future to a single committee, consisting of fourteen non-professional and seven professional members. The Chairman likewise read another circular, issued by the Professional Committee, stating that the proposition was an attempt to destroy their powers as an integral and independent body, a proposal not only prejudicial to the best interests of the Society, but in direct violation of the fundamental law which formed the basis of a permanent union of the artists with the Society twelve years ago. The professional members expressed their approval of the object of extending the benefits of the Academy by the establishment of a School of Design; but protested against the legality of any resolutions which might be adopted at the present meeting, as the 15th law of the Society provided that no measure should be passed at a general meeting, unless previously approved by both Committees.

After some conversation as to the mode of conducting the business of the day, Mr. P. Hollins rose to support the views of the artists, and protested against the power of the meeting to entertain the proposition. He said that previously to the year 1830, the artists were an independent body, forming a Society of their own, the entire management and the funds of which were under their sole control; and they carried on two exhibitions with much success, and gave great satisfaction to the town. The Society of Arts was in existence at the same period, but some dissensions took place between the bodies, and the artists were induced to cede some points of difference after a negotiation, in which it was agreed to unite the Societies on the principle of equal authority being given to a committee composed of the members of both parties; as it was clear that the artists would form a very small numerical minority, and their interests might be sacrificed at a general meeting by the passing any measure which had not received their previous concurrence. Mr. H. read some passages from the laws of the Society to support his statement. He agreed that these laws were not like those of the Medes and Persians, unalterable; but they were terms of partnership, and could not be dissolved without mutual consent; and he therefore contended that the meeting did not possess the power to entertain any measure which had not received the sanction

of both committees. He denied that the artists were averse to any improvements in the Society; and maintained that from 1820 until the last four years they had given their assistance gratuitously, and the result was, that a similar body of artists could not be found in any provincial town. Mr. Hollins concluded by moving "That under law 15, this meeting, seeing that the Professional Committee has not assented to the measure proposed, does not feel itself competent to entertain the resolution on the notice paper."

The Chairman then put the question to a show of hands, and declared it to be in favour of the resolution.—A scrutiny was then demanded, and the numbers were declared to be—for the resolution 30, against it 38; majority against it 8.—The artists, however, claimed 43 votes, as being entitled to two votes each; but the minutes of the Society having been searched, no trace of this privilege was found, and the Chairman declared the resolution to be lost.—Mr. Hollins said that the professional members could not remain any longer in the room, and they therefore retired.

Soon after they had withdrawn, the Rev. Mr. Lee disclaimed any intention on the part of the Non-professional Committee to treat the artists with disrespect. Fears having been expressed for the exhibitions of the Society from the retirement of the artists, he begged to call the attention of the meeting to the character of the exhibitions of the last two years. In the exhibition of 1840 there were 231 exhibitors, who furnished 525 works; of this number 23 only of the artists belonged to Birmingham, and the works furnished by them amounted only to 64; in 1841, of 246 exhibitors and 518 works, 29 belonged to Birmingham, supplying only 62 works. He regretted also to remark that the School of Drawing was not in such an efficient state as could be desired.

Mr. Plupson moved the following resolution:—"The Unprofessional Committee having applied to a Board of Commissioners appointed by her Majesty's Government for promoting the formation of Schools of Design, for assistance in carrying out the original purpose of the Birmingham Society of Arts, and the application having been favourably received, the Commissioners having expressed a willingness to grant to the subscribing members of the Society a sum of money not exceeding that guaranteed by them—that the management of the Society be henceforth intrusted to one committee, to be composed of the president, honorary secretary, donors of £100, together with nine subscribers of £2 2s. annually, and five subscribers of one guinea, to be appointed by the donors and subscribers at an annual general meeting; and also *seven artists*, to be chosen by the professional members of the Society of Arts; and in case the professional members shall delay or omit to certify to the committee their election, within one month after the annual general meeting, of the seven artists to form part of the committee as above-mentioned, the other members of the committee shall have power to fill up the vacancies so caused."

One of our correspondents asserts, that the claim of the artists to be considered equal to all the patrons and subscribers is an unwarrantable one; they claim, indeed, equality on the strength of certain terms, but the general tenor of the laws is opposed to it, as well as the intentions of the parties to the compact of 1830. The meeting decided against this claim. The artists have refused since that time to co-operate with the Subscribers' Committee in carrying on the business of the Society, and especially that portion of it which is of most interest to the public—the annual exhibition. The subscribers, with every desire to continue the most friendly feelings towards the artists, require that the original purpose of the founders shall be respected, *i. e.* teaching Art for the purpose of improving Birmingham manufactures. The artists profess not to oppose the plan of extension, but they claim to exercise a control over it quite incompatible with the interests of the Society, or the safety of the parties who will have to guarantee several hundred pounds per annum to meet the Government grant.

In consequence of this unfortunate division there will be, we understand, two exhibitions this year in Birmingham—one of the productions of modern Art, and the other of the works of deceased masters.

## CLAY FOR MODELLING.

Sir,—Bearing in mind the maxim, that "Sempre odioso è il paragone," I will not attempt to make any comparison as to the principles upon which the ancient and the modern schools of painting have been constructed. But it will be useful, I conceive, to call to the recollection of your readers the practice of the old masters in regard to MODELLING. To this branch of Art they attached infinite importance, considering it to be the only sure means of arriving at excellence in their profession, and to attain which, as we learn from Vasari, they spared neither time, labour, nor expense, "Quando io considero meco medesimo le diverse qualità de' benefizi ed utili che hanno fatto all' arte della pittura molti maestri,—non posso, mediante le loro operazioni, se non chiamarli veramente industriosi ed eccellenti, avendo egliu massimamente cercato di ridurre in miglior grado la pittura, senza pensare a disagio o spesa o ad alcun loro interesse particolare."—*Opere di Vasari*, vol. ii., p. 265.

In fact, they stored their minds with reminiscences from history and from poetry; and, gifted as they were with exquisite genius and fertility of imagination, they nevertheless prudently checked its exuberance wholesome discipline, that they might never transgress in their works the laws which regulate external and visible nature. Availing themselves of all the means within the reach of art, they never commenced a painting without having first well studied the subject; reducing it to method by various drawings, and by carefully modelling in clay or wax the figures which it was their intention to introduce; such figures being variously grouped, and placed in situations where a strong light could be made to play upon them, and show to advantage, and in the most striking manner, the effects of a powerful chiaroscuro. By such practices they were enabled to transfer their ideas to canvass with a positive certainty as to effect, and without alteration in the detail.

The last thing in a new work which they took into consideration was colour, its contrasts, opposition, and adaptation to the subject in hand. With respect to colour generally, they took NATURE for their guide; but it was Nature idealized. "La véritable science du coloris ne consiste pas à donner aux objets peints la véritable couleur du naturel, mais à faire en sorte qu'ils paraissent l'avoir: parceque les couleurs artificielles ne peuvent atteindre à l'éclat de celles qui sont en la Nature, le peintre ne peut les faire valoir que par comparaison, soit en diminuant les unes, ou en exagérant les autres. Un peintre qui imite simplement les couleurs du naturel, telles qu'il voit, et qu'elles paraissent, est l'esclave de la Nature, et non pas son imitateur."—*De Piles, Dissertation*, p. 63.

Certainly artists of the 15th and 16th centuries were men of extraordinary mental capacity and resources; the extent of their acquisitions fills us with astonishment—"Erano i medesimo e scultori, e fonditori di bronzi, ed orefici, e niellatori, e pittori, e talvolta architetti; argomento d'invidia per la età nostra, ove un artefice appena basta ad un' arte. Tale era in Firenze il magliastro entre gli studii, e fuor di essi l'ecceitamento: onde al lettore non paia strano che quella città fosse la prima in Italia a signare i be' giorni dell' aureo secolo."—*Lanzi*, vol. i. p. 56.

They were at once sculptors, founders in bronze, goldsmiths, chasers, painters, and oftentimes also architects—acquirements which raise a feeling of envy in our days, when one Art is hardly to be acquired by each artist. So great was the emulation among the students, and so great was the encouragement held out, that the reader will not be surprised that this city was the first in Italy to mark the bright period of the golden age.

Raffaële, Michel Angiolo Buonarroti, Titian, and Baroccio, were most careful and diligent modellers, both after nature and the antique.

A number of the clay models of Coreggio were recently discovered in Italy, in a convent, the walls and ceilings of which he adorned in fresco.

Of Leonardo da Vinci, it is reported that—"S'impegnò a far cosa finita, non solo perfezionò le teste, contraffacendo i lustrì degli occhi, il nascer de' peli, i pori, e finà il battere delle arterie; ma ogni veste, ogni arredo ritrasse minutamente, ne' paesi ancora niun' erba espressa, e niuna foglia di albero che non fosse un ritratto della scelta natura."—*Lanzi*, vol. iv. p. 189. He strove to do everything; not only to perfect the head, counterfeit the reflection in the eyes and the pores of the skin, and even the beating of the arteries, but each garment, each ornament, was separately and minutely portrayed; and in his landscapes, there was

not a herb or a single leaf of a tree which was not a separate portrait from Nature.)

Vasari tells us, "That it was Leonardo's practice to model figures from life, and then to cover them with fine thin lawn, or cambric, so as to be able to see through it, and with the point of a fine pencil to trace off the outlines in black and white; and that some such drawings he had in his possession."—p. 24.

Of Tintoretto it is related, that he was often accustomed to design by lamp-light, for the sake of the strong shadows, that he might thereby render himself expert in the representation of a powerful \* chiaroscuro. For this purpose he made models of wax and chalk, and, after draping them with extreme care, placed them within little houses which he constructed out of pasteboard, each having a window to regulate the light and shadow. These models he suspended, too, with threads from the ceiling, in sometimes one and sometimes another posture, and designing them from various points of view, he acquired a knowledge of the art *sotto in su* (foreshortening on ceilings), the practice of which was not understood as well in his school as in that of Lombardy. The account will be found in *Lanzi*, vol. iii., p. 140.

Andrea del Pozzo never drew anything without previously making a model of it, to ascertain the right distribution of light and shadow.

Mantegna and Bramante covered their models with glued canvas or with pasteboard, to enable them to draw the folds and curvatures accurately.

Simone Cantarini da Pessaro was particularly zealous in the modelling of his figures, and careful about the folds in their draperies.

Dentone retained in his employment a skilful modeller of figures, and even of flowers, &c.; and

Carlo Cignani (who may be called of painters "ultimus romanorum") modelled in clay or wax every figure he painted.

It would be easy to multiply examples of this kind; but I trust those already given will be sufficient to establish a case in favour of modelling.

Let it not, however, be supposed that I wish it to be understood, from what I have said, that the old masters formed their models entirely after their own ideas of symmetrical beauty: on the contrary, they modelled from the life, and with their own hands.

The introduction of lay figures into the studio of the artist, I apprehend to be a very expensive invention, not to be commended, since, however well constructed, they can never be made to assume easy attitudes.

I have thus concisely shown by what method the old masters established their reputation, and raised the character of Art. And as we studiously copy their pictures, with a view to improve and refine our taste, and to guard us from falling into the error of mannerism (an error which hastened the decline and fall of all the old schools of painting); surely it would be highly praiseworthy to return to the same practice (of modelling) as was pursued by the old masters in the composition of the very pictures which we so studiously copy. These same old masters enforced upon their pupils the absolute necessity of copying and of modelling; and the same reasons for doing both exist now.

I here subjoin a recipe for the composition of modelling clay, which, being very plastic, may be moulded in any form, which will not crack, and which may be worked by the hand of the most delicate lady. It admits also of being carved, when dry, with a knife or chisel, and of being smoothed with a Dutch reed. The artist, therefore, who uses it, will be enabled to remunerate himself for his time and labour in making models, by the sale of them after they have served the purpose for which they were made: while the amateur, to whom time and labour are of no such value, may preserve his models for the admiration of his friends, and hand them down as heir-looms to his posterity.

*My recipe for making modelling clay, or "terra cotta."*

Soft red clay, 4 pounds; Finely-powdered red rock soapstone, 1 pound. Knead them well together with a wooden spatula, and work them with the hand. A little water may be added if necessary, but the clay must be kept stiff enough for modelling.

This clay may be kept in a damp place to be ready for future use; and when the models are finished, they should be set aside in a warm room to dry, and then finished off, polished if necessary, and baked.

Sir, yours, &c., H.

\* It was the abuse of this practice which led Caravaggio, and those of his school, to introduce hard and violent shadows in their pictures. Even Guido had, in his early pictures, nearly fallen into the same bad taste.

## VARIETIES.

ROYAL COMMISSION OF FINE ARTS.—We direct attention to an advertisement printed in our first page. The Commissioners have, it appears, resolved to extend the time for sending in the cartoons from the first week in May to the first week in June 1843. This is a judicious change. The months of March and April are usually very important months for artists; preparing for the annual exhibition during the one, and recruiting strength by necessary relaxation during the other. Giving the whole of May to complete the cartoons is, therefore, a valuable boon. It will be observed also, that foreigners, long resident in Great Britain are permitted to compete—an arrangement to which there can be no possible objection. The cartoons, it must be remembered, are to be sent in without frames. In this advertisement, however, there is one point that merits especial notice—"the secretary of the commission is empowered to give such further explanations as may be required relative to the terms of this and of the former public notice." Artists, therefore, will have no excuse for ignorance upon any point upon which information ought to be obtained. We have already heard some doubts expressed as to their precise line of duty—among others, whether the term "cartoon" is to be literally construed, and whether a drawing may or may not be made upon canvass. Sure we are that the accomplished secretary to the commission will readily and gladly act as a guide upon this and all other matters. Indeed, we presume it was at his own suggestion that this paragraph was introduced into the advertisement. Already, as we know, preparations are making for the contest; but we implore those artists, who deign to compete, not to procrastinate until haste and incompleteness will be the necessary consequences. Procrastination is not only "the thief of time," but very frequently the assassin of reputation. It is a too common error to imagine that the impulse of genius will suffice without matured thought and deliberate study. He is a very unwise person who persuades himself that the work produced to-day cannot be improved to-morrow. Earnestly do we hope for the glory of the country, and the honour of the artist, that the result of a first Government effort to sustain British Art, will be such as to exhibit the wisdom, as well as the generosity, of confiding the task exclusively in the hands of our own painters. We trust, also, that they will so come out of the trial as to take from the foreigner the power to institute comparisons disadvantageous to them. Let our British painters bear in mind that they are not about to produce works to be closeted, or kept for the enjoyment of a few; they will be subjected to a perpetual exhibition, and a continual criticism by a whole nation—and that for ages yet to come. The "Report" of the Royal Commission will be issued, we believe, within the present month. We shall, of course, lay before our readers all such parts of it as may be interesting or important to them.

THE ROYAL ACADEMY.—In the House of Commons, on the 14th of July, Mr. Joseph Hume made a long speech in approval of the plan for extending facilities for the admission of the public to such public institutions as contain objects calculated to afford to the public information or enjoyment—or both. It will be seen, by our comments, elsewhere, that, so far, we have the advantage of going, hand-in-hand, with the honourable member. But instead of being satisfied with having made out a good case, he departs from his proper path to make another attack upon the Royal Academy. His words are these:

"He wished he could say anything in favour of the Royal Academy; but he found them, who ought to be the patrons of Art and taste, more inexorable than any others. A sum of £50,000 had been expended by the public to provide them accommodation, and surely the public had a right to derive some advantage from having done so. He wished them to permit the exhibition to remain open gratis for a week or a fortnight after those who paid had seen it, or to be open for one day in the week during the time of exhibition. He believed them to be the only body in Europe who did nothing towards the promotion of those objects for which it was established."

Now it is really most discreditable to the age and country that—in the first deliberative assembly of the world—so false and absurd a statement should

obtain currency. Mr. Hume is perfectly cognizant of the fact, that £50,000 has not been expended "to provide accommodation for the Royal Academy;" and he knows equally well that it is untrue to say the Royal Academy has "done nothing towards the promotion of those objects for which it was established." The national assemblage of holes and corners, called the "National Gallery," may have cost, we believe did actually cost, £50,000; and to the portion of it which belongs to the nation, the public is admitted free; not only free to walk through the rooms, but to examine the costly works with which the nation has furnished its walls. To demand for the public an equal right over that which they have not paid for—either in reference to the building or the furniture—is ridiculous as well as unjust, a course that no honest mind could recommend or require. The National Gallery (taken as it was by the Royal Academy in exchange for their apartments in Somerset-House), is as much the property of the Royal Academy as are the books in which they enter their minutes. It is too bad that this insult to the common sense, common justice, and common integrity of the British people should be repeated again and again in Parliament. We have canvassed the subject often; and need not occupy space in repeating either arguments or proofs. Mr. Joseph Hume is fully familiar with both; and knows sufficiently well that his statements are departures from truth. On the 25th the topic was again canvassed, on the occasion of granting the enormous sum of £1450 for "the purchase of pictures in the National Gallery!" Upon this occasion, however, it consisted with Mr. Hume's policy to consider the "£50,000" as having been spent, not for the accommodation of the Royal Academy, but for the Nation; and therefore he proposed that the Royal Academy should have "notice to quit," inasmuch as the nation wanted their apartments. Upon which Sir Robert Peel, with the manliness and sense of justice natural to him, replied that "when the Academy were deprived of the eligible apartments they formerly held in Somerset-house, it was on the distinct assurance of receiving other rooms in the National Gallery; and it was just that good faith should be kept by the public towards a body which he believed to be of considerable public advantage." This is quite sufficient. But we hope the day is at hand when the whole of the National Gallery will be used for the national property in pictures.

THE EXHIBITION closed on Saturday the 23rd of July. We understand the receipts have been far greater than during former years—than those of any year, indeed, except the first after the removal from Somerset House; we mean the receipts for admission and for catalogues. But the sales of pictures have been also considerable. Our readers are aware, however, that a large majority of the works exhibited are "commissioned," and consequently not exhibited for sale.

THE LATE JOHN CONSTABLE, R.A.—We perceive with exceeding pleasure, that a memoir of this accomplished painter and estimable gentleman is about to be published, together with "selections from his letters and other papers," and "notes of his lectures on the history of landscape-painting." Such a work cannot fail to be an acquisition of rare value to the artist, and to all true lovers of the Arts. Constable was a man of high genius, who received in his day less fame than he was justly entitled to; he lived on, however, and worked on, under the conviction that an after generation would more rightly appreciate his merits. This recompence has not been postponed even so long as he anticipated; and though it is paid but to his memory, still it is a triumph to find that it is paid. Already the world is beginning to comprehend his value, and to mourn over a treasure lost. Within a very few years his pictures will be sought for as eagerly as are those of Wilson—neglected also in his day. Alas! that the ear should be deaf to the voice of the charmer! but, after all, the consciousness of deserving applause is perhaps the best reward for having deserved it. We rejoice also that the task of commemorating the career of so good and true and useful an artist has fallen into safe hands. The work, to which we refer is announced as arranged by Mr. Leslie,—an artist, whose intellectual capabilities are held in large repute by all who know him; and who exhibits *mind* of the best order in every production of his pencil. The volume—to be issued in Imperial 4to

—will contain 22 mezzotint engravings (by D. Lucas), from pictures by Mr. Constable; but as the edition will be limited to 250 copies it will be necessary for those who desire to become subscribers to communicate such desire with little loss of time. The object is, obviously, to do honour to the artist's memory, and not to make a mere publishing speculation of his fame.

THE SCHOOL OF DESIGN.—An interesting debate on this subject took place in the House of Commons on the 14th of July; Mr. Ewart moved—"That it is expedient that the Government School of Design be formed into a central normal school, for the instruction of teachers of design, in communication with other schools of design throughout the country; and that the general recommendations of the committee which reported on this subject in the year 1836 be adopted." We learn from the reply of Mr. Gladstone that "the council had decided upon affording assistance for this purpose in five instances, and were of opinion that six schools or more, if it were advisable, should be established in the provinces. The places upon which they had already decided were Manchester, Birmingham, Norwich, York, and Coventry. The sixth was still under consideration. It was the intention of the council to appropriate a sum to each, partly in aid at the outset, and partly as a salary for the maintenance of a teacher for a certain number of years." This is at least doing something; it is at all events making a move in advance. Mr. Wyse added, "that one of the principal objects of the council was to ascertain whether a strong desire existed for the application of arts to manufacture, and on inquiry it was found that an earnest wish existed in every large town, where great branches of trade were established, to avail themselves of the advantages now offered." We hope ere long to supply our readers with some more minute and detailed information on this all-important topic, and to show that the establishment has been already brought to bear advantageously upon the manufactures of Great Britain. Sure we are that if the annual grant be insufficient—and we believe it is—for all necessary purposes, the nation would very willingly increase it, and thus add largely to the national wealth. We fully agree with Mr. Williams in considering it to be "impossible to cultivate the art of design so as to benefit manufactures, unless the parties understood the nature of the manufacture as well as designing. He believed there was as much talent for design in this country as in any other, but unfortunately no pains had been taken to cultivate it. The feeling which existed among the higher classes of this country, that there was a want of taste in our manufactures, had been very detrimental to them. He would mention a curious instance illustrative of the effects of this notion. A gentleman whom he knew shewed him a specimen of a pattern he had introduced two years ago, and which had then been utterly unsuccessful. The proprietor was obliged to part with the greatest portion of the stock at a loss, retaining a small quantity in his hands. A French manufacturer got one of the pieces in his hands, introduced it this year as the newest French style, and it had sold 40 per cent. higher than before. There was, in fact, a want of confidence in the public mind as to the taste of our manufactures; French designs were universally adopted in England while our own were rejected, though he would maintain that the taste of English designs was very much superior."

THE WILKIE STATUE.—The committee have confided the execution of this work to Mr. S. Joseph. The candidates were seven in number, and the result of the ballot was—for Mr. Joseph, 26 votes; for Mr. E. H. Bailey, Mr. T. Campbell, Mr. Henry Weekes, and Mr. L. Watson, three votes each; for Mr. Lough and Mr. C. Marshall, no vote. We have no right to complain of the decision of the committee. The sculptor they have selected is, in their opinion, the person best qualified to execute this monument; but as a precedent, it is much to be deprecated that committees, having already virtually elected an artist, should subject others to the loss of much valuable time rather than at once declare their election. There has of late been too much of this sort of thing. Committees, generally, instead of coming with clean hands to the disinterested discharge of a delegated duty, make their business a matter of handi-

cap stakes, and merely trot their favourite artist over the course.

HER MAJESTY'S BAL COSTUME.—We have been favoured with a sight, at the house of Messrs. Paul and Dominic Colnaghi and Co. of a series of drawings by Mr. Coke Smyth, intended for a work of which some numbers have been already published, entitled 'The Souvenir of the Bal Costume.' They are in style very free, and the colouring been made out by merely a wash of water-colour over the pencilling, all the lines are visible; they have been executed in a manner rapid and decided, evincing much skill and power. We have seen one or two of the plates after these sketches, and conceive that as costumed figures they could have been given in no other manner so advantageously to effect the desired object—that of describing the attire worn by each individual on the occasion of that superb assembly—the splendours and variety of which could only have been paralleled during some of the chivalrous reigns, imbued with the spirit of *honneur aux dames*, for the pageants of the times of the Tudors were rude and fantastic. Many of these drawings are excellent portraits, as well as illustrations of costume. We may mention as most striking in this particular Viscount Sidney, the Earl of Arundel, the Marquis of Ormond, the Marquis of Exeter, Lord Forester, the Hon. Miss Stanley, Col. Wylde, Lady Wilhelmina Stanhope, the Duke of Devonshire, Lady Palmerston, &c. &c. Her Majesty wears the robes of Queen Philippa, ascertained from the usual authorities, wearing the hair plaited at the sides, a fashion which prevailed also in the reign of Edward the First; and the dress of the Prince is the mantle and dalmatica. Perhaps no reign could have been selected as affording a greater variety of costume than that of Edward the Third, during which sumptuary laws were enacted, prescribing certain forms to each rank. The fashion of that time was not less capricious than at the present day, for the Monk of Glastonbury complained "that Englishmen haunted much unto the folly of strangers, that every year they changed them in diverse shapes and disguisings of clothing."

ARTISTS' GENERAL BENEVOLENT INSTITUTION.—The annual general meeting of this admirable institution takes place on the 1st of August, "to receive a report from the directors on the state of the funds of the society; to elect eight directors in lieu of those who go out by rotation, and other officers of the institution, and also for the purpose of receiving the charter of incorporation, and to take such measures as are consequently necessary in relation of the laws of the institution." We earnestly hope that the public sympathy may be largely excited in favour of a society second to none that exists in reference to the good it does, and the *wants*, to relieve which it is established. Charity is laudable, directed into any channel; the mechanic and the day-labourer are worthy objects for relief; no matter how humble may be a man's position, it is a duty to relieve him, in suffering, in sickness, or in poverty. But surely those will not be charged with narrowness of mind who consider that the strongest claim is advanced upon their sympathies by men whose more refined pursuits have made the struggle with pecuniary difficulties, far more severe than it can be to the rude and uncultivated.

MEDAL TO COMMEMORATE THE BAPTISM OF THE PRINCE OF WALES.—We hail with feelings of satisfaction the increased and increasing taste for medallion engraving in England. Debarred from placing on the reverses of our national coinage the picturesque and classic groups which have rendered the early Greek and Roman coins interesting for ever to the scholar and the historian, and fixed down to the manufacture of reverses that threaten to become every year more commonplace than even heraldry can make them, the only means left the artist in this particular line of study, to afford his imagination scope for the display of his peculiar art, is a series of national medals commemorative of the more striking events that pass before us. The name of Wyon has, by the force of its own talent, and against many adverse circumstances and their self-consequent evil operations, achieved for itself a European reputation of no mean importance, and raised our national coinage as high at least in the scale of artistic beauty as that of any of the surrounding nations. We are glad to find these artists employed upon what we

would fain hope to be the commencement of a series of medals that should record the events of our Queen's reign, and form a generous rivalry with the famous Napoleon series. The grace and elegance of the medal to commemorate the Queen's Visit to Guildhall has not been excelled in this particular branch of the Fine Arts; and the medal by B. Wyon, now lying before us, recording the Baptism of the Prince is no unworthy successor. It exhibits on the one side the bust of his Majesty of Prussia, Frederick William the Fourth, the countenance possessing the strength of feature for which that monarch is remarkable, combined with an elegance and intellectuality that high Art alone has at its command. The hair is well expressed, being simply and gracefully brought forward in masses that *might* apparently be broken into separate hairs, but without the "wiriness" that inferior artists find necessary to make use of. The reverse possesses much originality where but little was to be expected; it is an heraldic display of the Arms of the King of Prussia, of her Majesty Queen Victoria, and the Prince Albert, each surmounted by their appropriate crown; they are placed upon the coronet and feathers of the Prince of Wales, which forms a graceful background to the design as they bend over each shield. The general effect of this beautiful reverse is regally gorgeous, and great taste has been expended on its design. The raised border surrounding the shields, upon which the motto "Sponsor et Hospes," and the date, "xxv Jan., mcccclii," is placed, is beautifully relieved by the burnished centre upon which the shields are placed, and which gives an extra richness and solidity to a design, that altogether is exceedingly successful. Those persons who have seen the earliest attempts of the older medallist engravers to give a fleshy texture to their heads by corroding the surface of the die, and which in some instances too much resembled the ravages left on the countenance from the small-pox, will not fail to notice the exquisite manner in which our modern medallists produce this effect by precisely the same means, and with the best result; the delicate fleshiness of their heads, relieved as they are by the burnished surface of the medal, have the happiest effect; indeed medallist engraving can now vie with any branch of the Fine Arts successfully. The Art-Union of London at their last meeting declared their intention of including this branch of the Fine Arts among the others they patronise: this seems to promise well for an art too little cared for by our fellow-countrymen, and may help to bring forward our able native professors into that notice and attention which is now too much devoted to the productions of foreign artists in this department, and which may end in the creation of an English series of medals that may rival that of France and other nations.

**MURILLO.**—We have had an opportunity of inspecting a figure, apparently by this master, at No. 15, Cockspur-street, the property, we believe, of a Spanish gentleman, who has imported it. It is a single figure, St. John of Seville, wearing a monastic habit, and in the act of prayer. It is undoubtedly a fine picture—round, substantial, and instinct with life; but it has suffered great injury, and has been very badly repaired. From the shoulders depends a white cloak, painted very simply, but so well that it leaves the canvass.

**CARVING IN BOG-OAK.**—One of the most elegant and beautiful carvings we have seen has been exhibited by Mr. John Asken, a jeweller in Dublin, previous to its transmission as a present to her Majesty. It consists of an Irish harp, hanging on a willow, guarded by an Irish wolf-dog, with representations of the round tower and other objects peculiar to Ireland. The workmanship is remarkably fine. The work is cut from Bog-oak, found in great abundance in the Irish bogs. It is perfectly black and very hard, and capable of being wrought with great delicacy; moreover, it receives a high polish. The value of this graceful production of art is enhanced by the skilful introduction of Irish gems—the ruby, amethyst, and diamond, all set in Irish gold.

**GREENWICH HOSPITAL.**—The Painted Hall and Chapel will in future be open to the public, free of charge, on Mondays and Fridays, from ten to seven in the summer, and from ten to three in the winter. This has been done in accordance with the recommendation of the Select Committee on National Monuments.

**WESTMINSTER ABBEY.**—The Dean and Chapter contemplate putting a painted glass window in the south transept of the Abbey. In a report which they have presented to Parliament they express a resolution to appropriate a portion of their funds to this purpose.

**OPENING PUBLIC MONUMENTS.**—A meeting of the Society organized for the purpose of facilitating the admission of the public to national monuments, was held on the 13th of July at the Thatched House; Mr. Hume, M. P., was in the chair, and Lord Colborne, Mr. H. T. Hope, Mr. Ewart, M. P., Mr. Britton, Mr. Donaldson, Mr. Angerstein, M. P., Mr. Milnes, M. P., Mr. Foggo, Mr. John Wilks, and others, were present. The Society has already done much good, and moreover is evidently increasing in number and influence. Lord Manners Sutton and Mr. Wilks were added to the Committee, and several new members enrolled. After the Report had been read a number of propositions were made and discussed, and Mr. Godwin suggested that many of the city companies had collections of pictures which might with good effect be opened occasionally to the public. A gentleman present said he had no doubt the Paper-Stainers' Company, for one, would at once act on the suggestion. An account of some of these collections, which are little known, will be found in the early volumes of our journal. Many of the pictures are suffering greatly from neglect, an evil which would probably be remedied if they were occasionally exhibited to the public. Mr. Angerstein mentioned that the pictures in Dulwich Gallery, notwithstanding it was much frequented, appeared to be greatly neglected, and were in consequence injured.

**NEW EXHIBITION AT THE ADELAIDE GALLERY.**—A series of "resolutions" which usher to public notice the establishment of a new exhibition of works of Art in London, have been circulated among the artists. Wide as is the fame acquired by the Adelaide Gallery as a place of public resort, we look with considerable doubt on the prospects of success held out to artist-exhibitors at this well-known lounge. Great as may be the inducement afforded by the fact that the Art-Union Society will here recognise the selection of pictures which have been previously exhibited in the Metropolis, there are many points which require to be elucidated before such a proposition can be sure of proving profitable either to the proprietors of the Gallery or the contributors to the exhibition. We are not aware, as yet, of any announcements stating the authorities to whom the selection of pictures is to be confided, or the parties to whose taste and judgment the "hanging" is to be submitted. These are important data still in requisition in order to form a judgment of the advantages likely to be derived from the opening of another exhibition. So much positive dissatisfaction has naturally arisen from the conduct of matters at the British Institution, even although under the guidance of gentlemen who individually command the highest respect, that we can readily imagine there will be many artists who will welcome any further offers of accommodation for the exhibition and sale of paintings. A capable executive at the head of such an exhibition, with a strict unflinching determination to treat every artist's works according to the real merit displayed by them, would alone ensure success. But there must be satisfactory assurances on all these points. Although we can ill spare the requisite room, it may be advisable to print "the Resolutions."

#### ROYAL ADELAIDE GALLERY.

The Proprietors of this institution have adopted the following resolutions:—That in future the walls, and some other portions of the establishment, shall be devoted to annual exhibitions of paintings, sculptures, and other works of Art.—That to facilitate the sale, every work of Art on being deposited be accompanied by the name and address of the artist and actual price of sale, in order that it may be published in the catalogue.—That the first annual exhibition shall commence the first week in July, 1842, and terminate the last week in September of the same year, and consist solely of works by living artists.—That works intended for the first exhibition be sent in for approval on or before the 20th day of June.—That in succeeding years the annual exhibition of works by living artists shall open the first week in March, and terminate the last week in July; and, that works for exhibition must be sent in for approval on or before the 14th day of February.—That in the intervals between the months of September of the present year, 1842, and the month of March, 1843, and between the months of July, 1843, and March, 1844, in the same and succeeding years, the

same portions of the institution be devoted to annual exhibitions of works by the older masters.—That the expenses of transit, &c., be borne by the proprietors of the various works.—That every possible care be taken of the various works deposited, and that no charge be made to the artist or proprietor, except a commission of five per cent. in case of sale.—That every person exhibiting a work or works of Art be entitled to a free admission to the gallery, so long as such work or works remain under the care of the proprietors.

WM. JONES, Director.

**M. CLAUDET**, at the Adelaide Gallery, has lately made some full-length portraits of much beauty. Instead of employing a qualified light his sitters are generally placed in the open air and even in the sun, where certain results are to be obtained. With a little more attention to the backgrounds of these momentary transfers there would be a correspondingly improved effect, the same background being by no means suitable to every head. A background composed of trees or architecture should be so painted that the objects do not tell with severity against the sky, otherwise it frequently occurs that they exceed the figure in substantive importance. M. Claudet has lately photographed some of the *corps de ballet* of her Majesty's Theatre grouped in character—the figures are perfectly successful, and form the largest plates we have yet seen.

**THE TEMPLE CHURCH.**—The much talked of reparations and adornments of this interesting building, to which we have already directed the attention of our readers several times, have made considerable progress since our last notice. The three windows at the east end, and one window on the south side, are filled with panes of "thousand colourings," admirably executed in imitation of glass of an early period, by Mr. Willement, and produce an extraordinary richness of effect. The painting of the vaulting in the square part of the church is completed; the openings are surrounded by Latin texts in ancient character; the Parbeck marble columns are all polished; and some of the carved oak stalls, with which the old pewing is to be replaced, are fixed on the north side. These are of elaborate design, mostly different, and are well carved; they nevertheless lack that freedom and raciness which characterize many original works of the period, and give evidence of our want of a middle class of artists for decorative purposes. We would not have it understood, however, but that many of them are exceedingly well done. The three easternmost compartments of the vaulting have a dark ground instead of the buff colour on which the decorations of the rest of the vaultings are painted, and produces a superior effect. Some of the colours in the latter portion seem to have faded slightly, but without injury to the general appearance. The former discordant altar-screen has given place to an arrangement of arches and small pillars in accordance with the building, the whole being painted and gilt. The glass of the centre window on the north side has been taken out, and a building has been raised beyond it to receive the organ, which formerly served to separate the circular nave from the choir; the two portions of the building will now be thrown into one, by which means an agreeable intricacy of outline will be produced, and much perspective effect gained. The circular building will be painted to accord with the choir, indeed the decoration of the vaulting of it is nearly completed. The successful termination of this first attempt in England, on a large scale, to revive poly-chromatic decorations of buildings, cannot fail to be regarded with interest. The difficulties are necessarily very numerous, but the credit due to those who overcome them will be proportionate.

**PHOTOGRAPHIC PORTRAITURE.**—Since our last notice of photography, various experiments have been made, and *quasi* improvements effected. At the Polytechnic Institution, Mr. Beard has succeeded in communicating colour to his portraits, but this is not sufficiently positive to be an advantage; it is, therefore, probable that the colourless light and shadow will not yet be superseded. From ample experience the features are now transferred to the plate with singular fidelity, and much greater certainty of effect than at first. There are to be seen at this establishment some beautiful specimens of brooch-sized portraits, and others even smaller as adapted for rings. In these the markings of the features, although sometimes rather hard in larger sizes, are extremely soft.

HER MAJESTY has been graciously pleased to confer on Mr. Partridge the honour of the appointment of portrait painter extraordinary. His Royal Highness Prince Albert has also conferred upon him the like honour.

**STATUE OF GEORGE IV.**—A vote of £6300 was passed in the House of Commons for the bronze statue of George IV., by Sir F. Chantrey. This was questioned by Mr. Hume, but the Chancellor of the Exchequer said that the order for the statue had been a minute of Treasury in 1829, and the Government had adopted it as a public work.

**THE NATIONAL GALLERY.**—A cartoon, attributed to Raffaele, has lately been transferred from the Foundling Hospital to the National Gallery: according to the legend on the frame, "Deposited for the use of the Public," by the Governors of that Institution. We had understood the work had been "presented;" but, be it as it may, we have much to be thankful for, as it is a production of extraordinary excellence. The subject of the composition is the 'Massacre of the Innocents;' and when removed from the Foundling, was in such condition that it could with difficulty be held together: it has however been backed, and repaired in such a manner as could be done nowhere else but in England. On close inspection, it appears in places to have been in shreds; but it has been so judiciously put together, and parts so carefully supplied, and toned in unison with the whole, that the extent of the damage is by no means perceptible. *A-propos* of this picture—a word of our other cartoons. Now, this is glazed—we mean not in the painting sense of the word, but covered with a glass—a plan we some time ago proposed in the ART-UNION for the security of the cartoons now at Hampton Court, in case of their removal to London, as a perfect security against injurious deposits from the atmosphere of the metropolis. There are persons who declare, that they are suffering comparatively rapid decomposition at Hampton Court; there are others, and with abundant reason, who protest that, if removed to London, they would be effaced in fifty years: if, therefore, the best judges are agreed that they are exposed more or less to injury, it were assuredly better so to secure them, that they might, without a scruple, be added to the national collection. If this cartoon be covered with glass to protect it, why cannot the others be similarly treated? To return to the Foundling cartoon: we cannot recognise in it those characteristics of Raffaele, which are familiar to all acquainted with his works. In construction it is a foreground of struggling figures—the spirit of its composition we meet with in the works of Michael Angelo and Rubens—works of theirs are similarly put together, but we know of nothing altogether like it in those of Raffaele, although so dissimilar. It is presumed to have formed one of the Hampton Court series; but its imperfections are such as Raffaele, we can scarcely think, could have overlooked; and if they be such as might have vitiated an earlier work of his, yet the handling and touch are not those of an earlier time. It is, however, a work of high character, and strikingly rich in tone. The colour is very substantially driven, and the whole, it would appear, has been glazed in a manner to give great transparency to the shadows. It was long known as the property of Prince Hoare, Esq.; and notwithstanding its want of harmony with the other works of the series to which it is said to have belonged, it has always been considered a veritable Raffaele.

**THE ASSASSINATION IN MEXICO.**—An account of the barbarous murder of Mr. Egerton, late a member of the Society of British Artists, has gone the round of the daily papers. The main circumstances of the case are therefore publicly known, although some of the details published are incorrect. Mr. Egerton had been separated from his wife during a period of twenty years, having at the time of the separation made over to her, for her maintenance, the property (to whatever amount it might be) which he received with her on their marriage. Before his late residence in England he had previously lived in Mexico for six years; he had not therefore left his family in the manner stated. The deceased was proprietor of land to the extent, it is said, of about fifty thousand acres on the Mexican frontier towards Texas, the purchase of which was a speculation whence he expected to realize large profits. We have been favoured with the perusal of a letter from his brother, who resided

with him, describing the fearful appearance of the two bodies when brought home on the morning after the double murder, which is stated in this letter was not perpetrated within his own garden as hitherto supposed, but in some public but perhaps retired thoroughfare, where he was walking in company with the person who shared his fate. The assassinations are supposed to have been participated in by several persons, and the murdered man is thought to have defended himself as well as he could with a walking-stick, and even to have struggled violently with the miscreants after he had been stabbed more than once. The body of the female lay at some distance from him, mangled and abused in a manner which only the most fiendish malice could dictate. By his friends generally Mr. Egerton was deemed a man of high probity, and those who had known him for many years entertained for him a high esteem, and felt towards him a warm friendship. At the time of his death he had quitted England about thirteen months, and was from 47 to 50 years of age.

**NEW FRENCH PERIODICAL.**—We have received a new and interesting continental artistic periodical, entitled "L'Amateur," published in Paris, but too late to give a full review of it; this we propose to do in a future number of the ART-UNION, in the mean time we are happy to announce to our readers a new source by which we can offer them a variety of information. We quote from this work a catalogue of the engravings in the "Bibliothèque du Roi." Number of prints, costumes, &c., arranged in order in the cabinet of engravings in the "Bibliothèque Royal," January 1st, 1840:—

A GALLERIES AND CABINETS	36,194

**SALES OF THE MONTH, PAST AND TO COME.**—**ARMOUR.**—An extensive and varied assortment of armour and arms was, on the 21st and 22nd ult., sold by Messrs. Oxenham and Son, at their rooms in Oxford-street, among which were several curious specimens of mail and chain armour, especially one attributed to the Sultan Bajazet, which, as much of it as was composed of rings, was a fair example of the construction of a suit of *mailles*, or flattened rings. We cannot, however, believe it to have belonged to Bajazet, for in his day (the 15th century) the people of the East made better armour than this, the rings of which were made of metal so soft as to yield to a slight pressure of the finger; besides, in the best Oriental armour, the rings stand at but little short of a right angle with the jerkin to which they were attached, a method of construction introduced into this country from the East by the Crusaders. It is, however, a most curious and valuable suit; the breast-plate is formed of large *laminae*, extending across the person, engraved with what seem to be Persian or Arabic characters, and damasked in gold and silver. The head-pieces of this and other suits in the collection were fitted with the nasal which was in use in England at the time of the Conquest. This suit has been added to the Tower collection, at the cost of £138 12s. The principal purchases were made by the Board of Ordnance for the Tower collection, by the Marquis of Westminster, Lord Charleville, and the Russian Government, through an agent. A few of the most important lots were—a cap-a-pie suit of tilting armour, £36 4s. 6d.; a suit of cap-a-pie plate armour, time of Henry VIII., £46; a suit of engraved armour, £45 3s.; a cap-a-pie suit of German plated armour, time of Maximilian, £40 19s.; a splendid suit of engraved Spanish armour, £79 16s.; an early suit of tilting armour, £94 10s.; an early cap-a-pie suit of Knight's polished steel-ribbed armour, £71 9s.; a beautiful suit of plated steel armour of the period of Maximilian, mounted on a horse fully armed, £126. The purchases for the Tower collection exceed £600.

#### FOREIGN SALES.

We believe our readers will be pleased to obtain reports of the more important sales of objects of Art that occur on the Continent, we give the recent one of Baron Rogers' collection, and shall endeavour to obtain continual "returns" of all such matters.

**DRAWINGS.**—Michael Angelo Buonarroti—'Drawing in pen and ink of one of the Prophets in the Sistine Chapel,' 220fr., not considered true. Raffaele Sanzio—'Study for a fresco in the Vatican,' 20 figures, bistre and white, 'Dispute of the Holy Sacrament,' 3010fr. Perin del Vaga—'Resurrection of Lazarus,' 281fr. Ginguio Romano—'Defeat of the Amazons,' 100fr. Nicolas Poussin—'First idea for the Rape of the Sabinas,' 16 figures, bistre, 911fr. Claude Gelece, called Lorraine—'Landscape,' with pen in bistre, signed Claudio Gellée, 605fr. 'Landscape, with the Metamorphosis of Daphne,' 495fr. 'Landscape—Sunset,' 400fr. Cornelius Netscher—'Portrait of Philip Wouvermans,' lead-pencil on vellum, 400fr. Diepenbeck—'Portrait of a Prelate,' 76fr. Jean Baptiste Greuse—'Drawing in China Ink—First idea of the Village Contract of Marriage,' 1050fr. Jean Jaquard Boissieu—five 'Studies of Heads,' 159fr. Prudhon—'Allegorical composition,' 200fr. Ditto, Ditto. Both these have been engraved by Roger.

**ENGRAVINGS.**—By Marc Antonio Raimondi, 'The Martyrdom of St. Laurence,' after Baccio Bandinelli, 1090fr. 'Saint Cecilia,' from a drawing by Raffaele, somewhat different from the picture at Bologna, 701fr.

We may note that, though the engravings of Marco Centone are generally rather fallen in price, those after Raffaele being the largest prices now given among amateurs, being greatly in favour.

Paul Potter—'Bull and Cows,' there is written on this engraving Paulus Potter fecit, 207fr. Adrian Van de Velder—'Cows and Sheep,' 199fr. Henry Goltzius—'Portrait of Henri IV.,' 74fr. Wencelas Holard—'View of the Cathedral of Antwerp,' 63fr. Robert Nanteuil—'Portrait of Bonpomme de Believre, after Lebrun,' 100fr. William Woollet—'Spanish Pointer,' 130fr.

## CORRESPONDENCE.

## ENCOURAGEMENT OF ART.

SIR,—I happen to hold a ticket in a lottery for a picture now at Venice, by Paul Veronese, to be so disposed of under the sanction of the Austrian Government. I have been thus led to turn in my mind the subject of a Picture Lottery, not like the man selling his glass in the Arabian tale, under a calculation of the proceeds, as if I were sure to be the "fortunate holder," but under an impression that a lottery scheme might be set up for the promotion of the Fine Arts; and that what is done imperfectly by the Society of the ART-UNION, may be done more effectually by the Government. Objections have been urged over and over again to lotteries, but they all end in this one—that they lead to gambling and poverty. That such have been the effects of lotteries it cannot be denied. The too visionary and the desperate have found in them an excitement which has drawn them or driven them into neglect of the legitimate sources of gain, application and industry. And why was this? Simply because the object, the prize to be obtained, was money. There is not a gaming-house that proposes any other stake. But does this objection hold good in the case of the Fine Arts? Certainly not. In a lottery of pictures not one human being would be tempted to ruin himself. It would altogether avoid that class of persons, so liable to ruin, from money lotteries. It would offer only a moderate and pleasing excitement; and would at once engender where they do not exist, and improve where they do, intellectual desires and good taste; and it could be almost exclusively among those who would very readily afford to lose the amount they risk.

I will not, however, enter into arguments to show the immoral effects of one kind of lottery, and the contrary effects of the other. It would be a waste of time. There is no antagonist to combat; for no rational person will persuade himself that a picture lottery could have any immoral tendency whatever. I will now say a little more upon the scheme proposed. We want, we say, Government favour and patronage for the Arts—well then, we will see if we cannot have it without Government having to pay for it. Let Government purchase annually, or every second or every third year, according as the plan shall in the first instance be found to answer, a very considerable number of pictures, and dispose of them by lottery to the public. Let them either purchase those on hand, or give orders for new pictures; let them lay out to begin with £20,000 or £30,000. To the Government it matters little which sum, for they will be repaid; the economical public therefore will not have to complain of the amount. Nor would I have the Government to receive any pecuniary gain, but let one half such sum, as in ordinary cases of lotteries, goes to the Government in shape of duty, or terms on which lottery is allowed, be set apart as premiums for pictures to be painted, the prizes for artists to win. Who it may be inquired are to be the select purchasers, the caterers in this new lottery scheme? The reply is ready. There should, in the first place, be a "Minister of the Fine Arts" appointed by the Crown, with whom it should rest to appoint a committee, with power to make purchases. So that the machinery appears to be most simple. A minister of the Fine Arts; a committee, of which such minister, or Prince Albert, should be the head; Government to advance the money, to be repaid with all expenses. A per centage in lieu of duty would offer ample encouragement in shape of prizes; and the number of pictures sold diffuse a taste, improve it, and benefit both Arts and artists. The odium of selling by lottery would be entirely removed from the artist; and the honour substituted by the purchase being a government purchase; and a successful holder of a ticket would the more value his prize, as it had previously obtained the approbation of a committee of taste. Its merit would have the distinguished mark of this high authority. The character of the committee would ensure success; their endeavours and the countenance of the Court would make it popular, and secure the favour of all ranks. The committee, by their proposing subjects for the premiums, would have a high and legitimate direction of the artist's powers,

and thereby give a higher tone to Art than it at present possesses. And by having the prize subjects engraved, that branch of Art would meet with a proper encouragement, and would be more beneficially employed than at present. Such exquisite work as our engravers are capable of producing would be not much longer thrown away in engraving pictures of little meaning and no sentiment. Nor should sculpture in this scheme be neglected, though it appears hitherto to have been lost sight of, there being nothing of the kind in, or attached to the National Gallery. Perhaps, admitting this branch of Art, the sum to be expended should be increased.

I venture, Sir, to throw out these hints in the ART-UNION, under the hope that the subject may be taken up by persons better qualified than myself, to urge the claims of Art, and able, if there should appear, upon consideration, anything good in the plan, to carry it into execution.

J. E.

## ANOTHER VEHICLE!

MR. EDITOR,—Amused as I have felt in reading the very able articles contributed to the ART-UNION, on Media, Vehicles, Grounds for Oil Painting, &c. &c.; and sufficient as those articles may be considered by all the reflecting and practical members of the profession, I still cannot refrain from soliciting admission to your valuable columns for the following mode of proceeding, the result of many years study and experience in the practice of oil painting:—

Having carefully attached to a frame admitting of extension (for motives hereafter assigned) a web of Indian rubber cloth, apply to it a full couch of white lead, tempered to a proper consistency with spirits of caoutchouc. This when dry forms a most delightfully semi-absorbent ground, which admits the application of colours ground in every possible variety of material, from the purest water to the grossest oils. To force upon the attention the desirability of such a ground, and its superiority to all others, would be to make a parade of the most palpable truism; therefore, before commencing my directions I will merely say (after the manner of an old writer on the *modus operandi* of the famous Caracci), that having worked myself up, I set myself down, and commence by picking out my lights, that is, by sketching in my design; which done, I proceed to painting in the boldest way imaginable, using nothing but the simplest colours, as prepared by the London colourmen, tempering them as required, with the spirits of caoutchouc, which should be used with the utmost freedom, and liberality as to quantity, there being no danger in its excess, as it is in its nature so excessively innocent; so highly volatile, that what is not requisite to the durability of the work flies off; and so exquisitely elastic, that you may literally defy a picture to crack, in which it is used to any extent.

Having proceeded thus far, technically called dead colouring, should the general design or intermediate forms prove unsatisfactory, it will be merely requisite, with a large long-haired badger tool or sweetener, to apply to the surface of the painting a copious float of the same miraculous liquid, and in five minutes (by which time not only the dead-colour but the ground with it will be completely loosened), shake the work violently, give it a dozen or two slaps on the surface with the palm of the hand, and as many more with a coarse and rumpled kitchen towel, communicating to the blow a twisting motion, so as to disarrange portions of the picture surface, and it will assume all the variety in form, colour, light and shade, and texture, that can possibly be wished.

If it be desired to proceed immediately with the work it may be dried instantaneously, by applying to the back of the canvass a paste composed of the strongest French brandy and fine Durham mustard, five minutes after which the picture may be finished with as much ease and certainty as though (under the usual process) it had remained a month to harden the impasted and solid portions of the first colouring. Having thus far detailed the process, it may not be irrelevant to notice some few of the thousand advantages peculiar to a work got up by this mode. Cracking becomes impossible. A blow falls upon it innocently. The painting may be folded for transmission like a table-cloth, or crumpled up and thrust into the pocket like a hand-

kerchief, without in either case retaining a single crease. A small painting may be stretched to the size of a large one, or a portrait originally painted the size of a kit-cat may (at the caprice of the artist or possessor) be pulled out at once to the dimensions of a whole-length, and may be fitted by any common carpenter to any sized frame on hand, and out of use, and rendered appropriate to any residence, from the sitting parlour of the cottage orné at Hammersmith to the most noble picture gallery of the mansion in Grosvenor-square or Park-lane. But to return to the mode of working in this most extraordinary material, which is susceptible of a thousand and one modifications in the hands of the judicious and speculative artist; for instance, the drying process may be resorted to twenty times a day, allowing (in this age of texture) the impasting and loading your surface with colour, until it shall be as rough as a ploughed field, which may then be cut down with scrapers, from the razor or three-cornered scraper, or scalpel, to the finest pumice-stone, until it assumes the smoothness of ivory; glazings to any extent of richness may then be thrown into the work, until the most gorgeous depths be attained, from out of which, passing through the thousand intermedia of semi-transparent tones, the bright and luminous high lights may be relieved with the most perfect facility.

Let us now suppose the picture dry, thoroughly dry, and the forms to want that purifying which can never occur without the most cautious and judicious retouchings. Instead of the usual mode of repainting, use again a float of the spirits, but let it remain for two instead of five minutes, which will so effectually and equally soften the whole texture of the picture, that nothing more is required than the thumb or finger to push the forms gently and correctly into their final positions. A fan, for instance, may be entirely remodelled, the orb of an eye enlarged, the lid depressed or elevated, the mouth reduced to the dimensions of a button-hole, and a nose at once altered from the aquiline to the favourite *nez retroussé*, or any other character required, by merely, as was intimated, shifting the situation of the colour already on the canvass, instead, as is frequently the case (particularly in the practice of portraiture), of adding error to error, until the capacity of the canvass to receive more colour, and the ability of an artist to make new modifications for the whim of a patron become at once exhausted.

Indeed this method is at once so easy and simple of execution, that after a portrait is sent home the possessor may sit down before a looking-glass and with the point of the finger produce the most EXTRAORDINARY results himself, without the remotest chance of injury to the work of the most finished portrait painter.

Suppose now a perfectly novel case. The lights of a picture shall be considered too brilliant. Apply again a float of the spirits for the full period of five minutes, which effectually loosens the whole body of colour without displacing the minutest particle: having done this, lay the painting on its back for a half an hour, by which time the lights (being all founded in white lead) will have considerably subsided, from their own specific gravity; and should this not be sufficient, let the time be extended until you be perfectly satisfied, applying the drying paste to the back to secure it at the exact point desired.

But to produce the opposite effect, and extend the brilliancy (a thing almost universally desirable in sunsets), lay the picture surface downwards, and if it be suffered to remain long enough, the brilliancy derived will be literally dazzling, and surpass anything of the sort painted after the old masters, who apparently knew little of vehicles, such as modern chemistry has developed, and consequently painted very queer and ordinary pictures.

Now, Sir, I submit, if this vehicle of mine be not superior to all others, it is at least equal to any of those new ones that have found inventors and advocates in your columns, every one of which I have tried and found no better than this one of my own, for the discovery of which I claim exclusive merit.

Your obedient servant,

NEW-MEDIUM.

## THE OLD PAINTERS.

Antwerp, June 1842.

SIR,—Whatever practical effect may result to the mechanism of painting, from the interesting discussion lately published in the ART-UNION, regarding the vehicles used by ancient painters, it may be the means of calling the attention of your readers to the merits of those early masters, who have been hitherto greatly and unduly overlooked in England. It might be too much to maintain, with the most distinguished German painters of our day, that the styles of the fourteenth and fifteenth centuries must now be revived, in order to embody the inspirations of genius; yet those who have studied the subject, in even a superficial manner, will more readily pardon such enthusiasm, than bear with the contemptuous neglect under which most of our countrymen attempt to cloak their total ignorance of the matter. At the time when Louis of Bavaria has expended vast sums in securing for Munich the Boisseree Collection, illustrative of the medical school of Cologne; and when the Prussian Government have, by means of agents dispersed over Europe, in a few years acquired the choicest specimens, illustrative of the progress of painting in Italy, Germany, and Flanders; England has lost the golden moment of securing what all must admit to be at least curiosities of Art. I believe there is not in the National Gallery a single picture executed before 1500; certainly not a solitary specimen of painting in fresco or distemper; the two means by which that Art was raised to the perfection it reached in the early years of that century. This fact must astonish all cultivated foreigners who visit England; they would be amused, did they happen to know that one of the great authorities among our amateurs, and (as is supposed) an oracle among the trustees, condemned to the garret one of the most beautiful specimens now in existence of Beato Angelico, which its weight in gold would not purchase at Florence.

But, Sir, I took my pen not to inform your readers of deficiencies which are lamentably notorious, but to point out to those of them who come this way, an opportunity of seeing some singularly interesting paintings of the fifteenth century, illustrative of Van Eyck's supposed inventions. The Burgomaster d'Ertborn, of Antwerp, lately bequeathed to his native town a small, but very select cabinet of such specimens, distinguished by their beauty and extraordinary preservation, qualities of equal rarity, and seldom conjoined. As yet no catalogue has been printed of these, and many have no names attached. But nowhere can the mechanism of Van Eyck's pictures be so well examined, and the comparison of his colours with those of the distemper painters of Italy be so fairly made. I have no intention of supplying the want to which I have just referred, by here offering you a catalogue; but I shall briefly refer to a few of the pieces that relate more especially to these points.

On a panel, about twelve by seven inches, we have Van Eyck's preparation, of a pearly white appearance, which is debarred from close inspection by plate-glass, perhaps the only instance in which that deforming incumbrance is justifiable. On this ground he has traced his whole composition and details with a dark brown ink, slightly filling in the shades with the same. The sky is lightly washed with a pearly blue overhead, toned away on the horizon to a brownish grey. St. Agnes is seated on the ground, amid the numerous small folds of her ample robe, facing the spectator. Behind her an unfinished tower, rich in Gothic ornaments, perhaps that of Antwerp or Cologne, on which a multitude of figures are busied in building and carrying materials. The wide landscape is touched with the delicacy of miniature, and the picture is ready for the application of the colours; without which, however, it is already a complete and effective illustration of the subject. Although evidently an unfinished work, the frame is inscribed *Johes de Eyck me fecit, 1435*.

After examining Van Eyck's picture thus prepared, the student will next look for a finished specimen of that method which is supposed to have been his discovery. On another panel, about half the size of the last, we find this: Two angels on wing have let down a curtain, brocaded in rich and noble design, in front of which stands the Madonna with the Divine Child in her arms, deeply imbued with holy feeling. On this composition, as well as on the accessories, the sparkling fountain and richly enamelled flower-beds—the artist has lavished the whole magic of his colouring. Even the inscription forms a contrast with that just cited; *Johes de Eyck me fecit et completit, Ano. 1439*.

Equal to the brothers Van Eyck, in spiritualized sentiment and brilliant execution, superior to them,

perhaps, in correct design, was Hans Hemmelinck, otherwise known as John Meemeling. Nowhere can the cabinet pictures of these rival masters be better contrasted, for we have a diptych by the latter, dated 1499, which, though only 14 by 8 inches, ranks in grandeur and beauty with the highest works of the fifteenth century. In the nave of a cathedral, rich in inlaid marbles, stained glass, and Gothic tracery, stand the 'Madonna and Child,' a stately group; on the other wing the donor of the picture, a bishop in Camaldolese habit, worships them at his *prie-dieu* in a snugly furnished bed-room. The backs of the shutters are also painted: on one Christ, a noble figure arrayed in white robes, holds in his left hand the mass-book, while with his right he sheds his benediction over the globe beneath his foot, on which are inscribed *Asia, Europa, Africa*; on the other shutter he is worshipped by another bishop of the Camaldolese order, portrayed to the life.

Passing over other not less interesting specimens of the early Flemish, Dutch, and German schools, by Mabuse, Quentin Matsys, Lucas van Leyden, Holbein, Albert Durer, &c., and confining my observations, for the present, to illustrations of Van Eyck's method, I must give a few words to a very rare master. Antonello di Messina, having found his way into Flanders, saw, admired, and acquired that improvement on the vehicles hitherto in use; and was the first to introduce into Italy an art which was destined there speedily to attain perfection. By Antonello we have here a portrait, in all respects resembling similar works of Van Eyck, though the rich brown of the flesh tints seem to indicate a subject chosen from a sunny clime. But more rare and curious is his treatment of the 'Crucifixion,' on a panel about 22 by 16 inches. In the foreground of a wide prospect embracing sea and land, rises a hill strewn with bones and skulls, which mark it as Golgotha; on it stand the three crucifixions, beneath the centre one of which St. John worships, while the Madonna mourns apart. The poetic grandeur imparted to the closing scene of man's salvation by this simple treatment, and by the total absence of subsidiary action or figures from the lonely spot, has never, perhaps, been equalled in the thousand representations of this subject. This precious work is inscribed, *Antonellus Messanus me pinxit, 1417*.

Of a date nearly cotemporary must be a small picture by Beato Angelico, which may very well be contrasted with these works, as showing the difference between the distemper and the oil medium, if, indeed, the latter was known to Antonello so early as 1417. Giovanni di Fiesole, best known in Italy by the holy appellation of Beato Angelico, is the most spiritualized of Christian painters, and the most successful in realizing by his pencil the pure conceptions of his passionless soul in forms of ideal beauty. This little picture gives a competent notion of his mechanical treatment; but the subject being but the fragment of a *pradella* illustrating some saintly legend, does not realize the nobler powers of the artist. The brilliancy and freshness of the colours may, however, startle those whose book-knowledge has deceived them into the idea, that these qualities were deficient in easel painting until Van Eyck's invention. Such persons will be still more surprised on examining four little pictures here, which have once formed two triptychs, by Simone Memmi, of Sienna, the friend of Petrarch and rival of Giotto. They must be above a century older than the 'Crucifixion,' by Antonello di Messina; yet the whole range of mediæval or later Art does not, perhaps, equal their light and lively tints and pure tones. In these qualities, and in grandeur of conception, they excel the very fine specimen of Memmi in the Liverpool Institution. One diptych exhibits the common subject of the 'Annunciation'; the other (which is signed by the master), the 'Crucifixion' in two scenes—the moment of Christ's expiation, and the deposition of his body from the cross. The masterly arrangement of the many figures, their movements and varying characters, display within a few inches the ability which has preserved to us at the Sta. Maria Novella in Florence, the persons and portraits of the painter's most famed cotemporaries.

But I dwell too long on a topic strange to most English ears. I only repeat the wish that the Ertborn Collection may soon be properly arranged and catalogued; and that many of our countrymen may examine it ere they form their impressions of the Flemish and Italian painters of the fourteenth and fifteenth centuries.

Yours, &amp;c.,

DELTA.

## DECORATION OF THE NEW HOUSES OF PARLIAMENT.

TO THE EDITOR OF THE ART-UNION.

SIR,—In some remarks which I offered to you at a former period, on the notorious "Glasgow Statue Job," I directed attention to the foreign decorative paintings at Montague house, which I am glad to find has not been altogether lost upon some of your correspondents. I am still inclined to assign a somewhat higher scale of merit to these paintings than is perhaps generally done; but in this opinion I may very probably be mistaken. I, at all events, feel pretty certain that these works are vastly superior to any French paintings of the present day: and from their size alone, I am still disposed to think they would repay the examination of persons interested in the decoration of the Houses of Parliament. The state of deterioration into which they have fallen is no doubt, in some measure, attributable to the faulty material upon which they have been painted—plaster; but it is in part also caused merely by the smoke of the situation, and I do not doubt that the task of clearing, restoring, and even removing some of them would not at the present time be very difficult. The sulphureous quality of the London smoke acting upon the white lead, which is mixed with nearly all colours used in oil painting, is soon fatal to the effect of a picture; but this deterioration is confined to the surface; and can, for the most part, be removed by skilful mechanical abrasion.

As for the study of the modern German paintings in fresco, at Munich and elsewhere, being desirable in forming a school of English decorative painting, I may shortly express myself very sceptical indeed; but there are other examples for study which may be sought with advantage. Amongst those noticed in your pages, I have not observed that of a ceiling in the palace of the Wood, at the Hague; from which, (although I only speak from a recollection of thirty years back,) I think some useful hints in this style of art may be gleaned. About thirty years ago, the late accomplished and lamented Sir Robert Ker Porter painted a panorama of the battle of Azincourt, which as a mere battle-painting might challenge comparison with the first works of the class, whilst in point of historical accuracy of costume and development of national sentiment, it was everything that could be desiderated. It is, I believe, customary, on account of the value of the canvas, to efface works of this kind, and to use the canvas for future paintings. I think, however, I recollect having read that Sir Robert's fine picture escaped this fate; and that within the last few years it was found in a lumber room at Guildhall; where so completely was it forgotten, that it was imagined to be a work of the middle ages. It is to be hoped that it was preserved, and that it may still be accessible, at a moment like the present when it can scarcely fail to be both useful and interesting to our native artists. I may here remark, that one great difficulty to be overcome by our artists in the decoration of the Houses of Parliament will be found to exist in the mere size of the subjects required; and that an artist accustomed to panorama and scene painting, even although in other respects greatly inferior to his competitors, will be found able to execute a work upon the scale required, which will probably excel those of much superior artists accustomed only to the usual scale on which paintings are executed: this, however, is an affair of practice; and, if the proper means be taken and the necessary time allowed, the end in view can scarcely fail of being attained. I cannot enter upon the question of the comparative merits of oil and fresco painting in the necessary detail, and with the authority to render my remarks of any value, farther than to state, that for every purpose of Art I give the preference to oil-painting; and here I may also remark, that I have seen no arguments adduced to show how suitable wooden panelling may not be employed with advantage for every description of oil-painting, whether as regards economy, duration, or artistic effect.

In respect to the merits of British and foreign artists in fresco-painting, I maintain that—not with practice but at present "without practice" in fresco,—British oil-painters will be found to be as superior to those of the continent, as they are in every other respect and qualification whatever. It was, therefore, with unmingled satisfaction I learned that British artists were alone to be employed in the decoration of the great national work now in progress.

Yours, &amp;c.,

G. M.

## LORD BYRON'S STATUE.

SIR,—You will, I trust, notice this appeal regarding the shameful seclusion of Byron's statue in the dark vaults of our Custom-house: the statue is, I believe, executed by Thorwaldsen. We have no monument of Byron in any public situation, to the disgrace of England be it acknowledged; and one by the first living sculptor lies mouldering under ground. Where is the feeling of the Monarch? of Prince Albert? of Byron's friends? his brother poets, Moore and Rogers? The companion of Childe Harold's Pilgrimage, Hobbhouse? Alas! Echo answers, "Where?" and from the Custom-house vaults Solitude comes murmuring the word—Ingratitude. Are not the great poet's forebodings prophetically true, in his letters to Mr. Hoppner and Mr. Murray, when he alludes to the two epitaphs at Ferrara,

"Martini Luigi  
Implora pace;"

and  
"Lucrezia Picini  
Implora eterna quiete?"

Vide his letters, June 1819, dated Bologna; where he observes, "These two or three words comprise all that can be said upon the subject; they contain doubt, hope, and humility. Nothing can be more pathetic than the 'Implora.' Pray, if I am shovelled into the Lido churchyard, let me have the 'implora pace' and nothing else for my epitaph: there is all the helplessness, and humble hope, and death like prayer, that can arise from the grave. 'Implora pace.' Whoever may survive me, and shall see me put in the foreigners' burying-ground at the Lido, within the fortress by the Adriatic, will see these two words, and no more, put over me. I trust they won't think of 'pickling me, and bringing me home to Clod or Blunderbuss Hall.' I am sure my bones would not rest in an English grave, or my clay mix with the earth of that country." And then he adds, so appositely to his own fate—"As Shakspeare says of Mowbray, the banished Duke of Norfolk (see Richard the Second), who died at Venice, that he, after fighting

Against black Pagans, Turks, and Saracens,  
And toiled with works of war, retired himself  
To Italy, and there at Venice gave  
His body to that pleasant country's earth!  
And his pure soul unto his captain Christ,  
Under whose colours he had fought so long."

Has not this beautiful quotation some allusion to his self-devotion of life and fortune to Greece? which was afterwards followed by those beautiful stanzas, a few lines of which I quote from memory,—

I tread reviving passions down  
Unworthy manhood and of thee,  
Indifferent should the smile or frown  
Of beauty be.

Awake! not Greece, she is awake.  
Awake, my Spirit! think, through whom  
Thy life-blood tastes its parent lake  
And then strike home.

The sword! the banner! and the field!  
Glory and Greece around thee see,  
The Spartan borne upon his shield  
Was not more free.

And the patriot of the world, the martyr, the poet of the universe, has no place for his monument, but for years the dark cellars of the Custom-house. Our church cannot afford him a place by the side of Ben Jonson, Dryden, Chaucer, Cowley, Phillips, Drayton, Butler, Spencer, Milton, Gray, Prior, Shakspeare, Sam Johnson, Thomson, Rowe, Gay Goldsmith, Addison, and Davy Garrick. Where is the difference between the anathema of Pope Innocent, when England was under the ban of the See of Rome, and this exclusion of Byron's statue by the Protestant hierarchy?

Yours, &c., E. K.

## RAFFAELLE AND HIS FATHER.\*

BEFORE sitting down to this work, we had an impression that the reputation of the man whose career forms its subject matter, had long ago worked itself out; that the latest facts deriving interest from his name had been given to the world in 1833, when the question of his place of interment was set at rest by the violation of his tomb in the Pantheon of Agrippa, at Rome; but a German has been sited for us the dust of upwards of three centuries, once more verifying effectually a proverb of his quaint compatriot Lessing—"Der fleissige Deutsche macht die Kollektanea, welche der witzige Franzose nützet;" although it is not the Frenchman alone that profits by the German's patient research. The author of this work has taken for his subject, one that it would be difficult to invest with a new interest in the absence of new facts. These, we must say, he has succeeded in eliciting, and having moreover presented to us what was already generally known of Raffaele in a form

\* Raffael von Urbino, und sein Vater Giovanni Santi. Von J. D. Passavant. Leipzig. 1839.

acceptably freshened by judicious arrangement, he has produced a book which, from the obviously diligent research by which it is everywhere distinguished, cannot fail to have some weight in all that regards Raffaele or his works.

Raffaele is acknowledged, universally, as the greatest genius of modern Art; even the memorable period in which he lived offers to the biographer, to the practical and inquiring artist, no reputation of equal lustre. Yet since Vasari's time, none of the many professed biographies of this "principe dei pittori" have individually, by due study and efficient criticism, becomingly illustrated the master-spirit of that Art to the charm of which the human mind cannot help yielding in its most refined or least cultivated state.

The earliest known biography of Raffaele was written in Latin by Paolo Giovio, and first published by Girolamo Tiraboschi, in his "Storia della letteratura Italiana;" but this memoir is from its brevity unworthy of its subject, and yet more so from the errors into which the writer has been led from his insufficient knowledge of Art. Vasari's well-known work was published at Florence in 1550; and a second edition, revised and improved by himself, appeared in 1568. The periods assigned to Raffaele's works are generally correct; but the author has fallen into the common weakness of lavishing upon them a uniform and indiscriminate praise, which, were he not Vasari, would entitle us to question his critical powers. But for this work, many of the main facts of the life of the great master would have been unknown to us; it has, therefore, been made the basis of every biography that has been subsequently offered to the world; and the mere enumeration of these histories would form a catalogue, since no writer on pictorial art has held himself acquitted without some coquetting with the reputation of this great man. Let us hear the author of the work before us, whose labours are thrown into strong relief by the compulsory system of life-writing; he says:—

"This arduous work I undertook under singular circumstances. The late Professor Braun, of Mainz, acknowledging the imperfections of his own little book on Rafael and his works, contemplated the publication of a revised edition, on the subject of which he consulted me, and became convinced that without personal examination of Rafael's works, visiting the scenes of his labours, and deep study of the time in which he lived, no possible result could be expected. To my surprise the professor recommended me to write a life of Rafael; to which undertaking I at that time found myself altogether unequal. Circumstances, however, favoured the project, and with such a view I undertook a journey to England, visited Paris for the third time, and travelled another year in Italy, in which blessed land I had already lived seven years. What Germany contains has, of course, been long known to me; but I had occasion again to visit Vienna. Rafael's large works in Spain I had before made myself acquainted with at Paris. I may therefore say, that, with the exception of a few pictures of little note, the whole of Rafael's works are known to me from personal inspection. I have visited the cradle and the scenes of his labours. My researches have extended to almost all the greater, and many of the smaller, libraries of Italy, Germany, England, and France, for the discovery of documents having reference to Rafael and his times. The archives in Rome, the Medicean archives in Florence, together with some other similar resources, have alone been closed against me."

M. Passavant accounts for the change of the usually received family name of Raffaele,\* by saying that he finds the name used by the relations of the great artist to have been Sante, and Santi, which, in Latin documents, became Sanctus, and this was Italianized into Sanzio, which has been received as his patronymic from an early period.

The father of Raffaele is spoken of at length, and his manner and works described; but as the great master himself is the object of our interest, and he stands identified with the pictorial splendours of Rome, we pass at once to this period of his life. His fame is already gone before him, and he is summoned thither by Pope Julius II.

"Raffael now entered the service of a prince whose energetic character, searching deeply into all worldly matters, not only acquired for himself the reputation of a great general and statesman, but also the gratitude of posterity from his extensive patronage of Art. All his projects of embellishment were so vast, that, although he was not permitted to live to see the execution of the greater part of them, yet, supported by the immense talent which he knew so well how to appreciate and select, he left behind him in them the impress of a mind of no common mould. It was reserved for him to realize, in part, the great idea of Nicholas V., ac-

\* For ourselves, with respect to the baptismal name, we write it according to the latest Italian orthography.

cording to which, the Vatican increased in extent to the semblance of a palatial town, with the view to the construction of suitable residences, not only for the Pope and his immediate attendants, but also for the highest spiritual denominations, allembassies, and distinguished guests. He it was who conceived the project of renewing the decayed Basilica of the Apostle Peter, in such a manner as to merit the reputation of being the most celebrated temple in Christendom; and, as the part which he had been called upon to fulfil, had in his hands been so imposing, he determined that in this monument, the erection of which he intrusted to the ablest of architects, his memory should be preserved in the same spirit, since in grandeur and sublimity it should surpass everything of its kind."

It was Raffaele's works in the room called curiously enough by our author "Zimmer della Segnatura," that secured to him the continued patronage of Julius, who expressed himself satisfied with his first plans, and proportionably more so after seeing his first work, "Theology," completed. His expectations were so far exceeded, that he immediately determined that Raffaele should embellish all the rooms, and even gave instructions for the effacing of all works that had been previously executed. But Raffaele, in consideration of the beautiful arrangement and the rich embellishments of the roof of this apartment, thought fit to employ for new subjects only the eight larger fields, allowing much of the previously executed work, together with the Pope's arms, to remain.

It was in 1508 that Raffaele was summoned to Rome, and there only it is that his powers can be apprehended in their full extent. As it is not to any limited study that they declare themselves, so no length of application can reduce them to any common standard. Our own Reynolds even confessed on his first view of these works that he was disappointed—in short, that he did not understand them; but in maturer years he admitted himself subject to their fullest influence, and then none were more sincere than he in praise of the great master.

Raffaele was twenty-five years of age when he began his labours in Rome, which, when he had prosecuted for five years, his patron Pope Julius died. Within this period, besides the stupendous 'Theology,' he executed his works 'The Fall of Sin,' 'Marsyas Condemned,' 'Poetry,' 'Parnassus,' 'Alexander and Augustus,' 'The School of Athens,' &c. &c.; and of some of these it may be said, especially of the 'Theology,' that they were very unequally painted; hence it may be inferred that the whole of the work was not finished by Raffaele himself, but that he was extensively assisted by pupils. At this period Michael Angelo flourished, and of the influence exerted by his genius upon the works of Raffaele, M. Passavant thus speaks:—

"That Michel Angelo, as the elder of the two masters, and who, contemporarily with Rafael, executed at Rome and Florence his finest works, should, through them, have exerted a certain influence upon the latter, is sufficiently reasonable; and this is alluded to by Vasari, although with too much deference to Michael Angelo. Nevertheless, the individuality of the artist of Urbino, in which is mirrored the entire region of essences and forms, stands clearly distinct from that of the Florentine, who is alone in his own especial greatness; hence it follows that if Rafael have adopted from Michel Angelo, this could be but one of the many preferences with which he enriched his mind; since the acquisition is markedly dominated by his individuality. For his veritable reputation he is by no means indebted to his imitation of Michel Angelo, as, for instance, his 'Prophet Isaiah,' in the church of St. Augustine, in which the style of his rival is most striking, has ceased to be considered one of his more successful productions. This influence upon Rafael was first apparent after he had seen the first completed portion of the ceiling of the Sixtine chapel, which coincides with his last labours in the Segnatura;\* for although he had then already seen in Florence Michel Angelo's Cartoon, it is to be observed that his productions of that period have not the slightest sympathy of manner with that work, which, perhaps, is attributable to the circumstance of Bonarroti's regarding with a feeling of contempt, not only his (Raffaele's) friend Francia, but also his master Perugino, which would lead him to consider the great Florentine sculptor with aversion. But in Rome, which stimulated the genius of even Rafael, he no longer withheld the homage due to the efforts of his rival. When, therefore, either, as Vasari states, on the occasion of his being by Bramante, pri-

\* The Diario of Paris de Grassia shows that on Christmas-day, 1512, the Sixtine chapel was not yet cleared of Michael Angelo's scaffolding;—the following passage occurs:—In Vigilia N. C.: Pontifex voluit vespere interesse in Cappella Sixtina. . . . Sed quia non erat ubi possemus ponere thalamum et solium ejus, dixit, ut illud facerem ego modo meo.

vately, and before all other persons, admitted to the Sixtine chapel, or on that of the admission of the public, he had an opportunity of inspecting these works of Michel Angelo, they made an impression upon him so powerful as to afford him a further insight into the exalting tendencies of his art. In support of these assumptions, besides other evidences, there exist several drawings after the composition of those frescoes which Raphael himself sketched. One of them, the 'Setting up of the Brazen Serpent in the Wilderness,' is in the possession of the Earl of Leicester; another, 'Adam and Eve expelled Paradise,' was in the collection of the late Sir Thomas Lawrence."

"This influence of Michel Angelo on Raphael, is particularly striking in the statue of Apollo in the School of Athens, from its approach to the style of the former, although at that time several statues of this god had been discovered. But Raphael, from a regard for harmony, felt himself obliged to make the statue accord in manner with the other figures, and seems here to have acted entirely under the influence of the great sculptor; for this figure, in its action and keeping, presents at once to the memory the statue of a slave very similarly designed, which was intended as a part of the sepulchral monument of Julius II.; but it was left in an unfinished state by Michel Angelo, and is, if I err not, in the museum at Paris. A drawing of this, as also of the design of the monument, has been published by Ciampi, of Florence."

"With respect to the arrangement of colour, quality of tint, and indeed the entire effect observed in the School of Athens, Raphael showed himself a master who had already successfully combated all difficulties, and nearly attained his ultimate excellence. This work has certainly suffered serious injury; but enough of its original state remains to bespeak its source, still preserving the peculiar beauties of the execution. The flesh colours of some portions of the work yet remain in all their pristine richness; particularly those of the figures on the left in the upper part of the picture."

Raffaello's father, Giovanni, in addition to his accomplishments as a painter, was also a poet, and as such was considered by his friends of Urbino as of respectable pretensions. The deeper inspirations of the son in his art prompted him to give expression to all his poetry in the manner best suited to his genius. The amount of Raffaello's rhymes is summed up in a few sonnets; some of these allude to an attachment which he formed soon after his arrival at Rome, and which lasted till the end of his life. While busied in the execution of some of his greatest works, the by-play of his imagination was versification. Some of his rhymes are unhappily married; and as a proof that rhyming was a difficulty with him, evidences exist of his changing and trying the verses in different ways. His poetry is brought curiously under our notice from the circumstance of his having made memoranda for verses on his drawings, which are still preserved in this state.

The following sonnet was written on a sheet which contained also drawings for his fresco theology:—

Amor tu men vestrati con doi lumi  
Dei occhi dov'io mestrugo e face  
Da bianca neve e da rose vivace  
Da un bel parlar e d'onesti costumi.  
Tal che tanto ardo che ne mar ne fiume,  
Spegner potriam quel focho, ma piace  
Poi ch'el mio ardor tanto dibon mi face  
C'ardendo ognor piu d'ardor mi consumi.  
Quanto fu dolce al giogo e la catena  
De suoi candidi braci al col mio volti  
He sciogliendomi io sento mutal pena.  
D'altre cose io non dicho che son molti  
Che soperchia docezza a morte mena  
E pero taccio a te ipsensir rivolti.

In Julius II. Raffaello served a master of incredible energy, which was principally directed to the acquisition of a great name. In this he availed himself, successfully, of the talents of others, surrounding himself by the greatest geniuses of his time, who, in return for his judiciously applied flatteries, gave him the reputation he so much coveted. By constancy and perseverance, encouragement, participation, and even severity and impatience, he urged the greatest artists to surpass as it were themselves, by calling forth in them dormant and unknown capabilities. When this pope died, Raffaello had not yet finished the embellishment of two rooms: he was, when that event took place, employed in the apartment which contains Attila, the Mass of Bolsena, &c., &c. Giovanni de Medici, who succeeded Julius in the papal dignity, under the title of Leo X., was of an opposite character. Raffaello found in him a patron of refined and elevated tastes, and a master of benevolent consideration for those around him. Extensive patronage of genius was in him no affectation, for it had been a distinguishing heritage of his family for centuries. His liberality to distinguished men, philosophers, poets, and artists,

whom he drew from all parts of Italy to his Court, has procured him in the world of letters, not only of his own, but of succeeding times, a celebrity which throws into shadow the name of his predecessor, although a man exceeding him in strength of character and boldness of design.

We find the great painter at this period in friendship with men of the highest distinction, hereditary and acquired. The Pope himself showed for him the greatest cordiality and respect; and among his intimates may be mentioned Count Baldassare Castiglione, the ambassador of Francesco Maria, Duke of Urbino, who, on the occasion of the election of the new pope, expressed himself happy of again having an opportunity of embracing his ever dear Raffaello. He was claimed as a friend by all the learning and talent attracted by the Court of the eternal city; and his society was sought by the men of those times, whose leisure was frequently employed in complimenting each other in Latin and Petrarchan verses. With Pietro Bembo, Erasmus of Rotterdam, and Ariosto, he was upon terms of intimacy; also with Sanazzaro and Zebaldeo, both in their time high in estimation as poets.

Albert Durer was the contemporary and friend of Raffaello, and he expressed his admiration of him by offering for his acceptance a variety of presents. Among these was a portrait of himself, painted in water-colours upon linen, and so transparent as to be visible on both sides. This portrait was highly esteemed by Raffaello on account of its execution. It was bequeathed afterwards to Giulio Romano, who prized it equally with his master. In return for these, Durer received a drawing of two figures upon which he wrote:—"1515. Rafael of Urbino, so much esteemed by the Pope, made this drawing and sent it to Nürnberg to Albert Durer to show him his hand (i. e. manner)."

Of the Fornarina, so much associated with Raffaello's name, M. Passavant proceeds, after having spoken of her portrait, to say:—

"I should now be glad to be enabled to afford some more particular information about her whose name Raffaello has sent down with his own to posterity. She was known by the name of Fornarina, and if we may credit Misserini she was the daughter of a soda burner, who lived on the other side of the Tiber, in the quarter St. Cecilia. No. 20, in the Strada, S. Dorothea, is still pointed out as her birth-place; it is a house of strikingly antique appearance with ornamental work of terra-cotta. A small garden was formerly attached to it, the low wall of which admitted of its being surveyed from without, and here it was that the celebrated beauty spent much of her time. The Fornarina became celebrated among the Roman youth of the period; and especially so among the students of Art, ever the most passionate admirers of beauty, who, in passing the house, frequently stood on tiptoe looking over the wall to catch a glimpse of the lovely maiden. Her fame attracted among others Raffaello, than whom none more admired female beauty, and having seen her as she was bathing her feet at a fountain in the garden, was smitten with a love so powerful that he could not rest until he could call her his own."

This is a story that artists love to dwell upon, but its truth is disputed. This is the version according to Misserini; others insist that to whatever person it might have been given, the name Fornarina was never known to Raffaello. The work at Florence which bears this name is too well known to require description here; it is now in the Tribune, but has not been there many years.

Raffaello continued his labours with unremitting industry, and had he lived to a moderately old age his works would have been no less astonishing in their number than in their excellence. Even at the early age at which he died the number and magnitude of his works have been ever since his time a theme of wonder. In considering this the great master cannot be measured by any ordinary comparisons; it must not, however, be forgotten that he availed himself to a great extent of the assistance of his pupils. The most remarkable of these were Benvenuto Garafalo, Gaudenzio Ferrari, Timoteo Viti, Giulio Romano, Francesco Penni, Udine Carevaggio, Bagnacavallo, and others less known, besides a great proportion who left nothing behind them, either good or bad, to rescue their names from oblivion. Such is the influence of the success of a man in a profession for which nature has fitted him, that the self-love of others, ambitious of a similar reputation, urges them to the same career, which in every instance of this kind must end in disappointment; for in pursuits wherein something more than mere mechanical habit is

necessary to distinction, those who have shone in them have always been directed to them by innate genius.

Raffaello distinguished himself also as an architect, and is supposed even to have executed at Florence two marble statues. Among his latter great works were the Cartoons, which, as is known, were made with the view of having them executed in tapestry. He is said to have supplied the plan of a façade for the church of San Lorenzo at Florence, to which place he was summoned by the Pope, who passed the winter of 1515-16 in the ancestral capital. On Raffaello's return to Rome, he painted the bath-room of his friend Cardinal Bibbina, and occupied himself in embellishing the villa Raffaele, which is in the park of the villa Borghese; and generally understood to have belonged to himself, as the name would declare. About this period he executed 'Alexander and Roxana,' together with other works, among which were several versions of the 'Holy Family.' The celebrated 'Madonna della Sedia' was also painted at this time; it is one of the gems of the Pitti Palace at Florence, where it is preserved with much care in a massive frame under a glass. Florence contains likewise the portrait of his great patron, which was painted towards the end of his life. The portraits of Leo X., Giulio dei Medici, and Sadorico dei Rossi, form a picture known as one of the greatest triumphs of Art; and a critique to be worthy of it must involve even the principal passages of the painter's life. There is in the Tuscan capital another picture of this period, we mean 'John the Baptist,' which among the works of the Tribune is one of the first that catches the eye on entering. This picture was painted for Cardinal Colonna, from a singularly fine study from the life, made expressly for it, but with all its points of excellence, it is inferior to the other; it may therefore be supposed that much of the picture must have been done by pupils.

The whole of the second volume of the work under our notice, containing pp. 700, is devoted to an enumeration of the works of this renowned artist; and whatever we may have been prepared to expect, the tangible evidence of a catalogue increases, if possible, our astonishment at the teeming prolificness of imagination with which this man was gifted. He has been accused of negligent finish in some of his works; but, after all, such a chronicle as this is his best apology; for jostled by the images of his crowded brain, he entrusted that mechanical execution, and even finish, to his pupils, of which he himself was impatient.

The grand project of Raffaello's latter years was the architectural restoration of Rome; his remarkable letter on the subject to the Pope is contained in the work before us. He had been commissioned by his patron to consider the practicability of the plan, and entered eagerly on his studies and researches, in which he was aided by the most able antiquaries. His knowledge of architecture was of course extensive, and his own antiquarian experience great; but he was cut off in the midst of labours preparatory to this vast undertaking, in which his inward resolve was, doubtless, to divide the palm with his great contemporary, in the architectural embellishment of Rome.

The last work generally understood to have been finished by Raffaello was the 'Transfiguration,' and scarcely had he completed this work before the world closed upon him, in the strength of his years and the fulness of his renown. Our author thus speaks of his death:—

"In the mean time, in Rome the consternation became general, on account of the dangerous turn which Raffaello's indisposition had taken; for not only did his pupils and nearest friends deeply feel what a loss threatened them, but the entire population lamented the probable disappointment of the hopes which the revered master had held out to them of the future magnificence of their city. The Pope was most painfully concerned; for his love of Art found in the creative and inexhaustible imagination of Raffaello ever new matter for its gratification. He sent to him frequently during his illness, which was of fourteen days duration, inquiring each time circumstantially about his progress; and how was he alarmed on hearing of his death, having just previously been informed, that the part of the Vatican, inhabited then by himself, and which had been built by Raffaello, was giving way. Raffaello died at the age of 37, on the anniversary of his birth, on the Good Friday of the year 1520."

The length of our extracts compels us to close our notice of this work, to which, however, we may recur in a future number.

## REVIEWS.

**THE SEASONS.** By JAMES THOMSON. Published by LONGMAN, BROWN, GREEN, and LONGMANS.

This edition of "Thomson's Seasons" has been embellished by a "selected set" of the most distinguished artists of our time, whose taste and learning in their profession have fitted them to accompany the varied strain of these poems. Speaking of this book in a business point of view, it is an enterprise which, carried out as it comes before us, must have required a serious outlay of capital, considering that every book-shelf was already provided with a copy, in some shape, of "The Seasons;" and this we remark, merely to instance the spirit which animates publishers in the reproduction in forms so costly of works already in the possession of the public. In turning over these gemmed pages, the uninquiring reader may not know that some thousands of pounds must have been expended in bringing them forth—such, however, is substantially true: thus have our artists rendered their productions indispensable to refined enjoyment.

This reprint, which is edited by Bolton Corney, Esq., and contains a life of Thomson, and an account of his writings by Patrick Murdoch, D.D., F.R.S. The engravings are seventy-seven in number, executed from drawings by members of the Etching Club, to whom much praise is due for their excellence, although they would have received justice more definite in impressions from the wooden blocks, than from the metal fac-similes; for it must be understood that the proprietors of the work, in order to secure by renewing the forms, a succession of impressions of uniform quality, have submitted the original blocks to the electrotype process, and worked off the cuts from metal substitutes, which, albeit the best we have ever seen resulting from this operation, are yet sullied in some cases by slight imperfections irremediable save by the wood itself. With respect to the gentlemen who have contributed the drawings, as we cannot afford space for even the titles of more than a few of their productions, we can, at least, give all their names; and these are—John Bell; C. W. Cope; Thomas Creswick; C. J. Horsley; J. P. Knight; A.R.A.; R. Redgrave, A.R.A.; Frank Stone; C. Stonhouse; Frederick Tayler; H. J. Townsend; and Thomas Webster, A.R.A. The engravers in their department are not less known, they are—Branston, Jackson, Green, O. Smith, Vizetelly, A. Thompson, J. Thompson, Bastin, T. Williams, J. Williams, and Landells.

The imaginative themes and excursive style of "The Seasons," throw an artist upon his own resources in embodying compositions for their illustration: in the few cases affording localities eligible as subjects, these realities have been wrought out with exceeding truth, and the finest feeling for the picturesque. The blocks are generally large enough to cover the page, but blank spaces are formed for the insertion of the type; the text, therefore, be it more or less, is elegantly encompassed by the design. At the commencement of the book is a beautiful vignette by A. Tayler, taken from a single line,—a spot "where the deer rustle through the twining brake." The execution throughout is admirable; the metal form seems to have been touched upon with the best effects after the mould was obtained from the original cut. Another effective vignette, 'The Bowery Walk,' by Creswick, is a cool and tempting vista, shaded by a thousand pendent boughs. It seems to be a snatch from Haddon, or some other ancient baronial seat, for every drawing of this artist has about it that reality which pronounces it a picture of an actual existence. 'Angelic Harps,' the twenty-ninth subject, by Redgrave, is powerfully conceived, and pictures the image-thronged imagination of the poet. Mr. Bell, in the 'Nile and Nilometer,' has most ingeniously typified the Nile and the phenomenon of its annual rising; and, in a following plate, the dire plagues of the land of Egypt. The episode of 'Celadon and Amelia' is beautifully illustrated, in two connected vignettes by Cope; they are clear in execution and touching in sentiment. Creswick's 'Richmond Hill' is one of the most effective *morceaux* we have ever seen. The story of 'Palemon and Lavinia' is pictured by F. Stone, and the 'Mazy Dance,' as alluded to but in one line of 'Au-

turn,' by J. C. Horsley, in which there is something really very Watteau-like. 'Skating,' by Stonehouse, is a truthful representation of a winter day. Townsend supplies three or four of great excellence; the happiest—and it is indeed a sweet and graceful composition—is the illustration of the passage, "Each by the lass he loves."

We have of course passed over very many of these engravings, which may take rank with the very best specimens of the art. These are the first of the conjoint emanations of the Etching Club that we have seen; and if they are to be considered a commencement of similarly continued labours, it may be assumed that they will raise to themselves the fame of a club-school, whose works will be held of rare price: they have assuredly here entered into the spirit of him who was so often "admitted into the grove of Euripides."

**THE BEST PICTURES OF THE GREAT MASTERS.**  
Part IV. COLNAGHI and PUCKLE; and ACKERMANN and Co.

The fourth part of this really valuable serial sustains the reputation acquired by those which have preceded it. The engravings of which it consists are from 'The Blind Fiddler,' by Wilkie; 'Landscape, with Goats,' by Claude; and Raffaele's 'Sacrifice at Lystra;' and in looking over the prospectus which accompanies these, it holds forth promise that those which shall succeed will be of equal excellence. Deep as we are in the cause of modern Art, we cannot (*immemores veterum qui*) pass without a sign the labours of bygone sterling worth, to whose practical precepts many of our cotemporaries are more indebted than they choose to acknowledge.

'The Blind Fiddler,' engraved by E. Smith, is in feeling and effect an admirable transcript of the celebrated picture, and every item of the composition is made out in a manner appropriate to the high finish of the original. The characters of the figures are most faithfully preserved; the movement of the strolling musician is in time perfectly equable with that of his prototype in the National Gallery—we are within earshot of the snapping fingers of him at the fire-place, tripping like another dancing faun in his earnest endeavour to amuse the child—in short, the plate is in every way worthy of the picture. Claude's 'Landscape' is beautifully engraved by Forrest. The composition is characteristic of the master, consisting of groups of lofty trees telling against a clear sky, a distance flooded with the lights of the sun, and a foreground in transparent shadow derives life from figures in the foreground. A woman, mounted on an ass, and accompanied by a man, are moving along the road, and behind these are a flock of goats driven by the herd, attended by his dog. The engraver has been eminently successful in imparting to each object its particular texture. The foliage is light, and hangs naturally, and is yet withal carefully rounded and massed. A good engraving from a work of this master we can fully appreciate; and sympathize with the engraver, of whom is required a plate from a picture, which may have in parts been softened by time into indistinctness.

The 'Sacrifice at Lystra' is engraved in a manner to convey all the spirit and effect of the Cartoon. Every figure and object are clearly defined, and the expressions of the various heads transferred in their full force.

This series of engravings must be a valuable addition to every collection. The subjects are selected with judgment and taste, and executed with a perfect apprehension of their beauties in a manner to raise the respective artists to a high consideration in their profession.

The work, although it contains the names only of London agents, is the publication of an enterprising publisher in Edinburgh.

**ATKINSON'S SKETCHES IN AFGHANISTAN.**  
Publishers, H. GRAVES and Co.

Few modern works are calculated to be so extensively interesting as this—describing a country with the peculiarities of which recent events have unhappily rendered us far too familiar. These "mountains inaccessible," have echoed the dying groans of British soldiers—what is far worse, have witnessed their tarnished reputation—and many a brave fellow's grave has been made under the shadows of these rocks, that look down upon lonely glens. Yet those who examine this work will little wonder at the repulse our arms have met

with, and hesitate to pronounce our defeat dishonour. It is really frightful to contemplate these "Passes," even in a picture, and to know what fearful sufferings must have been endured by our fellow countrymen before they were surmounted. The series of views come in good time, for they come to remove much of the grief that England has endured in consequence of a calamity to which England is unaccustomed; for they show us that neither the men nor the mountains of Affghanistan are to be despised; and that a warfare with both must not be a "little warfare."

The artist (by whom these sketches were made "upon the spot"), James Atkinson, Esq., was, we believe, a surgeon in the British army, who enjoyed peculiar advantages for examining the country and noting its peculiarities. His drawings, however, passed through other hands before they were submitted to the public; having been placed "on the stone" by Louis Haghe, the most accomplished and experienced of our lithographic draughtsmen. The collection is very varied; exhibiting not only the natural scenery of the land, but its people, in so many ways, as to be a valuable contribution to their history. In the opening print, we have a group of "Belooches," in the Bolan Pass, pouring on our troops a murderous fire from a rocky fastness, unapproachable. Next, is a peaceful and pleasant scene, on "the river Sutledge," exhibiting quays and boats; next, a town and a fortress, with camels in repose; next, an encampment, with the entrance to the famous Bolan Pass; next, a terrific mountain, upon which the troops are about to ascend; next, we have a nearer view of the entrance to the Bolan Pass; next, a pass still more terrible, the Pass of Siri-Kajoor. The seven succeeding prints represent as many points of melancholy importance—ascents and descents in these appalling precipices; where battles were fought for every step, and under circumstances where skill and courage availed nothing. Then comes the city of Candahar, then the city of Ghuznee, then Caubul, then several objects of interest in or about the city, and then examples of the costume of the men and women of Caubul; each of the prints being described by a brief but clear and comprehensive explanatory account.

As a work of Art, this volume is of entire excellence, and under any circumstances would be a valuable acquisition; but its claims upon public attention are founded also upon the universal interest of the subject upon which it treats. There are few persons in Great Britain, whose hearts do not turn with anxious yearning to this, the only country of the world that in modern times has blotted our national annals; few who have not some dear connexion to mourn for, or to hope for, in connexion with the history of this disastrous war, in which we embarked without honour, and out of which with honour we cannot come. The glory of our arms may be regained indeed, but the page that records the discreditable contest, cannot be torn out of the book of the chronicles of England in the nineteenth century.

**VIEWS OF HADDON HALL.** By DOUGLAS MORISON. Published by GRAVES and Co.

The name of this artist is new to us: he has made his *début* with entire success. The work is something on the plan of "Nash's Mansions," but differing from it in being confined to illustrations of one Palace-house of England, and introducing landscapes of the ornamental scenery that adjoins it. The ancient and noble structure—the most beautiful and interesting of all our earlier architectural grandeurs—is represented in every aspect, and with all its advantageous accessories—its picturesque interiors and exteriors, and the several striking points about "the grounds." The drawings are capital examples—good studies for the learner, and highly satisfactory to the advanced student. The artist has very judiciously introduced figures into most of his subjects; and these figures are in good keeping with the character of the place, for they are habited in dresses of the olden time, the customs of which they occasionally illustrate. The work is of great value and of much importance; and will, we trust, be so received by the public as to lead to the production of similar volumes, extending the knowledge of similar places—places sacred to the memory of great men gone from us, and forming essential parts of our national history.

**THE PALFREY, A LOVE STORY OF OLD TIMES.**  
By LEIGH HUNT. Published by How and Parsons.

This is a graceful and beautiful poem, from the pen of one of the "worthies" of the age and country; a poet whose pages every artist should consult, for they abound in pictures. This little volume contains half-a-dozen wood-cuts; from drawings—one by Kenny Meadows, one by A. Clint, one by W. B. Scott, and three by J. Franklin. We avail ourselves of a fitting opportunity for saying a few words respecting the artist last named. He is comparatively new to the public—new, inasmuch as although his productions are sufficiently numerous, he has had but few opportunities of making his appearance upon the great stage under advantageous circumstances. In the "Book of British Ballads," we very lately supplied an example of his ability; it was one that could not have failed to attract general attention. For the same publication he has supplied many illustrations, all of them distinguished by great delicacy of touch and refinement of manner, combined with brilliant imagination, and deep reasoning and thought. We do not, indeed, fear to place his drawings on the wood, in juxtaposition with the best masters of the far-famed German school. We rejoice that into this more particular department of the Arts, a higher style and a better spirit are making rapid way. It is not too much to say, that for much of this improvement we are indebted to Mr. Franklin.

**THE PALACE OF BLENHEIM.** Drawn and lithographed by C. W. RADCLIFFE. Published by JAMES WYATT and SON, Oxford.

If there be truth in the folio volume before us Blenheim is a place that would have delighted *le roi chevalier*—Francis the First, who during the entire long day of his life, was striving after something in architecture that he had dreamt of, but that nobody had ever seen. If it could have been, with what delight would the Great Marlborough have shown Blenheim and Francis to each other. This work contains eighteen views, selected with much taste, and treated generally with a true feeling for agreeable effect; indeed, many of them, with a very little licence, would form admirable landscapes. Among the first plates in the volume we find a view of Blenheim, from Fair Rosamond's Well, in which, looking across a piece of water, the palace is seen in the distance on rising ground. The water is crossed by a bridge of a character with the architecture of the edifice itself, an object which, together with groups of well-grown trees, entertains the eye in passing to the utmost distance. The foreground is at once remarkable for its freedom of pencilling and a tolerable sprinkling of venison. A few pages further we are conducted to the front of this truly regal abode, with opportunities of examining the details of the mixed Greek and Italian architecture. Two or three interior views are given, among which the Library is conspicuous for its grandeur and magnificence, and of those showing the outside, that from the south-east is one of the most remarkable, as exhibiting the principal front and a portion of one of the sides. In a south view the front is seen through an opening between some well-drawn trees which occupy the foreground; and in a north view we are removed to a distance, whence the towers are seen rising far beyond the clumps of trees which stud the park. The contents of the volume terminate with two pages of vignettes, composed principally of wooded scenery drawn with much grace and natural truth. There are very few vignettes which, with their dependent domains, would afford so many interesting views; Blenheim, however, "cuts up" well, and the work is, in every way, worthy of the subject.

**ELECTROTINT; OR THE ART OF MAKING PAINTINGS IN SUCH A MANNER THAT COPPER-PLATES AND "BLOCKS," CAN BE TAKEN FROM THEM BY MEANS OF VOLTAIC ELECTRICITY.** By THOMAS SAMPSON. Published by EDWARD PALMER, Newgate Street.

This is a lengthy title, but we transcribe it as it stands, since unlike those of many books it describes the substance of the pages by which it is followed. We are not however of accord with the author, that "painting" is a term apposite to the process he describes; his impasto material being a

monotone unguent employed for the production of surface with reference to conveying impressions. To explain in a few words the object of the treatise—it shows a method of preparing a sort of etched surface capable of yielding under the electrotype process a corresponding copper-plate, with lines either in relief, or incised according to the manner of preparation. The work contains specimens of a variety of methods of working, exhibiting the applicability of the invention to an extensive round of subjects. To some of these the author gives the names "the painted texture," "the dragged texture," "the chalk style," &c., &c.; whence may be gathered some idea of the respective surfaces. The invention is well calculated to convey peculiarity of manner and feeling, and must be found useful in many departments of Art as applied to manufactures; as for instance, to earthenware-manufactures, calico-printers, &c., &c.; and in scientific works, the excellence of which does not consist in perfection of embellishment.

**ELEMENTS OF ELECTRO METALLURGY.** By ALFRED SMEE, F.R.S. Published by E. PALMER, 103, Newgate Street.

The art of working in metals through the agency of the galvanic fluid is the last of those profitable wonders exhibited by science, of which thousands already avail themselves, without bestowing a thought upon the natural laws whereby they obtain the substantial results which they seek. To those who do not wish to go beyond the mechanical operation of procuring a duplicate of a figured surface, the present treatise is not addressed, although such persons would, with infinite advantage, consult it in an inquiry into the nature of the agency excited in the simplest experiment. The work is published in monthly parts, of which three are before us: the first opens with a chapter on galvanic batteries, and although commencing with a few preliminary definitions, yet the author presupposes a knowledge of chemistry. Different forms of batteries are tested of, as Grove's, Daniell's, the author's, &c., &c. In the second chapter a piece of very necessary information is communicated—the signs of a battery in action; for without such information, an unscientific experimenter could not discover when the galvanic action had commenced. The author proceeds in a careful and perspicuous consideration of his subject in all its relations, terminating the third part midway, in a chapter on the laws regulating the reduction of the metals employed. "Let us never forget," he says, "to whom we owe this discovery, which of itself enables galvanic batteries to be used extensively in the Arts. Ages to come will, perhaps, have to thank the inventor, whom we are too apt to forget, because he was neither on the council of the Royal Society, nor a London Professor, yet still the obligation from the public to Mr. Kemp is the same."

**THE BEDALE HUNT.** Painted by ANSON MARTIN. Engraved by W. H. SIMMONS. Publishers, H. GRAVES and Co.

A capital print for the lovers of field sports. It is among the best signs of the times, that gentlemen who are learned in horses and hounds are no longer content to have them copied by unskilful hands. This is a good work of Art—the steeds and their riders are pictured with much ability, both, we presume, being striking likenesses; and no doubt the pedigree of the one is just as distinctly traced as that of the other—each being high blood. The print contains no fewer than forty portraits of persons whose names are familiar to the sporting calendar; and, moreover, to the "Court Guide," for they all hold conspicuous rank among our English aristocracy. The painter has been very successful in his management of a difficult subject; his grouping—the main point in such a matter—is excellent, and he has arranged his figures with considerable ease and skill. Mr. Simmons, the engraver, has performed his part of the task with much ability; we have been accustomed to meet him as a line engraver, and in that branch of the art he has attained to eminence; in this, to him, new department he is destined to occupy a prominent place.

**GLASGOW ILLUSTRATED.** Published by J. and D. NICHOL, Montrose. LONGMAN and Co., London.

This is the third part of a progressive work en-

titled "Nichol's Cities and Towns of Scotland Illustrated," and contains twenty-one folio-sized views of Glasgow, executed in lithography, and touched with white, the first of which is the 'Interior of the Royal Exchange,' an imposing structure of Greek architecture. In the plate 'Broomielaw,' is presented a view of the port of Glasgow, affording a fair picture of a place of immense mercantile traffic: the effect would yet have been better had the artist treated his distances more liberally, and not sacrificed them so entirely to the foreground. The reverse of this is the 'View from Blythswood-square;' the distance is not shut out of the picture, but remains an important part of it. 'The Trongate,' at least that part of it forming the subject of the plate, declares a place of wealth and consideration. The population are astir here; they are as numerous as

"bees"  
In spring time, when the sun with Taurus rides," and in perfect humour with the rest of the drawing. The view, entitled 'Ingram-street,' is not only one of the best of the series, but has merits which entitle it to a comparison with the best productions of its style: the general effect is skilfully managed, and the palatial edifice on the left is brought forward in a manner to unite with the surrounding buildings, without any diminution of its stateliness. Another admirable picture is 'Glasgow from the Clyde;' it is carefully drawn, without the slightest approach to hardness. 'The Royal Exchange,' conveys a good idea of the structure, and the kind of buildings by which it is surrounded; this seems to be the *quartier par excellence*: here it would appear is centered the pith of the architecture of Glasgow. There are also views of 'The High-street,' 'The Cathedral, Infirmary, and Barony Church;' 'George-square,' 'St. Vincent-street,' &c., &c.

This, as a provincial publication, must be considered as of some importance, and we wish the proprietors all the success their spirited undertaking deserves: the manner in which it is got up ought to secure an extensive circulation.

**GANDY AND BAUD'S WINDSOR CASTLE.**  
PART VII.

Nothing in architectural drawing and engraving can exceed the beauty of these plates, which have been executed with a view to exhibit the details of Windsor Castle. They are five in number, two lithographed by Haghe, and three engraved by Winkles, viz.: 'Part of the North Front showing the Cornwall and King George the Fourth's Towers,' &c.; 'View of Henry the Third's Tower;' 'Elevation of Charles the Second's Buildings, and King John's Tower,' &c.; 'Elevation of the Kitchen Gateway and Towers;' 'Elevation of the Queen's Private Entrance.' The first view is most elaborately lithographed—it is taken from the grounds below the terrace, and presents a vast expanse of front, showing in addition to the towers already named the erections of Henry the Seventh and Queen Elizabeth, in rear of the latter of which rises the Round Tower. The second view is also a carefully finished lithograph, exhibiting with the most perfect accuracy the construction of the buildings, and embracing, together with the 'Tower of Henry the Third,' a portion of the range of the Middle Ward Ramparts, with the Wickham Tower seen in the distance. The effect of these drawings is improved by the highest lights, being put in with white. To architects these views and elevations will be highly valuable.

**L'ESPAGNE ARTISTIQUE ET MONUMENTALE.**  
Published by A. HAUSER, Boulevard des Italiens, Paris.

Successive numbers from 8 to 12 of this work have appeared, verifying the promise held forth in the first parts; indeed with subjects selected from a country so rich in the picturesque as Spain, much might be achieved by individual taste and talent; but from such an array of celebrities as are occupied in the production of these views, with the accompanying letter-press in Spanish and French, everything is to be expected. We have already pronounced this the most important continental publication of the kind we have seen: having for a part of its subject-matter, the Moorish architectural remains in Spain, it treats of things which have existed only, in Europe, but yet are not of it; and the history of which is a tract wherein the real and the romantic are reconciled. Toledo supplies

many of the subjects of these plates; and surcharged as they are with ornament, yet the faithful pencil has not halted in its task; the artist is not to blame that so many of these interiors are overdone with carving and fret-work, such was the taste that prevailed when the wealth of Spain exceeded that of every other power—when other kingdoms since grown up were but as yet cadets of the European family of nations. The lithography sustains the reputation of those to whom it is entrusted; and the enterprise cannot fail of encouragement.

**A HANDBOOK FOR FREE PICTURE GALLERIES.**  
By FELIX SUMMERLY. Published by BELL and WOOD.

We find in this little book much useful information with respect to public galleries. It contains a Catalogue of the National and Dulwich Galleries, of the pictures of the Soane Museum, of the Society of Arts, and of those of the British Museum. In his introduction the author states that of every seventy-six visitors one only purchases a shilling catalogue; that his object in publishing this was to offer something cheaper to the many who may desire a list of the pictures, but who may be unwilling to pay the official price. To the numerical list of each collection is appended an alphabetical list of the painters, their chronology, their schools, and references to their pictures—offering altogether as much information as the mass of visitors have leisure to acquire.

**THE ELEMENTS OF LINEAR PERSPECTIVE, AND THE PROJECTION OF SHADOWS.** By W. BARNES (of St. John's College, Cambridge). Published by LONGMAN and CO.

As a short treatise, this is one of the most comprehensive we have ever seen. It is illustrated by sixty-one diagrams cut on wood by the author himself, and is addressed chiefly to mathematical students, although available in affording instruction also to others. In Part 2nd the Projection of Shadows is clearly treated of in sixteen propositions with abundant explanatory figures; and what we much admire in the little book is, that the subjects are at once entered upon without any useless preliminaries.

**CHARACTERISTICS OF PAINTERS.** By HENRY REEVE, Esq. JOHN MURRAY, Albemarle-street. In this little book the characteristics of many of the most celebrated artists are ably described, each in a few lines of poetry prefaced by an apposite motto. "They were first written down as a kind of sport in Art, to describe the painters to whom they severally relate, by some awakened association with a favourite picture, or some general characteristic of the artist's genius," and they are evidently written by one well read in the masters of the Art.

**THE CASTLES AND ABBEYS OF ENGLAND.** Nos. I. and II. By WM. BEATTIE, M.D. Published by MORTIMER and HASELDEN, Wigmore-street.

This is a highly interesting subject. A History of the Castles and Abbeys of England is, in short, a history of the land and its most influential inhabitants. The first part describes the Castle of Arundel, in Sussex, the principal seat of his Grace the Duke of Norfolk. This castle, or rather the fortress of the time being, has been a place famed in the annals of all times, since that of Alfred the Great, who bequeathed it to his nephew Athelm, together with other lordships. The ducal house of Howard succeeded to the possession of it in 1581. The second part of the work traces downward the history of the Howard family, particularly that of its most distinguished members. The work is illustrated by numerous engravings.

**TRANSACTIONS OF THE ROYAL INSTITUTE OF BRITISH ARCHITECTS.** Vol. I., Part II. Published by LONGMAN, BROWN, GREEN, and Co. 1842.

It cannot be deemed other than a reproach to the members of this now large and influential Association, that more than five years have elapsed since the publication of the first part of their first volume of Transactions. The success which attended that first part was so eminent that a second edition was speedily called for; and it therefore seems clear nothing but lack of fitting materials could have prevented the committee from

again appearing before the public. Do the architects consider it *infra dig.* to communicate the result of their practice to their younger colleagues, and implying a want of more profitable occupation? or can they fear making their contemporaries as well informed as themselves? We will not suspect either. Their silence proceeds from inertness and apathy, which it would be well for them at any cost to rouse themselves from and shake off. Until architects write more than they now do, their art will not hold that place in public estimation to which it is fairly entitled. It should be their aim to disseminate information on their art in all shapes and by every means in their power, so as to lessen existing ignorance on the subject, and increase the number of competent judges. Moreover, so far as their own improvement is concerned, "writing maketh an exact man," and induceth close thinking.

The volume before us is a most valuable contribution to architectural literature, and cannot fail to maintain the reputation of the Institute at home and abroad; but it affords, nevertheless, a proof of our assertion, inasmuch, that of the eleven communications which it contains, five, and those the most important, are by non-professional men or foreigners, namely, "On the Construction of the Vaults of the Middle Ages," by R. Willis, M.A., Hon. Member; and "On the Characteristic Impenetrations of the Flamboyant Style," by the same author; "The History of Greco-Russian Ecclesiastical Architecture," by Herr Hallmann (a very interesting communication); "Particulars of the Cost of Public Buildings in Prussia," by Herr Beuth; and "Observations on Stone used for Building," by Mr. C. H. Smith, the sculptor, one of the gentlemen who were deputed by Government with Mr. Barry to select stone for the New Houses of Parliament.

The remaining papers are, "On the Contemporary Styles of Gothic Architecture in England and France," by Ambrose Poynter, Fellow; "Report of the Committee appointed to examine the Elgin Marbles as to the employment of Colour for Decoration," "On the Heights of Entablature," by Joseph Gwilt, F.S.A.; "On Warming the Long Room of the Custom House," by Chas. Fowler, Hon. Sec.; and two communications "On the Stone Arch between the West Towers of Lincoln Cathedral," by Messrs. Nicholson and Papworth.

Remarks, however brief, upon each of these papers, would make this article far exceed our limits; we must therefore content ourselves with a few observations on two or three of them. Professor Willis's paper calls for, and will repay, attentive consideration. The art of masonic projection has been much more studied in France than in England, and has been treated of by various writers there, since the time of De L'Orme, and more especially by Frezier, who published in 1737 "La Theorie et la Pratique de la Coupe des Pierres et des Bois pour la Construction des Voutes," &c. "The meaning of the term *coupe des pierres*," observes Frezier, "is not that which it first presents to the mind; it does not exactly signify the work of the artisan who cuts the stone, but the mathematical science by which the design of a vault is carried out, or a mass of a certain figure formed by an assemblage of small parts. In truth," he continues, "it requires more ingenuity than might at first be thought necessary, so to arrange the component parts that, although of unequal shape and size, they may fit in one with another to form a surface, either regular or regularly irregular, and that they may support themselves with no other connexion than their own gravity, for the mortar or cement ought never to be taken into consideration."

With this art the builders of the middle ages were well acquainted, indeed they may be said to have originated it; and it is therefore interesting and valuable to trace, from an examination of the buildings themselves, the methods they employed. It is only from such examinations we can hope to arrive at the principles which guided our forefathers in the construction of the works they have left for our admiration, and without a knowledge of which we can never hope successfully even to imitate them. Mr. Willis has executed his task with a masterly hand, and has conferred a fresh obligation on the profession. We may observe the Essay occupies 69 quarto pages, and is profusely illustrated by engravings.

The inquiry instituted by Mr. Poynter on the contemporary Gothic of France and England is one of much interest, and is very successfully treated. As Rickman observed in his valuable chapter on the same subject, "The styles of architecture in different countries are not contradictions, but members of the same family, with local differences." The absurd claim of remote antiquity set up by some of the French antiquaries for Coutances Cathedral, and some other buildings in France, would, if substantiated, have rendered the chronology of architecture very different in one country from the other. This, however, having been quite set at rest by Mr. Gally Knight and some other English writers, the parallel can now be drawn closely. Three very nice lithographs of French churches accompany the essay.

Under the head of Construction, Mr. Smith's dissertations on building-stones (with a map of the Isle of Portland and section of the quarries) are the most important contributions: indeed, these papers cannot be studied too attentively by the young architect desirous, as all ought to be, to arrive at a full understanding of the subject. It is not merely skill in drawing or even powers of design, which constitute an able architect. A general knowledge of all the sciences must be acquired by those who would play an efficient part, amongst which chemistry and geology should on no account be overlooked. We trust the Institute will henceforth make their Transactions an annual, as they would so unquestionably effect much good.

**ENGRAVINGS FROM THE WORKS OF THE LATE SIR THOMAS LAWRENCE, P.R.A. Part I.**

This part contains portraits of Sir William Grant, the Hon. Mrs. Ashley, and Abernethy, the famous surgeon. The collection will be very valuable to the artist; for the ease and grace which the President gave to his sitters, afford important lessons; and these advantages can be communicated without the aid of colour. The series is well engraved, and the work altogether is a monument to the memory of the accomplished painter.

**TO CORRESPONDENTS.**

A portrait-painter, at Manchester, calls our attention to a rule, which he strongly condemns, of the West of England Art-Union, providing that the winner of a prize "will be allowed to have the portrait of a member of his family painted by an artist chosen by himself." The principle is entirely bad; and can be defended upon no good ground.

A correspondent informs us that, "when people asked Wilson what he painted with, he said *honest linen*, which he always used out of a hollow oyster-shell."

In answer to the objection concerning our letters on "Vehicles," we have only to say that good *may* arise out of them; we confess, however, that we are not sanguine on the subject. But it is only by discussion we can discover truth; and we do not occupy a very large space in considering the matter—one certainly of very great importance.

A correspondent requests us to give to "Sir Robert Peel a hint there is at this time a sketch of Rubens, the centre of the Whitehall ceiling, now to be disposed of. It was at Wilkie's elbow when he painted; it was purchased at his sale; and would be one of the most valuable additions to the National Gallery that could be placed there, as it is one of his most pure and brilliant studies."

Our Glasgow correspondent will perceive that we have anticipated his information. We are glad to find that, "considering the general depression of trade that has for some time existed in this great emporium of the west, we may well conclude, that a true spirit for the encouragement of Art is rapidly extending itself throughout all classes of the community."

We have elsewhere referred to the forthcoming "Report of the Royal Commission," of which we shall, of course, give a full abstract.

We hope to hear again of the movements of our correspondent at Antwerp.

There can be no possible objection to the course which "An Amateur" considers desirable in reference to Birmingham.

The particulars relative to the plate required at Manchester may be known by application to the Secretary. An advertisement on the subject appeared in the ART-UNION for July.

### ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.

**C. J. ECKFORD, 45, FLEET-STREET,** corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

### SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES M'LEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**CHIMNEY GLASSES, PICTURE FRAMES, CHEVAL AND TOILET GLASSES, CONSOLE TABLES, WINDOW CORNICES, SCREENS,** and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer, by **P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT,** St. Martin's-lane.—P. G. manufacturing every article on the premises, is thereby enabled to offer them at such low prices that he defies competition. An extensive assortment of Ornamented Gilt and Fancy Wood Picture Frames kept ready. Regilding in all its branches in a superior manner, at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given free of charge. A list of the prices of Plate Glass, &c. sent, pre-paid, to any part of the Kingdom. A quantity of Picture Frames of every size, that have been some time on hand, at reduced prices.

### PAPIER MACHE PICTURE FRAMES.

**ARTISTS, PICTURE DEALERS, and others,** are respectfully informed that **C. F. BIELFIELD** has formed a large collection of new and elegant designs for PICTURE FRAMES, in the IMPROVED PAPIER MACHE. The superiority of these Frames consists in their having all the effect of old carved work; many of the patterns represent exactly the finest carvings of the seventeenth century. The small parts are far less liable to injury than putty work; Papier Mache being a remarkably tough and hard substance, it never shrinks, and takes gilding very freely. The Frames do not weigh one quarter the weight of others, and their price is below that usually charged. Many specimens are now on view at **BIELFIELD'S PAPIER MACHE WORKS, 15, WELLINGTON-STREET NORTH, STRAND;** where, also, pattern books may be had, price 14s., consisting of a variety of patterns of Picture and Glass Frames, and Window Cornices, already erected and on sale.

### PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.**—**THOMAS BROWN** begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by **Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.**

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "**BROWN'S PATENT**" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

**TO GENTLEMEN, ARCHITECTS, and Others.**—**SLOPER'S CONTINENTAL MARBLE PAPER HANGINGS,** invented and manufactured only by **J. SLOPER, No. 106, HIGH-STREET, MARYLEBONE.**—J. S. solicits an inspection of his Continental Marble Papers, expressly adapted for halls, staircases, &c., being natural imitations of the most beautiful foreign marbles, worked in blocks of any dimensions, and differing in every way from anything hitherto manufactured in England, well deserving the attention of all connected with good buildings. Good bed-room paper, 1d. per yard; handsome drawing-room, 8d.; dining and library, 6d.; best gold moulding, 6d. per yard. House painting and decorating 15 per cent. less than usually charged. Estimates given. Patterns sent to all parts of the country.—Observe, **J. Sloper, 106, High-street, Marylebone.**

**OAK CARVINGS for CHURCH DECORATIONS, &c.**—**Messrs. BRAITHWAITE and CO.,** Proprietors of the patent method of CARVING in SOLID WOOD, beg leave to invite the Nobility, Clergy, and Architects, to view their Specimens of Oak Carvings, suitable to the Gothic Embellishments of Cathedrals and Churches, such as Stalls, Panelling, enriched Tracery, Chairs, Communion-rails, Tables, Altar-screens, Pulpits, Reading-desks, Lecterns, Stall-heads, Finials, Organ-screens, Gallery-fronts, &c., at one half the price usually charged.

Estimates given, and contracts entered into, for the entire fitting-up, restoration, or repairs, of any Cathedral, Church, or Mansion.

By their process a most important saving in expense and time will be found in the fitting or repairs of Churches or Mansions, either in the Gothic or Elizabethan style, in any description of wood. It is equally applicable to Elizabethan or Gothic Furniture, such as Chairs, Book-cases, Cabinets, Tables, Picture-frames, Coats of Arms, Mouldings, &c., &c.—No. 5, HENRIETTA-STREET, COVENT-GARDEN.

**NOTICE.—PATENT RELIEVO LEATHER HANGINGS and CARTON-TOILE OFFICES,** 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of **F. LEAKE and CO., 52, Regent-street,** where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foilages, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c., &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.

**L. COMETTI and CO., 10, Rue Basse du Rempart, Paris.**—May 25, 1842.

**DIMES and CO. (LATE WARING and DIMES) ARTISTS' COLOURMEN, 91, GREAT RUSSELL STREET, BLOOMSBURY.**

**F. DIMES** begs to inform the Profession, himself and Mr. George Waring has been DISSOLVED by mutual consent, and that in future the Business will be continued under the name of **DIMES and CO.**

To those Gentlemen who have given their patronage to the late firm, he begs to return his grateful acknowledgments, trusting to have their continued support, assuring them that all the articles he manufactures and sells shall receive every attention to insure the best quality. Subjoined is enumerated a few Articles, to which attention is respectfully requested:—

**CANVASS WITH INDIA RUBBER GROUND.**—The eligibility of this article having been thoroughly acknowledged, and it having received the patronage of the first artists in the kingdom, those gentlemen who desire that the labours of their pencils should be preserved from the effects of time (too visible in some of the finest productions of the Art), this Canvass is particularly recommended, as it is never subject to crack or peel, and the surface is very agreeable to paint on.

**Patent Collapsible Metallic Tubes for Oil Colours.**—The Patentee having thrown these Tubes open to the trade, D. and Co. can supply them at 6d. each colour, extra colours also in proportion; also, tubes of Oils, Varnishes, M'Guelp, and Asphaltum.

**Zinc Tablets for Painting in Oil.**—The surfaces of these Tablets are well adapted for highly-finished paintings, and superior to panels or milled boards.

**Water-Colours in Cakes or Moist, filled in mahogany or japanned boxes for sketching.**

**Whitman's Drawing Paper, all sizes and thicknesses.**

**J. D. H., ditto.**

**Tinted or Academy Paper, in great variety of tints for chalk or pencil.**

**Genuine Cumberland Lead Pencils, warranted of pure lead.**

**Chalks and Crayons of all descriptions.**

**French, Hog, and Sable Hair Brushes for Oil and Water-Colour Painting.**

**Marble Slabs mounted, prepared for Miniature Painting.**

**Drawing Boards, Enscels, T Squares, and every article for Architectural Draughtsmen.**

**Drawings and Paintings lent to copy.**

## MILLER'S SILICA COLOURS.

The daily increasing patronage bestowed on these Colours by Artists of the first eminence, while it is gratifying in the highest degree to the inventor, is, at the same time, an acknowledgment of the soundness of those principles upon which they are manufactured. It will be sufficient to repeat that, being composed of substances identical or similar to those used by the old masters (the brilliancy of whose works, after the lapse of centuries, is an incontestable proof of the superiority of ancient colouring). The Silica Colours will ever retain their freshness, transparency, and gem-like lustre uninjured by atmospheric influence and unimpaired by time.

The SILICA OIL COLOURS are prepared in collapsible tubes, and can be forwarded per post to any part of the country, on receipt of an order, for any of the under-mentioned tints, viz.:

### Pale and Deep Red.

Pale and Deep Blue.	Pale and Deep Yellow.
Pale and Deep Orange.	Pale and Deep Purple.
Pale and Deep Green.	Pale and Deep Brown.
White and Half Tint.	Grey and Black.

### VAN EYCK'S GLASS MEDIUM FOR OIL PAINTING.

This Medium, having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'guelps, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

### Glass Medium in Bottles.

No. 1. For first and second painting.

No. 2. For third painting, finishing, and glazing.

Any of the above Media may be thinned, according to the taste of the Artist, with Miller's Florentine Oil.

**T. MILLER,** being the original preparer of this INVALUABLE MEDIUM, has the honour of supplying the President and Members of the Royal Academy.

The SILICA WATER COLOURS are prepared in small squares, which possess many and great advantages over the Cake and Moist Water Colours at present in use; and can be forwarded per post to any part of the country, on receipt of an order for any of the above-mentioned tints.

### MILLER'S GLASS MEDIUM.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after; this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints uninjured; in durability it will approach nearer to Oil Painting than anything hitherto in use.

### Glass Medium in Bottles.

No. 1. For first colouring or laying on masses of colour. This dries so hard that the second colouring or finishing will not disturb it.

No. 2. For second colouring, glazing, and finishing.

### PREPARED BLACK LEAD IN CAKES.

This beautiful preparation of Black Lead is a substitute for the Lead Pencil, over which it possesses many advantages; among which are the depth and clearness it imparts to the shadows of the drawing, and the softness and delicacy with which the lighter parts may be handled. As it is used (like a water-colour) with the camel's-hair pencil, it admits of great rapidity of execution and boldness of effect, as a large surface may be speedily covered, and intense and delicate tints produced with equal facility; and without any of the porousness which is so apparent in the lead pencil, or the least risk from rubbing or exposure.

**MILLER'S ARTISTS' COLOUR MANUFACTORY, 56, LONG-ACRE, LONDON.**

**THE SOUVENIR OF THE BAL COSTUME.**  
**MESSRS. PAUL AND DOMINIC COLNAGHI AND CO.,** Publishers to her Majesty the Queen, 14, Pall Mall East, beg to state that they have been honoured by her Majesty's commands from the Lord Chamberlain, to insert in the first portion of the "SOUVENIR," the following Personages composing her Majesty's Court of Edward the Third:—

The Queen	Colonel Arbutnot
Lady Jocelyn	Earl Jernyn
Hon. Mrs. Anson	Earl of Beverley
Hon. Miss Liddell	Duke of Buccleuch
Hon. Miss Devereux	Marquis of Salisbury
Countess of Rosslyn	Earl De Grey
Viscount Sydney	Duchess of Buccleuch
Lord Charles Wellesley	Lady Portman
Earl of Rosslyn	Hon. Mrs. Brand
Colonel D. Damer	Hon. Miss Paget
Colonel Reid	Hon. Miss Stanley
Marquis of Normanby	Duchess of Roxburghe
Earl of Arundel	Captain Seymour
The Prince	Colonel Wyke
Earl of Liverpool	Lord E. Bruce
Earl De la Warr	Lord Forester
Earl of Jersey	Duke of Roxburghe
Marquis of Exeter	Earl of Warwick
Marquis of Ormond	Four Pages of Honour
Captain Ducombe	

In accordance, therefore, with her Majesty's commands, the earlier Numbers will contain the entire Court of her Majesty as Queen Philippa, and Supplementary Numbers will from time to time appear, continuing the Quadrilles. The work when completed will bind up in two volumes.

Vol. I. The Court of her Majesty as Queen Philippa.  
 Vol. II. The Duchess of Cambridge's Quadrille.

Contents of the first Supplementary Number:  
 Her Royal Highness the Duchess of Cambridge Beaufort  
 Her Grace the Duchess of Sutherland The Countess of Jersey

The work will be completed in fifteen or twenty Numbers, from drawings by Mr. Coke Smyth, to whom every person portrayed will have sat for their likeness. Messrs. Colnaghi have secured the services of J. R. Planché, Esq., F.S.A., for the prefatory matter and descriptive letterpress.

No. 2 is now ready.

Contents: { Viscountess Jocelyn | Earl De la Warr  
 { Lady Portman | Earl of Jersey.  
 Subscribers' names received by the Publishers, at their sole Establishment, 14, Pall Mall East. Price per Part, 21s. correctly coloured.

N.B. With the publication of the Third Number, the price of each Part will be raised to 28s. to Non-Subscribers.

Messrs. Colnaghi beg that this work may be considered with no other. They have authority to announce that this publication is the only one dedicated to the Queen and Prince Albert, and under her Majesty's immediate patronage.

Published this day, 12mo., 2s. 6d. cloth,  
**THE ELEMENTS OF LINEAR PERSPECTIVE** and the PROJECTION OF SHADOWS; adapted to the use of Mathematical and Drawing Classes and Private Students. With Sixty-one Diagrams on Wood. By W. BARNES, of St. John's College, Cambridge.

London: Longman, Brown, and Co.; and Hamilton and Co.

**THOMSON'S SEASONS ILLUSTRATED.**  
 Published this day, square crown 8vo., 21s., handsomely bound in ultramarine cloth; or 36s. bound in morocco, in the best manner by Hayday.

**THOMSON'S SEASONS.** Edited by BOLTON CORNELL, Esq., with the Life of the Author, by PATRICK MURDOCH, D.D., F.R.S. With nearly Eighty engraved Illustrations, from Designs drawn on Wood by eminent Artists.

\*.\* One hundred copies, on prepared paper, £2 2s. each.

London: Longman, Brown, Green, and Longmans.

Just published, imperial 8vo., handsomely bound, 24s.,  
**THE USE OF A BOX OF COLOURS.** By

HARRY WILLSON, author of "Fugitive Sketches in Rome, Venice," &c. &c. Being Practical Instruction on Composition, Light and Shade, and Painting. Illustrated with beautiful Patent Lithotint examples, plain and coloured. Also a Box of neutral Landscape Tints have been prepared to accompany the same.

London: C. Smith, 34, Marylebone Quadrant; Tilt and Bogue, Fleet-street; and all other Publishers, Stationers, &c.

**CEMENT.**—To ARCHITECTS, BUILDERS, and Others.—**THE PATENT STUCCO PAINT CEMENT.** Its extraordinary qualities are rapidly becoming well known and appreciated. It will adhere to any substance or surface. No Wet, or Damp, or Frost, can have any effect on it; time hardens and improves it; a house covered with it becomes encased in stone; the cost is trifling; the invention is a fortune to builders, and to all who are interested in house property, old or new.

The sole agents for the Patentees are Messrs. MANN and Co., 5, Maiden-lane, Queen-street, Cheapside.

## MR. MURRAY'S HANDBOOKS FOR TRAVELLERS,

Giving detailed and precise Information respecting  
 STEAMERS, PASSPORTS, TABLES OF MONIES,

JOHN MURRAY, ALBEMARLE-STREET.

This day is published, price 5s., the  
**BOOK OF BRITISH BALLADS.**

Edited by S. C. HALL, Esq., F.S.A.  
 Part III. containing—The 'Blind Beggar' (concluded); illustrated by J. Gilbert; engraved by Vize-telly—'Robin Goodfellow'; illustrated by R. Dadds; engraved by Green—'Sir Patrick Spens'; illustrated by J. Frankling; engraved by Armstrong—'Gil Morice'; illustrated by K. Meadows; engraved by Smith and Linton—'Sir Aldingar'; illustrated by J. Gilbert; engraved by Gilks and Folkard—'Sir Lancelot Du Lake'; illustrated by E. Corboud; engraved by Smith and Linton.

Also,  
**THE ILLUSTRATED ITINERARY OF LANCASHIRE:** with seven landscapes, engraved on steel—a map of the country, and 170 woodcuts,—being the second volume of "England in the Nineteenth Century," price 22s. 6d., in half-morocco.

London: How and Parsons, 132, Fleet-street.

Messrs. COLNAGHI and PUCKLE, No. 23, Cockspur-street, Charing-cross, Printers to her Majesty the Queen, have to announce the publication of the following Engravings and Works, viz., Portraits of

1.  
**HER MAJESTY and H. R. H. PRINCE ALBERT.** Engraved by FREDERICK BACON, Esq., from the original Miniatures painted by W. C. Ross, Esq., A.R.A., her Majesty's Miniature Painter.

2.  
**H. R. H. THE DUCHESS OF KENT.** A Companion to the Portraits of her Majesty and the Prince, by the same Artists.

These beautiful Prints, executed in the line manner, are of the same size as the Miniatures, and are as much suited for framing as for the Portfolio of the Amateur. They are acknowledged to be by far the best Portraits of her Majesty, H. R. H. the Prince, and H. R. H. the Duchess of Kent. Prints, 10s. 6d. Proofs, £1 1s. Autograph Proofs, £2 2s.

3.  
**HIS GRACE THE DUKE OF WELLINGTON.** A half-length Print, engraved by T. H. RYALL, Esq., Engraver to the Queen, from the original Picture by H. P. Briggs, Esq., R.A., painted for the Right Hon. Lord Warburton. Of this admirable Picture, by far the best likeness of his Grace since the celebrated Portrait executed in 1823 by Sir THOMAS LAWRENCE, for the Right Hon. Charles Arbutnot, one cannot speak too favourably. It represents the Duke in the fullness of years and wisdom. Prints, £1 1s. Proofs, £2 2s. Autograph Proofs, £3 3s.

4.  
**THE RIGHT REV. JOHN KAYE, DD.** Lord Bishop of Lincoln, visitor of King's College, Cambridge, and Lincoln and Brzenose College, Oxford, F.R.S. The Print by Mr. RYALL, from Mr. S. Lane's very excellent Portrait of his lordship, is of the usual size of half-lengths. Prints, £1 1s. Proofs, £2 2s. Autograph Proofs, £3 3s.

5.  
**HER MAJESTY'S DOGS, DASH, NERO, and HECTOR,** and a favourite LORY. Engraved in Mezzotint by FREDERICK BACON, Esq., from the original Picture in the Royal Collection, by EDWARD LANDSEER, Esq., R.A. This is in size a Companion to Mr. Cousins's celebrated Print of "Bolton Abbey." Prints, £2 2s. Proofs, £4 4s. First Proofs, £6 6s.

6.  
 The following will be published in the course of the month:—

**TWENTY-FOUR VIEWS IN THE FRENCH PYRENEES,** Lithographed by HAGHE, BOUEN, DODGSON, ALLOM, WALTON, &c., from the original Drawings, executed upon the spot by WILLIAM OLIVER, Esq. A work of great fidelity and extremely well executed, forming an excellent companion to Vivian, Roberts, Hughes, Haghe, Lewis, &c. Plain copies, with tint, £4 4s. Coloured copies, mounted, £10 10s.

**PARLOUR'S PATENT DELINEATOR.**—This beautiful Instrument, having been greatly improved and simplified by the Patentee, is now offered to the public in its present portable form, at the reduced price of £2 2s. It is universally allowed to be infinitely superior to the Camera Lucida for the purpose of Drawing or Sketching from Nature.—Manufactured and sold, wholesale and retail for the Patentee, by his Agents, Messrs. REEVES and SONS, 156, Cheapside, London; and may be had of all Opticians, Stationers, or at Artists' Repositories.

**RAND'S PATENT METALLIC COLLAPSIBLE TUBES FOR OIL COLOURS.**

**J. RAND,** the Inventor, Patentee, and sole Manufacturer of the above, during the time they were known to the profession solely under the name of "Brown's Patent," has made arrangements with Messrs. Winsor and Newton, of 38, Rathbone-place, by which that firm are supplied by him with Tubes of the same description as those so long supplied by J. Rand to Mr. Brown.—August 1st, 1842.  
**WINSOR and NEWTON,** of 38, RATHBONE-PLACE, respectfully announce, that they have on sale Oil Colours in Rand's Patent Collapsible Tubes, wholesale, retail, and for exportation.

The **NEW COPYRIGHT ACT**, with an Explanatory Introduction and copious Explanation; and the Act in full. By a BARRISTER. As is of essential import to all Book, Print, Map, and Music Publishers and Printers; to Authors, Artists, and all Patrons of Literature and the Fine Arts.

James Gilbert, 49, Paternoster-row.  
To Calico Printers, Paper Stainers, Inventors and Manufacturers of all Articles to which Designs may be applicable for pattern, shape, configuration or ornament.

Preparing for immediate publication, in post 8vo., Dedicated to J. EMERSON TENNENT, Esq.,

**OBSERVATIONS on EXTENSION of PROTECTION**, with a view to the improvement of BRITISH TASTE; including THE ACT, passed August, 1842,—for consolidating and amending the Laws relating to THE COPYRIGHT OF DESIGNS, to which will be added legal and practical Notes, with instructions relative to the Registering of Designs. By GEORGE BRACE, Secretary to the Linen Drapers', Silk Mercers', Lacemen's, Haberdashers', and Hosiers' Institution.  
London: Smith, Elder and Co., 65, Cornhill.

Just published, price 16s.,  
**THE SKETCHER'S GUIDE**; a light and portable Apparatus for Drawing Landscape, and other Outlines, in Perspective, without Elementary Knowledge. To which is added, a Compendium of the Rules of PERSPECTIVE and EFFECT.

By W. F. ELLIOT, Esq.  
There are few persons, unacquainted with the art of Drawing, but have (either when travelling, or at other periods of their lives), had frequent occasion to lament that deficiency. The difficulties in the way of sketching objects correctly, without a knowledge of the laws which regulate Optical Perspective, have been so great, and hitherto so forcibly felt, as to be considered insuperable. Messrs. Fuller, however, are happy to announce, that, in "The Sketcher's Guide," they have perfected an apparatus, extremely simple, and as portable as a hand-book, by means of which those obstacles are overcome; and any person, by simply attending to the printed instructions, may draw Landscapes, or other objects, as faithfully as they are presented to the eye.

And, in order to simplify and encourage the study of Perspective and pictorial composition, they have added to the above a Synopsis of the Rules of Perspective and Effect; clearly and popularly written, and containing numerous Illustrative Examples.

To persons travelling, either on the Continent or elsewhere, "The Sketcher's Guide" will be an invaluable companion; as, by its assistance, there is not a single scene of interest but may be secured, to give birth to pleasurable, if not useful, reminiscences at some future period. The student in Drawing and Perspective will also find it an important help. It will facilitate his progress by demonstrating practically the application of the rules he may have learnt theoretically. At the same time, the letter-press and illustrations will teach him the most approved methods of combining and treating his subjects to compose a picture.

Orders should be immediately given to Messrs. Fuller, 34, Rathbone-place, or through any Book or Print-seller in Town or Country.

London: Published by S. and J. Fuller, at their Temple of Fancy and Artists' Repository, 34, Rathbone-place.

PUBLISHED THIS DAY,  
**FINDEN'S ROYAL GALLERY OF BRITISH ART.**

Part X. Containing:—

1. **THE LAKE OF NEMI.** Painted by J. M. W. TURNER, R.A.; Engraved by R. WALLIS.

2. **RUSTIC HOSPITALITY.** Painted by W. COLLINS, R.A.; Engraved by J. OUTRIM.

3. **THE LUCKY ESCAPE.** Painted by W. F. WITHERINGTON, R.A.; Engraved by S. FISHER.  
 Engraved in the finest LINE manner, from the ORIGINAL PICTURES, and delivered in a handsome Portfolio.  
 Price: Prints, £1 5s.; India Proofs, £2 2s.; Before Letters, £3 3s.

LONDON: Published for the Proprietor, by T. G. MARCH, No. 4, HANOVER-STREET; sold also by F. G. MOON, 20, Threadneedle-street; and ACKERMANN and Co., Strand.

Just published, in 4to., price £2 2s., in French boards, and on royal paper; with proof impressions of the Plates, price £4 4s., half morocco, gilt tops,  
**DISCOURSES** delivered to the **STUDENTS** of the **ROYAL ACADEMY**, by Sir **JOSHUA REYNOLDS**. Illustrated by Explanatory Notes, and Twelve Plates. By **JOHN BURNET, F.R.S.**, Author of "Hints on Painting," in 4to., price £4 10s.  
 James Carpenter, Old Bond-street.

Published in 4to., Price £4 10s. in French Boards; and on Royal Paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, Price £7 7s.,  
**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By **JOHN BURNET, F.R.S.**

1. On the **EDUCATION OF THE EYE.** Second Edition. Price £1 5s.

2. On **COMPOSITION.** Fifth Edition. Price 15s. in boards.

3. On **LIGHT and SHADE.** Fifth Edition. Price 18s. in boards.

4. On **COLOUR.** Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Students in Art in the New Edition of the *Encyclopædia Britannica*—See the article on Drawing.  
 James Carpenter, Bond-street.

Will be published, in one volume, 4to.,  
**SELECTIONS** from the **LETTERS** and **OTHER PAPERS** of the late **JOHN CONSTABLE, ESQ., R.A.**, comprising Notes of his Lectures on the History of Landscape Painting. Arranged, and connected with a Memoir of his Life, by C. R. LESLIE, Esq., R.A. And interspersed with the twenty-two Mezzotint Engravings by D. Lucas, from the Pictures of Mr. Constable, originally intended to form a work entitled "English Landscape."

As the number of copies printed will be limited to One Hundred and Fifty, the impressions of the Engravings, which are on steel, will all be equal to proofs, and the price of the work, to Subscribers, will be Two Guineas and a Half in boards.

Subscriptions will be received by Messrs. Paul and Dominic Colnaghi, Pall-mall East; Mr. J. Carpenter, Old Bond-street; Mr. D. T. White, 28, Maddox-street, Hanover-square; and Mr. Tiffin, 434, Strand; at whose establishments Specimens of the Engravings may be seen.

*Extract from the Preface to the Work.*

"The lives of painters are considered to afford but few materials calculated to engage the attention of the generality of readers. They are not often diversified with what is called 'stirring incident'; yet the 'adventures of the mind' of an artist cannot be without interest, and the progress of so entirely original a mind as Constable's will be found to differ from that of most others, as greatly as a voyage of discovery differs from a passage through well-known seas.

"The materials placed in the hands of the editor were ample, and the difficulty of selection proportionally great. His object is to trace, as far as it can be done, in Mr. Constable's own words, a narrative of his studies, and this necessarily includes some account of his domestic life; for in him the affections of the heart were so inseparably blended with the professional character, that it did not seem possible to give a true impression of the painter without making the reader acquainted with the lover, the husband, the father, and the friend.

"The subjects of the beautiful engravings that adorn the volume are all from scenery connected with Mr. Constable's earliest associations, and those of later periods of his life; and there is no other instance in which the memoirs of so eminent a painter, almost entirely from his own pen, have been illustrated by the productions of his own pencil."

**PARLOUR'S PATENT DELINEATOR.**

This beautiful Instrument, having been greatly improved and simplified by the Patentee, is now offered to the public in its present portable form, at the reduced price of £2 2s. It is universally allowed to be infinitely superior to the Camera Lucida for the purpose of Drawing or Sketching from Nature.—Manufactured and sold, wholesale and retail for the Patentee, by his Agents, Messrs. REEVES and SONS, 150, Cheapside, London; and may be had of all Opticians, Stationers, or at Artists' Repositories.

**PERSPECTIVE and DRAWING MODELS** for TEACHING ELEMENTARY PRACTICAL PERSPECTIVE DRAWING, LIGHT and SHADE, &c. Acknowledged, generally, as the best possible introduction to Landscape Drawing upon certain principles. Being composed of Geometrical and separate Pieces, are capable of many hundred variations. Illustrated and complete in box, price £1 1s.  
 C. SMITH'S ARTISTS' REPOSITORY, 34, MARYLEBONE-STREET, QUADRANT.

**PAINTING IN OIL.**

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES**, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.—**THOMAS BROWN** begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "**BROWN'S PATENT**" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

**DIMES and CO. (LATE WARING and DIMES), ARTISTS' COLOURMEN, 91, GREAT RUSSELL-STREET, BLOOMSBURY.**

**F**o that the **PARTNERSHIP** subsisting between himself and Mr. George Waring has been **DISSOLVED** by mutual consent, and that in future the Business will be continued under the name of **DIMES and CO.**

To those Gentlemen who have given their patronage to the late firm, he begs to return his grateful acknowledgments, trusting to have their continued support, assuring them that all the articles he manufactures and sells shall receive every attention to insure the best quality. Subjoined is enumerated a few Articles, to which attention is respectfully requested:—

**CANVASS WITH INDIA RUBBER GROUND.**—The eligibility of this article having been thoroughly acknowledged, and it having received the patronage of the first artists in the kingdom, those gentlemen who desire that the labours of their pencils should be preserved from the effects of time (too visible in some of the finest productions of the Art), this Canvass is particularly recommended, as it is never subject to crack or peel, and the surface is very agreeable to paint on.

**Patent Collapsible Metallic Tubes for Oil Colours.**—The Patentee having thrown these Tubes open to the trade, D. and Co. can supply them at 6d. each colour; extra colours also in proportion; also, tubes of Oils, Varnishes, M'Guep, and Asphaltum.

**Zinc Tablets for Painting in Oil.**—The surfaces of these Tablets are well adapted for highly-finished paintings, and superior to panels or milled boards.

**Water-Colours in Cakes or Moist, filled in mahogany or japanned boxes for sketching.**

**Whatman's Drawing Paper**, all sizes and thicknesses. J. D. H., ditto.

**Tinted or Academy Paper**, in great variety of tints for chalk or pencil.

**Genuine Cumberland Lead Pencils**, warranted of pure lead.

**Chalks and Crayons** of all descriptions.

**French, Hog, and Sable Hair Brushes** for Oil and Water-Colour Painting.

**Marble Slabs mounted**, prepared for Miniature Painting.

**Drawing Boards, Easels, T Squares**, and every article for Architectural Draughtsmen.

**Drawings and Paintings** lent to copy.

**MILLER'S SILICA COLOURS.**

The daily increasing patronage bestowed on these Colours by Artists of the first eminence, while it is gratifying in the highest degree to the inventor, is, at the same time, an acknowledgment of the soundness of those principles upon which they are manufactured. It will be sufficient to repeat that, being composed of substances identical or similar to those used by the old masters (the brilliancy of whose works, after the lapse of centuries, is an incontestable proof of the superiority of ancient colouring). The Silica Colours will ever retain their freshness, transparency, and gem-like lustre uninjured by atmospheric influence and unimpaired by time.

Prepared for Oil and Water-Colour Painting of the under-mentioned tints, viz:

Pale and Deep Red.

Pale and Deep Blue.

Pale and Deep Orange.

Pale and Deep Green.

White and Half Tint.

Pale and Deep Yellow.

Pale and Deep Purple.

Pale and Deep Brown.

Grey and Black.

**VAN EYCK'S GLASS MEDIUM.**  
**FOR OIL PAINTING.**

No. 1. For first and second painting.

No. 2. For third painting, finishing, and glazing.

Any of the above Media may be thinned, according to the taste of the Artist, with Miller's Florentine Oil.

**MILLER'S GLASS MEDIUM.**  
**FOR WATER-COLOUR PAINTING.**

No. 1. For first colouring.

No. 2. For second colouring, glazing, and finishing.

T. M. begs to call the attention of Artists to his new Drawing-Paper, made of pure linen only, without undergoing any chemical process.

**MILLER'S ARTISTS' COLOUR MANUFACTORY,**  
 55, LONG-ACRE, LONDON.

**THE PATENT EASEL.**

**W**INSOR and **NEWTON** respectfully inform the Profession and the Public, that this admirably-constructed Easel, the invention of M. BONHOMME, of Paris, is manufactured by them with considerable improvements on the French model, and with the advantage of the best English workmanship.

W. and N. are induced to submit this Easel to the Profession in England by the high encomiums and great patronage bestowed upon it in France, where the ingenious Inventor, not only obtained a prize for the merits of his Easel at the National Exposition of Manufactures and Inventions, but also received from the Government a liberal reward for the assistance he rendered to the Professors of Art.

Though possessing the advantages of the largest Easels, by standing firmly and holding steadily paintings of a very large size, M. BONHOMME's invention occupies no more space than the smallest of the Artists' Easels now in use, and certainly not so much as the greater number of them.

The position and height of a painting may be adjusted with the utmost facility by a novel arrangement, which permits even unusually large works to be, when placed on this Easel, as much under control as smaller ones. The painting can also be sloped or thrown forward to any angle most favourable for the view, and this forward inclination can be adjusted with ease and exactness.

It presents a neat and even elegant appearance, and is peculiarly fitted as well for all purposes of exhibition as for the studio; affording the utmost convenience for the advantageous display of large or small works. The connoisseur who desires to exhibit his gems of Art in a manner adapted to make the most favourable impression, obtains in the improvements here brought forward an auxiliary hitherto much required.

The Easel to be seen at **WINSOR and NEWTON'S**, Artists and Colourmen to Her Majesty and His Royal Highness Prince Albert, 38, Rathbone-place, London.

## REPORT OF THE COMMISSIONERS ON FINE ARTS.

THIS important National document having been "presented to both Houses of Parliament, by command of her Majesty," has been printed, and is now before the public. It must be regarded, however, as but the first of "a Series," for it deals only with the topic concerning Frescoes—a very minor, and, after all, a comparatively insignificant branch of the mighty subject upon which the nation has been at length summoned to "legislate." Unhappily the period at which Parliament has been called on to receive—if not to consider—the document, is unpropitious. Interests still more weighty, and far more embarrassing press upon the Government, the Peers, and the Commons; consequently the newspapers have been utterly silent in regard to its reception; we believe it was presented without eliciting a single remark from any noble peer or honourable commoner, having been "laid upon the table" in silence, if not with indifference. Still it is an augury of great good to come; it is, indeed, a huge step in advance for British Art, to have the attention of the legislature directed to it; even if the kingdom paid for promoting it no more than the printer's bill, it would be a larger national grant than has been hitherto issued for the promotion of its welfare, and the extension of its benefits. But it is unquestionable that vast results will follow this first solemn recognition of the Arts in England by the State; we hail this publication as the herald of a new order of things, as affording evidence that the Arts are no longer to be regarded by the nation as less worthy its consideration than a bill for building a jetty; that the public money may be expended upon objects of higher import than park gates and stables; and that a new and powerful public teacher, for whom employment has never yet been found in Great Britain, is at length to be retained by the Legislature.

Our present purpose, however, is to devote as much space as we can spare to the "facts" contained in this "Report;" leaving to future occasions the comments we may consider either useful or necessary.

Our readers are aware that the commission was appointed by her Majesty, on the 22nd day of November, 1841. It consisted of His Royal Highness Prince Albert, Lord Lyndhurst (the Lord Chancellor), the Duke of Sutherland, the Marquis of Lansdowne, the Earl of Lincoln, the Earl of Shrewsbury, the Earl of Aberdeen, Lord John Russell, Lord Francis Egerton, Lord Palmerston, Lord Melbourne, Lord Ashburton, Lord Colborne, Shaw Lefevre, Sir Robert Peel, Sir James Graham, Sir Robert Harry Inglis, and H. G. Knight, Benjamin Hawes, jun., Henry Hallam, Samuel Rogers, George Vivian, and Thomas Wyse, Esqs.; and at the same time her Majesty appointed Charles Lock Eastlake, Esq. to be secretary to the commission.

In the introduction to the Report the Commissioners state as follows:—

"We, the Commissioners appointed by your Majesty for the purpose of inquiring whether advantage might not be taken of the rebuilding of your Majesty's Palace at Westminster, wherein your Majesty's Parliament is wont to assemble, for the purpose of promoting and encouraging the Fine Arts in your Majesty's United Kingdom, and in what manner an object of so much importance might be most effectually promoted, humbly report to your Majesty that we have taken into our consideration the matters referred to us, and have given due attention to the report of the Committee of the House of Commons, in 1841, on the Fine Arts, together with the opinions of various other competent persons on questions relating to the special objects for which the present Commission was appointed, and have consulted the Architect as to the manner in which various kinds of internal decoration would affect his intended architectural arrangements; and we beg now to report our opinion that it would be expedient that advantage should be taken of the rebuilding of the Houses of Parliament for the purpose of promoting and encouraging the Fine Arts in the United Kingdom.

"Having thus come to an opinion on the first point to which our inquiry was directed, we have, in conformity with the instructions contained in our Commission, proceeded to consider in what manner the above-mentioned purpose could best be accomplished. With this view we have, in the first place, directed our attention to the question whether it would be expedient that Fresco-painting should be employed in the decoration of the new Houses of Parliament; but we have not yet been able to satisfy ourselves that the art of Fresco-painting has hitherto been sufficiently cultivated in this country to justify us in at once recommending that it should be so employed. In order, however, to assist us in forming a judgment on this matter, we propose that artists should be invited to enter into a competition in Cartoons, and we have prepared the draft of an announcement on the subject, offering premiums of public money, to which we request the sanction of your Majesty.

"In framing this announcement we have felt that although the competition which we at present wish to invite, has reference chiefly to Fresco-painting, yet if we were to confine our notice entirely to that method of painting an inference might be drawn therefrom that we intended to recommend its exclusive adoption for the decoration of the new buildings. We have, therefore, inserted in our announcement paragraphs, intended to explain that the future attention of the Commission will be directed to the best mode of selecting for employment artists skilled in oil-painting and in sculpture, and that due consideration will be given to other methods and departments of Art applicable to decoration generally."

This is in fact "the Report;" it is signed by all the members except the Lords Ashburton and Shrewsbury, both of whom are abroad.

It will be observed that—in reference to an advertisement inserted in the ART-UNION, June 1842—the commissioners, although they have offered "premiums for cartoons," have done so only in order to "assist them in forming a judgment" whether "it is expedient that fresco-

painting should be employed in decorating the new Houses of Parliament;" and it by no means follows that their decision will be favourable to this branch of Art. We are inclined to think that it will be against the introduction of "the novelty." Many and strong arguments have been adduced on both sides; but the feeling in favour of frescoes has certainly not been increased by the discussion.

There is one consideration that cannot fail to have great weight with the commission, and one which at present cannot enter into consideration of the question; it is this—our *leading British artists will not compete*; the prizes, therefore, will of necessity be distributed among comparatively inferior professors; and as the frescoes, if to be done at all, should, we think, be selected from the examples of artists who will have competed, it follows, as matter of course, that our eminence in this department of the Arts cannot be sustained as it may be sustained in others. Of this fact her Majesty's commissioners are not, we believe, aware; for they seem to consider it "expedient that fresco-painting *should* be employed in the decoration of the new Houses of Parliament"—if we may judge from the space occupied in their report in treating the several branches of the subject; for considerably more than half the printed volume is filled with matter concerning it—beginning with the "Statements of Cornelius," and continuing with "Various Communications on Fresco-painting," and a treatise on "Methods of Fresco-painting described by Writers on Art;" terminating with a description of "Lime fit for Fresco-painting," a "communication" from Dr. Reid (the distinguished chemist) "on the same subject," and another "communication" from him "on the Probable Effects of Gas on Fresco-painting."

Whether our "leading artists" are or are not justified in withdrawing from the contest for honourable and profitable employment, we do not now propose to inquire; but we know that the majority of those who have been promoted to "high places" by the suffrages of the Profession and the public voice, do not mean to submit cartoons as candidates either for prizes or for occupation in the way contemplated. We regret this; because we think it only just, wise, and right that men of distinction should have replied to the first call which the nation has made upon genius in the Arts. To this topic it will be our duty to revert.

But as we have said, our space will, this month, be better filled by transferring the Report to our columns, than by any reasonings or speculations of our own upon the subject. We shall have—and so will our correspondents—abundant opportunities for criticism. In printing the whole of this important document, we shall necessarily sacrifice much of variety. It is, however, one that we cannot feel justified in abridging; for every part of it contains valuable information to the profession generally, and more especially to those who design to study fresco-painting. The whole of the "Introduction" (for such it properly is) bears the signature of Mr. Eastlake.

Our readers will perceive that his own views—and they will no doubt greatly influence those of the commissioners—are in favour of the introduction of frescoes. They will of course be sufficiently criticised and canvassed; but with that respect which his great acquirements, high character, and undoubted genius, entitle him to receive.

## THE GENERAL OBJECT OF THE COMMISSION CONSIDERED IN RELATION TO THE STATE AND PROSPECTS OF THE ENGLISH SCHOOL OF PAINTING.

As the commission is understood to take up the present inquiry where the Committee on the Fine Arts, appointed by the House of Commons in 1841, left it, it will be proper, by way of introduction, to recapitulate the leading opinions expressed in the report of that committee.

It was there observed that "the chief object

aimed at by the appointment of the committee," was "the encouragement of the Fine Arts of this country;" that it was "requisite that a plan should be determined upon, and that as soon as practicable, in order that the architect and the artist or artists to be employed, may work not only in conjunction with, but in aid of each other; that thus the abilities of both would be exerted for the decoration of so eminently national a building; and at the same time encouragement beyond the means of private patronage would be afforded, not only to the higher walks, but to all branches of Art." The report proceeds to recommend the employment of fresco-painting in the decoration of the new Houses of Parliament, suggesting, however, the necessity of further information and inquiry.

The appointment of the commission has fully secured the latter, and the general objects of the committee have been recognised in the notice respecting a competition already prepared for publication under the sanction of her Majesty's commissioners.

It is here proposed to consider the question of the decoration of the Houses of Parliament with reference to the state and prospects of the English school of painting. And first it is to be observed that, although "all branches of Art" may be entitled to the consideration of the commission, historical painting is not only generally fittest for decoration on a large scale, but is precisely the class of painting which, more than any other, requires "encouragement beyond the means of private patronage." The want of such encouragement has long been regretted, not by professors only, but by all who have turned their attention to the state of painting in England; a proof that the promotion of historic art is an object of interest with a considerable portion of the public.

The inference is not unimportant; for an already existing estimation of the higher aims of Art, is in itself an earnest of their success. The desire which has been manifested for historical painting would not be entitled to attention if it could be traced to a passing influence, or to a disposition to imitate what had been achieved in other countries, since this could only lead to the adoption of superficial qualities, betraying, sooner or later, the absence of a vital impulse. Such attempts would be the more likely to be ineffectual, if a different style, however humble, really corresponding with the national taste, were at the same time cultivated with marked success. The history of Art is not wanting in examples of schools and of periods, with regard to which it might be a question whether a sudden demand for historical painting would have been a boon to the artists or to the lovers of Art. The Dutch school of the seventeenth century might be adduced as a case in point.

It may here be remarked that, even where the direction of national taste is favourable to the cultivation of historical painting, the peculiar difficulties of that branch of Art must sometimes place it in unfavourable contrast with inferior departments more commonly practised, and in which a relative perfection is more commonly attained. The disadvantages resulting from this contrast are peculiar to modern times: at the revival of Art and during its progress to excellence the efforts in the grander style were not in danger of being undervalued, or stimulated to injudicious rivalry, by such a comparison. No school exclusively devoted to indiscriminate imitation then existed. The present influence of such schools and examples may partly account for and excuse the occasional fastidiousness of modern amateurs with regard to efforts in historical painting, and may render a consistency of style more difficult for the historical artist.

These admissions with regard to the present difficulties of the highest style of Art cannot, however, render it necessary to vindicate its abstract claims; the sole question for consideration now is, whether in this country, and at this time, there exist grounds for hoping that historical painting could be cultivated with success, and whether it would awaken a more general interest, if it were duly encouraged by the State.

That the actual estimation of this department of Art has direct reference to the moral wants of our own nation, is further proved by the repeated exertions of individuals in proposing plans for the promotion of the higher style of Art, by the generous encouragement occasionally extended to its votaries by others, but above all by the efforts of the artists

themselves. For it must always be borne in mind that the aims of the artists are not to be considered as accidental predilections apart from the public feeling, but as representing a portion of that feeling. However variously modified by other influences, the formative arts must always express the manners, the general taste, and, to a certain extent, the intellectual habits of the nation in which they are cultivated; the chief conditions with regard to the last being, that the objects of mental interest should be analogous to the pursuits of taste, and at the same time familiar to that portion of the public to which the Arts are addressed.

But to whatever extent the mind or manners of a nation may be communicable to its productions in Art, the result is to be looked for rather in general tendencies than in degrees of technical excellence, and is especially to be sought where controlling influences, even of a salutary kind, are least likely to interfere with the free expression of national taste. Thus, the indications in question are not so evident in religious subjects, in which a common education, and long consecrated themes, have tended to elevate to a common standard the taste of the civilized world; nor are they so distinctly manifested even in certain subjects of local interest, such as the acts of illustrious individuals, and the commemoration of national events; themes which patriotism has everywhere supplied, and which presuppose a uniformly ennobling influence. The proper and peculiar tendency, the physiognomy, so to speak, of national taste, is to be detected in more spontaneous aims; in the direction which the arts have taken, when their course has been unrestrained, save by the ordinary influence of the intellectual and moral habits of society.

It might be interesting to trace the connexion between the Arts and national culture and character under such conditions; but the general truth of the view above taken has been so often dwelt on by the historians of Art, that it must be unnecessary to adduce examples of such a connexion where circumstances must render it more than commonly direct. If it were proposed to compare the English school of painting (as regards its general tendency) with the schools of other countries, it would, however, be just to consider the direction of taste in the latter when art has not been employed in the service of religion and patriotism, for it is under these circumstances that painting has been cultivated in England. The result of such a comparison would tend to vindicate the aim and character of the English school.

But the inference from the above statement, which is more immediately applicable to the present question, is, that the efforts of the English artists in the higher branches of their profession are to be regarded as an evidence of the tendency of taste in a considerable portion of the public, and it remains to observe that both the efforts and the taste may be almost irrespective of the common relation between demand and supply, since the due encouragement of the higher branches of Art may be "beyond the means of private patronage." This apparent contradiction of a moral demand for a particular class of art, existing independently, in a great measure, of its usual consequences—the actual employment of those who, with due encouragement, might respond to it, is explained by the fact that the decoration of public buildings, with a view to moral or religious purposes, has always been necessary for the formation of a school of historical painting. The history of Art shows that whatever may be the extent of general education, the service of religion or the protection of the state is indispensable, at the outset at least, for the full practical development of the highest style of painting. Thus formed and thus exercised historic Art lives and is progressive, but with the aid, however liberal, of private patronage alone, either its aim becomes lowered, or its worthier efforts are not sufficiently numerous to re-act on the general taste.

To many it may appear unnecessary to assert the capacity of the painters or of the public for the cultivation or appreciation of elevated Art; but it must be remembered that while the great stimulus and support of public employment is wanting, the exertions of the artists are gradually compelled into other directions; and some observers, looking at this result alone, may draw erroneous inferences from it,—may sometimes hastily conclude that pictures of familiar subjects, which have been of late years predominant and deservedly attractive,

represent the universal and unalterable taste of the nation.

Such observers might, however, at the same time remark that the productions in question oftener approach the dignity of history than the vulgarity of the lower order of subjects, and either by the choice of incidents, or by their treatment, still attest the character of the national taste. The evidence of an intellectual aim in familiar subjects, may be therefore considered as an additional proof that the artists of England want only the opportunities which those of other nations have enjoyed, in order to distinguish themselves in the worthiest undertakings. But to place this question in its proper light it will be necessary to take into consideration the peculiar circumstances under which the English school has been formed.

The great impediments to the cultivation of the higher branches of Art have been already adverted to. With few exceptions, painting in England has not been admitted into churches (a subject which it is not intended here to discuss), nor has it been employed to any extent in the embellishment of public buildings. Other difficulties have existed, owing to various accidental circumstances.

The perfection which the great Italian masters arrived at, was the result, it is true, of slow experience, but happily for them the more ornamental and fascinating qualities of the Art were attained last. With the English school it was the reverse. Its rise in the last century was remarkable for sudden excellence in colouring and chiaro-scuro, an excellence so great, as to eclipse contemporary efforts in a severer style, while it gave a bias to the school. The peculiar union of what are called the ornamental part of the Art, with those essential to history, which has prevailed in England, not unattended with some sacrifice of more solid qualities, has been generally attributed to this influence.

This mixed character became more decided in consequence of the circumstances under which the school was developed; namely, the subsequent introduction and prevalence of a style suited to small dimensions. Most of the distinguished English artists in the time of Reynolds, painted the size of life. The experiment, as regards private patronage, seems to have been then fairly made, and the gradual change to reduced dimensions, appears to have been the consequence of the insufficient demand for large works, arising in a great degree from the limited size of English dwelling-houses.

Hence the execution of small historical pictures, a practice recommended by the occasional example of the best masters of every school; but where the subject is dignified, smallness of dimensions cannot consistently be accompanied by smallness of treatment. Minute imitation is not found in Correggio's Gethsemane, nor in Raphael's 'Vision of Ezekiel,' diminutive as they are. The breadth of manner which is indispensable in such elevated themes is not, however, essential in familiar subjects, and hence, when specimens of both styles, similar in size, but widely different in their technical conditions, are placed together, the impression produced by so marked a contrast is unsatisfactory, without reference to the difference of subject.

Thus, partly through the influence of the "ornamental" character of the school, and partly to prevent this abrupt contrast of treatment in pictures which are to hang together in galleries (for under such circumstances, the more abstract style appears to disadvantage), the kind of historic Art chiefly followed, is that which admits picturesque materials, thus combining the attractions of familiar subjects with the dignity of the historic style. Under such influences has been formed an interesting portion of the more modern English school, distinguished, on the one hand from the Dutch, and on the other, from the small works of the Italian masters, embracing a great variety of subjects, sometimes scarcely removed from the familiar, sometimes approaching the grandest aim.

The circumstances that have led to the general adoption of a small size are thus, it appears, accidental, and the actual practice of our painters cannot be adduced as a proof of their original choice of such conditions. The frequent efforts on their part, amid various difficulties, to recommend larger dimensions, are a sufficient proof of the real inclinations of the artists. These efforts have not been confined to the ardour of youthful inexperience; many of our best artists have returned to, or per-

severed in such undertakings to the last; with some, the ambition to encounter the difficulties of this style was first kindled at an advanced period of their career. In the last century all the principal English artists, notwithstanding Hogarth's success in small pictures, were in the habit, as already observed, of painting the size of life—Reynolds (considered as an historical painter), West, Barry, Fuseli, Copley, Northcote, Opie, and others.

It cannot, therefore, be admitted that the artists of England are, by their own choice, confined to small dimensions; but the questions now are,—

Whether it is possible to afford more favourable opportunities than those which have hitherto existed for the adequate display of historic Art?

Whether such opportunities will be sufficiently numerous? for if not, the school, after attaining the excellence which honourable employment will assuredly call forth, may again languish; and lastly,

Whether such encouragement will be in danger of diverting the taste and practice of some artists from that domestic Art which is now so successfully cultivated?

The first of these questions, while it is immediately connected with the special object of the commission, involves the consideration of the abstract relation of dimensions to styles of Art. This subject has been often discussed on grounds independent of technical requisites, and as very different opinions have been the result, it may here be allowable, without undervaluing the conclusions derived from other considerations, to refer to the mere physical or external conditions which must necessarily affect the question.

In comparing the treatment of cabinet pictures with that of works of the largest size—for example, where the figures are colossal—it may be observed that the small picture, besides being executed with delicacy, generally exhibits a certain fulness of detail, while the large work is not only less elaborate, but is composed of fewer parts. Even assuming the same subject, and one requiring a variety of minute accessories, to be represented on a colossal and on a small scale, it may be safely affirmed that the degree of detail which would be admissible in the small picture would be objectionable in the larger. In a grander and more ideal subject, where such detail would be inadmissible under any circumstances, the comparison could be less fairly made, but a similar influence would be more or less apparent. Thus, assuming other conditions to be common, the greater space never allows the introduction of *more* detail than the smaller, but generally, if not always, requires *less*.

Without entering into the examination of this question, as connected with the laws of vision, it may be remarked that, although the indistinctness arising from distance may be counteracted, as regards the most important qualities in Art, by increased dimensions, and by appropriate style and treatment, it must still tend to exclude certain refinements of imitation which are appreciable in pictures requiring to be seen near,—refinements capable of conferring an interest on details that may be unimportant in themselves. The inference is at once applicable to the question proposed. The familiar subject, as fullest of accidental circumstance, must be best displayed in dimensions fitted for near inspection, and, in an advanced state of Art as regards imitative excellence, must be a consequence of the habitual adoption of such dimensions. On the other hand, the larger the figures in a picture, the greater the distance at which the work must be seen; and as the omission of detail is a consequence of that reduced scale of gradation which distance supposes,—as the absence of minute particulars is felt to be the attribute of distance without reference to the size of objects, so the accessories in the larger work of Art require to be few and important. Thus, again increased dimensions, by involving the suppression of detail, suggests subjects of corresponding dignity.

Such appears to be the relation of dimensions to style and subject, considered with reference to technical results: as regards the question of taste, it may be observed that the involuntary conclusions derived from the influence of association agree with the practice of Art. The analogy between grandeur and the absence of detail, and between minute circumstance and familiar incidents, is sufficiently apparent. With these analogies, the impressions produced by magnitude and its attributes, and by the opposite qualities, respectively correspond.

The general relation thus defined has often been reversed in works of Art, but not with equally good results, for it may be remarked that large works, when elaborate in detail, and full of accidental circumstance, have the unpleasant effect of magnified cabinet pictures; on the other hand, diminutive historical works, when treated with that breadth which belongs to the grandest style, must give the impression of large works diminished. The last-mentioned inconsistency can hardly be objected to; grandeur of conception and treatment must unquestionably be acceptable in any form, but nevertheless, the abstract breadth of imitation which is indispensable in elevated subjects is, under the circumstances supposed, a kind of contradiction, inasmuch as the vague generalization of a distant or ideal effect is submitted to close inspection, and can only be so viewed. The small pictures by Raphael and Correggio, before referred to, are of this description; but the instances of such subjects being treated on so minute a scale are not frequent.

It is unnecessary to enumerate other exceptions, or to refer to larger works in which a just adaptation of style may have tended to obviate an incongruity between subject and dimensions. It may be sufficient to dwell on those plainer principles which result from the technical and external conditions that have been considered, but which may afford a criterion with regard to some of the more arbitrary conventions of works of Art.

It may be added, that even the extreme conclusions which might be deduced from the conditions referred to, are strictly conformable to the authority of the grandest examples of Art. The loftier aim of imitation thus defined, may seldom be literally compatible with the usual range of subjects; but in this instance again, the criterion, as such, may be admissible. Thus, assuming the representation to be dilated to its full measure, details of costume, illusion, and even the more delicate varieties of colour are no longer fitted for the dimensions. But in proportion as the subordinate excellences of imitation are excluded by the nature of the existing technical conditions, the display of the nobler qualities still attainable becomes more necessary. As the resources of Art become circumscribed, the artist's aim becomes elevated. In the highest style of painting, as in sculpture, the representation of inanimate substances ceases to be satisfactory when they no longer directly assist impressions of beauty or grandeur: and the styles of Art in which the living form can be least dispensed with, are precisely those which, by the abstract character of their imitation, render it less objectionable.

The foregoing considerations may warrant the conclusion that the grandest style of Art is best displayed in large dimensions. It will also follow that the treatment of subjects fitted for such dimensions, must tend to ennoble the style and taste of the artist.

Works of such magnitude cannot be often in demand for ordinary dwelling-houses; hence, while pictures are excluded from churches, the places in which it is possible and desirable to employ the higher branches of Art will be the national and municipal public buildings; all localities, in a word, where painting can be displayed to the public in its highest and most didactic form.

But will such opportunities and means of encouragement be sufficiently numerous and enduring? The answer to this important question can be best anticipated by the exertions of the artists; it may be reasonably expected that the employment of national talent in a great national building, will serve as an example throughout the country, and that the style of Art which will be thus recommended and promoted, may be even adopted in fit situations for the decoration of the mansions and villas of affluent individuals.

In answer to the third question proposed, namely, whether the encouragement of historical painting may tend to alter the direction of the taste and practice of those artists pursuing the hitherto more thriving and popular branch of Art; it may be allowable to observe that even such a danger would be no just argument against the employment of deserving candidates for fame in another department. But the long neglected interests of the historical painters can, it is believed, be promoted without interfering in any degree with the prosperity of the class in question. That school is already formed; and the cause to which it chiefly owed its rise,—the possibility of its productions

being placed in apartments of ordinary dimensions, must insure its duration; added to which, the societies for the encouragement of Art by subscription and lottery, have solely in view the acquisition and distribution of comparatively small pictures. The object now is to find opportunities as fit (they cannot possibly be as numerous) for the development and display of historical painting on a large scale. Whatever may be the influence of the proposed encouragement on the rising generation of artists, it is at all events desirable that inclination should be free; that the inheritors of that enthusiasm, which prompted the best English artists of the last century to offer to decorate St. Paul's cathedral and other buildings at their own expense, may no longer ask in vain even for space.

The general tendency of the national talent has been hitherto considered, in a great measure, apart from the question of the actual qualification of the artists. It may be sufficient, in reference to this part of the subject, to acknowledge that the difficulties of the style of Art, which is now proposed, may be peculiarly great in England, owing to the circumstances before adverted to, and that no common energy may be necessary to surmount such difficulties. But while the artists are expected to show themselves worthy of entering on that career which is now opening to them, it is but just to remind the enlightened judges of Art who refer to the great works of other countries, that those works were the result of repeated essays, and that considerable time was necessary for the formation of the taste and practice of those who produced them. In justice to the artists, the trial should be as fairly made in England.

On ordinary occasions the imitative arts may be considered as adventitious embellishments; but in proposing to adorn an important national edifice, where it is essential that a characteristic unity of design should be maintained throughout, painting should appear as the auxiliary of architecture. It was thus that it was employed in the best ages of Greece and Italy, and it was thus that its highest development was insured. In the present instance the chief decorations in painting will be required to be on an extensive scale. The difficulty of keeping large masses of canvas well stretched during all changes of weather, has been considered an objection to the employment of that material under such circumstances. The evil here alluded to may be seen in its worst form, in the ceiling of the chapel at Whitehall, owing to the surface of the paintings being highly varnished. The fittest kinds of painting, for the decoration of architecture, are those which can be applied, when required, to every surface, curved as well as plain; and for such general decoration, fresco—recommended as it is by the example of the great masters—appears to be better adapted than any other method.

The objections to the employment of fresco in London, on account of the smoke, have not been overlooked, and various information respecting the mode of cleaning such paintings has been collected. The opinions of Director Cornelius on the subject will be found in his statements (Appendix No. 3). Professor Hess, on being consulted on this point,\* remarked that "if frescos were painted in the open air in London, the rain would be the best picture cleaner." The observation is so far important, that it assumes the possibility of washing frescoes freely without injury to the colours. Mr. Thomas Barker, of Bath, who painted a fresco of considerable extent in that city some years since, writes:†—"To clean fresco from smoke, I know of no mode so simple or efficacious as washing the surface with pure water, using a soft sponge in the operation." Mr. Barker elsewhere observes:—"It is now seventeen years since the completion of that work;" (the fresco he painted) "if any change has taken place, it is in the colouring having become much more effective than when first completed." Mr. Andrew Wilson writes from Genoa,‡ that frescoes there are cleaned with vinegar, so as to look as fresh as when first painted. Carlo Maratti used wine in washing the Vatican frescoes, and succeeded in restoring the principal paintings, notwithstanding the injuries and neglect of nearly two centuries.§ There seems, therefore, to be no reasonable ground of

\* By Mr. William Thomas.

§ Memoir in the second edition of Bellori's Life of C. Maratti.

apprehension on this account. With regard to the effect of the English climate, no very accurate conclusions can be arrived at, as the examples of older frescoes in this country are not numerous. About the middle of the last century some frescoes were executed at West Wycombe Park, by Giuseppe Borgnis, a Milanese, under the auspices of Francis Lord Le Despenser. The paintings are exposed to the open air, yet those in the east portico and south colonnade and loggio, are in general remarkably well preserved. The paintings in the west portico, from whatever cause, have suffered considerably. The east portico is an agreeable example of the union of fresco-painting with architecture; in the soffit is a copy of Guido's 'Aurora.' Some ceilings in the interior appear to be painted in oil.

As long as any doubt is expressed as to the mode in which the antique paintings which have been preserved were executed,\* it may not be allowable to quote those works as examples of the durability of fresco-painting in particular; but they afford strong evidence of the durability of painting on well-prepared walls. Sufficient examples, however, of frescoes, properly so called, that have stood for many centuries, exist in Italy. Among them may be mentioned: at Padua the works of Avanzo, though injured in lately removing the whitewash with which they were covered; in Florence those of Benozzo Gozzoli in the Palazzo Ricardi, of Angelico da Fiesole, Masaccio, and others; in Perugia those of Perugino; in Assisi those of Giotto, (the vows of St. Francis); † these works belong to the fourteenth and fifteenth centuries. In S. Giacomo, Spello, Orvieto, Pisa, Siena, and Rome, various examples by the earlier masters are in good preservation, when unhurt by violence. The works of Luini, at Saronno and Lugano, may be mentioned as remarkable instances of frescoes in perfect preservation after three centuries. ‡ It has been supposed that the sea air at Venice may have affected the few frescoes painted in that city; but in Genoa, where the influence of the sea air is more immediate and the effect of storms more severely felt, frescoes have lasted on the external walls of houses for some centuries.§

The practice of fresco-painting, as far as description can explain it, is sufficiently detailed in the papers of the Appendix which follow, but it may be desirable briefly to examine its general qualities as a means of representation.

Its difficulties are not to be dissembled; they are, however, not the difficulties of the mere method, but arise from the necessity of an especial attention to those qualities which rank highest in art; qualities which, when not absolutely indispensable, are too often neglected. Defects in composition, form, action, expression, and the treatment of drapery, may be redeemed in an oil-painting by various merits; not so in a fresco. A style of art thus circumscribed cannot, therefore, be recommended for exclusive adoption; but if studied together with oil-painting, its influence can hardly fail to be beneficial. The great Italian masters, as is well known, practised both methods; hence their employment, frequent as it was, in fresco, led to no imperfection, but on the contrary, may be considered to have been mainly conducive to the vigorous character of Italian design.

The immediate and necessary connexion of this mode of painting with the highest aims of art fits it to embody those inventions which belong essentially to the domain of thought. As a mode of decoration for public buildings it has peculiar recommendations: no style of painting is more clear, distinct, and effective at a distance. This is partly to be referred to the thorough execution, founded on the intelligence of form, which it requires, and to the brilliancy of the material em-

ployed for the lights. But there are other causes of this distinctness of effect more directly connected with general design. With dimensions and distance, and a treatment that depends rather on power of light than on intensity or quantity of shade for its effect, a style arises which develops the elements of composition in some measure distinct from *chiaro-scuro*. The influence of these conditions is apparent in the best Italian frescoes, which, at the same time that they exhibit the happiest adaptation of perspective and foreshortening, and often the most skilful management of gradations of light, are remarkable for impressive clearness of arrangement.

This style of composition is still more apparent in the celebrated cartoons of Raphael, in which it is carried to the most emphatic simplicity, still combining the picturesque principle of depth, as opposed to the flatness of *basso-relievo*. These works were evidently treated with reference to the material in which they were to be ultimately executed, namely, tapestry; in that material, as wrought in Raphael's time, powerful effects of light and shade were unattainable—a defect attempted to be remedied by heightening the relief of some of the objects with gold. The figures are, however, colossal in size, as the works were to be seen at a considerable distance, and the great artist attained distinctness by means of composition almost alone. The principal figures are rendered important chiefly by the place they occupy, and the story is comprehended at the first glance; thus a skilful arrangement supplies the absence of those modes of relief which might be resorted to in oil-painting; indeed the effect of light and shade, making every allowance for the injuries of time, is far weaker than that attainable in fresco.

But assuming this general style of composition to be applicable to fresco, it cannot be objected that, owing to its peculiar fitness in the case referred to, it would in any degree disqualify the artist for the practice of composition in oil-painting; for the cartoons of Raphael have always been considered to be among the most perfect examples of arrangement and of masterly clearness in telling a story, without any reference to the particular conditions which may have influenced the painter.

In like manner as regards colouring, the practice of fresco has never been found to have any unfavourable influence on that of oil-painting, but rather the reverse. Without referring to particular works as instances of the perfection in both methods, which the Italian masters of different schools—*Francia* and *Raphael*, *Andrea del Sarto* and *Guido*, *Guercino* and *Pordenone*\* attained, it may be sufficient to mention the example of *Correggio*—in the opinion of *Reynolds*† the most consummate of painters as regards colour and execution. This great artist painted more in fresco than in oil, looking to the quantity of surface covered. In his case it is evident that even the comparative absence of depth and mass of shade in fresco had no unfavourable influence on his practice as an oil-painter, while the clearness of his colouring in his oil-paintings may not unreasonably be attributed in some degree to his experience in the other method.‡ And here it may be allowable to express the opinion that the great skill of the English artists in water colours might be the means of introducing new technical merits and a new perfection in the practice of colouring in fresco, which might again directly benefit the school of oil-painters.

The foregoing are among the considerations which it is considered might induce her Majesty's commissioners to recommend the promotion and encouragement of historical painting in connexion with the rebuilding of the Houses of Parliament,

\* For a description of *Pordenone's* principal fresco, the cupola of S. Rocco at Venice, see *Boschini*, *La Carta del Navegar Pittoresco*, Ven. 1660, pp. 90–94.

† Notes on *Du Fresnoy*, Note LV.

‡ The works of *Correggio* in fresco, are here referred to merely to show that the practice of that method has no disadvantageous influence on the practice of oil-painting; but the cupolas of *Correggio* at Parma, are by no means favourable examples of the durability of fresco. Their decay appears, however, to have been owing to the former dilapidated state of the roofs and the penetration of damp, as the lower figures are better preserved. The fresco in the tribune of S. Giovanni was destroyed in enlarging that part of the church; part of the principal group, the Coronation of the Virgin, was fortunately saved, and was inserted in the wall of the library at Parma. It is in perfect preservation, and is one of the noblest works of the master.

while a hope may be here expressed that the example will be followed on other occasions. The employment of fresco, for a portion at least of the intended works might be proposed conditionally, since it must necessarily depend on the evidence of inclination and qualification on the part of the artists, to work in that method.

C. L. EASTLAKE, Secretary.

The reader will ponder over this treatise; it is the production of an artist and a scholar, and will receive the respect even of those who may hold opinions opposed to the views of the accomplished writer.

We proceed to copy another valuable document, "THE SUBSTANCE OF SOME OPINIONS EXPRESSED BY DIRECTOR CORNELIUS ON THE PROPOSED DECORATION OF THE HOUSES OF PARLIAMENT."\*

#### THE SITUATION.

Cornelius, the distinguished artist who has executed so many works in fresco at Munich and elsewhere, inspected the plans for the new Houses of Parliament, as well as the site of the buildings, during his short stay in London in November 1841. His attention was first directed to the general situation, with reference to works in fresco. He thinks the situation unobjectionable. He has no idea that the damp of the river can have any effect on fresco paintings in rooms elevated as those in question will be, above the actual level of the water. The effects of damp in the atmosphere are not apprehended by the German painters. Many failures that might have been hastily attributed to damp, were really owing, *Cornelius* observes, to the use of lime in too fresh a state. Of the experimental works painted at Munich in the open air, those only have faded which are known to have been done without due attention to the materials. Thus, a figure of *Bavaria*, painted by *Kaulbach*, which has faded considerably, is known to have been executed with lime that was too fresh. Similar failures in less exposed situations have been traced to the same cause. The cupola of *Val de Grace* at Paris, painted in the 17th century by *Mignard*, faded soon after it was done, though sufficiently elevated above damp exhalations, because the lime used was too new.

The damp which, in the opinion of *Cornelius*, is really prejudicial to fresco, is that which is occasioned by the use of unseasoned materials—new timber, imperfectly burnt bricks, &c. The nitre which is so destructive to fresco, is that which he supposes to originate from the stones of the wall rather than from the mortar. Such causes of decay might exist in high and dry situations from want of care. But *Cornelius* lays the greatest stress on the necessity of using lime that has been long kept, since this comes in immediate contact with the colours, and is a colour itself.† When this eminent artist, in conjunction with others, painted the house of the *Chevalier Bartholdy*, in Rome, an old mason who had been employed under *Mengs* (a not unskilful fresco painter), directed their attention to this point, and it so happened that they were then supplied with lime which had been preserved twelve years. The works alluded to, though the first executed by the modern German fresco-painters, have stood perfectly well.

Among other precautions it is desirable to let the building itself dry well before painting the walls: yet *Cornelius* painted in the *Glyptothek* at Munich, not long after it was finished, from a confidence in the soundness and dryness of the materials. He, however, took the precaution to use water that had been boiled in moistening the surface and in thinning the lime.

#### THE STYLE OF THE ARCHITECTURE.

With respect to the question, whether it is possible to preserve a due congruity between the modern taste in painting and Gothic architecture, the opinion of *Cornelius* is unhesitating; but this

\* The particulars relating to the practice of fresco-painting, are extracts only from more copious details freely communicated by him. For some few allusions to facts, in the history of the Arts, connected with the subjects discussed, the Secretary of the Commission is responsible. These additions are distinguished by brackets, or are given as notes.

† As the opinion respecting the necessity of using lime that has been long kept is frequently repeated in this paper, it may be necessary to state, that other German and Italian fresco-painters do not consider it essential to keep the lime longer than ten or twelve months.—See the remaining papers in the Appendix.

\* According to Sir *Humphrey Davy's* experiments, the antique painting called the 'Aldobrandini Marriage,' was unquestionably executed in fresco; no colours were found in it but such as stand in fresco, and the white pigment was lime. (Compare Appendix, No. 5.) Other paintings appear, from his description of the materials, to have been executed in *tempera*, though he calls them fresco; but no wax (used in the *encaustic* method) was found in any of the specimens examined by this great chemist in Rome. (See *The Philosophical Transactions*, 1815, p. 97.) In *Pompeii*, specimens of *encaustic* are said to be frequent.

† Letter from Professor *Ernst Deger* of *Düsseldorf*, 4th March, 1842.

‡ Communication from Mr. *Ludwig Gräner*.

\* Letter from Mr. *Andrew Wilson*, Genoa, 28th February, 1842.

opinion, it will appear, is the result of particular views respecting the standard of pictorial excellence. He thinks the Italian works which the Germans most approve, and modern German Art itself perfectly fit for such a purpose. The works of Heinrich Hess in the Allerheiligen Kapelle at Munich are, he observes, in one sense, a case in point, since that chapel is in the Byzantine style of architecture, the date of which is still earlier than the so-called Gothic. In these frescoes the space round the figures is often gilt, and thus the rude splendour of a remote period is united with a grandeur of design derived from the purest examples of Italian Art.

It is well known that in the middle ages the cathedrals and churches throughout Europe, however varying in their style of architecture, were more or less decorated with painted and gilded ornaments and scriptural or legendary subjects. [Vestiges of paintings, even in churches where stained glass had been used, are often found concealed under whitewash, and every year brings some to light in our own country.]\* Similar works in a ruined state, have lately been discovered in the choir of the cathedral at Cologne. These are now to be replaced, Cornelius states, by Professor Steinle, and the general style to be adopted will correspond with the architecture, although the forms and draperies will be treated with a due regard to the best examples of art.

Cornelius thinks that Westminster Hall might be decorated on the same principles, with a like attention to the character of the architecture. He considers that as the walls of such buildings were sometimes hung with tapestries, they could be quite as consistently adorned with paintings. It is to be observed that in the Hall of Constantine in the Vatican, painted by Giulio Romano and others from Raphael's designs, the edges of the frescoes are made to imitate the appearance of tapestry; this treatment is also observable in some of the ceiling paintings of the Vatican, though differently contrived according to their situation. But Cornelius thinks no such approximation to the effect of hangings necessary, since paintings were quite as common as tapestry in ancient Gothic edifices. He considers the questions as to the appropriate style of sculpture and painting for Gothic buildings to rest precisely on the same grounds, and assumes that the artists of the thirteenth century would have added better ornaments to the architecture of the period if they had possessed the skill. He considers it, nevertheless, essential that a certain congruity and harmony should be preserved, less dependent on association than on general principles. He thinks that the style of some Florentine masters of the fifteenth century would harmonize well with Gothic structures of an earlier date or character.

It is here to be observed that the question of the adaptation of the style of art to the architecture is connected in the mind of Cornelius with that of the general expediency of returning to those severer principles of design which, it is acknowledged, first led to excellence in Italian Art. With these views he connects the consideration of the nature and capabilities of fresco, as a means of insuring attention to the elements of form and composition. The founders of the present German school, as is well known, at first proposed these principles and methods not as an end, but as a means which it was hoped would again lead to important results. But the attempt, according to the eminent artist so often quoted, was at the outset universally condemned. When a few individuals (with that artist himself, Overbeck and Veit at their head) began the revolution which they have now rendered comparatively popular, they had to encounter the most violent opposition and the keenest ridicule from their own countrymen; and even when, after years of perseverance, they had succeeded in gaining some favour at home, it was long before foreigners acknowledged their merit. Cornelius dwells on these circumstances in recommending the style above alluded to.

There are other considerations connected with the application of painting to Gothic architecture particularly, on which Cornelius was consulted, and which may not be undeserving of attention. The available spaces for painting in Gothic buildings are supposed to be unfavourable; the pointed

arch, sometimes introduced superficially on walls, and the acute forms produced by the simplest groings in ceilings are, it is remarked, difficult to fill satisfactorily. It is here necessary to bear in mind that the taste for this style of architecture declined in Italy much earlier than in the rest of Europe, and hence the examples of celebrated paintings in Gothic churches are rare; the works of Cimabue and other early Italian masters at Assisi, and those ascribed to Giotto in the church of the Incoronata at Naples are, however, cases in point, and had Gothic architecture continued to prevail in Italy, higher examples, it may be assumed, would not have been wanting. Cornelius does not admit that there is any unusual difficulty in adapting painting to the compartments of Gothic architecture. [It may be readily granted that all ceiling-painting is difficult to contrive and execute, but no Gothic roof, assuming the groining to be simple, could present such difficulties as Michael Angelo had to contend with, in the angles of the Sistine chapel (the architecture of which is not Gothic), where the figures are painted on a projecting ridge formed by the meeting of two curves. The celebrated foreshortened figure of Haman is painted on such a surface. A portion of the ceiling in one of the Stanzas of the Vatican, presents similar difficulties.] The more florid style of Gothic may be acknowledged to be unfit for pictorial decoration on a large scale; its surfaces being so crowded with ornamental panelling that little space remains for pictures.

Another objection to the application of painting to Gothic architecture, is the use of stained glass. A decoration so suitable in many instances to Gothic windows, is incompatible with the due effect of paintings on the walls, the colours of which require to be displayed by a colourless, and at the same time a sufficient light. This objection is met by the consideration that stained glass is not desirable nor usual in all Gothic buildings, to the extent to which it was employed in those of a sacred character. Its application elsewhere was generally less profuse, and might be so contrived as not materially to interfere with the quantity or quality of the light. In answer to a question on this subject, addressed to Cornelius by letter, he replies, "The church 'in der Aue,' at Munich, which has painted windows, is not adorned with frescoes, but the church of St. Francis, at Assisi, shows how painted windows and frescoes may be combined. The paintings discovered in the cathedral at Cologne were without doubt executed immediately after the completion of the choir."\*

#### Fresco as compared with oil-painting.

Cornelius is decidedly of opinion that fresco should be preferred to oil-painting for the decoration of the New Houses of Parliament. In pronouncing this opinion he is of course not alive to any of the considerations which would weigh with English judges respecting the present ignorance of the process of fresco in this country, and the comparative mastery of our oil-painters. In no circumstances probably could he prefer oil-pictures to fresco, in which he has for many years been constantly engaged, and in which his taste has been formed. He, however, supports his preference (at least with regard to certain applications of painting) by argument and example. He maintains that fresco is on every account fittest for monumental, permanent works in public buildings in which painting is to be considered as the handmaid of architecture. The Italian masters, he observes, were always fully impressed with the necessity of adapting their works to the effect of the architecture, so as to make one harmonious whole. The nature of fresco fits it for such a purpose. It is indeed impossible to produce that illusion which is considered so desirable in oil-pictures—the same depth of shade is not in the artist's power; but this very circumstance, while it compels attention to composition, colour, and form, renders fresco more directly appropriate for strictly decorative purposes.

On no point is Cornelius more decided, than on the necessity of placing a given series of frescoes

\* Without reference to the style of the architecture, the highest authority for the union of stained glass, to a certain extent, with paintings on the walls, is that of the Stanza of the Vatican, the windows of which were enriched with figures of angels supporting the papal arms (those of Julius II. and Leo X.), by the glass painter, William of Marselles, at the very time when Raphael was painting the frescoes of the same rooms. See Vasari, Vita di Guglielmo da Marcilla.

under the control of one directing artist. This appears to be quite compatible with the employment of many such directors, by subdividing the works; but he thinks it most desirable that in one complete series there should be a congruity of style and general execution. In Munich, where great experience has now been gained in these undertakings, several independent masters have formed scholars to work in their style, and these have been ultimately employed on original works. This gradual education of scholars is observable, if we follow the career of Cornelius himself. For example, when employed in his first work in Munich (the frescoes of the Glyptothek) the cartoons were all the work of his own hand; the assistance he received was only in the execution of the paintings. In the Pinakothek his sketches and small drawings sufficed for his pupils to prepare some of the cartoons, and lastly, in the Ludwig-Kirche the invention even of some subjects was entrusted to a scholar, namely, Hermann.\*

No new modes of cleaning fresco have been devised in Germany. To a question on this point addressed to Cornelius by letter, he replies:—"The London smoke may, undoubtedly, have a disadvantageous effect on frescoes; but with a due warmth,—for example, by the introduction of warm air or warm water in tubes,—I am of opinion that, in the situation where the new buildings are, no particular evil effects are to be apprehended. If, however, after fifty or a hundred years, it should be found that the dirt had accumulated to a great extent, the surface could be cleaned with bread. The mouldy appearance which sometimes shows itself is to be removed with a wet sponge. The mouldy efflorescence which appears in some cases may be owing to saltpetre in the walls: for this there is no remedy; but, on the other hand, it never appears when the walls are built with well seasoned and dry materials. In the Munich frescoes no saltpetre has shown itself." (An artist of Rome, Cavaliere Agricola, has been lately employed to clean the old frescoes in that city; he has published the result of his experience, and his report, which has been procured, would be among the documents to be referred to in any future inquiry relating to the modes of cleaning fresco. The method adopted by Carlo Maratti, in 1702, as I have elsewhere remarked, is also preserved.)

#### TIME NECESSARY FOR THE EXECUTION OF WORKS IN FRESCO.

The whole scheme and invention of a series of frescoes should not only be settled, but all the large drawings made by the time the building is ready; for the work can then advance rapidly. Supposing the present buildings to be ready in seven years from this time, Cornelius says it is time to begin the designs. The German artists, expert as they are in drawing, always take some years to prepare their cartoons. Cornelius's cartoon for the altar-wall of the Ludwig-Kirche at Munich was executed in Rome: he went there for the purpose. If Westminster Hall, or any other building already in existence, is to be adorned with frescoes, the wall should be prepared with the first rough coat of mortar at once; for this ought to be on the wall, if possible, for some years before it receives the final preparation immediately before painting, unless very old lime be used in the first instance: but even in that case, six or twelve months should elapse before painting on it, to give it ample time to harden.

#### THE PRACTICE OF FRESCO-PAINTING.

THE CARTOON.—It may be assumed that it is impossible to retouch a fresco painting to any extent. The portion of the work undertaken in the morning must be completed during the day. The partial remedies and contrivances in case of unavoidable delay or accidental defects will be hereafter considered.

Hence every part of this design must be defined in preparatory studies: the fresco is, in fact, a copy from these, the forms being traced on the wall from drawings the full size. [Cartoons of the kind prepared for fresco (that is, without colours) may be seen in the National Gallery; namely, those at

\* The public spirit of the German artists is apparent in the circumstance of Cornelius himself now undertaking to superintend the execution of Schinkel's designs in Berlin, with scarcely any addition of his own. His own first original work in that city, is to be the decoration of a Campo Santo.

\* Preston, Dartford, Rochester, the Chapter House, Westminster, &c.

the head of the staircase, by Agostino Carracci.\* When the painting is to be very large, and it is found inconvenient to prepare a cartoon of the same size, the drawing may be made half the size: or, the whole composition of the full size may be divided into two or more cartoons; [thus Raphael's cartoon, for the school of Athens, preserved in the Ambrosian Library at Milan, contains the figures only, without the architecture.] It is scarcely necessary to observe that the cartoon itself is, in the first instance, generally enlarged from small drawings of the whole composition, with the aid of careful studies for the separate parts. The following is the mode in which Cornelius prepares and fixes his cartoons. A strong cloth is stretched on a frame as if to be prepared for painting; paper is then firmly glued on the cloth. When this first layer of paper is quite dry, a second layer is carefully glued over it in the same manner. The edges of the separate sheets are a little scraped, where they overlap, in order to preserve an even surface. The surface is then prepared for drawing with size and alum. The drawing is made with charcoal, and, when finished, is fixed by wetting the back (the cloth) with cold water, and then steaming the drawing in front. The effect of this last operation is to melt the size a little, thus fixing the charcoal.

A finished drawing of the full size being thus ready, the outline is traced from it on oiled (transparent) paper: if the finished drawing is half the size it is enlarged by squares to the full dimensions, portion by portion; in this case the paper on which it is copied should be moderately thin, for the convenience of tracing on the wall. A part of this "working" outline (as much as can be finished in one painting) is now nailed to the wet wall, and the forms are again traced with a sharp point, which makes an indented outline through the paper on the soft plaster. The "working" drawing is generally destroyed in this operation. [The following is another mode: the paper to be applied to the wall is placed behind, and in close contact with, the finished cartoon; the outlines of the latter are then pricked, and the operation necessarily leaves a similarly pricked outline on the paper behind. The next process is to pounce the pricked outline of the latter, when fastened to the wall, with a little bag of black or red dust; this leaves a dotted outline on the wall. This method is sometimes adopted for small works, as the surface of the plaster thus remains undisturbed.] The first mode—tracing on oiled paper, and then again from it to the wall—is, however, generally preferred, since it insures the best and most decided outline, while the finished cartoon may be preserved uninjured. In many celebrated Italian frescoes the indented outline, produced by tracing, is apparent.†

It has been already observed that the fresco is a final operation; any considerable alterations that may suggest themselves when the cartoon is completed must be made on the cartoon, or rather on additional pieces of paper fitted upon it.

[One of the most interesting examples of the nature and extent of the alterations that may be introduced in a composition prepared for fresco, is the cartoon, already referred to, of Raphael's 'School of Athens.' The changes are mostly additions. The figure of Epictetus, represented in the fresco sitting in the foreground on the left, leaning his head on his hand, is wanting in the cartoon. This figure was added to fill up a vacant space, and thus the change, though a considerable improvement, involved no inconvenience. Some less important alterations in the same fresco, such as covering the head of Aspasia with drapery instead of showing her flowing tresses (for thus she appears in the cartoon), might have been made on the wall without any change in the drawing. That this cartoon was the identical one which served for the execution of the fresco is proved by the exact conformity of every part, except the additions above mentioned, with the painting.]

Beside the cartoon, in which the forms and

general light and shade are determined, it is desirable to have a coloured sketch of the whole composition, for it is almost as impossible to change colours as forms after the fresco is done. In general, the German painters are not in the habit of making complete coloured sketches for this purpose.

#### THE PREPARATION OF THE WALL.

If the wall to be painted is covered with old mortar, the ingredients of which are unknown, this coat should be entirely removed till the solid materials are laid bare. The rough coat then applied is composed of river sand and lime. The proportions of the sand to the lime may vary in different climates, and the working builder and mason are sufficiently experienced on this point. In Italy, it appears that two parts of sand were added to one of lime; the Germans generally use more sand, viz., three parts to one of lime. The thickness of the coat is such as is generally used in preparing the walls of dwelling-houses. The surface of this first application should be rough, but not unequally so; and the mason should avoid leaving cavities in it.

The wall thus prepared should be suffered to harden perfectly; the longer it remains in this state the safer it will be, especially if the lime used was in the first instance fresh. In that case, two or three years even should elapse before any subsequent operations are undertaken. Among the essential conditions of fresco-painting must be mentioned the preparation and seasoning of the lime. At Munich it is made and kept as follows:—A pit is filled with clean, burnt limestones, which, on being slaked, are stirred continually till the substance is reduced to an impalpable consistence.\* The surface having settled to a level, clean river sand is spread over it to the depth of a foot or more, so as to exclude the air, and lastly the whole is covered with earth. The German painters suffer the lime to remain thus for at least three years before it is used either for the purposes of painting (for lime is the white pigment) or for coating the walls. Cornelius prepared the lime for the Ludwig-Kirche eight years before he painted there. A great quantity is generally kept in Munich, and might, perhaps, be had from thence for works in this country. The late Lord Monson intended to have had lime from Munich for the works which Cornelius was to have done for him at Gatton. The pits or vats in which the lime is preserved are not lined with brick nor protected in any way; they are dug in the mere earth. The lime thus kept is found moist, as at first, after many years. Cornelius said that there might perhaps be no objection to lining the pits, so as to keep the lime clean, but that the usual mode was to slake it and keep it in the mode described.†

The ultimate preparation for painting on the dry, hard, well-seasoned mortar is as follows:—The surface is wetted again and again, with water that has been boiled, or with rain water, till it ceases to absorb. Then a thin coat of plaster is spread over that portion only which is to be painted; the surface of this coat should be but very moderately rough. As soon as it begins to set (in ten minutes or so according to the season), a second thin coat is laid on somewhat fatter, that is, with more lime and less sand,—about equal proportions. Both these layers together are scarcely a quarter of an inch thick. The plaster is laid on and the surfaces are smoothed with a wooden trowel—this at least is Cornelius's practice. Some painters like the last surface (which is to receive the fresco) to be perfectly smooth; one of the modes of rendering it slightly rough is to fasten some beaver nap to the trowel; another is to pass over the plaster in all directions lightly with a dry brush.

#### THE PROCESS OF PAINTING.

A portion of the outline is now traced with a sharp point on the plaster as before described, and the painter begins to work when the surface is in such a state that it will barely receive the impression of the finger, and not so wet as to be in danger of being stirred up by the brush; besides other inconveniences this would fill the brush with sand. If the wall has been previously well wetted, the plaster will not dry too rapidly; but if, during the course of a dry summer's day the surface begins to harden too much and no

longer takes the colour well, the painter takes a mouthful of water from time to time and sprinkles it over the surface, in the same manner as sculptors sometimes wet their clay models. Much evidently depends on the thorough wetting of the dry mortar, before the last preparatory coats are applied.

In painting, it will be found that the tints first applied sink in and look faint, and it is necessary to go over the surface repeatedly before the full effect appears. But after some time, especially if the surface be not occasionally moistened, the superadded colour will not unite with what is underneath. The change in some of the colours from the wet to the dry state can be best learned by experience, but it is usual to try the tints at first on a brick or tile that absorbs moisture.

After having completed the portion allotted to the day, any plaster which extends beyond the finished part is to be removed, and in cutting it away care must be taken never to make a division in the middle of a mass of flesh, or of an unbroken light, but always where drapery, or some object, or its own outline forms a boundary; for, if this be not attended to, it is almost impossible, in continuing the work the next day, to match the tints so that the junction shall be imperceptible; but by making these junctions correspond with the outlines of the composition, the patchwork which is unavoidable is successfully concealed.

In the next day's operation the surface of the old mortar is to be wetted as before, and care must be taken to wet the angles round the edge of the portion previously painted. This requires to be done delicately with a brush, in order to secure the sufficient moistening of every minutest corner, and also to avoid wetting or soiling the surface of the finished portion. On this last account it is better to begin from the upper part of the wall; for, if the lower part is first finished, the water constantly runs over the fresh painting.

When the painter is unable to finish a portion at once, or is compelled to leave it during the day for a considerable time, the Munich artists have a contrivance which arrests the drying of the work. A board is padded on one side, the cushion being covered with waxed cloth; a wet piece of fine linen is then spread over the fresh plaster and painting, and pressed to the surface of the wall by the cushioned side of the board, while the other side is buttressed firmly by a pole from the ground.

When any defect in the first operation is irretrievable, the spoiled portion is carefully cut out and the process above described is renewed for that particular part. The same remedy is possible in reviewing the finished work, but here again care should be taken that the portion cut out should be bounded by definite lines, for the reason before given. This attention to the nice adjustment of the successive portions of the work, so as to make one whole in the mere execution, is of great importance in fresco-painting.

In the finished fresco the depth of shadows is often increased, parts are rounded, subdued and softened, by hatching, in lines of the colour required, with a brush not too wet; the medium then used being vinegar and white of egg. Shade is more easily added in this way than light, but some use crayons made of pounded egg-shells to heighten the lights. It is to be observed, that such retouchings are useless in frescoes painted in the open air, because the rain washes them away, whilst the rain does not affect frescoes painted without retouchings; of this the paintings on the Isar-Thor at Munich are a sufficient proof. [Cavaliere Agricola who, as before observed, has lately published a report on the Roman frescoes, is of opinion that they were retouched with coloured crayons.\* Vasari,† however, distinctly says that frescoes which were not retouched were least subject to alteration and decay.] Various methods of this kind have, nevertheless, been resorted to by the Munich painters, and Cornelius has mentioned some.

#### THE COLOURS AND IMPLEMENTS.

These details, communicated with all-sufficient precision by Cornelius, need not be inserted here, as they are given in other papers that follow. The colours are chiefly simple earths; no vegetable, and few mineral, preparations can be used with safety, but there is a mode of rendering vermilion durable. The palette is of tin, with a rim round it to

\* See Appendix, No. 5.

† Introduzione, c. 19, and Vita di Antonio Veneziano.

\* Presented by Lord Francis Egerton. Agostino Carracci assisted in the frescoes of the Farnese Palace, and the two subjects in question were, it appears, designed and executed entirely by him. See Lanzi, v. 5, p. 74, and Malvasia, v. 1, p. 439.

† Compare Appendix, No. 5. The outlines of Raphael's cartoons are covered with pin-holes. This is very apparent also in the fragment of the cartoon for the 'Murder of the Innocents,' now in the National Gallery. Of the cartoons above mentioned, by Agostino Carracci, one (the Triumph of Galatea) has the pricked outline; the other (the Cephalus and Aurora) not.

prevent the colours, which are thinned with water, from running off. The colours, mixed or ground in water, are kept at hand in small pots. The brushes are of the usual materials, but they should all be somewhat longer in the hair than those used for oil-paintings.

#### VARIOUS COMMUNICATIONS ON FRESCO-PAINTING.

The following papers contain further information respecting the practice of fresco-painting, or point out the sources where the subject is more fully treated. In inserting these communications and extracts, it has not been possible to avoid occasional repetition, but in some cases coincident testimony may be necessary to establish or recommend particular methods. While the question respecting the adoption of fresco remains, for the reasons before stated, undecided, it may appear premature to describe its methods so fully; but it is precisely because so little is generally known of the process, in this country, that it has been thought desirable to take this means of putting the artists and the public in possession of the information that has been collected.

A communication on fresco by Professor Hess, of Munich (to Mr. William Thomas), need not be given at length, as it agrees generally with the foregoing statements by Director Cornelius. In speaking of the preparation of the wall, Professor Hess recommends "bricks well dried, and of equal hardness," as the groundwork of the mortar and plaster. Mr. Thomas observes, "All the frescoes in Munich are painted on the (plastered) brick wall: laths with wattling and copper nails are not approved of, as the risk of bulging is thus increased. The use of laths is sometimes necessary for certain surfaces, but the professors in Munich are decided that a brick ground is to be preferred wherever it is practicable, not only on account of its solidity, but also because it is better adapted for the execution of the painting. The brick ground absorbs superfluous water, and keeps the plaster longer in a fit state for painting upon. The painting ground dries much quicker on laths, as two surfaces are presented for evaporation. The walls ought to be thoroughly dry. A wall of a brick, or a brick and a half in thickness, is preferable to paint upon. Professor Hess once observed to me, that where the walls in the lower portions of buildings were five or six feet thick, the liability of saline matter making its appearance was much increased, as the mass of wall remains longer in a humid state."

Mr. C. H. Wilson, professor of ornamental design in the Royal Edinburgh Institution, has contributed much useful information on the subject of fresco, derived from his own observation in Italy, and from recent communications from his father, Mr. Andrew Wilson, now at Genoa. He observes: "In Italy the practice of lathing walls is unknown, but many of the finest Italian ceiling frescoes are on lath, and are in perfect condition. Most vaulted ceilings, in what is termed the *piano nobile*, or principal floor of every palace, are constructed of wood. The lathing in this case is not attached to single thin pieces of timber, cut to the shape of the ceiling, but to a strong grating; in some cases the ribs and transverse pieces of this grating are four inches thick each way. The lathing in Italy is a very peculiar process. The material is the reed, which is cultivated so extensively in that country, and used in so many ways. It grows to the length of about 18 feet, and is rather more than one inch and a quarter diameter at the base. When these reeds are used for lathing they are split, and not being strong enough for the purpose in this state, they are wattled upon the grating.\* The result of this somewhat complicated contrivance is a framework of great strength."

Mr. Hamilton, a distinguished architect of Edinburgh, observes: "In the preparation of walls and ceilings for fresco-painting, no expense should be spared; battens and laths are obviously perishable materials, and therefore ought to be avoided. The damp from exterior stone walls may be guarded against by lining them with brick, and now that the use of cast-iron is so well understood, the girders or joisting of houses where fresco-painting is contemplated should be of iron arched with brick between, and thus a perfectly level ceiling may be formed of the most durable kind." For the more effectual prevention of damp,

\* Compare with the directions of Vitruvius, Appendix No. 5.

Mr. Hamilton recommends that the lining of brick should be somewhat detached, leaving a small space between it and the stone wall, to which it could be bound at intervals. Mr. C. Wilson, in communicating this opinion, remarks, that as the brick lining, added to walls of sufficient solidity for the support of the ceiling here described, would diminish the size of the rooms, tiles placed edge-wise might be used instead of bricks. These should, however, be of sufficient strength to be in no danger of fracture from any ordinary accident. To guard against damp from roofs, or even occasional washing of upper floors, it is also suggested that a coating of asphalt might be applied on the upper sides of the arches of the ceiling. In some cases asphalt might be necessary in walls. Mr. C. Wilson observes, that a French architect, M. Polonceau, effectually checked the progress of damp from a humid soil, in several instances, by covering the horizontal surface of the masonry a few inches above the level of the soil with a coating of liquid asphalt, applied with a brush; when this was dry it was covered with a layer of coarse dry sand, and the building then proceeded. An external joint of hard asphalt at the same level is necessary effectually to cut off all communication of damp. (See the "Revue Générale de l'Architecture," September 1841.) These and other remarks on the construction of walls and ceilings have been communicated with all deference to the judgment and experience of the architect of the new buildings at Westminster.

In considering the question respecting the comparative fitness of laths and bricks, as a groundwork for fresco, it is not to be forgotten that the battened wall sooner adapts itself to the temperature of the atmosphere, and is therefore less likely to be affected by external damp; while the coldness of the more solid wall causes the rapid condensation of moisture in humid weather. This evil might perhaps be guarded against by due precautions with regard to temperature and ventilation.

Mr. C. Wilson next describes the mode of preparing the lime at Genoa:—"The lime having been slaked is mixed in a trough about six feet in length, and twenty inches in width; at the bottom it is somewhat narrower. The instrument used in mixing it is similar to that used by our masons. The lime is worked with this, and water is thrown in till the substance is of the consistence of cream. At the end of the trough there is a little sluice, the opening of which, however, comes only to within an inch and a half of the bottom of the trough. On being drawn up, the sluice allows the lime to escape, but small stones or impurities which may have sunk to the bottom are prevented from passing by the ledge under the opening. The lime is received in a pit dug in the mere earth (not lined) to the depth of several feet, and of any convenient size. The process of mixing in the trough is repeated till the pit is well filled, the trough being washed out with clean water every third or fourth mixing."

"The lime being thus prepared, is left in the pit from eight to twelve months,\* according to its ascertained strength. The lime for the first rough coat need not be kept more than two months: this is allowed to dry perfectly, before the next coats are put on. The proportion of sand to lime is the same as with us, viz., two of sand and one of lime. No hair is used by the Italian plasterers. The lime of which the *intonaco*, or coat of fine plaster, is composed, is, however, to be subjected to a much more careful preparation than that used for the first coat. After it has been kept the requisite time, it is taken out with a spade, the greatest care being necessary not to come too near the edges, sides, or bottom of the pit, lest any clay or earth should be taken up with the lime. It is now thrown again into the troughs, and is again thoroughly mixed with water, till it is not thicker than milk; it is then allowed to escape as before, through the opened sluice, but this time it passes through a fine hair sieve into an earthenware jar; a number of these jars are required, and each is filled to within a third of the top. The lime is allowed to settle, and when the water which rises over its surface is clear, it is poured off. This is repeated

\* In Florence, where fresco-painting is now occasionally practised, artists are of opinion that, "the lime should be kept in the moist state from eight to twelve months, otherwise it will burn both colours and brushes." (Letter from Mr. Seymour Kirkup, Florence, 1842.)

till there is no more water to pour off, and the lime remains in the jar, of the consistence of the white paint commonly used, and is quite as smooth. It is now ready to be mixed for the *intonaco*, which consists, as usual, of two parts sand and one of lime. Great pains are taken in Italy to find a suitable sand: it must be perfectly clean, sharp sand, the grains of equal size, and its colour favourable, as the *intonaco* should not be too dark. The presence of any earthy particles in the plaster would inevitably ruin the fresco: this accounts for the very careful preparation which all the materials used undergo."

Professor Hess recommends avoiding the intermixture of plaster of Paris in the mortar for the first rough coat (in the finer coats it is never employed as a preparation for fresco), and advises a moderate use of small flint pebbles. The rough coat should not be too compactly laid on, as its porousness is essential to the convenience of fresco-painting. In like manner the last finer coats should be lightly floated on to ensure their power of absorption. He proceeds: "The plaster for painting on is composed of lime not in too caustic a state, and pure quartz sand. With regard to the lime, it should be well and uniformly manipulated, and should be entirely free from any small hard lumps. The sand should be very carefully washed to cleanse it from clayey or saline particles, and should be afterwards dried in the open air. Sand that is coarse or unequal in grain should be sifted; thus the plaster will be uniform in its texture. The proportion of sand to the lime is best learned from experience, and must depend on the nature of the lime. If the plaster contains too much lime it becomes incrustated too soon, is too smooth in surface and easily cracks; if it contains too little it is not easily floated, the successive patches (as the fresco proceeds) are not to be spread conveniently in difficult situations, and the plaster is not so lasting."

"Before laying on the plaster, the dry rough coat is wetted with a large brush again and again, till it will absorb no more. Particular circumstances, such as spongy bricks in the wall, humid or very dry weather, &c., dictate the modes in which this operation is to be regulated. The plaster should be laid on lightly and freely with a wooden hand-float; in connecting the successive patches some portions require, however, to be finished with an iron trowel; in this case care must be taken not to press too strongly, otherwise rust spots might appear in the lime, and even cause portions of the superadded painting to become detached. [A glass float seems to be preferable where a wooden instrument is unfit.] The plaster should be about a quarter of an inch in thickness. The surface of the last coat is then slightly roughened to render it fitter for painting on. The wall thus prepared is to be left a quarter or half an hour before beginning to paint."

The colours enumerated by Professor Hess are the following:—"White: lime which has either been long kept, or by repeated manipulations and drying is rendered less caustic. Yellow: all kinds of ochres, terra di Siena. Red: all kinds of burnt ochres, burnt terra di Siena [the brightest particles selected at different stages of the process of burning, furnish, according to Director Cornelius, very brilliant reds], oxides of iron, and lake-coloured burnt vitriol. Brown: amber, raw and burnt, and burnt terra vert. Black: burnt Cologne earth, which when thus freed from its vegetable ingredients, affords a pure black. Purple: burnt vitriol, cobalt blue, and lake-coloured burnt vitriol. Green: Verona green (terra vert), cobalt green, and chrome green. Blue: ultra-marine, cobalt, and the imitation of ultra-marine; the last is most safely used for flat tints, but does not always mix well with other colours. These colours have been well tested, and for the most part admit of being mixed in any way. Other more brilliant colours, such as chrome yellow, vermilion, &c., have been tried in various ways, but have not yet, in every case, been found to stand. Colours prepared from animal and vegetable substances cannot be used at all, as the lime destroys them." Fresco-painters observe that "great attention is necessary in the due preparation of tints on the palette, for if tints are mixed as the work proceeds, the painting when dry will appear streaky: when the colours are wet the differences are not so perceptible."

In addition to hog's hair tools, which, as before

observed, are longer than those used in oil-painting, "small pencils of otter hair in quills are used. No other hair resists the lime, but becomes either burnt or curled. The palette, of the material and form before described, is covered with a light coloured varnish to protect the tin from rust. Rain water (that has not passed through an iron tube), boiled or distilled water should be used from first to last in all the operations of fresco-painting."

Professor Hess continues:—"After the painter has laid in his general colour, he should wait half an hour, accordingly as the colour sets, before he proceeds to more delicate modelling. In these first operations he should avoid warm or powerful tints, as these can be added with better effect as the work advances. After the second painting and another shorter pause, the work is finished with thin glazings and washings. In this mode the requisite degree of completion can be attained, provided the daylight and the absorbing power of the plaster last. But if the touches of the pencil remain wet on the surface, and are no longer sucked in instantaneously, the painter must cease to work, for henceforth the colour no longer unites with the plaster, but when dry will exhibit chalky spots. As this moment of time approaches, the absorbing power increases, the wet brush is sucked dry by mere contact with the wall, and the operation of painting becomes more difficult. It is, therefore, advisable to cease as soon as these indications appear."

"If the wall begins to show these symptoms too soon, for example in the second painting, some time may be gained by moistening the surface with a large brush, and trying to remove the crust or setting that has already begun to take place; but this remedy affords but a short respite. In the additions to the painting on successive days, it is desirable to add the new plaster to that part of the work which is not quite dry, for if added to dry portions the edges sometimes exhibit spots. Various other effects sometimes take place from causes that cannot be foreseen, and the remedies must be provided by the ingenuity of the artist, as the case may require."

The following extract from a letter, addressed by Mr. Andrew Wilson to his son (in March last), will render the process of painting in fresco more intelligible; but it is almost needless to observe, that in such details, the practice of painters may vary considerably:—

"I lately went to the royal palace (Genoa) to see the Signor Pasciano paint a ceiling in fresco. His tints had all been prepared before my arrival; he had only two in pots, viz., pure lime and a very pale flesh tint. He had no palette, but a table with a large slate for the top: on it he set round, 1. Terra vert. 2. Smalt. 3. Vermilion. 4. Yellow ochre. 5. Roman ochre. 6. Darker ochre. 7. Venetian red. 8. Umber. 9. Burnt umber. 10. Black. These colours were all pure, mixed only with water and rather stiff; put down with a palette knife, perhaps about an ounce, or two at most, of each. He mixed each tint as he wanted it, adding to each from the pot of flesh tint or that of white. Near him lay a lump of umber, and on taking up a brushful of colour he touched this with it; the earth instantly absorbed the water, and he was thus enabled to judge of the appearance which the tint would present when dry. The painter used a resting-stick with cotton on the top to prevent injury to the *intonaco*. The *intonaco* being prepared in the manner which I have described, the moment it would bear touching he set to work. The head was that of the Virgin; he began with a pale tint of yellow round the head for the glory (the colour of the ground, owing to the mixture of sand with the lime, it is to be remembered is a cool middle tint), he then laid in the head and neck with a pale flesh colour, and the masses of drapery round the head and shoulders with a middle tint, and with brown and black in the shadows. He next, with terra vert and white, threw in the cool tints of the face; then, with a pale tint of umber and white, modelled in the features, covered with the same tint where the hair was to be seen, and with it also indicated the folds of the white veil. All this time he used the colours as thin as we do in water-colours; he touched the *intonaco* with great tenderness, and allowed ten minutes to elapse before touching the same spot a second time. He now brought his coloured study, which stood on an easel near him, and began to model the features, and to throw in the shades with

greater accuracy. He put colour in the cheeks, and put in the mouth slightly, then shaded the hair and drapery, deepening always with the same colours, which become darker and darker every time they are applied, as would be the case on paper for instance. Having worked for half an hour, he made a halt for ten minutes, during which time he occupied himself in mixing darker tints, and then began finishing, loading the lights and using the colours much stiffer, and putting down his touches with precision and firmness; he softened with a brush with a little water in it. Another rest of ten minutes: but by this time he had nearly finished the head and shoulders of his figure, which, being uniformly wet, looked exactly like a picture in oil, and the colours seemed blended with equal facility. Referring again to his oil study, he put in some few light touches in the hair, again heightened generally in the lights, touched too into the darks, threw a little white into the yellow round the head, and this portion of his composition was finished, all in about an hour and a half. This was rapid work; but you will observe that the artist rested *four times*, so as to allow the wet to be sufficiently absorbed into the wall to allow him to repass over his work."

"The artist now required an addition to the *intonaco*; the tracing was again lifted up to the ceiling, and the space to be covered being marked by the painter, the process was repeated, and the body and arms of the Madonna were finished before I left him at one o'clock."

The following is an extract from a second letter:—"Yesterday I went again to see Pasciano, and I found that he had cut away from his tracing or cartoon those parts which he had finished upon the ceiling; in fact I now found it cut into several portions, but always carefully divided by the outline of figures, clouds, or other objects. These pieces were in some instances a good deal detached from each other, and were nailed to the plaster so as to fold inwards or outwards for pouncing the outlines. The *intonaco* had just been fresh laid for the upper half of an angel supporting the feet of the Madonna; this was one of a group much larger than those surrounding the glory, and therefore requiring more colour and finish; more than half of the figure too was in shadow, with a strong ray of light on the face and on one of the arms; this was a good opportunity of observing the painter's management of shadow. Having gone over the outline carefully with a steel point, he waited till the *intonaco* became a little harder, and in the mean time mixed up a few tints, he then commenced with a large brush, and went over the whole of the flesh; he next worked with a tint which served for the general mass of shadow, for the hair, and a slight marking out of the features. He now put a little colour into the cheeks, mouth, nose, and hands, and all this time he touched as lightly as he possibly could, not to wash up the *intonaco*. He then halted for ten minutes, looking at his oil study, and watching the absorption of the moisture, and he called my attention to his outline; none of it was effaced by this washing."

"The *intonaco* would now bear the gentle pressure of his fingers, and with the same large brush, but with water only, he began to soften and unite the colours already laid on. Observe, he had not as yet used any tint thicker than a wash of water-colour, and he continued to darken in the shadows without increasing the force or depth of colour. This I before noted to you, that you can strengthen by the simple repetition of tint, but if the day be very dry, after an hour or two this process of repeating with the same tint produces an opposite effect, and instead of drying darker, it actually dries lighter. [See this explained in the communication by Professor Hess.] I now observed that the painter had increased the number of his tints, and that they were of a much thicker consistence, and he now began to paint in the lights with a greater body of colour, softening them into the shades with a dry brush, or with one a little wet as he required. In drying, the water comes to the surface, and actually falls off in drops, but this does no harm whatever to the work, although it sometimes looks alarming."

Mr. C. Wilson observes, that the 'Aurora' of Guido, in the Rospigliosi Palace in Rome, was painted on a copper trellis, and afterwards fixed on the ceiling where it still exists. He adds that this fresco was offered for sale about fifteen years

since, and that its safe removal was guaranteed. Mr. W. Thomas states that some small (landscape) frescoes by Professor Rottman, in the Hofgarten in Munich, were painted on an iron frame and wire-work, and fixed in their situation afterwards. The example of Guido's 'Aurora,' the figures of which are larger than life, shows that it would be possible to prepare moveable frescoes for situations where this might be thought necessary; for example, before flues or tubes in walls. But it is to be remarked that flues behind frescoes have generally injured them. Mr. Aglio, who painted some frescoes at Manchester some years since, attributes the great alteration of the colours in them partly to this circumstance: but also to his having been supplied with lime that was much too fresh. Cavaliere Agricola, in examining the frescoes of the Vatican, found that the 'Heliodorus' had suffered considerably from a flue behind it. The plaster had been detached from the wall, and projected in some places nearly four inches; it had been secured with nails, and the cracks had been filled with some composition by Carlo Maratti in 1702. The fresco of the 'Defeat of the Saracens at Ostia' has been injured in like manner by a chimney behind it."

In connexion with the subject of moveable frescoes it may be observed that the operation of detaching the mere painting from the wall, almost independently of the plaster, has been often practised with success. Although less immediately connected with the present inquiry, it is desirable to make this process known, as, in repairing churches and other buildings in England, many ancient paintings on plaster have been destroyed, from ignorance as to the means of removing them. Mr. Ludwig Gruner gives the following account of the mode in which he detached some frescoes at Brescia in 1829. The convent of St. Eufemia in that city was then undergoing repair, and the excellent frescoes it contained, painted by Lattanzio Gambara in the 16th century, would have been destroyed, when Mr. Gruner succeeded, with the assistance of some expert Italians, in removing them from the walls. The mode they adopted was first to clean the wall perfectly: then to pass a strong glue over the surface, and by this means to fasten a sheet of fine calico on it. The calico, after having been rivetted to the irregularities of the wall,† was afterwards covered with glue in like manner, and on it was fastened common strong linen. In this state heat was applied, which caused the glue even on the fresco to sweat through the cloths, and to incorporate the whole. After this a third layer of strong cloth was applied on a new coat of glue. The whole remained in this state two or three days (the time required may vary according to the heat of the weather). The superfluous cloth extending beyond the painting was now cut off so as to leave a sharp edge; the operation of stripping or rolling off the cloth began at the corners above and below, till at last the mere weight of the cloth and what adhered to it assisted to detach the whole, and the wall behind appeared white, while every particle of colour remained attached to the cloth. This operation shows that the colours in fresco do not penetrate very deeply: the layer of pigment and lime which was detached in this instance was extremely thin, the outlines and even the colours of masses were visible at the back of the cloth. It is the opinion of some of the Munich professors that frescoes thinly painted are least liable to change; the example just given, exemplifying as it does the practice of a skilful Italian fresco painter, seems to confirm this, but in many instances the surface of frescoes even by the older masters is solidly painted. To transfer the painting again to cloth, in completing the operation above described, a stronger glue is used which resists moisture, it being necessary to detach the cloths first used by tepid water, after the back of the painting is fastened to its new bed.

\* Alcune osservazioni artistiche fatte dal Cavaliere Filippo Agricola, &c., in occasione di aver tolto via l'ingombro di polvere che offuscava i famosi Dipinti di Raffaello nelle Camere Vaticane. Roma, 1839, pp. 7-22.

† Mr. A. B. Johns, of Plymouth, suggests fastening one or two layers of blotting-paper on the surface of the painting at first; not only because that material may be made to adhere more closely to the wall, but because it is more easily detached by moisture, together with the cloths, when the painting is re-transferred to a new surface.

‡ Communication from Prof. Schnorr, 23rd Feb., 1842.

The frescoes by Paul Veronese, in the Morosini Villa, near Castel Franco, were removed by Count Balbi of Venice a few years since: he fastened cloth to the wall with a paste composed of beer and flour, and rivetted it to the irregularities of the surface by means of a hammer composed of bristles.\* Several of these works when re-transferred to canvases were sold in England in 1838. The operation of removing frescoes has been lately performed with success in Florence and elsewhere.†

METHODS OF FRESCO-PAINTING DESCRIBED BY WRITERS ON ART.

The observations on the practice of fresco-painting by early writers on Art coincide generally with the statements above given; the only point on which those writers do not appear to insist is the necessity of keeping the lime for a very long period. In other respects, Cennini and Leon Battista Alberti, in the fifteenth century; Vasari, Armenini, and Borghini, in the sixteenth; Andrea Pozzo, in the seventeenth; and Palomino, in the beginning of the eighteenth, describe, more or less fully, the same process. But before referring to these writers, it may be desirable to take a glance at the ancient authorities who have described the modes of preparing walls with stucco on which fresco-paintings were executed.

Vitruvius suggests that where there is danger of damp affecting the coats of plaster, a thin (brick) wall should be carried up within and in some measure detached from the main wall.‡ When timber partitions were to be covered with stucco, two layers of split reeds were nailed with broad-headed nails on the upright and cross pieces, the one vertically, the other horizontally; "the double row of reeds thus crossed and firmly fixed prevents all cracks and fissures."§ The coats of plaster, from the rough-cast to the finished surface, were numerous, namely, after the rough-cast, three of sand and lime, and three of marble-dust and lime.|| The last coat was often highly polished. "When," Vitruvius afterwards observes, "only one coat of sand and lime and one of marble-dust and lime are used, the plaster is easily broken and cannot receive a brilliant polish."¶ When frescoes were added the surface was necessarily somewhat less smooth.

The passage that follows, relating to paintings on walls, has been often the subject of controversy, but when compared with the practical details of fresco, already described, it can hardly fail to be understood as referring to that method. The ancient writer's mode of accounting for certain effects is, of course, unimportant. "Colours," Vitruvius observes, "when carefully applied on moist stucco, do not therefore fade, but (on the contrary) last for ever;‡ because the lime having been deprived of moisture in the kiln, and having become porous and absorbent, readily imbibes whatever (moisture) comes in contact with it; and the whole, when dry, seems composed of one and the same substance and quality. Hence stuccoed walls, when well executed, do not easily become dirty, nor do they lose their colours when they require to be washed, unless the painting was carelessly done, or executed after the surface was dry."\*\* The general evenness of the wall is here explained to be essential to the due effect of the paintings; the opposite evil, that of an undulating surface, on which dust lodges irregularly, is seen in some of the frescoes of the Vatican.

This general evenness of the plaster does not suppose unpleasant smoothness of surface in the fresco: in many Italian, and indeed many antique

mural paintings, the traces of the brush often indicate a considerable body of colour; but care seems to have been taken not to load the surface unequally. In a London atmosphere this comparative evenness of the surface might, on the Vitruvian principle, protect the painting longer from smoke and dust, while it would assist the operation of cleaning. But the work might be protected by other means; the plaster might be applied so that the face of the wall—at least in the portions intended to receive frescoes—should not be quite perpendicular, but incline a little inwards (with reference to the room) towards the upper part. In connexion with the question of surface, it may be remarked that the hardening of the lime takes place sooner in proportion to the roughness of the surface. In Plate 2 of Smith's translation of Vicat ("Résumé sur les Mortiers et Ciments Calcaires") will be found representations of sections of lime a year old, exhibiting the progress of the carbonic acid and the comparative reintegration of the original carbonate of lime.\* Captain Smith remarks (p. 173), "It would be difficult to credit, did we not see it, how great an obstacle a smoothness of surface presents to the penetration of the carbonic acid."

Leon Battista Alberti† copies Vitruvius in many points: he observes generally that the more coats a wall receives the better the surface may be polished, and the longer it will last, and speaks of ancient examples in which there were nine successive coats. He alludes more directly to the practice of his own time when he says that no stucco should be composed of less than three coats:‡ these he afterwards describes. "The first rough coat," he observes, "should be composed of pit sand and pounded bricks; the pieces of brick should not be broken too small. For the second coat river sand is best adapted, and is less apt to crack; this second coat also should be somewhat rough, because nothing that is applied to a smooth surface will adhere to it. The last coat should be as white as marble, in fact, pounded white marble should be used instead of sand. This coat need not be thicker than half a finger's breadth, some make it no thicker than the sole of a shoe. In many places," he proceeds, "we find nails fastened in the wall to keep on the coats of plaster, and time has shown that they had better be of bronze than of iron. Instead of nails, I much approve the practice of inserting thin pieces of flint, projecting edgewise from the joints of the stone; these should be driven in with a wooden mallet." Various directions follow, partly derived from Vitruvius, partly from his own experience. Speak of colours that are fit and unfit for fresco, his expressions are at once in accordance with an ancient authority § and with modern practice; in this, as in other instances, Leon Battista Alberti appears as the connecting link between ancient and revived art. He speaks of the "newly-invented art of painting with linseed oil," as calculated to last for ever on walls, provided they are perfectly free from damp; on this subject he could of course have no experience. He concludes by observing that he had seen even fresh lime painted with colours prepared from vitrified substances.

\* On this subject, see Appendix No. 6.

† De Re Edificatoria, l. 6, c. 9.

‡ He is still so far true to the Vitruvian rules, that he speaks of each layer in the plural, as if the number of coats was indefinite. His Italian translator (Cosimo Bartoli, 1550), reduces these half classical directions to the practice of the day, and gives the Florentine technical terms for the general expressions of Alberti; the *rinzaffato* rough-coat, the *arriccato* sand-coat, and the *intonaco* (tunica) fine plaster.

§ Pliny (l. 35, c. 7) observes that certain colours, which he enumerates, are unfit for fresco (udo), but may be employed on a dry ground of gypsum (cretulam). So elsewhere (l. 35, c. 13) speaking of an artificial blue, he states that it would not stand on lime, "usus in creta, calcis impatiens." Andrea Pozzo observes, that all colours may be used on a ground of gypsum; the word creta, or its diminutive, is probably to be understood here to mean gypsum; the similar Italian word is often employed in this sense. Sir Humphry Davy observes, "the ancients were not acquainted with the distinction between aluminous and calcareous earths, and 'creta' was a term applied to every white fine earthy powder." (Philosophical Transactions for 1815, p. 112, note.) The precise meaning of creta is, however, here less important; the above passages of Pliny, together with that before quoted from Vitruvius, are sufficient to establish the fact that the ancients painted on moist lime. The analysis of some antique paintings by Sir Humphrey Davy confirms this.

Cennini,\* who has recorded the old Florentine methods, states that "both the lime and the sand should be well sifted. If the lime is what is called a rich lime, and has been recently slaked, there should be two parts of sand to one of lime.† On being slaked it should be well mixed and stirred, and a quantity should be made sufficient to last for 15 or 20 days. It should then be suffered to remain for some days, in order to render it less caustic, for if too caustic, the *intonaco* ‡ will blister." The mortar composed as above serves for the first coat, the surface of which is to be left somewhat rough; the application of the thinner coat or painting-ground is afterwards described, and the lime for this purpose is recommended to be well stirred and manipulated, "till it appears like ointment." The practice of painting, described by Cennini, is less important, but the allusion to glazing in fresco is worth consulting. § The mode of preparing lime for the white to be used in painting, called "*bianco sangiovanni*," is precisely the same as that practised by modern fresco-painters, and is thus described by Cennini. || "Take very white slaked lime reduced to a fine powder; place it in a large tub, and mix well with water, pouring off the water as the lime settles, and adding fresh for eight days. The lime, divided into small cakes, is then placed to dry in the sun on the house-top, and the longer these cakes are left the whiter they become. To shorten the process, the cakes may be moistened again with water and well ground, and then again dried; this operation, once or twice repeated, renders the lime perfectly white." Cennini adds, "without this finely-ground white, flesh-tints, and other mixed tones that may be required, cannot be executed in fresco."

Armenini¶ describes some varieties of this process as follows:—"Take the whitest lime, such as is commonly found in Genoa, Milan, or Ravenna; this is to be well washed (*purgata*) before it is used; the painters prepare it in various ways: some, in order to render the lime less caustic, boil a certain quantity well on the fire, always skimming the froth; it is then suffered to cool and settle in the open air; the water is poured off, and the lime is put on new sun-baked bricks [which absorb the moisture]; and the lighter the lime the purer it is. Others bury the lime in the earth, after having thus washed it, and keep it in this state many years before they use it; others expose it, while undergoing the same preparation, on the roofs of houses. Some mix it in equal proportions with marble dust. But it has been found that if the lime is exposed to the air in a large vessel, and water that has been boiled is poured on it, the whole being stirred, and if the next day it is spread in the sun, it will be sufficiently purified, and may be used for painting the following day, but not for flesh-tints, for these might undergo some change at the edges (of the successive patches of plaster)."

Speaking of retouching, Armenini observes ††,

\* Trattato della Pittura, date of the MS., 1437. First published, Rome, 1821.

† This is the general proportion mentioned by the ancient writers (Cato, Vitruvius, Pliny, and Palladius), and appears to be now commonly in use. According to some modern authorities, the proportion of sand (for general purposes) may be very much increased with advantage; see Higgins, "Experiments and observations made with the view of improving the art of composing calcareous cements, &c., London, 1780," p. 51. But Vicat, by a series of accurate experiments, ascertained that "the resistance of mortars made from very rich limes slaked by the ordinary process, increases from 50 to 240 parts of sand to 100 of lime in stiff paste, and beyond that decreases indefinitely." (Résumé sur les Mortiers et Ciments Calcaires, p. 51). Thus two parts and half of sand to one of rich lime are already beyond the due proportion.

‡ Cennini mentions two coats only, and applies the term *intonaco* to both.

† The following publications may be consulted for further information on this subject: Leopoldo Cicognara, *Del Distacco delle pitture a fresco*. Articolo estratto dall' *Antologia* di Firenze, 1825. Vol. 18, num. 52.—Girolamo Baruffaldi, *Vita di Antonio Contri, pittore e rilevatore di pitture dal muro*. Venezia, 1834.—Cenni sopra diverse pitture staccate dal muro e trasportate su tela, &c. Bologna, 1840.

‡ De Architect, l. 7, c. 4. This is the mode in which the stuccoed and painted walls of Pompeii are constructed; the bricks, or rather tiles, are placed edgewise, and are connected by leaden cramps to the brick or tufo wall, without being in immediate contact with it. (Communication from the Chevalier Schlieck.)

§ Ib., c. 3. Compare Palladius de Re Rustica, l. 1, c. 3.

|| Pliny (l. 35, c. 23) says that three of sand and lime, and two of marble-dust and lime, are indispensable.

¶ A similar opinion is expressed by a Venetian painter, Paolo Pino: *Dialogo di Pittura*, Ven. 1548, p. 19.

\*\* Ib. c. 3.

"in frescoes which are not exposed to the weather, it is possible to give the requisite completeness by going over the work when dry." The shadows, he adds, may be finished and deepened, "by hatching, as in a drawing, with black and lake, in water-colours, using a brush of marten-hair, not too small. In diluting the colours, some use gum, some thin size, some tempera (white and yolk of egg)." He admits that in the course of time such retouchings fade.

The descriptions of Vasari† and Borghini‡ are more concise. It might be inferred that a mixture of a certain quantity of sand with the lime must reduce the whiteness of the latter to a middle tint, but Borghini alone takes notice of this circumstance; he even assumes that a slight tint of black is added to the plaster, perhaps when the sand was of too warm a colour. From the description of Leon Battista Alberti, it appears that the last coat was white, and the mixture of lime and marble-dust, mentioned by Armenini, seems to show that the same practice was sometimes followed in the 16th century. Armenini speaks also of another practice which agrees with the appearance which some of the older frescoes present; he says that some painters were in the habit of covering the wall with a coat or two of white (wash) immediately before beginning, in order to give more brilliancy to the superadded colours. He disapproves of the practice, as tending to injure the effect of the shadows, but the practice itself shows that in this case the *intonaco* was not in the first instance white.§

Andrea Pozzo, the author of the original of the Jesuit's Perspective, and the painter of the celebrated ceiling of S. Ignazio in Rome, and other works of the kind, added a short treatise on Fresco to his great work on Perspective.|| The subject is treated under the following heads:—1. The construction of the scaffolding. 2. The application of the rough-cast (*arricciare*): on this he observed that the painter should never begin to work where the rough-cast has been recently laid on, especially if in interiors, on account of the moist exhalations and the smell of the lime, both of which are hurtful.¶ 3. The application of the *intonaco*. This is to be done when the wall is thoroughly dry; it is then well moistened as before described before the *intonaco* is laid on. "The lime used for this purpose should have been slaked a year or six months before, and is mixed with well washed river sand of moderate fineness. In Rome the painters use pozzolana, but as this is of unequal grain, it is difficult to levigate mortar composed of it, and it is impossible to stir it again after some hours; this being sometimes necessary. An expert and active mason should be selected to spread the *intonaco* equally, and to leave the painter time enough for his work within the day. 4. Roughening the surface (*granire*). The *intonaco* being equally spread, it will be well slightly to rub up with a brush the minute grains of sand, as the colours adhere better to a somewhat rough surface. This operation is essential in great works that are to be seen at a distance; it is also useful in a certain degree in near works, but it will be advisable in the latter case to spread a sheet of paper over the work at last, and with the trowel slightly to press the surface; the too prominent particles of sand will then sink in and disappear. 5. Drawing. Every one knows

that before beginning to paint it is necessary to prepare a drawing and well-studied coloured sketch, both of which are to be kept at hand in painting the fresco, so as not to have any other thought than that of the execution. There should also be a cartoon, of the size of the intended work; this may be placed in the situation in order to judge of the effect at a distance, and to make such corrections as appear necessary." 6. Enlarging and transferring by squares. Such methods are recommended for curved and irregular portions of architecture, where it may be difficult to trace from drawings. According to some passages in Cennini and Armenini this seems to have been the practice with the early Florentines, even on level walls; in this mode the squares were first marked on the rough dry mortar and repeated, (the extremities of the lines being visible) on the *intonaco*. In this process time was lost, and the outline was less correct. 7. Tracing on the wall. Either with an iron point, or by pouncing a pricked outline as before described. 8. The palette. "Before beginning to paint, the colours are to be prepared as well as the intermediate tints, such at least as are wanted for one figure; indeed, if a mass of architecture is to be painted it will be necessary to prepare a key-tint for the whole work, otherwise it will be found difficult in repeated operations (after the tints have changed in drying) to match the colour. Other methods, however necessary, need not be described, as they are common to oil-painting." 9. Painting. The general observations are the same as those before given; the author suggests that a small (tin) vessel for water may be attached to the palette; he recommends not beginning to paint till the *intonaco* will barely receive the impression of the finger, otherwise the whole work will be weak, and could only serve for a first painting. 10. Painting more solidly (*impastare e caricare*). "This is peculiar to fresco, that the first colours which touch the lime immediately lose their force. It is therefore necessary to go over the work again with a greater body of colour, taking care never to leave the portion allotted for the day till it is quite finished, because all retouching after a certain time will deform the work: it would be better even to wait till the wall is quite dry, and then retouch." 11. Retouching. The author admits that it is better not to retouch, but adds that as the lime always undergoes some slight change, particularly in the shadows, it is sometimes unavoidable; he observes that such retouchings are useless in the open air as the rain washes them away. 12. Softening. He recommends the use of soft, long brushes, not too moist, and states that the finger may be used sometimes with effect in heads, when the lime begins to grow hard. He alludes to other methods for the gradation of light in glories, &c. 13. Excision and entire repainting. The possibility of such corrections, and the mode of making them have been already alluded to. "In interiors, alterations may be made merely by repainting on the dry surface, provided such alterations are required for distant figures." 14. Colouring. General observations on colours fit for fresco. 15. White. Lime kept a year or six months is to be thinned in water, and passed through a hair-sieve into a large vessel; the water is poured off as soon as the lime has settled; thus prepared, it is fit for painting. A list of colours follows, differing but little from that given by the older writers, and also by Professor Hess, Director Cornelius, and Mr. Andrew Wilson. The following is Pozzo's method of preparing vermilion for fresco. "This colour is altogether hostile to lime, particularly when exposed to the external air, but I have often used it for draperies in paintings executed in interiors, having first prepared it as follows:—Take pure vermilion in powder, and having placed it in an earthenware vase, pour on it the water that boils up when lime is slaked in it; the water, which should be as pure as it can be, is then poured off, and the operation is often repeated. In this manner the vermilion is penetrated with the quality of the lime, and always retains it." Cennini and Armenini, on the other hand, distinctly say that vermilion will not stand in fresco.

Palomino,\* in his first general account of fresco,† gives a list of the principal works in that method executed by the Spanish masters in Madrid, Cordova, and Seville. His description of the method itself\* is fuller than those hitherto referred to in this paper; but, to avoid unnecessary repetition, it will be sufficient to quote his directions where they differ from those already given. The lime should, he says, be prepared if possible four or six months before it is used. Then, after having been passed through a hair-sieve, it is mixed with sand, quite free from clay, sifted in like manner; his directions for doing this are minute. The quantities are to be equal, this he had found from his own experience to be the best proportion, especially if the lime is rather fresh, but if not, the plaster may be composed of three parts of lime to two of sand. This stucco is to be kept in a large tub in which it may be conveniently stirred; it is to be kept quite moist, and remains covered with water. If the work to be executed is extensive, it will be well to prepare more than one tub; thus while the first is being used, the additional provision may become duly tempered. In this state it is to be stirred and beaten daily, taking care to remove the pellicle which remains on the surface of the water; thus prepared, it becomes perfectly mild and of the consistence of lard,† it no longer injures the colours, nor, in passing from the wet to the dry state, is it liable to those changes which sometimes disappoint the most expert. "Three things are essential in the rough-cast before applying this *intonaco*: first, that it should be perfectly dry, otherwise saltpetre will appear; next, that it should be generally level though rough, for if not the *intonaco* will be unequally thick, and will crack where it is thickest; thirdly, that it should be well wetted before applying the *intonaco*." The author even recommends wetting the portion to be painted the evening before, especially in summer. "The *intonaco* should be about the thickness of a dollar.‡ After it is well spread, the assistant is to go over it with a roll of soft wet linen, to get rid of the extreme smoothness, to remove the traces of the trowel, and slightly to stir the sand. The surface is next to be lightly passed over with a handkerchief to remove the particles of sand which are on the surface, and which, in painting ceilings," the author observes, "might get into the eyes. Care must be taken in tracing the first portion of the composition, to fix the paper precisely in the right place, because the subsequent lines depend on the first; for this purpose the whole drawing had better be first fitted to the space before it is cut up for the convenience of tracing." The drawing, in this instance a pricked outline, is pounced with a bag of pounded charcoal; the edge of the portion first applied should also be pounced as a guide where to cut off the superfluous *intonaco*: it is, however, cut away not close to the line so marked, but about two fingers' breadth from it, to avoid cracks and to ensure the completion of the portion traced to the very edge: (the remainder of the superfluous *intonaco* is not to be scraped away till the day's work is done). The dotted outline left by the pouncing is then to be gone over with black chalk, which will at once leave a dark line, and at the same time slightly indent the surface; so that if, in painting, the chalk line should disappear, the indented one will still serve as a guide. In describing this method the author alludes to the old method of tracing with a wooden point, and refers to frescoes thus drawn in the palace "del Pardo."§ He speaks of the finished cartoons of Michael Angelo, Raphael, the Carracci, and others, but observes (and here the degeneracy of his age appears), that since their time artists had become impatient of so much toil, having found that their enthusiasm evaporated before the period arrived for the execution of the painting.

The surface is now to be again lightly wiped with a handkerchief to remove the charcoal that might remain; it is then to be sprinkled with water with a plasterer's large brush; this and a vessel of clean water are to be kept at hand, as the same operation may require to be often repeated, especially in summer. Another brush and a separate vessel of water should be kept for washing out any work which may require to be effaced; the

\* Vol. 2, p. 143.  
† The author here appears to allude to the lime only, but he is speaking of a mixture of lime and sand.  
‡ The particular coin mentioned is the "real de á ocho."  
§ There were frescoes in this palace by Vicencio and Bartolomé Carducho and Eugenio Cajés.

\* This is explained in l. 2, c. 8 (on Tempera). "The colours are commonly mixed with thin size, and also with tempera, except the blues, which would become green, owing to the yellowness of the egg medium." It appears from Cennini (ib. p. 70), that the yolk of egg was used with the white, and even alone; the white alone was sure to crack. Armenini further observes, "the Flemish artists use size alone, because tempera has the effect of darkening the colours." The vehicles of gum, size, vinegar, and white or yolk of egg used by the moderns for tempera (or for retouching frescoes), were all employed by the ancients. See Pliny, l. 35, c. 6.  
† Introduzione, c. 19.

† The author here appears to allude to the lime only, but he is speaking of a mixture of lime and sand.

‡ The particular coin mentioned is the "real de á ocho."

§ There were frescoes in this palace by Vicencio and Bartolomé Carducho and Eugenio Cajés.

water in this second vessel becomes gradually tinged with lime, and cannot serve for sprinkling the work as it would leave white spots. In frosty weather it is necessary to keep these vessels on the fire, and the assistant should use warm water in first preparing the wall. "If," the author continues, "owing to extreme cold, the surface of the *intonaco* freezes, the effect is worse than rapid drying, for no absorption takes place, and the colours afterwards crumble off like ashes, as I have myself experienced.\* If, therefore, the use of warm water is not sufficient to prevent such effects, it will be better to wait for milder weather." The list of colours does not materially differ from those already given, but the qualities and changes of the various pigments in fresco and the best modes of employing them are minutely described. Vermilion, the author says, will stand if passed over *terra rossa*. The preparation of the lime for mixing with the colours is the same as that already mentioned; the composition of the principal tints and their preparation immediately before employing them, are described.† A close silk sieve is recommended in preparing the white for the palette. If the lime be too fresh its causticity may be reduced by mixing finely-ground marble dust with it: (see the following paper in this Appendix.) A large palette of well prepared *cassava* is proposed on account of its lightness; the palette is cleaned from time to time with a sponge. In the execution, the back ground and more distant portions of the work allotted for the day are to be put in first; the observations on these practical details are copious and useful; the tints may be softened, if desired, so as to equal the union of oil-painting by means of a moderately moistened brush.

For retouching, the author recommends goat's milk or common milk thinned with water, and mentions some colours that may be employed:‡ *Luca Giordano*, he adds, retouched with white of egg. It appears from the author's experience (and this is confirmed by modern practice), that retouchings are most necessary at the junctions of the successive patches of the *intonaco*.

The author remarks that the old masters went over the *intonaco* with a general tint of white and *terra rossa* before they began to paint, to render the surface more even; the operation, before described, of pressing and smoothing the surface by means of paper was, he states, practised by them at last, when the day's work was quite completed. He concludes with some observations on *capola*-painting and on the constructing of scaffolds.

From the report of *Cavaliere Agricola* § on *Raphael's* frescoes in the Vatican, it appears that the effect of those paintings was originally much heightened by retouchings, some of which have faded. Thus in the architecture of the "School of Athens," the masses of light and dark only were put in in fresco, but the minutest forms and mouldings were added in water-colours when the fresco was dry: a similar double operation is observable in white draperies.¶ In some instances even coloured retouchings are apparent; these are introduced in the mode described by *Armenini*, not in masses, but by means of hatching (employing lines as in shading a drawing); one of the cardinals in the subject of the "Attila" is thus finished. Such retouchings appear to be distinct from those added by *Carlo Maratti*.

C. L. EASTLAKE, Secretary.

#### LIME FIT FOR FRESCO-PAINTING.

From the preceding statements it appears that

\* The principal frescoes of *Palomino*, are at Valencia, Salamanca, and Granada. He died at an advanced age, in 1726.

† For some of these details, the author refers to a previous chapter (Vol. 2, p. 110), on the practice of tempera-painting.

‡ Some blues are best added when the wall is dry; thus it is related, that when the Pope compelled *Michael Angelo* to remove the scaffolding from the Cappella Sistina, the retouching of ultra-marine had not been added. See *Condivi*, Vita di Michelangelo.

§ Already referred to, Appendix No. 4.

¶ These methods appear to have been the remains of the early Florentine practice. *Cennini* says, "Everything which is executed in fresco requires to be finished and retouched when dry in tempera." (Ib. p. 74, and note). The frescoes of the early Italian painters were in fact half tempera-paintings. *Merimee* (De la Peinture à l'Huile, p. 310) appears to be in error in supposing that *Cennini* directs certain colours to be mixed with tempera when used on the wet *lapis*. The Italian artist, no doubt, alluded to the second operation.

it is of importance to select a quality of limestone which shall furnish a material fit for a white pigment, and well adapted in other respects for the ground or surface which is to receive the painting. On this subject it may be sufficient, in the absence of long-tested experiments in our own country, to consult the practice of the early Italian and modern fresco-painters.

A limestone consisting of as few foreign ingredients as possible is generally esteemed the fittest.\* But other circumstances are to be taken into the account; Carrara marble, which is pure carbonate of lime, is liable when heated, from its granular, crystalline structure, to fall into a coarse powder, and thus the inconveniences attending the burning and slaking it render it unfit for use, if required in considerable quantity.† On the other hand, limestones which have been long used, apparently without any bad results, for the preparation of lime employed in painting, will often be found to contain various ingredients besides carbonate of lime.

The particular limestone recommended by *Vasari*‡ is *Travertine*; the lime it furnished was without doubt used by the great artists who painted in Rome in the beginning of the 16th century, and was in all probability employed for similar purposes by the ancients.§ The Colosseum, St. Peter's, and various other ancient and modern edifices in Rome are built with blocks of this stone;|| its colour is a yellowish white, but after long exposure to the air, it acquires a reddish tint, probably from the small amount of iron which it contains. It is found in abundance throughout the Campagna, and even within the walls of Rome. It forms, in a horizontal layer, the face of the *Aventine Hill* to the height of nearly 100 feet immediately above the *Tiber*.¶ Some of the ancient quarries are near *Tivoli*, and the stone is the same in quality, with the sole difference of superior hardness acquired by age, as that still annually formed by the calcareous deposit of the waters of the *Anio*; the same tartar, as it is called, lines the ancient and modern aqueducts. The abundance of this deposit is easily accounted for by the origin of these streams from the chain of the *Apennines*, which, in central Italy, consist almost entirely of a comparatively soft limestone. The stone called *Travertine* is thus a formation by means of fresh water; it is full of hollows, frequently cylindrical in form, occasioned by the calcareous sediment being originally deposited on vegetable substances.\*\* These accidents in its formation may be detected in their progress in the neighbourhood of *Tivoli*.††

From this account of the origin of the stone, it might be inferred that it would be almost a pure carbonate of lime. Its analysis in fact is:—‡‡

Carbonate of lime .....	99	4
Alumina with a trace of oxide of iron .....		6
	100	

\* Memoir communicated by *Professor Schlotthauer*, of Munich, to *Professor Schnorr*, for the use of the Secretary of the Commission.

† *Aikin* on Limestone and Calcareous Cements, Transactions of the Society of Arts, v. 51. *Leon Battista Alberti* (De Re Edificatoria, l. 3, c. 4) observes, that lime which is reduced to powder in the kiln is unfit for use.

‡ *Introduzione*, c. 4, c. 13, c. 19.

§ *Palladius* (De Re Rustica, l. 1, c. 10) mentions it among the fittest stones to burn for lime.

¶ *Vasari* (Ib. c. 1) makes especial mention of its employment by *Michael Angelo*, even for ornamental work in the *cortile* of the *Farnese palace*.

¶ *Bunsen*, Beschreibung der Stadt Rom, v. 1, b. 1.

¶ The epithet *stetulus* applied by *Vitruvius* (l. 2, c. 5) and *Pliny* (l. 36, c. 24) to the stone used for the finest lime is especially appropriate to the *Travertine*.

†† *Leon Battista Alberti* (Ib. l. 2, c. 9) speaks with wonder of the growth of *Travertine*, in ignorance of the cause. *Vasari* (Ib. c. 1) describes and explains it accurately. Modern chemists have watched the progress of the formation. "In May, 18—," says *Sir Humphrey Davy*, "I fixed a stick on a mass of *Travertine* covered with water, and I examined it in the beginning of the April following, for the purpose of determining the nature of the depositions. The water was lower at this time, yet I had some difficulty, by means of a sharp-pointed hammer, in breaking the mass which adhered to the bottom of the stick; it was several inches in thickness."—*Consolations* in Travel, p. 127. Quoted in *Smith's Translation* of *Vicat*. "Sur les Mortiers et Ciments Calcaires."

‡‡ The analyses given in this statement, have been carefully made by *Mr. Richard Phillips*, of the Museum of Economic Geology, under the sanction of her Ma-

The lime it furnishes is of the purest whiteness. It appears from *Armenini*,\* that the Genoese lime ranked in the 16th century among those remarkable for their whiteness. The *stuccatori* of Genoa are among the most skilful in Italy, and the practice of fresco-painting is still very common there. It has been already observed that frescoes have lasted there extremely well on the external walls of houses, notwithstanding the action of the sea air. A specimen of the stone furnishing the lime used in Genoa for fresco-painting has been procured. It contains a considerable portion of magnesia, its analysis being,

Carbonate of lime .....	63
Carbonate of magnesia .....	36
Earthy matter, oxide of iron, and bituminous matter .....	1
	100

The lime used for fresco, at Munich, is also remarkable for its whiteness. It is made from pebbles, washed by the torrents of the Isar from the marble mountains of the Tyrol. The analysis of the stone is,

Carbonate of lime .....	80
Carbonate of magnesia .....	20
	100

A specimen of the lime now used by the Florentine fresco-painters has also been procured. On being analysed, it proves to be so nearly pure carbonate of lime that no appreciable quantity of any admixture is to be detected.

The analyses of the limes employed for some frescoes that have stood well in this country, may here be added.

The fresco executed, seventeen years since, by *Mr. Thomas Barker*, at Bath, has been already alluded to. The Wick (Bath) stone furnished the lime; the analysis of the stone is,

Carbonate of lime .....	97
Impurity, chiefly oxide of iron ....	3
	100

*Mr. David Scott*, of Edinburgh, painted a fresco in that city about eight years since; the limestone was obtained from the *Vogrie quarry*, near Edinburgh. Its analysis is,

Carbonate of lime .....	94	5
Silica, alumina, and a little oxide of iron and bituminous matter .	5	5
	100	

It has not been possible to procure the stone which furnished the lime for some frescoes, executed by *Mr. John Zephaniah Bell*, at *Muir-house*, near Edinburgh, about nine years since, and which have stood perfectly well, but a small portion of the lime which had dried in a jar has been analysed, and was found to consist of "hydrate, or slaked lime, of carbonate of lime, and minute traces of alumina and oxide of iron." It appeared to be well fitted for the purpose of fresco-painting.

If these examples show that the presence of various ingredients of a certain kind, or to a certain extent, is not prejudicial, the extreme purity of the *Travertine* (not to mention the Florentine limestone) is, on the other hand, sufficient authority for selecting a stone furnishing a very pure, or, as it is technically called, a very rich lime. The following are analyses of stones from the neighbourhood of *Bristol*; similar specimens are to be found elsewhere.

Limestone procured by *Mr. Phillips* from a quarry, called the "White Quarry," on *Durdham Down*, near *Bristol*,

Carbonate of lime .....	99	5
Bituminous matter .....	0	3
Earthy matter .....	0	2
	100	

Limestone marked, "Bristol Durdham Down, white lime†,"

Carbonate of lime .....	99	6
Bituminous matter .....	0	2
Earthy matter and oxide of iron ....	0	2
	100	

† *Veri Precetti*, &c., l. 2, c. 7.

† Specimen procured by *Mr. T. L. Donaldson*.

Limestone marked, "Bristol Durdham Down, producing very white lime for plasterers*."	
Carbonate of lime .....	99.7
Bituminous matter .....	0.1
Oxide of iron and earthy matter...	0.2

100

Thus the Durdham Down limestone is equal or even superior to the Travertine in purity. The original colour is less promising, owing to the presence of bituminous matter, but this disappears in the burning.†

The question as to the means of rendering lime (using the word in the general sense) less caustic, seems to be quite determinable by chemical investigation. It is true the results are at variance with the opinions of some experienced living artists, but it will have been seen that the Italian writers on Art by no means insist so emphatically on the necessity of keeping slaked lime for a very long period; and in the practice of the modern Italian, and indeed some German fresco-painters, it is not considered essential to keep it longer than a few months. That lime is for a *certain period* unfit for the purposes of painting, is, however, sufficiently evident. The well known effect (noticed by Cennini)‡, is that it blisters if used too fresh; in some instances, it is said to have turned the colours to a brownish red.§ All are agreed, in short, that the caustic quality requires to be mitigated; the only questions seem to be—what are the best and shortest means of effecting this, and to what extent is it desirable? In order to a clear view of this subject, it may be necessary at first to state a few elementary facts.

It is common to talk of more or less caustic limes, as if mere lime could vary in its quality; it is the same in all limestones, and is only greater or less in quantity. The purest limestone consists, in atomic proportions,|| solely of,

Carbonic acid.....	44
Lime .....	56

Carbonate of lime..... 100

Thus constituted, whether in its original state or reproduced by chemical agency, it is not at all caustic. If the limestone be subjected to sufficient heat, it loses the carbonic acid, and there are left,

Lime .....	56
Let there be added to this lime as much water as will combine with it, and the result is a compound of,	
Lime .....	56
Water .....	18

Hydrate of lime..... 74

It is to be observed that this proportion of water in combination with the lime does not (apparently) moisten it. Hydrate of lime is a dry powder; the addition of more water either mixes with the lime mechanically or dissolves it.

Let these 74 of hydrate of lime be exposed to the air, the water is expelled by carbonic acid, and the result is, as at first¶—

Carbonic acid .....	44
Lime .....	56

100

This is, chemically speaking, the original limestone, although the original state of cohesion is never regained.

The non-caustic state of lime is therefore arrived at when, by exposure to the air or by other means,

\* Specimen procured by Mr. T. L. Donaldson.  
† The ancients appear to have trusted to the colour of stones before burning, see Vitruvius, l. 2, c. 5. Pliny and Palladius repeat the same opinion.

‡ Trattato, &c., c. 67.  
§ These accidents happened to Mr. Aglio's frescoes at Manchester, and in Moorfields Chapel in London, from the carelessness of those who prepared the lime. The blistering of the lime in the latter case was so universal, that the surface of the painting, soon after it was finished, looked as if flakes of snow had covered it. (Communication from Mr. Aglio.)

¶ The equivalent of carbonate of lime is here doubled, for the sake of convenience; the original atomic weight being,

Carbonic acid .....	22
Lime .....	28

50

¶ It is found that the carbonic acid does not, even in the course of ages, penetrate to any considerable depth in masses of masonry (Vicat. Résumé, &c., p. 122), but a superficial reintegration actually takes place. See a subsequent note.

it has regained its maximum of carbonic acid; but if buried and kept air-tight, the lime cannot in any degree acquire that which renders it non-caustic. "Time," observes Mr. Phillips, "has no effect on pure lime, whether slaked or unslaked, provided it be not exposed to atmospheric air or some other source of carbonic acid."

One of these sources, though not an abundant one, is spring or river-water, which contains carbonic acid and carbonate of lime,\* and the frequent washing recommended by all the authorities on fresco-painting, is a means of restoring the lime to the state of carbonate; pure or caustic lime being constantly carried off in solution with the water that is thrown away, and carbonate of lime being formed. The mixture of water with carbonate of lime is a mere mechanical mixture; non-caustic lime may therefore be kept in a moist state. It might also be kept in a dry state without further change, but, whether moist or dry, it would be wholly useless for the composition of mortar, and would possess no adhesive quality. In the last state of mildness it would resemble mere moistened chalk, and would crumble to dust. But as long as the lime is still caustic, as long as, in other words, it has not recovered its quantum of carbonic acid, it will, on exposure to the air in a moist state, rapidly attract it, and the surface soon becomes incrustated, and in a manner petrified.† This is what takes place during and after the process of fresco-painting; moisture being always the medium—the conductor, so to speak, of carbonic acid.

It thus appears that a considerable degree of causticity is indispensable in lime to give it adhesive firmness, and to render it fit for the purposes of the fresco-painter.‡ This degree experience must teach; but the means of diminishing the caustic quality are always possible. In addition to the recombination of carbonic acid with pure lime, which, as has been seen, can be promoted in various ways, a mechanical mixture with non-caustic substances, pulverized white marble, or even chalk or whiting, might possibly answer the purpose. Armenini§ observes, that some fresco-painters mixed lime and marble-dust in equal proportions, and Palomino|| (on the authority of Luca Giordano) states that the practice was universal throughout Italy in his time. In fact a mixture of this nature with various substances actually exists in several limestones: thus the stones which furnish the limes of Munich and Genoa contain magnesia in considerable proportions; such limes may therefore in one sense be called mild. Perhaps the lime known at Milan and elsewhere by the name of "calcina dolce" may be of this description. The presence of magnesia, if not otherwise objectionable (and experience seems to decide that it is not), cannot obviously lessen the whiteness of the lime. Other natural ingredients, although they might equally have the effect of rendering the substance less caustic, might be less desirable as ingredients in lime for fresco-painting. Thus iron would affect the colours; silica and alumina would probably cause the lime to set too fast.

But although the quantity of the lime may be thus reduced, it must not be forgotten that in itself it is still perfectly caustic till combined with carbonic acid, and in modern practice it appears

\* Recently boiled or distilled water, and recent rain-water, recommended in the practice of fresco-painting, contain neither.

† "If rich lime be spread in layers three quarters of an inch thick, it will in ten months re-absorb as much carbonic acid as is necessary to saturate it." (Vicat. ib., p. 17). On the theory of the solidification of mortars, see the same work, p. 122, and the notes in the English translation, p. 125, &c.

‡ An intelligent writer in the *Antologia di Firenze*, Pietro Petrucci, considers, however, that Cennini's "bianco sangiovanni" (see the preceding paper of this Appendix) was entirely restored to carbonate of lime. That it was, at all events, no longer in any degree caustic, appears certain, since Cennini (Trattato, c. 144) speaks of mixing it with vegetable colours in fresco. He probably meant, in re-touching fresco when dry, as the lime for the *intonaco* was only kept "some days," (ib. c. 67) and could not have lost its causticity. (See the *Antologia di Firenze*, v. 6, pp. 539, 40, and v. 7, p. 326.)

§ Ib., l. 2, c. 7.  
|| El Museo, &c., l. 7, c. 6. He recommends one-third or one-fourth of marble dust, and distinctly says, that it was to mitigate the caustic quality of the lime, when it had not been kept long enough; ground alabaster, he observes, would do equally well.

that the same precautions are taken (whether they are necessary or not is another question) with the magnesian as with other limes. It is also to be observed that there is a considerable difference in the rate at which different limes recover their carbonic acid, the white (pure) limes take it up the most rapidly, and the argillaceous and magnesian limes the most slowly.\* On the whole, therefore, a pure limestone seems to be preferable.

With regard to the question of burying lime, or keeping it by some means air-tight, it is evident from the previous statements that, instead of rendering it mild, this would preserve it in a caustic state for almost any length of time. There would be no danger of its becoming dry even if buried in the mere earth; but for the sake of preserving it clean, the pits had perhaps better be lined. Thus preserved in the state of *putty*, as it is technically called, no chemical change could take place, but a mechanical alteration in the arrangement of the particles might be the result, which might be advantageous by improving the consistence of the paste.

It is not to be expected that the ancient authorities who have undertaken to explain these results should be always accurate in their views, but their testimony with regard to the results themselves is important. Vitruvius† observes, "Stucco (albaria opera) will be well executed if lime of the best quality be slaked long before it is wanted, in order that, if any portion was imperfectly burnt in the kiln, the action of moisture in long maceration may slake it and reduce it to the same consistence as the rest. For if lime be used too fresh, instead of being thoroughly macerated, it will, when spread (on walls), throw out blisters owing to the crude particles that lurk in it; these particles, not having been duly slaked, swell, and destroy the smoothness of the plaster." This explanation does not satisfy the modern chemist, but it will be observed that the evil pointed out is assumed to result from imperfect slaking, not from too caustic a state of well-slaked lime. Pliny‡ observes that the longer mortar is kept the better it is, and speaks of an ancient law relating to building which prohibited the use of mortar that had not been kept for three years, adding, that the stucco executed during the operation of that law was free from cracks. Palladius§ evidently copying Vitruvius, recommends that lime intended for stucco should be slaked long before it is used, and describes it, after having been so kept, as soft and adhesive (viscosum). Leon Battista Alberti|| after repeating the above passage from Vitruvius, asserts that he had seen "some ancient lime which, there was reason to suppose, had laid neglected in a trench for more than 500 years, and which far surpassed honey or marrow in consistence." These passages show that long maceration, or, as it is now technically called, "souring," was supposed to improve the consistence of lime, besides reducing its causticity.

The opinions of writers on art have been already given. Modern authorities on the general nature of cements have also considered this question; a writer of the last century,¶ although very much opposed to the practice of keeping lime to be used for building, admits that the process may be necessary for the due preparation of stucco. After repeating the reason for so keeping it usually given by plasterers, namely, the tendency of fresh lime to blister, he adds, "it appears to me that there is another reason, which the workmen do not notice, for their process. Lime soon imbibes so much acidulous gas (carbonic acid) from the air, as to be increased in bulk and in weight (?) beyond the half of its former quantity; and as stucco for inside work, for the sake of a fine grain and even surface, must have a greater quantity of lime in its composition than is necessary for cementing the grains of sand together, the incrustation would, by the access of acidulous gas after it is laid on, be apt to swell and chip and lose the even surface, if the lime were fresh when it is used in this excessive quantity. But this inconvenience is obviated by their processes, in which

\* Aikin, ib. p. 142.

† L. 7, c. 2.

‡ L. 36, c. 23.

§ De Re Rusticâ, l. 1, c. 14.

|| L. 2, c. 11. Elsewhere, speaking of the preparation of the finest stucco fit to receive fresco-paintings, he merely observes, "lime is not thought to be sufficiently prepared in less than three months." L. 6, c. 9.

¶ Higgin's Experiments and Observations, &c., p. 41.

the lime imbibes a considerable quantity of the gas, and is therefore the less apt to blister or swell, after the stucco is laid on.\*

Recent authorities† merely state the fact that rich limes can be kept in the moist state for any length of time;‡ the results, whatever they may be, are not by them considered important. It has been shown that these results are commonly supposed to be, first, to render the lime mild, and, next, to improve its consistence: assuming, then, that the effect of keeping pure lime in pits would be to promote the more perfect comminution of the particles, it appears that this result might be as completely attained by the method before described, commonly practised by the Genoese masons, namely, thinning the paste in water and pouring off the finer particles as soon as the coarser have subsided.‡ The process is objected to by modern writers on cements for building purposes,§ because it reduces the strength of the lime—in other words, renders it less caustic; but this is precisely the further result, supposed to be attained by keeping the lime in pits. The method is thus doubly recommended to the fresco-painter.

COMMUNICATION FROM DR. REID ON THE SAME SUBJECT.

After the above investigation had been made, the following paper was communicated by Dr. Reid. It will be seen that the experiments proposed, in order to reduce the caustic quality of the lime, are founded on the same general principle as that already pointed out.

In reply to the question proposed by me|| as to the possibility of preparing lime for fresco-painting by a more speedy process than that which has been usually recommended, I have to submit the following remarks,—

Lime can be rendered mild by numerous operations with much more certainty and rapidity than by exposure to the air, or to slow action of air and moisture after being buried in the earth.

Were the precise chemical condition of the lime known with minute accuracy, in so far as it is most advantageously employed for fresco-painting, a definite answer might at once be given to the question proposed. But this, so far I am aware, has not been tested with those advantages which modern science presents. And should this opinion be correct, an opinion, however, on which I would rather inquire for information than presume to offer it with my imperfect acquaintance with this branch of art, I should then consider it desirable to adopt the following course:—

1. That a series of experimental trials should be made with lime prepared in various ways by chemical processes, such as would afford at all times, and without delay, a material whose uniform texture might always be depended on.

Mixtures of fresh lime in minute quantity, with much carbonate,—of precipitated lime and precipitated carbonate,—of lime carbonated by exposure to steam and water with carbonic acid, and various other mixtures, will at once occur to the practical chemist. Here it is to be observed, that if the lime requires to be fully carbonated, the carbonate can be prepared in the most minute state of division, and in the highest purity, by rapid precipitation from solutions of lime, the cost of which would not be so great as to prevent their use for this purpose, as they might be formed partly by materials of which hundreds of tons are dissipated weekly in manufactories, from their being no demand for them. The carbonate might also be obtained from any limestone that might be preferred in a much more minute state of division than it is commonly reduced to, should chemical purity not be a special object, by adopting some of the processes followed in manufactories for reducing solids to an extreme degree of comminution. But if, though much carbonated, it is essential that it should not be entirely carbonated, then the experiments proposed will solve the question as to the best proportion. This is, perhaps, the most important point to determine.

2. That mixtures of various other ingredients should be tried along with the lime so as to ascer-

tain if any peculiar combination of earths should prove more favourable for fresco-painting.

3. That experiments should be made also with the view of ascertaining the extent to which the retardation of the setting of the lime may be secured both by admixture and by the production of artificial atmospheres, so as to give more freedom to the artist in the execution of his designs.

D. B. REID.

15, Duke-street, Westminster, April 16, 1842.

PAPERS OF LATER DATE THAN THE REPORT.

LETTER FROM THE RIGHT HONOURABLE THE SECRETARY OF STATE FOR THE HOME DEPARTMENT.

Whitehall, 25th April, 1842.

Sir,—I have received her Majesty's commands to notify to you, that her Majesty has been graciously pleased to approve the Report of the Commission on the Fine Arts; and her Majesty has directed the Lords Commissioners of the Treasury to submit to Parliament an estimate for the grant of £2000, to be given and distributed as premiums for the best cartoons, in the manner proposed in the Report.

I have the honour to be, Sir,

Your faithful servant,

C. L. Eastlake, Esq. J. R. G. GRAHAM.

COMMUNICATION FROM DR. REID ON THE PROBABLE EFFECTS OF GAS ON FRESCO-PAINTINGS.

15, Duke-street, Westminster, June 10, 1842.

Sir,—I have to acknowledge your communication, and forward accordingly the following replies to the queries you have addressed to me by command of her Majesty's Commissioners, as to the influence of gas, and of the products of its combustion on fresco-paintings.

1. In considering the influence of gas, I presume that I need not advert to the effect of sulphur or ammonia, two impurities which gas frequently contains, as the entire exclusion of these impurities can be effectually secured by selecting proper materials for its preparation, or by such subsequent operations as the quality of the substance employed may indicate.

2. According to the system proposed for using gas, which has always been advocated in connexion with the ventilating arrangements for the new Houses of Parliament, even were a leakage of gas to occur, this gas could not affect fresco-paintings there, whatever its quality might be, as it will instantly be carried off by the air-drains left for ventilating the gas burners, which will always be sustained in operation so as to guard against the ingress of gas, and also to prevent its local accumulation in case of leakage from any of the pipes.

3. The removal of gas in this manner is greatly facilitated by centralizing the burners. A series of experiments was made on this subject nine years ago in an apartment, 80 feet by 40, which is still lighted by the burner then employed, and in which a series of gas jets was introduced so as to form two circular wreaths of flame of different diameters, one being placed within the other. Three lithographic illustrations of some of the burners used in the apartment constructed at Edinburgh, for the experiments on which the details of the ventilating arrangements in the present House of Commons were founded, are given in a letter addressed to the Right Honourable the Viscount Duncannon, which was printed according to the order of the House of Commons in 1838, and to these I beg to refer, as they show precisely the system to which I have alluded. These figures (marked 12, 13, and 14,) show more particularly the method of constructing a Gothic pendant with an illuminated drop, from which the products of combustion are entirely removed, while the light is brought to act without offending the eye, upon the roof, the walls, and the floor. Similar arrangements have been adapted to the principal gas burners now in use at the House of Commons, where they are not received directly into the present ventilating shaft; and where powerful burners, such as Mr. Gurney employs, are in use, the stream of air that carries away the products of combustion will be proportionally rapid in its course.

4. If arrangements be adopted which shall certainly secure the removal of any gas which may arise from leakage of pipes, it is scarcely necessary to remark that there will be still less danger of any injurious action from the use of gas when it is

actually burning, as the currents in the air-drains proceeding from the burners will then be in greater force.

5. Gas may be used in many other modes so as to imitate the diffused light of day, and the products of combustion can be excluded as essentially in these cases as in the arrangements that have been mentioned.

6. As it is obvious, accordingly, that the moisture and carbonic acid produced by the combustion of gas, and also any unconsumed gas, can be effectually removed, no apprehensions are entertained as to any injury to fresco-paintings from the use of gas.

7. It may be proper to add that in all galleries for works of Art, where these have been injured by the state of the atmosphere, the principal causes of injury that have come under my observation are the following:—

A. Mechanical or other impurities in the air, introduced in consequence of the supply being taken from an indifferent source, or not filtered by passing it through gauze. The filtration of air is an important question in reference to works of Art in cities, where soot abounds in the atmosphere. It is an operation, however, which has been found very advantageous in numerous buildings in London. At the House of Commons no air has been admitted since the alterations made there, in 1836, that has not passed through a filter, exposing about 400 feet of surface. It consists merely of a gauze veil, which intercepts the soot and other impurities mechanically suspended in the air, to such an extent, that in extreme states of the atmosphere I have reason to believe that upwards of 200,000 visible particles of soot have been excluded by it at a single sitting. In the House of Lords, where the air enters more directly from the east, it has been found advantageous not only to filter the air, but also to wash it by the action of an artificial shower, through which it is drawn on its progress to the house.

The air at a considerable elevation is much purer than the air at the surface of the ground; and hence the Victoria Tower has been suggested as a fit place for affording a proper channel for the supply of air to the new Houses of Parliament.

B. The imperfect removal of moisture and carbonic acid evolved during respiration, and from the combustion of lamps and candles, which condense subsequently during the cool of the evening, and evaporate again each successive morning with the returning warmth which accompanies it. Moisture and carbonic acid are not only injurious by the chemical action they exert under such circumstances, and the mechanical abrasion that is consequently induced, but also by affording the pabulum, that is the great source of nourishment in the production of dry-rot, as it is observed in the wood-work of public buildings and private dwelling-houses, in canvases, paper, libraries, paintings, and in short in all textures derived from the animal and vegetable kingdom, particularly where this action is assisted by the warmth of combustion or respiration.

C. The accretion of minute particles of dust, which, though they may be infinitely small, must necessarily in the course of time produce injurious effects where the arrangements for their exclusion are imperfect. But these are altogether trifling, comparatively speaking, in their influence on works of art, when moisture associated with carbonic acid is effectually prevented from being deposited along with them. In public galleries subject to the daily concourse of numerous individuals, the removal of dust from the floor may be most effectually secured by a process of ventilation which can be made to determine its exclusion, while in the movement of the air generally for the benefit of those assembled, the usual upward current which nature and experience equally point out as the most desirable, need not be reversed.

I have the honour, to remain, Sir,

Your most obedient servant,

C. L. Eastlake, Esq.

D. B. REID.

## VARIETIES.

**THE DULWICH GALLERY.**—Our attention having been called to a report of a meeting, "to facilitate the admission of the public to public monuments," published in our last number, we have thought it right to institute some inquiry on the subject. At that meeting, it seems to have been stated by Mr. Angerstein, that "the pictures in the Dulwich Gallery, notwithstanding it was much frequented, appeared to be greatly neglected, and were in consequence injured." Now, it is our duty to give the most unqualified contradiction to this assertion: there is not the slightest foundation for it. Either our reporter must have been mistaken, or Mr. Angerstein must have obtained his information, by silly hearsay, from some person who was not actuated by a right motive. Sure we are, that he could have said nothing of the kind if he had seen and judged for himself, with his eyes open, his wits about him, and a disposition predisposed to truth. We have ourselves, within the last fortnight, examined the collection with scrupulous care, and looked with suspicious caution into every one of the works deposited in the gallery. Several of them, certainly, bear tokens of the attacks of time; but we do not hesitate to say, there is not a single one of the whole, which does not supply evidence that an intelligent mind, an experienced judgment, and a careful hand, have been long active, to arrest the progress of the destroyer, and to repair the inroads he has made. This is so evident, even to the most casual observer, that we marvel at any person's so completely departing from integrity, as to venture an assertion, or an insinuation, to the contrary. In one or two instances, ignorant visitors may imagine that certain defects may be the results of carelessness,—for example, in the famous 'Flower Girl,' of Murillo, the canvass all round the picture is cracked; but this arises from the fact, that the parts so injured occur upon inferior canvass, that has been added to the original canvass to increase its size. We rejoice, indeed, to find, that the keeper of the gallery has not been labouring to content and gratify a mass of stupid observers, by glazing highly the works in his charge, in order to make them look fine for a season; but we know that he has daily watched the progress of decay, so as to arrest it in the safest and most satisfactory manner. We have conversed with several artists who remember the state of the pictures a few years ago, and who bear the strongest testimony to their present improved condition. The abilities of the keeper, Mr. Denning, are well known; there can be and there is no question as to his skill and knowledge; few members, if any, of the profession, are better capable of keeping this valuable collection in good order. It is not his ability, therefore, but his honesty, that is attacked, when it is asserted that the pictures "appear to be greatly neglected, and, in consequence, much injured." We do not hesitate to say, it is impossible for the charge to be sustained by the evidence of a single upright and competent judge in the kingdom.\* The contrary is proved, not only by the existing state of the collection, but there is no gallery better "ventilated," or "heated" upon safer scientific principles; a matter of vast importance, when we recollect the low and damp situation in which the gallery stands. People who desire to attain an object, sometimes overshoot the mark. It will be well to remind "The Society for Facilitating the Admission of the Public to National Monuments," &c., that although the Dulwich Gallery has *always* been free to the public, the gallery is not the national property, and that the trustees might, if they pleased, demand pay-

\* Within the last month, indeed, the President and Council of the Royal Academy have paid their annual visit to the Dulwich Gallery—the purpose of such visit being to ascertain the state of the pictures, and whether the keeper justly discharges his duty. It is scarcely necessary to add that their report differs essentially from the report attributed to Mr. Angerstein.

ment from every person who seeks to enter it. The will of the testator, Sir Francis Bourgeois, expressly providing, that the pictures shall be "kept and preserved for the inspection of the public, upon such terms, pecuniary or otherwise, at such time or times in the year, day or days in the week, as they may think proper."

**THE PATENT STUCCO PAINT CEMENT.**—A composition of very extraordinary and most valuable properties is at present under this name attracting the attention of speculators in the improvement of architectural material. To describe in half a dozen words the result of its application to the façade of a building—it may at once be said to assume the appearance of the most carefully dressed freestone—when employed according to the prescribed directions. So perfect is the resemblance, that it would deceive an experienced mason; in short, as sand, the main component of freestone, constitutes a great proportion of the material in its application, we may say that it is the formation of freestone—the result of a chemical combination surpassing the effect of the chemistry of nature in this instance, inasmuch as freestone readily yields to the action of hard bodies, but this composition is of a more stubborn texture. "This Paint Cement" in colour is of the tone of cream, and of a consistency somewhat more dense than colour prepared in the usual way for house-painting; and it is applied to surfaces after having been mixed with sand in the proportion of one part to three parts of the latter, or say of 1 cwt. of the paint to 3 cwt. of sand. After this simple preparation it is applied by the plasterer with a care proportioned to the kind of surface required. With respect to the surfaces to which it may be applied, there is no necessity for any degree of roughness; for so powerful is the adhesive nature of the base of the composition that it attaches itself to glass with apparently the same tenacity that it would adhere to a rougher substance. It can be applied to fronts of brick or any other material, and of any degree of thickness, although of course upon rough surfaces there must be more of the material, in order to secure uniform smoothness; and with respect to expense, we are assured that the cost of thus converting a brick house into a stone one would be somewhat about two shillings per square yard. This valuable invention is the patent of a company of gentlemen at Plymouth, who have during some years tested the value of their composition before offering it to the public; the firm is known as Messrs. Johns and Co., whose sole agents are Messrs. Mann and Co., 5, Maiden-lane, Queen-street, Cheapside. To architects, builders, contractors, &c. &c., it is recommended as possessing these qualities:—

1. Its strong adhesive properties fixing most tenaciously to the smoothest surfaces, even to glass.
2. Its being highly repellant of water, and thoroughly impervious to wet or damp.
3. The chemical peculiarity of its composition does not admit of the possibility of its vegetating, and thereby becoming discoloured.
4. The safe and gradual rapidity with which it dries; *hardening the more by the greater exposure to the atmosphere.*
5. Its perfect freedom from any of the caustic qualities of Lime Stuccoes; and, consequently,
6. It may be painted upon as soon as dry; *a property possessed by no other cement whatever.*
7. It is not in the slightest degree affected by frost. &c. &c.

**A NEW EASEL.**—We have been much gratified by the inspection of an easel upon an improved principle, brought forward by Messrs. Winsor and Newton, of Rathbone-place. An easel upon the principle of this we are about to describe was formed by M. Bonhomme, of Paris, which gained for him a prize at the exposition of inventions, as also, we believe, the patronage of, and a premium from, the King of France. But the construction and improvements in the easel which we have seen are almost sufficient to claim for the proprietors a title to invention. Among the advantages it possesses over the common peg or rack easel, are two very important ones: it is comparatively small, but is capable of receiving any sized canvass, up to a Bishop's full length, and is so entirely under command, that the artist can lower or elevate his work, so as to

reach at convenience any part of it; a picture can also be inclined forward, a position often desirable for advantage of light. This cannot be effected on the ordinary easels; but by means of a cord and a spring bar, the inclination can be steadily and accurately adjusted to any angle desired. It is a matter of continual complaint, the difficulty of raising or lowering a large canvass. On the common easel, to support the picture, and at the same time move the pegs, are more than one person can conveniently effect; but this, together with the ordinary inconveniences, this easel obviates. Its advantages are also great as an exhibition easel, for paintings can be so disposed on it, as to display them in almost any light.

**LEATHER IMITATION OF CARVING.**—The process of blocking leather into singularly-effective imitations of carving, patented by Mr. Leake, 52, Regent-street, has been already briefly described in a previous number. We have had an opportunity of inspecting some panels (if the compartments may be so termed), executed for H. R. H. Prince Albert, after original carvings by Albert Durer, the property of his Royal Highness. It is impossible to conceive, in feeling and colour, a more perfect imitation of ancient sculptures in wood than is presented in these mouldings. Her Majesty has commanded a cabinet, with enrichments, after carvings of the most beautiful design and execution; as also, patterns in the *mauresque* and *renaissance* tastes, for hanging rooms. The latter are gilded, and coloured in tones the most brilliant and delicate that can be communicated to any substance. The process by which these designs are produced is novel and ingenious. Leather to be employed for the purpose is first subjected to the action of steam, or hot water, in order to reduce it to a workable consistency, which it acquires by being reduced to a substance resembling gelatine; it is then, by air or hydraulic pressure, forced into the mould, where it assumes all the sharpness and determined prominence of carving, and even the texture of any grained wood, whence the original design might have been taken. Leather is by no means a novel decorative appliance, but its uses have never been developed to the extent that Mr. Leake has carried them. It is known to have been anciently used for hangings and furniture, but it has never been used as a means of producing imitative carvings, *basi*, and even *alti-relievi*. In Spain and Italy, the method of imparting the design was by common pressure, producing it in relief on the surface; it has also been imprinted in intaglio, but by this method the surface is left comparatively poor. By means of additional forms and recipients, figures were sometimes projected to basso-relievo, but little beyond this was anciently done in this material. The proprietors, however, of this patent have so far perfected the application of leather to decorative furniture, that not only can they produce designs in high relief, but would even undertake to execute busts in leather. Their experiments have been so extensive, as to have tested the qualities of every kind of elastic matter at all likely to be valuable for such a purpose. India-rubber did not escape their researches, but from its extreme tenacity it was found impossible to mould it into any permanent form. From what we have seen of these beautiful productions, we conceive them to be applicable to enrichment of every kind to which carving has hitherto been applied; and the coloured Elizabethan and renaissance designs, are in effect equal to the best of the Tudor period in England and the age of Francis the First in France.

**WILKIE'S WORKS.**—The exhibition of the works of the late Sir David Wilkie, at the British Institution, closed on Saturday, the 27th August. As usual of the works of old masters, a certain number will be left for the students to copy.

## THE ART UNION OF LONDON.

THE sixth annual Report of this Society has been published. We have already so sufficiently canvassed it, as to render it needless to occupy much space in considering it now. We shall have, however, some observations to make upon it ere long; and some suggestions which we shall offer—with all due respect—to the committee by whom it is managed. Hitherto, they have done WELL—the word is too weak a word for our purpose—but it by no means follows that they may not do better; no human institution has ever been incapable of improvement.

The printed report contains three engravings on wood; these we have borrowed for introduction into our columns. The subject is thus referred to:—

"Your committee, wishing to obtain an appropriate device to head the society's papers, offered a premium of 10 guineas for a design in outline. More than 100 drawings were submitted, and from these your committee selected one which was afterwards found to be by Mr. F. R. Pickersgill. The subject of it is 'Minerva encouraging the Sister Arts.'

"There were amongst the drawings several other very excellent designs, and your committee, desirous of rendering the annual report interesting to the subscribers generally, and so inducing its preservation as a record of the society's operations, as well as to aid, although slightly, the art of wood-engraving, selected two other devices, which, by the kind liberality of the authors of them, they were enabled to engrave for its adornment.

"The second is by Mr. Selous, and represents 'Genius nurtured in the lap of the Society.' The third is by Mr. Bonomi, and is described as 'Minerva replenishing the lamp of the Genius of Art.' The three are engraved respectively by Mr. Williams, Mr. Jackson, and Mr. Orrin Smith."

The prizes, amounting in number to 269, are now exhibiting in the rooms of the Society of British Artists. The exhibition is not only free to all members, but each member has received a ticket to admit four friends; so that it is by no means improbable that 60,000 or 70,000 persons will have examined the collection. This is in itself a vast advantage to the Arts, and to the artists also; for the works of many of them are here seen to great advantage that were completely hidden from the eye in the galleries from which they have been selected. In the greater proportion of them we recognize familiar faces; but with some—and not a few—we make acquaintance for the first time; and if we had not been this month more than usually pressed for space, we should bring under review such as we have not already noticed.

The collection will undoubtedly gratify the thousands who may see it, and is, on the whole, satisfactory—as affording evidence that the selection of the prizes has been generally dictated by sound sense and good taste. Out of the number there are certainly not above a score that can be characterized as discreditable:—a matter of astonishment when we recollect that among the prize-holders there will of necessity be many who have hitherto known little and cared less about works of Art. A vast proportion of the pictures are such as might be coveted by persons of refined judgment. There is one of the prizes upon which we desire to offer a remark. We rejoice that Mr. Frith's painting, "from the Vicar of Wakefield," is in the possession of a kindred spirit. It was selected by Mr. Z. H. Troughton, whose powerful and beautiful tragedy of "Nina Sforza" ranks among the most meritorious and successful of modern dramas. It was just the choice we should have expected from him. The painter is fortunate in falling into such hands; and the poet is lucky in possessing a work of very rare merit, by an artist who cannot fail to become very famous ere long. There are certainly a few cases, in which we regret that prizes did not fall to the lot of persons equally capable of judging rightly; but upon these it is not necessary to remark. After all, people will please themselves; and the buyers of pictures through the Art-Union are not the only buyers of the year who have paid money for things of little or no value.

While, however, we express ourselves content with the selection generally, we are by no means disposed to admit the accuracy of an assertion in "the Athenæum," that—

"The pictures selected by the holders of the Art-Union prizes are now in course of exhibition, and offer a very comprehensive text to any one who desires to write a treatise on the state and prospects of painting in this country."

This is disingenuous, to say the least. It is notorious that, of the productions of our leading British artists—of the men who enable us to judge correctly as to "the state and prospects of painting in this country"—there were none *for sale* at either of the exhibitions out of which a choice was to be made. When, therefore, persons look round the walls of the Art-Union Exhibition Room, and ask—as we know persons have asked—where are Eastlake, Maclise, Leslie, Mulready, Turner, E. Landseer, and so forth, they must be reminded that every work by these artists had been sold previous to opening the gallery of the Royal Academy.

We also perceive in one of the morning papers an intimation that "this year fewer pictures than usual have been sold"—the object being to show that if the Art-Union is the means of selling pictures, private buyers have become less numerous in proportion, and that in reality the sales are not increased. Nothing can be more erroneous. On the contrary, it is certain that at *all* the exhibitions the number of works purchased has been unusually large, exclusive of the immense sum—a sum of nearly £30,000—"thrown into the market" by Art-Union Societies.

The Committee of the Art-Union have thus terminated their year's labour. We should be ungrateful, if we did not convey to them the thanks of the profession, whose interests they have so greatly promoted. Their work was undertaken, and has been carried out with the most disinterested spirit. They have laboured, not only without fee or reward, but even without the shadow of other recompense, than that which arises from the consciousness of having done good. We could tell them of some households to whom they have brought a cheerful present and a bright future.

And now for the efforts of another year. As we have intimated, we shall venture to suggest some changes, which to us will seem improvements in the constitution of the Society: they will regard, chiefly, the mode of selecting the larger prizes, the wisdom of invigorating the committee by an infusion of new blood, and the project for multiplying copies of the engravings. With respect to the latter, there does appear to us to be very considerable difficulty; we fear much that the "application of science" will be a failure, and that the 12,000 subscribers will certainly not obtain 12,000 "decent" impressions of the plate. But let the experiment succeed or fail, perhaps it was the duty of the committee to try it.

## BIRMINGHAM SOCIETY OF ARTS.

The professional and unprofessional members of the Birmingham Society of Arts have separated; and, we fear, with little chance of their again meeting. The fairest way in which we can act, in reference to both of them, is to print the explanatory documents issued by each. We lament greatly that this division has occurred; good cannot come out of it. We feel that any remarks of ours, under existing circumstances, could do no service—and shall postpone them until all reasonable hope of reconciliation has vanished. Our comments might contribute to prevent this most desirable "consummation;" and it is, therefore, better that we leave the reader—for the present, at least—to judge for himself.

The following is the address of the "unprofessional" committee to the members and the public.

The Unprofessional Committee feel it incumbent upon them to address the donors and subscribers, as well for the purpose of explaining the alteration in the management, as for putting in its true light the conduct of the professional body since the special general meeting.

The limited usefulness of the Academy, and the mischief resulting from the Society's being managed by two separate bodies, led the subscribers' or unprofessional committee to consider a remedy.

In March 1842, the committee prepared a memorial to Government requesting aid in promoting the formation of an efficient school of design. The shortness of the time prevented its being laid before the professional body, but it was submitted to their chairman, and by him cordially approved. A grant of money was promised "on condition of a sum at least equal being guaranteed by the subscribers for three years certain."

This stringent condition, and the experience of the difficulty of managing the Society by two separate bodies, led to the consideration of a plan by which all the advantages of the artists' co-operation could be obtained, and the great evils of a divided management obviated.

A plan embracing these objects, and approved with one exception by the whole of the unprofessional committee, was submitted to the artists, but after a very lengthened correspondence they refused their concurrence. They strenuously resisted the management by a single committee, and required that the school of design should be conducted upon principles to be sanctioned by them.

Three months were consumed in this interchange of written communications. The whole body of the Society of Arts was then assembled in the manner provided by the laws, on the 12th of July last. The artists denied the competency of the meeting to entertain the propositions, on the ground that they had not been approved by themselves. Dissatisfied with the decision of the meeting on this point, they immediately withdrew. The meeting then passed a law authorizing the management by one committee composed of subscribers and artists.

The proportion of seven artists to fourteen subscribers was assigned because it was the proportion proposed by the artists themselves, in 1828, and also because the committee conceived that as the responsibility to Government would rest upon the subscribers alone, they therefore were entitled to the larger share in the control. The seven artists were members of a permanent body, whose whole number of resident members does not exceed fourteen. The circumstance of their being bound together by a peculiar interest, and, practically, the perpetuity of their appointment in comparison with that of the subscribers, who are changeable every year, render the appointment of power less unequal than the arithmetical numbers express.

On the 14th of July, the unprofessional committee requested the professional committee, "As the preparations for the Annual Exhibition had been so long delayed, to meet them on the 16th on that business." It was replied that "they respectfully decline doing so." On the 16th the committee, stating their opinion that "it is desirable to have the Annual Exhibition as early as possible," request the artists to say "whether they concur, and whether they intend to give their co-operation as heretofore in making the necessary preparations." The professional committee in reply state on the 17th of July, that they "regret that the time for making preparations for the annual exhibition has been delayed by the unhappy proceedings of the unprofessional committee: that it was their intention, in the event of the special general meeting coming to what they deemed a just decision upon the question pending between them, to have redoubled their exertions to have repaid the damage caused by such delay:—the decision of the special general meeting has determined them to take no part in the preparation referred to."

Upon the receipt of this, the committee determined upon having an exhibition of the works of deceased masters (six years having elapsed since the last) and proceeded to make arrangements for that purpose. Desirous however of coming to a clear understanding with the professional body, the committee wrote to them on the 23rd July, as follows:—"The professional committee having on the 15th of July declined to meet the unprofessional committee on the subject of the annual exhibition, and having subsequently refused to co-operate in the preparations for such exhibition, and

this committee deeming it absolutely necessary to make a direct application to the professional committee, to ascertain whether this committee is correct in assuming that the professional members have withdrawn from the Society of Arts, Resolved—that the Honorary Secretary transmit a copy of this minute to the Chairman of the professional committee, with a request for an early and explicit answer." This was forwarded the same day, but notwithstanding particular and repeated requests for an early answer, it was the 28th before the following was received.

"At a meeting of the Artists, held July 27, 1842. "The minute of the unprofessional committee of the Society of Arts, of the 23rd instant having been read— "Resolved—That it is the opinion of this body, that the unprofessional committee (as such) have no right under the existing laws of the Society to require an answer to the question contained in the minute referred to, and that the artists beg most respectfully to decline any reply.

"Resolved—That in forwarding the above resolution to the unprofessional committee, this body disclaims all want of respect or courtesy to the unprofessional committee, and regrets that existing circumstances prevent any other course being taken.

"PETER HOLLINS, Chairman." At a meeting of the unprofessional committee, held August 3rd, 1842, a circular letter of which the following is a copy, having been laid before this committee,—

"BIRMINGHAM SOCIETY OF ARTISTS. "SIR, July 23rd, 1842. "I am requested by the Birmingham Society of Artists to solicit a continuance of your support to their annual exhibition.

"I deem it necessary to inform you, that the artists have seceded from the Society of Arts, in consequence of the arbitrary proceedings of the unprofessional committee, particulars of which will shortly be published.

"The Society's agent, Mr. Green, 14, Charles-street, Middlesex Hospital, will collect, pack, and forward to Birmingham, works of Art until August 20th, the expenses of which will be defrayed by the Society in all cases where this circular has been addressed, with the usual deduction of carriage for those sold.

"I have the honour to be, "SIR, your obedient servant.

"PETER HOLLINS, Chairman." "It was resolved—That the unprofessional committee of the Birmingham Society of Arts feels called upon to express its deep surprise and disapprobation at the conduct of the professional committee in having communicated resolutions to this committee, apparently in their capacity of the professional committee of the Society of Arts, and in reply to a communication addressed to them as such, while they had previously drawn up and were circulating in London a paper signed by their chairman, in which they, by requesting a continuance of support to what they improperly term their annual exhibition, assume the character of still being the representatives of the Society they had belonged to—seek uncourtously to prejudice this body in the eyes of the usual contributors to the exhibition, by accusing them of arbitrary conduct without entering into particulars of the charges, or giving them notice of their intention to bring it forward—and state that the artists had seceded from the Society, while they were opening, considering, and answering communications addressed to them as members forming part of it.

"Resolved—That until the conduct set forth in the resolution of July 27th is satisfactorily explained, they cannot, in honour, hold communication with the professional committee, beyond what the laws indispensably require."

One of the artists has already, in most express terms, disavowed to the committee all participation in the conduct here referred to.

The committee print these extracts of the proceedings, and the letter, to show that they used every means to insure the co-operation of the artists in the annual exhibition; and that the subscribers may judge whether the committee's "proceedings" have been "arbitrary," also, that it may be seen who is chargeable with the delay; and that the subscribers may estimate the "courtesy" and the sincerity of the professional gentlemen.

The committee in speaking of the members of the professional body of the Society of Arts—a body, twenty-four in number, self-elected, and ten of whom are not resident in Birmingham—have for brevity's sake called them "the artists;" it must however be understood that they constitute only a small proportion of the painters, architects, designers, engravers, medalists, die-sinkers, modellers, carvers, and chasers, who form the artists of Birmingham. The committee desire it also to be observed that so far from being unkind of whatever services the professional gentlemen, connected with the Society of Arts, have rendered, they have uniformly acknowledged, and to the utmost extent of their ability, compensated them.

In conclusion, the committee request the subscribers' attention to a cursory review of the history of the Society. It was founded in 1821, "for the encouragement of Arts and Manufactures." Many noblemen and opulent gentlemen contributed largely to its funds. The late Lord Wenlock (then Sir Robert Lawley) presented a very valuable collection of casts of sculpture, and warmly advocated the establishment of a professorship, for teaching Art with express reference to Bir-

mingham manufactures. To this collection of casts, &c., valuable additions have since been made.

With the exception of the Anatomical lectures that have been delivered by Mr. Gutteridge, since 1832, and attendance from time to time by members of the professional body for the last few years in the Antique Academy, the founder's plan was never realized. Exhibitions, as a means of improving the taste of the inhabitants, became a special object of the Society's attention, and in 1830, £3000 were expended in new buildings chiefly for this purpose.

As respects the purposes of the founders, they anticipated by fifteen years the Government grant in aid of Schools of Design. When, in 1836, Parliament first voted money for this purpose, a slight effort was made to obtain a portion of it, but the application was not prosecuted. It remains therefore yet to obtain for Birmingham systematic teaching of Art, by a competent professor, with special reference to manufacturers. Through the aid of Government and the continued support of the subscribers this may shortly be accomplished, and justice done to the enlightened and generous purposes of the founders—some of the most effective patrons of Art and earnest promoters of the welfare of Birmingham.

The subjoined extract of a letter from Lord Wenlock will form one of the best justifications of the committee that can be advanced, supported as it has been by the yearly gift of £25 as a prize for modelling, by this lamented nobleman to the end of his life, and continued to the present time by his brother, Sir Francis Lawley, but which—though intended expressly for the encouragement of a branch of Birmingham manufacturers—has been diverted from that object these seven years, and given to the artists who have periodically superintended the studies of the pupils in the Antique Academy.

From Sir Robert Lawley to J. W. Unett, Esq., Hon. Secretary. Dated Florence, October 11, 1821.

"I shall be obliged also to you to inform the committee for the establishment of an exhibition of Fine Arts (and upon which subject you wrote me some time since), that I consider it as the most essential and necessary part of such establishment—the formation of a general school for drawing and modelling under the direction of an able professor. That my unalterable opinion is that, unless such a measure be adopted, the whole plan is nugatory and useless. And that I shall not think myself in the least bound to proceed with my contributing other casts than those already sent to it, unless that the first and most essential part of my scheme submitted to them be fully adopted. I have no person whom I now can recommend. It appears to me the best way, to select some young man of talent and genius from the Royal Academy of London, and to send him to Italy to perfect himself. If this is consented to, I desire you put my name down to an annual subscription for £30 for such an object. The young man may be sent to me: I will undertake to attend to his instruction, and he shall be accommodated with apartments in my house and maintenance at my table; so that a very small salary will be sufficient to any enterprising youth who would be too happy to find such an opportunity of instruction. And by pursuing this my plan, the manufacturers of Birmingham might be put upon a peace establishment, and furnish the foreign markets, from which they are annually becoming more excluded. I hope this will be attended to. I have no personal view in proposing to the town of Birmingham so important a plan: the only view I have is, the introduction of just taste and solid principles in the shape and construction of their articles; in which at present they are miserably deficient. If the town, losing this opportunity, rejects my advice, I do not conceive that any other is likely to be offered to it; nor will they easily find any gentleman so willing, and I may say so able, to carry this plan into effect as myself."

WILLIAM PHIPSON, Chairman to the Committee. Birmingham, August 4th, 1842.

## SOCIETY OF ARTISTS.

The following is the address of the "professional" members, in reply:—

The "unprofessional committee" of the Society of Arts having published a circular containing some very unjustifiable imputations on the conduct of the Artists who formerly constituted the professional members of that Society, the artists feel it due to themselves to enter into a full exposition of the circumstances attending the recent dismemberment of the Society, as they are equally anxious with the "unprofessional committee," to put "in its true light" the conduct of both professional and unprofessional bodies.

Previously to the year 1830, circumstances, not material to the present subject, had caused the establishment of two Societies for the encouragement of the Arts, in Birmingham, the one called the Society of Arts, the other, the Birmingham Institution. On the 2nd of January in that year, the two Societies were incorporated under the circumstances and provisions stated in the accompanying paper. It was then agreed, and was indeed the fundamental law of their union (as expressed by laws, 1, 2, and 6), "that the Society of Arts shall consist of two distinct bodies, professional and unprofessional, with equal authority." The pro-

fessional body consisting of artists, called members of the Society, acting independently as a body, and subject only to their own bye-laws. The unprofessional body consisting of donors and annual subscribers, acting by a committee of their body annually chosen. And by law 16, it was further specially provided, "that no measure shall be passed in a general meeting, unless previously approved of by both those bodies."

It was on these laws, thus specially framed, that the professional members took their stand in the recent discussion between themselves and the unprofessional committee. Convinced of the impolicy of the change proposed, as well as of the utter want of necessity for such change, merely to accomplish the object which the unprofessional committee professed to have in view, the professional members claimed to exercise the veto conceded to them by the constitution of the Society; and they confidently refer to the report of a select committee appointed on the occasion before referred to, in 1830, to prove that their claim is neither new nor unreasonable. That report, sanctioned at the time by Mr. W. Phipson himself, states that "with regard to the new laws and regulations now presented to the committee, the deputation [i. e. the select committee] feel it right to remark, that they are framed on the principle of giving equal power to the artists and to the pecuniary contributors. The deputation cannot doubt the propriety and justice of this principle."

The great popularity of the Society, subsequent to this period (1826), and its increased receipts, (amounting this year [1830] to upwards of £1300) are, in the opinion of the deputation, chiefly attributable to the establishment of exhibitions, and to the exertions of the artists, which have excited correspondent efforts on the part of the unprofessional committee; and since it appears certain, that but for those exertions, the Society, if in existence, would not at this time have possessed funds sufficient to accomplish the original objects of its liberal founders, the deputation observe, that these objects can be attained only by an arrangement which secures the permanent support of the resident artists."

For twelve years the Society of Arts has continued increasing in prosperity and in efficiency, and more than all, in the respect and esteem of the public. Within the last few months, however, the artists have been surprised to hear complaints of "the limited usefulness of the Academy, and the mischiefs resulting from the Society's being managed by two separate bodies," which it was forthwith proposed to remedy by re-organizing the Society and utterly annihilating the powers of the professional body. For themselves the artists deny that any mischief has resulted at all, but more especially, if it did arise, that it was in any way attributable to them; and they would also remark, that, as at present appears, it is a mere assumption of the unprofessional committee, and altogether unsupported by any one specific fact.

As respects the Academy, however, the professional members of the Society of Arts had long been aware of and lamented its "limited usefulness." The Academy (or antique school) would accommodate only about 30 pupils, which was the number registered in the late Society's books. Until the year 1835 the School was superintended by the different members of the body of artists in succession gratuitously; but in the course of that year, by the intervention of the Hon. Sec. Mr. Unett, the Lawley prize of £25, which had been for some years dormant for want of competition, was, with the concurrence of Sir Francis Lawley, assigned to the artists as an acknowledgment for services in the school which the Society itself had no funds to remunerate. In the mean time also, as stated in the circular of the unprofessional committee, in the year 1836 an effort (in which a member of the professional body was the chief agent) was made, to obtain a portion of a parliamentary grant, then voted for such purposes. That gentleman was informed by Lord John Russell, that the grant was intended exclusively for the Metropolitan Schools, and on that account alone, therefore, "the application was not prosecuted."

Limited however as their means were, the artists have the satisfaction of referring back to the terms in which the Academy itself was spoken of, and their services from time to time acknowledged, in the annual reports of the Society. They are thus recognized in the very last report presented to subscribers in March, 1841:—"The Society has directed its energies to the promotion of the study of Art in the higher departments, and also to its application to the practical purposes of this manufacturing community. \* \* \* \* \* Thus has been laid upon the most solid foundation, a school for the profitable study of Art." And subsequently it is admitted that "the students of the Academy, now more numerous than at any former period, have entitled themselves by their acquirements and general demeanour to praise; the diligence and solicitude evinced by those members of the professional body who have had the superintendence and direction of their studies, has been such as to recommend them in an especial manner to the approbation of the subscribers." Nor were the praises undeserved. The artists refer with pride and satisfaction to the number and talent of those among the students who have already attained high rank in their respective branches of the profession; whilst a very numerous body of resident Medalists, Die-sinkers, Modellers, Engravers, Carvers, Chasers, and Japanners, are profitably pursuing their various avocations in the town, and contribut-

ing by their taste and skill greatly to the superiority of its manufactured articles.

The artists nevertheless continued to direct their serious attention to the adoption of the best means in their power to increase the efficiency of their school. So far back as January, 1841, they submitted to the unprofessional committee "A plan for the extension of the School of Design, including Elementary Drawing of every description, Perspective and Geometrical Drawing, &c." and also for improving the academy, by the addition of casts of the most celebrated and beautiful ornaments, candelabras, and vases, from the earliest period to the present time. This plan was estimated to require an additional expenditure of £100 per annum only, and having been laid before the general meeting of that year, was by it again consigned to the unprofessional committee, to be acted on or not at their discretion. The professional members of this Society more than once reminded the unprofessional committee of these suggestions, but they received no answer until March 1842, when they were for the first time made acquainted with the fact of an application for a grant from the Queen in aid of a School of Design, accompanied by an intimation, that it was intended also to propose, "that the regulations of the Society must thenceforward necessarily rest with the subscribing members alone."

To this proposition the Artists at once demurred, and conveyed their opinions to the unprofessional committee in the following resolution:—"That this committee cordially join with the unprofessional committee in grateful acknowledgments 'to Her Majesty's Government, for the offer of a grant in aid of the School of Design, and are willing also to unite and promote to the utmost extent, the object of such a grant, in accordance with the spirit of the memorial, and consistently with the laws of this Society, but this committee is of opinion, that as a necessary consequence of the acceptance of the grant, the alterations in the laws proposed by the unprofessional committee is uncalled for, and would, if carried into effect, be injurious to the best interests of the Society.'"

Notwithstanding, however, that the professional members thus "strenuously resisted the management by a single committee," they were so far from requiring, as is untrue alleged against them in the circular referred to, "that the School of Design should be conducted upon principles sanctioned by them," that, after many other attempts at accommodation, they suggested by a resolution, dated the 30th of May, 1842, "that the unprofessional body should be the recipients of her Majesty's bounty, and carry out the plan of the School of Design, independently of the artists, with power to call to their aid, if deemed necessary, any or all the members." More mature reflection having convinced the professional members, as they also stated in the same resolution, that "such an union would be destructive of the present balance of the two bodies of equal powers, and incapacitate the artists from giving that efficient support, which is acknowledged to have been mainly instrumental in raising the Society of Arts to its present high stand in the provinces."

Instead of any manifestation of a corresponding feeling of conciliation, this suggestion of the artists was met by a resolution of the unprofessional committee, "That a special general meeting be now summoned, for the purpose of re-organising the Society, and of considering the adoption of measures that may extend the advantages of it, and more especially as respects the management of the Institution by a single committee."

Justified as the artists believed they were by the laws of the Society, as before quoted, they protested against the injustice and illegality of these proceedings, and also against the competency of any general meeting to entertain the question proposed. A special general meeting was, however, held at the Waterloo Rooms, Birmingham, on the 12th of July, when 52 persons only attended, out of a body of subscribers amounting to nearly 400. The artists again protested against the regularity of the proceedings: and the question of the competency of the meeting to entertain the proposal having been put to the vote, it was found, that 27 persons voted against the abrogation of the laws, and 25 only, including the chairman, for the alteration. The minority then claimed double votes, a further scrutiny was had, when the votes appeared to be, for the alteration 38, against it 30. The former majority of two persons present was therefore changed into a minority of eight votes, and the artists and their friends declining to participate in the further proceedings of the meeting, immediately withdrew, as they could consider the resolution then come to in no other light than as a dismemberment of the Society, and a forcible disruption by the committee of the subscribers of the terms on which their union with the artists had been originally accomplished.

Feeling that their professional character and position would be materially injured by these arbitrary proceedings of the unprofessional committee of the Society of Arts and their adherents, and fearing lest the advantages proposed by the establishment of public exhibitions—which they would also remark, is permanently recorded in the report of 1830 (before quoted), to have originated with their own body, and not with the unprofessional part of the late Society—fearing lest these advantages should be lost to the public as well as to themselves, the artists then formed themselves into a new Society, called the Society of Artists, and proceeded to make the necessary arrangements with

their friends and brother artists, for the opening an exhibition of Modern Paintings for the present year. But they were at the same time careful to have it perfectly understood, as expressed in the circular of their chairman, that "they had seceded [or more properly, perhaps separated from the Society of Arts]," and the circumstances of this separation were fully explained in a personal interview by Mr. Room, with each artist. It is with grateful pride that the artists have now to acknowledge the cordial sympathy evinced towards them on this occasion, and the valuable support with which they have been honoured by the most distinguished members of the profession, and that too on the very ground of this their struggle for independence.

The artists have now fully set before their friends and the public, the circumstances attending the recent dismemberment of the Society of Arts. They have refused, as they felt they had a right to refuse, to hold any further communication with the new committee of management of the Society of Arts, on the subject either of their own, or the former Institution, nor will they now condescend to recriminate charges against them. The ungenerous spirit that dictated the circular, that has called for the present statement, will be apparent to the most cursory reader, and its illiberality will not fail to draw down the unqualified reprehension of honourable minds. The artists, however, confidently rely on the merits of their case, for acquittal of the many unjust insinuations thrown out against them by the unprofessional committee; and appeal from the decision of an interested few, to the impartial judgment of the public.

PETER HOLLINS, Chairman.

Birmingham, August 18th, 1842.

## ART IN CONTINENTAL STATES.

ITALY.—NAPLES.—*The Railroad from Naples to Castellamare.*—The railroad between Naples and Castellamare is almost complete; its distance is fifteen miles, and perhaps no road in Europe, nor in the world, comprises in so short a space so many objects of interest and beauty. We need not speak of the charm everything gains from the sky of Italy; independently of this, the artist will see in these fifteen miles a succession as it were of model landscapes, prepared by the master hand of nature, to inspire his genius. The antiquarian is surrounded by the objects of his research, not buried in the tomb of a museum, but in their old localities, and with all their old associations; and the naturalist may study the most sublime facts in the science he loves—in the wonderful evidences of volcanic power, in the solid lava of Herculaneum, and the ashes of Pompeii.

FLORENCE.—*Monument to Signor Sismondo de Sismondi.*—The celebrated Sismondo de Sismondi, originally from the city of Pisa, in Tuscany, deceased at Geneva, has left with life-rent to his wife, an English lady, his whole property to his relation, M. de Sismondi, residing in the town of Pescia. In grateful remembrance this Sismondi has commissioned the sculptor Bartolini to erect a monument in honour of his uncle. It is to be a statue in marble, representing Sismondo de Sismondi in a sitting posture, reading one of his works, "The History of the Italian Republic;" other volumes are scattered at his feet, on which we read the titles of his most celebrated works, "History of France," "Political Economy," "Literature of the South," "Agriculture of Tuscany," &c.

MADLE. FAVEAU.—The celebrated French sculptress, Madlle. Faveau, continues her labours here. It is many years since she left France, in consequence of the revolt in La Vendée; she for a long time carried on her works in the studio of Bartolini, but she has now a work-room of her own. Among her most celebrated productions we may mention a monument to Dante, executed for that true lover of Art, the Countess Pourtalès—this was her first large work—a vase for holy water, and a sword-hilt for the King of Sardinia; a sepulchral monument in the style of the middle ages, for a noble family in Piedmont; the Arch-Angel Michael vanquishing Lucifer, now in the collection of M. Thiers; and our readers will remember her Judith, exhibited this year at the Louvre, in alto-relievo, which excited so much admiration and so much criticism. To the list of smaller productions belong two busts of the Duchess de Berry, and six of the Duke de Bordeaux.

BOLOGNA.—*Monument to Signor Sismondo de Sismondi.*—The news of the premature death of the distinguished author, Sismondo de Sismondi, had scarcely reached the Academicians of the Institute of Science, who have the real honour to have numbered him among their members, when they came to a resolution to erect a memorial to

this celebrated historian and economist. It is to be a statue in white Carrara marble, representing Sismondi standing in the act of writing "The History of the Italian Republics." The statue will be placed on a pedestal richly sculptured with scientific and literary emblems, crowns of laurel, the titles of his works, &c., and the following inscription is to be placed on it:—

ITALICO,  
SISMONDO DE SISMONDI,  
CONFRATRES INSTITUTI SCIENTIARUM,  
BONONIE,  
MEMORIAM HANC,  
D. D. D.

The sculptor employed for this work is Signor Baruzzi, Professor in the Academy of Fine Arts at Bologna.

*Works of Signor Gualandi.*—We have before mentioned that most interesting collection published here by Signor Gualandi, called "Memorie originali riguardanti le Belle Arti"—("Original Memoirs regarding the Fine Arts.") We have the pleasure to say that the Grand Duke of Tuscany has most liberally aided the success of the work by permitting M. Gualandi to examine not only the public archives, but his secret ones; and when we consider the relations of the greatest artists during the brightest era of the Arts with the court of Tuscany, we may well anticipate a rich harvest of interesting documents, many disputed questions cleared, and oftentimes to meet the simple and modest enunciation by their great authors of works that have become the world's wonder, such as Raffaele's letter, when he sent his Sta. Cecilia to Bologna, requesting Francesco Francia to tell him its defects.

**FRANCE.**—*Duke of Orleans.*—According to the command of the King and Queen, M. Pradier, the sculptor, has taken a cast of the head, hands, and feet of the lamented Duke of Orleans. M. Cailloux, director of the Royal Museum, was present during the operation, which was perfectly successful. The features were quite unchanged, and the countenance retained the mild and benevolent expression which characterized it in life. M. Pradier is charged to execute a marble statue of the Duke, in a standing posture, and a recumbent one for his tomb. One only correct likeness of him now exists,—we allude to the portrait by M. Ingres; there is also a good bas-relief, modestly called a sketch, by M. Adam Saloman. On the spot where the house stood, where the Duke of Orleans breathed his last, on the "Chemin de la Revolte," a chapel is to be immediately erected, and the materials of the house removed to the Park of Neuilly, are to be there reconstructed a fac-simile of the house itself. Our readers are aware the house was sold to the civil list for 110,000 francs.

*Cathedral of Dijon.*—M. J. Lecurieux, one of our most distinguished painters, has received an order from Government to paint two pictures for the cathedral of Dijon. The one is to represent the martyrdom of the Apostle of Burgundy, St. Benigne; the other, a circumstance in the life of St. Bernard.

*The Elephant of the Bastille.*—The municipal council of Paris are occupied in coming to a decision as to making use of the colossal model of the elephant now standing where it was modelled in 1813, on the "Place de la Bastille." It is proposed to cast it by a single jet for the sum of 900,000 fr. The situation where it will probably be placed is the "Rond Point de la Barrière du Trône," where it will form a monumental fountain, unequalled in any capital of Europe for its stupendous size and rich adornments. Columns for lamps and magnificent candelabras, in a similar style to those of the "Place de la Concorde," will form part of the decorations. At the same time the unfinished sculptures on the pyramidal columns of the "Barrière du Trône" will be completed, and allegorical figures placed on the top of them. It is considered that these improvements will make this one of the most important entrances to the capital, and may also have the effect of attracting a return of the population which of late have been withdrawing from this quarter. The municipal council have already voted 30,000fr. for the preparatory works.

**MALESHERBES.**—*Monument to the Defenders of Mazagran.*—The foundation-stone of a column destined to commemorate the defence of Mazagran was laid on the 3rd of August, on the "Place

Martroai of Malesherbes," the native town of Capt. Lelièvre, who conducted the defence. Within the foundation-stone was placed a very thick glass bottle, containing the names of the subscribers and description of the ceremony, the number of the "Journal du Loiret" of the 18th of March, 1840, containing details of the attack, a medal struck in honour of the day, and one of King Louis Philippe.

**GERMANY.**—**MUNICH.**—*The Walkalla.*—We have before mentioned the *Walkalla*, or Temple of Glory, erected by the King of Bavaria, to contain the busts of two hundred illustrious Germans. The group for the north pediment of this building has been for eight years the labour of Swankhaler. We have examined it in his studio, and it well merits a description, small as may be the justice a cold description can render to such a work. The subject is allusive to the victory of Hermann or Arminius over the Roman legions, poetically represented, and contrasting the elements of the old German nation, war, poetry, religion, love of fatherland and woman, with the homeless military life of the Roman soldiers. The entire group consists of fifteen colossal figures, from eight to ten German feet in height, executed in complete alto-relievo, the figures being detached and separate. The middle figure is that of Hermann dividing the two parts of the composition. He is the representation of the spirit that animated his nation; his heroic form is partly concealed by a flying mantle, in his helmet is a falcon's plume, beside him are three personages, to whom are given the historic names of Mela, Cattumer and Legimer, leaders of the Germans, but typifying strength, love of war, &c. Near them is a kneeling bard, crowned with oak, striking the harp, while he describes the battles that have just taken place; and a prophetess, her streaming hair wreathed with oak and mistletoe, sings on the heroic fields the song of war. A sublime melancholy that breathes the spirit of antiquity, characterizes this part of the work. The lovely form of Thusnelda is a charming contrast to the dying old man, Sigmar, the father of Hermann, whom she supports, her flowing tresses partly covering him. This is the German part of the work. On the other side of Hermann we see lightly-armed Roman soldiers, who retire, heavily-armed ones, who press forward. The overthrow of the legions is typified by the suicide of the leader, and the fate of the augurs, one of whom is dying and the other dead.

The examination of the whole composition induces us most warmly to join in the high acknowledgment of the merit of this work, which has been paid to it by the best judges and by the public at large; we ought to mention that the draperies, from the fur to the linen garments, are finished in a manner that is adapted to come close to the eye in a museum.

**VIENNA.**—*Exhibition of Fine Arts.*—The exhibition of works of Art has been open for some time in the hall of the Polytechnic Institution. We do not consider the excellence generally of the works exhibited of a very high order, nor are they very numerous. Many, however, may be selected as exceptions to the first remark, being of great merit: among these we may name, in sculpture, Bauer's group, in Carrara marble, of 'a dead Christ supported by his mother'; here are noble forms and deep expression. There are good busts by Antony Dietrich and T. Glanz, and 'a love' in marble, by Schaller, is also much admired. Among historical paintings there is a very effective altar-piece, by Kupelwieser; and J. Schnorr exhibits his cartoons of 'the Barbarossa Hall' at Munich. The department of landscape is very strong: Canella (an Italian painter), Fischbach, Von Haanen, Osterhood, having all contributed beautiful pictures; we also especially noticed a large and beautiful view, in water colours, of the 'Bocca di Cattaro,' by Alt (the father). Of pictures 'de genre,' there are two excellent ones of military life by Von Tremsell and Schindler. Of engravings there is a magnificent one of the Madonna, by Raffaele, in the I. R. Picture Gallery, by Steinmüller; excellent also are Robert Theer's engravings in stone.

## ART IN THE PROVINCES.

THE exhibitions at Liverpool, Manchester, and Birmingham, will be opened before the publication of our next number. We shall take especial care to review them somewhat minutely, and at length.

**DUBLIN.**—The prizes of the Royal Irish Art-Union have been distributed. The total number was 309; the total cost was £2,120. The highest prize was £80—a landscape by Mr. G. Columb; the lowest was valued at £2. We rejoice to perceive that the Committee are devising plans for the encouragement of the Arts, independently of the purchase of pictures, and think the London Art-Union may borrow, with advantage, some hints from their arrangements—we earnestly hope they will not suffer private interest to prevail, as it did in the case of Mr. Burton, against public duty and the interests of the Society; but that every competitor may feel certain that he will be judged wholly and solely by his own merits. It is not by elevating one artist to an undue position—a position to which he is not entitled, and which he cannot maintain—that the honour and welfare of the body can be supported and extended. The injudicious friends of Mr. Burton have done him no service: they may push him up, but they cannot prop him up. The most perilous of all things to an artist who promises well, is injudicious patronage. We turn to a pleasanter view of the subject, and print the "programme of the Royal Irish Art-Union for the ensuing year:—"

### "TO ARTISTS RESIDENT IN IRELAND.

The Royal Irish Art-Union have resolved to appropriate one hundred and sixty pounds as premiums, to be offered in the following proportions for the best specimens (if approved of by the Committee of selection) in the following branches of Art, executed by individuals resident in Ireland for at least one year previous to the time of exhibition, which will probably take place in the month of May, 1843:—

1. For a line engraving on copper or steel, size not less than eight inches by six. . . . . £50 0 0
  2. For an etching on copper or mezzotint, size not less than eight inches by six. . . . . 25 0 0
  3. Engraving on wood, size not less than four inches by six, (first prize) 10 0 0  
Second prize . . . . . 5 0 0
  4. Lithographic drawing, size not less than eight inches by three, (first prize) . . . . . 10 0 0  
Second prize . . . . . 5 0 0
- Impressions on India paper and white paper, printed in Ireland, to be exhibited.
5. A pair of medal dies, diameter not less than one inch and a half, impressions in silver and bronzed copper to be exhibited . . . . . 25 0 0
  6. Engraving on gem or hard stone, (first prize) . . . . . 10 0 0  
Second prize . . . . . 5 0 0
  7. Model or cast in clay, plaster, or wax, (first prize) . . . . . 10 0 0  
Second prize . . . . . 5 0 0
- £160 0 0

### "CONDITIONS.

1. In case any impression or copy of any work be publicly exhibited previous to its being sent in for competition, it shall be disqualified to receive the premium.
2. The engraving, &c., must be from original and unpublished subjects, by living Irish or resident artists.
3. All specimens for competition for the prizes must be sent into the Committee before the 1st of June, 1843.
4. The competitors for the prizes must furnish satisfactory evidence to the Committee that the works exhibited have been executed by the artists in whose names they are entered.

"It will afterwards be optional with the Society to possess themselves of any of these productions, allowing the artist, in addition to the premium, a fair and equivalent remuneration for his labour, or assisting him by the weight and influence of the Society to publish the same for his own benefit, and that of the painter from whose work an attractive engraving or lithograph may be undertaken."

## REVIEWS.

SIR UVEDALE PRICE ON THE PICTURESQUE.  
Edited by SIR THOMAS DICK LAUDER, Bart.  
CALDWELL, LLOYD AND CO., Edinburgh,  
pp. 586.

The present edition of this work differs from that of 1810, inasmuch as the numerous foot-notes occurring in the latter are here incorporated with the text; much, it cannot be doubted, to the convenience of the reader, although we apprehend it is a licence open to some objections. The volume is interspersed throughout with wood-cut vignettes, amounting to 60 in number, designed and drawn on the wood by Montagu Stanley, R.S.A.; and it commences with "An Essay on the Origin of Taste," by the editor. All who have written on taste agree in deducing it either from cultivation or sympathetic association. We hear continually of declared preferences which society term "bad taste;" but with respect to the individuals themselves, who, moved by affections which have never been qualified by education, evince such inclinations, there can be no such thing. An individual may derive much pleasure from the contemplation of an object which would generate emotions of an opposite character in a mind of greater refinement; this is not "taste," conventionally; but the sight of the object fills his mind with images, bringing with them a gratification, which, if he is unfeet by others, yet arises from what to him is a sense of the beautiful. There are things which address themselves with the same degree of force to the educated and the uneducated intelligence—such things are enthusiastically pronounced beautiful by both; if, therefore, the feelings of both could be accurately shown, without declaring the fact that this or that was the effect experienced by the cultivated mind, and the other the emotion of the uneducated, both would be declared possessed of "taste." Thus, two persons very differently considered in society may accord upon certain subjects, while upon others less purely natural they may be divided; this, however, does not invalidate the claim of the uncultivated perception to "taste;" for every taste is just, considered in the abstract, and with regard to individual emotion. We do not look very charitably upon those whose tastes do not assimilate with our own; but if we canvass the question honestly, there is no reason why others as well as ourselves should not have their peculiar sources of enjoyment. Taste is (*eccathedrally*) denied to all who have not graduated in refined experience: this is one of the pseudo-tenets of society; but every preference, without regard to conventional circumstance, is true taste.

The word "picturesque" is common and popular, and consequently loosely and vaguely applied; this abuse, however, can never vitiate its real sense, nor widen the range of its applicability. In the third chapter of the book before us, Sir Uvedale Price, defining the term, says:—"In general, I believe, it is applied to every object and every kind of scenery which has been or might be represented with good effect in painting—just as the word beautiful, when we speak of visible nature, is applied to every object and every kind of scenery that in any way give pleasure to the eye; and these seem to be the significations of both words, taken in their most extended and popular sense." If, from a certain sense of pleasure, the term beautiful be applied to that which generates the emotion, it is an appropriate term independently of all circumstances, and the qualifications of the mind entertaining the affection. But of the picturesque there is more to be said: it has been begotten of a good intention, therefore ought its purity of descent to be vindicated. It may be applied to "every kind of scenery which has been or might be represented with good effect in painting," but, employed thus generally it must be an improper epithet in a multitude of cases, since there is much that could be represented "with good effect" that is not picturesque. We believe the epithet to describe a quality existing in forms and combinations which fills the mind with a grave interest. Gilpin has also broken this ground; and, from his habitual contemplation of the picturesque, better things might have been expected than this—speaking of objects so qualified he defines them, as those "which please from some quality capable of being illustrated in painting;" again, in a letter to Sir Joshua Reynolds, he distinguishes by it "such objects as are proper subjects for painting." Few seriously-

attempted solutions of a quality so well-understood have been more wide of the truth than this. There is an inexhaustible range of subject-matter for painting, which, with tolerable treatment, would be effective in every way save in the picturesque. In the same chapter (page 82), Sir Uvedale Price says, "I am persuaded that the two opposite qualities of roughness, and of sudden variation, joined to that of irregularity, are the most efficient causes of the picturesque." "Roughness"—a term also used by Gilpin on the same subject—contributes much in certain combinations to the picturesque; but yet we apprehend that the quality can exist without it. Many have objected to the word itself, as having a signification beyond what its etymology would imply; but to how many other terms are we reconciled which must be interpreted by a paraphrase! It has a place in all the languages of Romanesque descent, and is partially adopted into the German, for the word *malerisch* is not limitable to the same sense. The word has been invented to express not only what is essential to effect in painting; but that which is peculiar to the art that shares with sculpture the sublime and the beautiful, but claims the picturesque for itself alone. Simple as is the mechanical production of breadth in a picture, there is yet great experience necessary for its treatment; since we find it, in its best effects, only in the works of eminent men. The attempts of others, who, aware of the value of the quality, essay to give this effect without feeling it, end generally in flatness. Innumerable producers of pictures have no apprehension of the value of breadth in connexion with finish; hence we find their compositions always minced into impertinent lights and shadows: such works are accustomed to hear designated as "spotty." Speaking of breadth so managed as to preserve an idea of detail, Sir Uvedale Price appropriately observes—"Many of the great Italian masters have done this also, and with a taste, a grandeur, and a nobleness of style unknown to the inferior schools; though none have exceeded, or perhaps equalled, Rembrandt, in truth, force, and effect. But when artists, neglecting the variety of detail and those characteristic features that well supply its place, content themselves with mere breadth, and propose that as the final object of attainment, their productions, and the interest excited by them, will be, in comparison of the styles I have mentioned, what a metaphysical treatise is to Shakespeare or Fielding; they will be rather illustrations of a principal, than representations of what is real: a sort of abstract idea of nature, not very unlike Crambe's abstract idea of a Lord Mayor."

In the 8th chapter, the beautiful in colour is spoken of, on which subject the opinion of Sir Thomas Dick Lauder does not assort with those of Mr. Burke and Sir Uvedale Price. The last says—"Mr. Burke's idea of the beautiful in colour seems to me in the highest degree satisfactory, and to correspond with all his other ideas of beauty. I must observe, at the same time, that the beautiful in colour is of a positive and independent nature; whereas the sublime in colour is in a great degree relative, and depends on the circumstances and associations by which it is accompanied. A beautiful colour is a common and a just expression: no one hesitates whether he shall give that title to the leaf of a rose, or to the smallest bit of it; but though the deep gloomy tint of the sky before a storm, and its effect on all nature, be sublime, no one would call that colour (whether a dark blue, or a purple, or whatever it might be) a sublime colour, if simply shown him without the other accompaniments."

The remarks of Sir Thomas Dick Lauder immediately follow; he says—

"Let us test this opinion. Let us suppose that a fragment of the most beautiful rose-leaf that can be found shall be applied to the tip of the nose of a beautiful young woman, in a manner so perfectly natural as to lead the spectator to believe that the hue is native of the spot, and essentially belonging to it; how would the eyes of all strangers be directed askance towards it with curious inquiry—and how would they recoil from it as something fearfully strange and unnatural! There can be no doubt that rose-colour has acquired its beauty in the eyes of mankind from the immediate association which it awakens in every one's mind with the rich fragrance of the flower itself, as well as with the endless poetical images with which it

has been for ages connected. The beautiful in colour is no more of a positive and independent nature, then, than the sublime in colour; and the picturesque in colour stands, I suspect, on the same grounds as the other two."

Nothing is more readily admissible by the simplest understanding than the proposition of Mr. Burke. An infant can be moved by none of the associations of which Sir Thomas Dick Lauder speaks; but it will prefer a rose for its colour, and would pronounce the flower beautiful if it could do so. If wood, or any other substance, were susceptible of the delicacy and colour of the rose, it would, without any association, be as beautiful as the rose. If the same delicacy and colour were natural to the wood, it is probable that certain associations might attach to it; but these could not add to the quality of beauty. We will accept as serious Sir Thomas Dick Lauder's essay of Mr. Burke's opinion, by placing the rose-leaf on a young lady's nose. If the tender colour and texture of the rose-leaf could be represented by paper, without the slightest reference to the flower, we should call the colour beautiful, without the slightest suggestion from association. As circumstances, therefore, do not affect the colour, which, as Sir Uvedale Price says, is "of a positive and independent nature," the colour loses not the minutest portion of its beauty, even where Sir Thomas Dick Lauder would test it—on a young lady's nose. The beautiful in colour may by association become the sublime, but it never can be less than beautiful.

No mind can be insensible to the beauty of trees. Thus it is that their aid is called in as the primary auxiliary in all cases of improvement. Without them any landscape, however varied otherwise, is incapable of awaking all our sympathies. There is much grandeur in combinations of rocks and of mountains; and although trees may not be required on the summits of these, yet we feel them insufficient without their accompaniment since every variety producible by river, plain, and mountain, is more or less inappreciable without them. The most subtle and brilliant effects in the landscape are those of water. It harmonizes with all objects and circumstances, and adapts itself at once to every change of the atmosphere and season. It reflects colour and form, correcting the crudeness of the one and the harshness of the other; and is the best example of the general harmony of nature to which the painter can address himself, for the compliance of water with a general tone is less reluctant than that of any other object. In separate essays Sir Uvedale Price treats also of "artificial water," "buildings near the house," "architecture and buildings," &c. &c. These, it will be seen from their titles, bear upon the subject of the improvement of estates, which is discussed with much ability and perspicuity. They are followed by a dialogue on the distinctive qualities of the picturesque and the beautiful, the former of which is negatively illustrated in a query, partially shaped like one that would be put by an examiner to a candidate for honours. "Tell me," says the querist, "how you account for this strange difference between an eye accustomed to painting and that of such a person as myself? If those things, which Howard calls beautiful, and those which I should call beautiful, are as different as light and darkness, would it not be better to have some term totally unconnected with that of beauty, by which such objects as we have just been looking at should be characterized? By such means you would avoid puzzling us vulgar observers with a term to which we cannot help annexing ideas of what is soft, graceful, elegant, and lovely; and which, therefore, when applied to hovels, rags, and gipsies, contradicts and confounds all our notions and feelings." Erasmus must have had an extensive knowledge of art to have made this observation: "Que naturâ deformia sunt, plus habent et artis voluptatis in tabulâ." He was thinking of the picturesque, but he has failed to describe it. Deformity works powerfully on the mind, but the effect is widely distinct from that of the picturesque, between which and deformity there is a clearer demarcation than between the picturesque and the beautiful.

Many of the vignettes are skilful in execution and appropriately thrown in; in character and feeling they are of our own school—English landscape, meaning, of course, British. As no painter can work for any length of time from a given stock of

knowledge or experience, it is necessary that he should continually read nature for himself, and also study the precepts of those who have read her assiduously, and laboured to do so accurately. The opinions of Sir Uvedale Price seem to have been elaborated by years of research and observation, and he has borne gallantly the honey of his summer-time to the common stock; we can therefore say that artists will gather much valuable information from his pages. None can follow better working maxims than those of Michael Angelo, who, late in his lifetime, said,—*Io imparo ancora.*

#### HANDBOOK FOR NORTHERN GERMANY. JOHN MURRAY AND SON.

The utility of these handbooks ("we thank ye, *Germans*, for that word") is a proverb; for to a knowledge of the language of the country in which a man would travel, a judiciously-arranged handbook is the next blessing: not that kind of production which, with due regard to sound topography, commences each chapter with a disquisition upon local nomenclature, and concludes it a quarter of a century short of all the information desirable to the temporary visitor; but such a book that goes at once to the *personel* of the traveller, and saving him the vexation of arriving at Sterne's solution of the problem of payment—"pay, pay, with both hands open"—tells him at once how many times a day the *trekschuit* goes from Leyden to Haarlem. This handbook embraces Holland, Belgium, Prussia, Mecklenburg, Hanover, Brunswick, Hesse Cassel, the Hanse Towns, Nassau, the Rhine, &c. &c., and seems to be constituted of materials actually gathered in the experience of travelling. Consisting of some 540 very closely-printed pages; it may be supposed to contain an immense mass of matter, the whole of which is so arranged as to promote the conveniences of the tourist, and anticipate the usual inquiries of the curious.

The traveller having landed at Rotterdam, finds in his handbook a description of everything worth seeing. From Rotterdam he proceeds to Delft, the Hague, Leyden, Haarlem, and Amsterdam, which terminates the second route. Without using the book otherwise than as a gazetteer, we are much pleased with the judiciously-selected information it supplies with regard to cities and towns all famous throughout Europe. To the artist the Low Countries are of great interest, not only from their wealth in productions of Art, but as also supplying endless subject-matter for the pencil. In looking at the accounts of the famous galleries and minor collections, so numerous in Holland, it is gratifying to observe that the opinions of authorities upon such a subject have been respected. As early as the year 1358, the first corporation of artists was formed at Bruges, and in the days of the Van Eycks, between 1370 and 1445, the guild consisted of upwards of 300 painters, who were enrolled on the books and formed the most celebrated school of Art of the time. In the portion of the book devoted to Germany, the greatest care has been exercised in recommending the best inns, which recommendations are accompanied with such remarks as must result from actual experience.

#### HANDBOOK OF SWITZERLAND, SAVOY, AND PIEDMONT. JOHN MURRAY AND SON.

This Guide-book opens at the Rhine towns, and carries the traveller across to Italy. To the numerous English travellers who have visited Switzerland, the want of a sufficient handbook must have been much felt; for, useful as are the class of servants, known as *valets de place*, yet there is a great proportion of travellers who would willingly exchange their garbled communications for the silent gossip of a book. Long as Switzerland has been the attraction of all European travellers, yet their progress has never been aided by anything like a convenient guide-book. The work of Ebel, written about the commencement of the present century, has been long the "counsellor and friend" of all who, in visiting Switzerland, have desired somewhat beyond the mere entertainment of the eye; but consisting of four volumes, its place is the book-shelf, and not the pocket. When this book was published, the country, although visited as the wonder of Europe, was not so much as now within the compass of moderate means: the growing peripatetic habits of our countrymen have called for a publication formed of useful and inte-

resting information, and the want seems to be ably supplied in the present work. Although it is impossible to testify to the accuracy of every item in the book, yet experience enables us to verify many parts of it. The time has been when the traveller must have contented himself with Kotzebue, the Frau Von Brun, or some other popular and partial writer. The work contains a map and views of the Alps; and the writer, entering into the spirit of German pedestrianism, recommends the individual traveller to equip himself in a blouse; his shoes ought to be "double-soled, provided with hob-nails," *such as are worn in shooting in England*, and without iron heels. Other indispensables are, a knapsack, a flask for *Kirschwasser*, a pocket telescope, and a stout bag to hold dollars. He speaks out assuredly from the experience of a "walking gentleman": to these, however, we would yet make one addition, we need scarcely name it—a pencil. The points whence the best views among the Alps are to be obtained are, the Dôle, the Chaumont, the Weissenstein, the Albis, Monte Salvatore, the Kamor, the Righi, the Faulhorn, and one or two other heights. To the English traveller and artist the scenery is entirely new, and abounding with waterfalls, some of which are among the most remarkable in the world. Of these the attention of the voyager is directed to the Fall of the Aar at Handek; to that of the Tosa in the Val Formazza; to the Staubbach; to the Giesbach; to the Reichenbach fall, &c. &c. No route of any interest is overlooked; we are conducted to every locality worth seeing; and carefully piloted to the famed lakes of this part of the world which the pictures of our artists must create in all who see them a strong desire to behold. So free from affectation is the style of this book, and so substantial the information it affords, that it must supersede everything else of the kind in the hands of those who visit Switzerland.

#### LONDON AS IT IS. Drawn and Lithographed by T. SHOTTER BOYS. Published by THOMAS BOYS.

We have now been long accustomed to street-scenery of every possible variety, made out in a style so distinctly our own, that no other school in Europe can equal it: with what indifference soever our continental neighbours may regard the fact with reference to the rank of this style in the scale of art, they are fain to copy it; and for ourselves it is worthy of note to bring forward anything original. Professed portraiture of streets and "brick-bound" highways is perilous ground for an artist of any calibre—more so for him of established reputation than an undergraduate, so spoilt are we by the licences which they first taught us to pardon, then to relish, and finally to crave. According to Burke, objects are more devoid of beauty in the proportion as they are angular; whether this be substantially true we cannot here discuss, but no discussion is necessary to show that angles are destructive of the picturesque, which we are taught to love rather than to reverence the beautiful. To depict the leading thoroughfares of London where all is improvement of that kind which among painters is at a discount, is an enterprise demanding talent of a high order, without which nothing like the views before us could have been produced. These views are of a large folio size, coloured, mounted and generally executed with a close observance of truth, and much skill in the adaptation of effects to the subjects. 'The Tower from Tower-hill' is a plate which must hereafter become valuable as representing the buildings on the side of Tower-hill as they stood before the fire. This is now the most interesting view of the Tower that could be offered. Some of the most beautiful views in the set are those upon the river, which are pictures in effect and composition. That entitled 'London-bridge from Southwark-bridge' comprehends a vast range of objects remarkable in the local histories of both sides of the river: these are St. Saviour's, the Custom-House, St. Dunstan's-in-the-East, the Monument, &c. &c.; the view is bounded by a forest of masts. In 'Blackfriars, from Southwark-bridge,' St. Paul's forms a principal feature, a number of other churches are also visible, among which we distinguish the graceful steeple of St. Bride's, also those of St. Dunstan's and the ill-starred St. Martin's-in-the-Fields. 'Westminster, from Waterloo-bridge,' is a fine and characteristic picture of the Thames "above bridge," the ex-

pense of which is thronged with river-craft, and its shores studded with countless dwellings, warehouses, and factories; Westminster Abbey and Hall are conspicuous objects in the drawing, and on the Surrey side rise many lofty chimneys, the whole backed by a distance of hills. 'Buckingham Palace, from St. James's-park,' is an interesting artificial landscape, presenting the Palace from the most advantageous point of view. 'Hyde Park-corner' is a feature worthy of a great city keeping pace with the times and even heading them: we see here St. George's Hospital, Apsley House, the entrances to the Parks, &c.; all of which have received ample justice at the hands of the artist. In 'Regent-street, looking towards the Quadrant, a correct and imposing view of this part of London is given; undue proportion may seem to have been given to the buildings, but they will, nevertheless, prove accurate in their relations, although the objects are drawn large with regard to the general composition. The 'Entrance to the Strand from Charing Cross' is perhaps the most remarkable thoroughfare in London—the drawing embraces every object and edifice of interest, even the National Gallery. Other views are, 'The Strand,' 'Temple Bar, from the Strand,' 'Guildhall,' an interior, beautifully drawn and treated with the best feeling; 'St. Dunstan's, Fleet-street'; 'St. Paul's, from Ludgate-hill,' &c. &c. Of the entire work we have, finally, to observe that it is most faithful in detail, spirited in execution, and is accompanied by a Key, which is a useful auxiliary to the memory. It has been most carefully adapted to the plates by Mr. Ollier, and dwells upon every circumstance of interest in connexion with the localities represented. The matter descriptive of each view occupies half the column, the other half contains the same description in French, a provision which must facilitate the continental circulation of the work.

#### TO CORRESPONDENTS.

**BRITISH COSTUME.**—We shall next month commence the publication of a series of papers on British Costume; into which we shall introduce a considerable number of engraved examples. They will be written and illustrated by Mr. F. W. Fairholt, an artist who has devoted considerable time and attention to the subject. His object, however, will be, as he himself expresses it, "to act rather as a guide than a lecturer;" to direct the student to the several sources in which extensive and sufficient information is to be obtained. Under existing circumstances, when the *knowledge* as well as the *genius* of the Historical Painter is called into requisition, such references are especially needed.

The necessity for occupying considerable space with the report of the "Commission," compels us to postpone the publication of a variety of articles. We have at the present moment in type, the "Grounds of the Ancient Masters," "The Genius of Wilkie," "Architecture round the Bank," "Metallurgy as Fine Art," "The Decoration of the Houses of Parliament," "The Contrast of Colours dependent upon Physical Causes, &c.," "Mode of purifying Linseed Oil," &c. &c.

We direct the attention of three or four correspondents from whom we have received communications on the subject, to an advertisement that will be found elsewhere, of the work announced by Mr. Leslie, "Selections from the Letters and other Papers of the late John Constable, R.A." We understand that, as a sufficient number of subscribers has been already obtained to justify the publication of the work, it will be issued very shortly. Those who desire to possess it, should therefore forward their names without delay.

"A Teacher of Drawing" must have read the notice of which he complains in haste—the work is not recommended as a class-book. If it could have borne an analytical notice such would have been given of it. It is not every book which we notice that we can recommend.

**CARTOONS.**—Although, as our correspondent suggests, the word cartoon means literally, paper, yet the conditions of exhibition do not, we believe, limit the materials upon which the drawings are to be made to the literal meaning. We know that some artists are working upon fine canvass or sized holland.

We have several "Reviews" in type, the publication of which we must postpone.

To two or three queries that have been put to us regarding the "Commission," we shall obtain replies.

**ROYAL POLYTECHNIC INSTITUTION,** extended into Cavendish-square.—Additions to the enlarged DISSOLVING VIEWS, one of which, the Interior of the Chapel of St. Helena, in Jerusalem, taken from the work of D. Roberts, R.A. (published by Mr. Moon), rivals the much admired picture of the Interior of the Greek Church. Among other novelties are fine specimens of Fresco, in the ancient and modern style, just executed by Frederick Sang, a German artist of the first eminence. Among the varied Lectures in Practical Science, the Calotype Process of Mr. Fox Talbot is given at Two o'clock daily, in which pictures are spontaneously developed before the visitors. The Orrery, Diving Bell, Diver, &c. The Cosmographic Views are shown in the evening only. Conductor of the Band, Mr. Wallis.—Admittance is.

#### WORKS PUBLISHED BY HOW AND PARSONS.

**ENGLAND IN THE NINETEENTH CENTURY; an ILLUSTRATED ITINERARY:** Combining Views and Descriptions of all that is picturesque in Nature, with all that is wondrous in Art; and exhibiting England as it is, under its several aspects of Natural Scenery, Historic Memorials, and productive Industry.

#### CORNWALL:

With Five Landscapes, by CRESWICK, engraved on Steel, a Map of the County, and 110 Wood-cuts,—being the First Volume of the Work, price 10s., in half-morocco.

#### LANCASHIRE:

With Seven Landscapes, engraved on Steel—a Map of the County, and 170 Wood-cuts,—being the Second Volume, price 22s. 6d., in half-morocco.

#### II.

#### THE PALFREY: A POEM.

BY LEIGH HUNT.

(Dedicated to Her Majesty.)

With Illustrations by CRESWICK, MEADOWS, FRANKLIN, SCOTT, &c., engraved on Wood. 8vo. price 5s.

#### III.

#### THE SALAMANDRINE; OR, LOVE AND IMMORTALITY.

A Romance.

By-CHARLES MACKAY. Price 5s.

#### IV.

#### BELGIUM,

SINCE THE REVOLUTION OF 1830,

Considered in its Topographical, Civil and Military, Commercial and Agricultural, Religious, Literary, Moral, and Social Relations.

By W. TROLLOPE, M.A.

1 vol. 8vo., price 10s. 6d. in cloth.

#### V.

#### THE BRITISH ANGLER'S MANUAL.

By T. C. HOFLAND, Esq.

Containing Notices of the principal Rivers, Lakes, and Trout Streams; with Instructions in Fly-fishing, Trolling, and Angling at the Bottom. Post 8vo., very highly embellished, 21s. cloth; large paper, with India proofs, 36s.

**TO MINIATURE PAINTERS, &c.—W. WARRINER, 39, GREAT CASTLE STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.**

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

#### PAPIER MACHE PICTURE FRAMES.

**ARTISTS, PICTURE DEALERS, and others,** are respectfully informed that C. F. BIELFIELD has formed a large collection of new and elegant designs for PICTURE FRAMES, in the IMPROVED PAPIER MACHE. The superiority of these Frames consists in their having all the effect of old carved work; many of the patterns represent exactly the finest carvings of the seventeenth century. The small parts are far less liable to injury than putty work; Papier Maché being a remarkably tough and hard substance, it never shrinks, and takes gilding very freely. The Frames do not weigh one quarter the weight of others, and their price is below that usually charged. Many specimens are now on view at BIELFIELD'S PAPIER MACHE WORKS, 15, WELLINGTON STREET NORTH, STRAND; where, also, pattern books may be had, price 14s., consisting of a variety of patterns of Picture and Glass Frames, and Window Cornices, already erected and on sale.

#### TO PARENTS AND GUARDIANS.

**WANTED, by an ARTIST in good general practice, a genteel Lad, not under 14 years of age, as ARTICLED PUPIL, not to board in the house. He will be thoroughly taught to draw the Human Figure, Anatomy, Perspective, Geometry, Oil and Water-colour Painting, Lithography, &c. A premium will be required.—Apply for address to H. W., at Hogg's Library, 25, Edgeware-road.**

#### TO GENTLEMEN, ARCHITECTS, and

Others.—SLOPER'S CONTINENTAL MARBLE PAPER HANGINGS, invented and manufactured only by J. SLOPER, No. 106, HIGH-STREET, MARYLEBONE.—J. S. solicits an inspection of his Continental Marble Papers, expressly adapted for halls, staircases, &c., being natural imitations of the most beautiful foreign marbles, worked in blocks of any dimensions, and differing in every way from anything hitherto manufactured in England, well deserving the attention of all connected with good buildings. Good bed-room paper, 1d. per yard; handsome drawing-room, 8d.; dining and library, 6d.; best gold moulding, 6d. per yard. House painting and decorating 15 per cent. less than usually charged. Estimates given. Patterns sent to all parts of the country.—Observe, J. Sloper, 106, High-street, Marylebone.

#### NEWLY INVENTED SKETCHING PENCILS.

BB. Very black for the foreground.

HB. Middle tint.

N. Neutral tint, for distance.

E. WOLFF and SON beg to recommend their new invented BLACK CHALK PENCILS and CRAYONS, which will not rub off or smear. They are richer in colour and superior in working to any other Pencil hitherto known. The great advantage derived from these Chalks, are their capability of producing effect with little labour, combined with their adhesive qualities, which will admit of the drawings being kept in a portfolio without fear of smearing.

May be had of all Artists, Colourmen, and Stationers; and at the Manufacturers, 23, CHURCH-STREET, SPITALFIELDS.

**CHIMNEY GLASSES, PICTURE FRAMES, CHEVAL and TOILET GLASSES, CONSOLE TABLES, WINDOW CORNICES, SCREENS, and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer, by P. GARBNATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane.—P. G. manufacturing every article on the premises, is thereby enabled to offer them at such low prices that he defies competition. An extensive assortment of Ornamented Gilt and Fancy Wood Picture Frames kept ready. Regilding in all its branches in a superior manner, at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given free of charge. A list of the prices of Plate Glass, &c. sent, pre-paid, to any part of the Kingdom. A quantity of Picture Frames of every size, that have been some time on hand, at reduced prices.**

**NOTICE.—PATENT RELIEVO LEATHER HANGINGS and CARTON-TOILE OFFICE, 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foilage, Patteras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c., &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.**

L. COMETTI and CO., 10, Rue Basse du Rempart, Paris.—May 25, 1842.

#### OAK CARVINGS for CHURCH

DECORATIONS, &c.—Messrs. BRAITHWAITE and CO., Proprietors of the patent method of CARVING in SOLID WOOD, beg leave to invite the Nobility, Clergy, and Architects, to view their Specimens of Oak Carvings, suitable to the Gothic Embellishments of Cathedrals and Churches, such as Stalls, Panelling, enriched Tracery, Chairs, Communion-rails, Tables, Altar-screens, Pulpits, Reading-desks, Lecterns, Stall-heads, Finials, Organ-screens, Gallery-fronts, &c., at one half the price usually charged.

Estimates given, and contracts entered into, for the entire fitting-up, restoration, or repairs, of any Cathedral, Church, or Mansion.

By their process a most important saving in expense and time will be found in the fitting or repairs of Churches or Mansions, either in the Gothic or Elizabethan style, in any description of wood. It is equally applicable to Elizabethan or Gothic Furniture, such as Chairs, Book-cases, Cabinets, Tables, Picture-frames, Coats of Arms, Mouldings, &c., &c.—No. 5, HENRIETTA-STREET, COVENT-GARDEN.

#### RAND'S PATENT METALLIC COLLAPSIBLE TUBES FOR OIL COLOURS.

**J. RAND, the Inventor, Patentee, and sole Manufacturer of the above, during the time they were known to the profession solely under the name of "Brown's Patent," has made arrangements with Messrs. Winsor and Newton, of 38, Rathbone-place, by which that firm are supplied by him with Tubes of the same description as those so long supplied by J. Rand to Mr. Brown.—August 1st, 1842.**

WINSOR and NEWTON, of 38, RATHBONE-PLACE, respectfully announce, that they have on sale Oil Colours in Rand's Patent Collapsible Tubes, wholesale, retail, and for exportation.

ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.

**C. J. ECKFORD, 45, FLEET-STREET,** corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE and CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

#### SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES McLEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

#### THE ARGUS! SATURDAY EVENING FAMILY CONSERVATIVE NEWSPAPER.

Forty-eight Columns! Price Sixpence! The ARGUS is esteemed the Leading Family Newspaper, and noted for its staunch and independent Conservative Principles, aspires to be considered in quality, as in quantity, the most complete Weekly Newspaper, interesting alike to the Politician and the Lover of Literature—the Man of Business and the Man of Leisure—at the Club and in the Drawing-room—in the Counting-house and the Family Circle—in the Gentleman's Study and the Lady's Boudoir. Nothing that can interest or inform its readers is neglected, from business of the highest import to the lightest and most amusing chit-chat; whilst its pages are unsullied by aught that can offend the most fastidious delicacy. It contains every week from

SIXTEEN TO TWENTY COLUMNS of ORIGINAL MATTER, and its

SIXTEEN CLOSELY PRINTED PAGES

present a perfect transcript of the week's occurrences; whilst its sources of early information give it additional superiority, and the powers of its numerous and able contributors (including many of the foremost writers of the day) are warmly devoted to the advocacy and support of our great National Interests in opposition to the views of the factious Liberalism which seeks their Destruction.

The ARGUS is the strong and consistent advocate of the AGRICULTURAL CLASSES!

\*.\* The regular transmission of a weekly Letter to THE ARGUS from an able and intelligent Contributor resident in Paris, with whom arrangements have been recently made, enables the Editor to afford his readers the latest news, both of light and of graver interest, together with all the *on dit* and the latest fashionable intelligence from the French Capital.

To be had of all News-agents in Town and Country. Agents treated with on liberal Terms.—Office, 2, Catherine-street, Strand.

NOW IN COURSE OF PUBLICATION,  
THE  
**BOOK OF BRITISH BALLADS.**

EDITED BY S. C. HALL, ESQ., F.S.A.

The Work will consist of British Ballads taken from the collections of PERCY, EVANS, RITSON, PINKERTON, SCOTT, MOTHERWELL, JAMIESON, BUCHAN, HERD, and others, by whom they have been gathered with so much industry and care; and, also, from sources comparatively unexplored by the general reader. No attempt has, hitherto, been made to select, and arrange in a popular form, the best of these Ballads from the several volumes in which they are scattered, and where they are mixed up with a mass of inferior, or objectionable compositions.

The Work will be issued in Monthly Parts, small Quarto; the Part will consist of five sheets—forty pages; and EVERY PAGE will contain an Illustration engraved on wood, in the finest style of which the Art is capable.

The present intention of the Editor is to complete the Work in Twelve Five Shilling Parts.

Part I., published on the First of June, contains the ballads of—

CHEVY CHASE; illustrated by J. FRANKLIN; the Engravings by LINTON, SMITH, LANDELLS, ARMSTRONG, &c.  
THE CHILDREN IN THE WOOD; illustrated by J. R. HERBERT, A.R.A.; engraved by GREEN.  
FAIR ROSAMOND; illustrated by J. FRANKLIN; engraved by T. WILLIAMS, Miss WILLIAMS, WALMSLEY, EVANS, &c.  
THE DEMON LOVER; illustrated by J. GILBERT; engraved by FOLKARD and BASTIN.  
THE NUT-BROWN MAYD; illustrated by T. CRESWICK; engraved by S. and J. WILLIAMS.

Part II. contains—

THE NUT-BROWN MAYD (concluded); illustrated by T. CRESWICK, W. B. SCOTT, and S. WILLIAMS; engraved by WILLIAMS, LANDELLS, and VIZETELLY.  
KEMPION; illustrated by W. B. SCOTT; engraved by SMITH and LINTON.  
THE CHILD OF ELLE; illustrated by J. FRANKLIN; engraved by WILLIAMS.  
THE TWA BROTHERS; illustrated by W. P. FRITH; engraved by BASTIN.  
THE BLIND BEGGAR; illustrated by J. GILBERT; engraved by VIZETELLY.

Part III. contains—

THE BLIND BEGGAR (concluded); illustrated by J. GILBERT; engraved by VIZETELLY.  
ROBIN GOODFELLOW; illustrated by E. DADDS; engraved by GREEN.  
SIR PARTICK SPENS; illustrated by J. FRANKLIN; engraved by ARMSTRONG.  
GIL MORICE; illustrated by K. MEADOWS; engraved by SMITH and LINTON.  
SIR ALDINGAR; illustrated by J. GILBERT; engraved by GILKS and FOLKARD.  
SIR LAUNCELOT DU LAKE; illustrated by E. CORBOULD; engraved by SMITH and LINTON.

Part IV. contains—

SIR LAUNCELOT DU LAKE (concluded); illustrated by E. CORBOULD.  
KING ARTHUR'S DEATH; illustrated by J. FRANKLIN.  
THE HEIRE OF LINNE; illustrated by E. M. WARD.  
LORD SOULIS; illustrated by R. McLAN.  
LORD THOMAS AND FAIR ANNET; illustrated by H. T. TOWNSEND.

Each ballad will be preceded by two pages; giving its history, and supplying such information concerning it as the Editor may be enabled to obtain. Into these pages will be introduced, generally, the airs to which the ballads were sung; and any pictorial illustrations that may serve to explain the text.

"Nothing can be better than the manner in which the plan is executed. . . . The engravings are extremely beautiful; the editor has performed his part with taste and judgment; and the work is got up in an admirable manner. This publication cannot fail to be a general favourite. The old ballads were and are popular compositions in the best sense of the phrase. Their vigour and feeling are essentially English, and more than once English poetry has drawn new life from the same original sources. It is sufficiently known how deeply the ballad poetry entered into the minds of Shakespeare and Scott, and through them effected the two greatest ages of our literature. It is both pleasant and profitable to recur often to the fountains at which such men loved to drink, and the reader can hardly do it anywhere with so much luxurious enjoyment as in the 'Book of British Ballads.'"—*Morning Chronicle*.

"This promises to be a brilliant of the first water, even among the many lustrous gems which adorn the pictorial literature of the day."—*John Bull*.

"The design of this beautiful book is to illustrate the national ballads of Britain by British artists, as the ballads of Germany have been illustrated by German artists: but instead of the etchings of 'Die Lieber und Bilder,' the 'Book of British Ballads' is embellished with wood-engravings, executed in the most finished manner. The selection of old ballads is a popular one; they are culled from the various collections, not for their antiquity but their interest; each is collated with the original, and prefaced by an introductory notice of its history; and they are all profusely illustrated, every page being fairly divided between the verses and the designs, the head and tail pieces to each respectively filling nearly an entire page. The typography is handsome, and the fanciful borderings give a finished appearance to the pages."—*Spectator*.

"We have seldom seen, even at the present day, when ornament is so much the fashion, a more beautifully-illustrated work than Mr. Hall's 'British Ballads.' More chasté and appropriate

than Lockhart's Spanish collection, without its glare and pretension, the arabesque borders, initial letters, and vignettes are exquisite. Mr. Hall's notes and introductions show careful reading and industry, and he has evidently performed his agreeable task *con amore*. There is such a wide field still left that we anxiously look for new numbers in which to see enshrined some of our old favourites."—*Morning Herald*.

"This is, without any exception, the most tasteful and beautiful publication of its class we have met with, and, if it does not prove too good for the ordinary public, cannot fail of meeting with great success. The plan appears to have been arranged with much judgment. The intention of the editor seems to be to illustrate, in the most exquisite style, so far as the capabilities of wood engraving can go, all the best and most deservedly popular ballads in our language, from the ruder ages of minstrelsy down to our more polished times."—*United Service Gazette*.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 45.

LONDON: OCTOBER 1, 1842.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

**ARTISTS** who require an **IMMEDIATE SALE** for their **WORKS**, and others who have **PAINTINGS** for **DISPOSAL**, are informed that **J. A. SMITH SELLS ON COMMISSION**, for artists and others, at the rate of 10 per cent on the price fixed. **J. A. S.** does business with most of the principal dealers in London, and has also a good private connexion. No. 9, Russell-court, Catherine-street, Strand.

**PERSPECTIVE** and **DRAWING MODELS** for **TEACHING ELEMENTARY PRACTICAL PERSPECTIVE DRAWING, LIGHT and SHADE, &c.** Acknowledged, generally, as the best possible introduction to Landscape Drawing upon certain principles. Being composed of Geometrical and separate Pieces, are capable of many hundred variations. Illustrated and complete in box, price £1 1s. Extra Large of the above made for Schools, Classes, &c., price £1 2s.

**SMITH AND WARNER, 34, Marylebone-street, Regent's Quadrant.**

Now ready, for the Sketching Season, **SHADE'S NEW PATENT PERSPECTIVE DELINEATOR and SKETCHING APPARATUS**; by means of which Landscapes and all other objects can be drawn in true Perspective, with the utmost facility, without previous knowledge, and with the same ease as writing a letter. Drawings can be enlarged or diminished with certainty by the simplest means, and as many copies of it obtained as required with unerring correctness. No obscurity of the pencil as in previous instruments.

Price £1 11s. 6d., or fitted up for out-door Sketching £3 3s., with seat and every necessary convenience, rendered compact and light to suit Ladies, Pedestrians, &c.

Sold at **SMITH AND WARNER'S, ARTISTS' REPOSITORY, 34, MARYLEBONE-STREET, QUADRANT, LONDON.**

**MR. DICKENS'S VISIT TO AMERICA.** Early in October, in 2 vols., post 8vo. price One Guinea, **AMERICAN NOTES FOR GENERAL CIRCULATION.** By **CHARLES DICKENS.** **CHAPMAN and HALL, 186, Strand.**

Just published, in 4to., price £2 2s., in French boards, and on royal paper; with proof impressions of the Plates, price £4 4s., half morocco, gilt tops.

**DISCOURSES** delivered to the **STUDENTS** of the **ROYAL ACADEMY**, by **SIR JOSHUA REYNOLDS.** Illustrated by Explanatory Notes, and Twelve Plates. By **JOHN BURNET, F.R.S.** Author of "Hints on Painting," in 4to., price £4 10s. **James Carpenter, Old Bond-street.**

On October 1, will be published, Part I., royal 4to., price 4s.

**ANCIENT and MODERN ARCHITECTURE**; consisting of Views, Plans, Elevations, Sections, and Details of the most remarkable Edifices in the world: with Archaeological and Descriptive Notices, by Messrs. Jomard, Champollion-Figeac, Anglois, Albert Lenoir, Raoul Rochette, L. Vaudoyer, &c. &c. Translated and Revised by Mr. F. Arundale; Edited by M. JULES GAILLHABAUD. The work will be published in Monthly Parts, each containing four highly-finished Steel Engravings, with four or eight pages of descriptive Letter-press, printed in royal 4to. The price of each number will be four shillings.

London: Firmin Didot and Co., Amen Corner, Paternoster Row. Sold by Ackermann and Co., Strand; J. Weale, High Holborn; Simpkin, Marshall, and Co.

**THE BOOK OF GERMAN BALLADS, NATIONAL AIRS, DRINKING SONGS, &c.** forming a Companion Volume to the "Lieder und Bilder," or the songs of a Painter; illustrated with 30 highly finished Etchings on Steel by the most eminent Artists of Germany, in the style of Neureuther, Retzsch, and Sonderland. In Royal 4to., price One Guinea. In order to secure early impressions an immediate application is necessary.

The volume, published some years ago under the title of "Lieder und Bilder," or Songs of a Painter, having attained so much popularity, the Publisher has been induced to yield to the repeated entreaties of the Public and his Friends to bring out a Companion Volume, in a similar manner, illustrating the well known Ballads, National Airs, Drinking Songs, &c., of Germany. The undermentioned list will show, that the most distinguished artists have contributed to the illustration of this beautiful and interesting work: **Jac. Becker, Camphausen, Canton, C. Clasen, Diemann, E. Ebers, Fay, Hasenclever, C. Hübner, Jacobi, Jordan, Kiederich, Körner, Kretschmer, Meyer, v. Normann, Plüdemann, Pose, Rethel, Ritter, Scheuren, Professor J. W. Schirmer, Schrader, Ad. Schröder, Sonderland, Otto Speckter, Steinbrück, Volkhardt, and others.**

A few copies of the "Lieder und Bilder," or Songs of a Painter, are still on hand.

Published for the Proprietor by **H. HERING, German Repository of Art, 9, Newman-street, Oxford-street, London.**

Just published, price 16s.,

**THE SKETCHER'S GUIDE**; a light and portable Apparatus for Drawing Landscapes, and other Outlines, in Perspective, without Elementary Knowledge. To which is added, a Compendium of the Rules of PERSPECTIVE and EFFECT.

By **W. F. ELLIOT, Esq.**

There are few persons, unacquainted with the art of Drawing, but have (either when travelling, or at other periods of their lives) had frequent occasion to lament that deficiency. The difficulties in the way of sketching objects correctly, without a knowledge of the laws which regulate Optical Perspective, have been so great, and hitherto so forcibly felt, as to be considered insuperable. Messrs. Fuller, however, are happy to announce, that, in "The Sketcher's Guide," they have perfected an apparatus, extremely simple, and as portable as a hand-book, by means of which those obstacles are overcome; and any person, by simply attending to the printed instructions, may draw Landscapes, or other objects, as faithfully as they are presented to the eye.

And, in order to simplify and encourage the study of Perspective and pictorial Composition, they have added to the above a Synopsis of the Rules of Perspective and Effect; clearly and popularly written, and containing numerous Illustrative Examples.

To persons travelling, either on the Continent or elsewhere, "The Sketcher's Guide" will be an invaluable companion; as, by its assistance, there is not a single scene of interest but may be secured, to give birth to pleasurable, if not useful, reminiscences at some future period. The student in Drawing and Perspective will also find it an important help. It will facilitate his progress by demonstrating practically the application of the rules he may have learnt theoretically. At the same time, the letter-press and illustrations will teach him the most approved methods of combining and treating his subjects to compose a picture.

Orders should be immediately given to Messrs. Fuller, 34, Rathbone-place, or through any Book or Print-seller in Town or Country.

London: Published by S. and J. Fuller, at their Temple of Fancy and Artists' Repository, 34, Rathbone-place.

**GWILT'S ENCYCLOPEDIA OF ARCHITECTURE.** In October will be published, in one thick volume, 8vo. with upwards of 1000 Engravings, handsomely bound in cloth.

**AN ENCYCLOPEDIA OF ARCHITECTURE, HISTORICAL, THEORETICAL, and PRACTICAL.** By **JOSEPH GWILT.** Illustrated with upwards of 1000 Engravings on Wood, from Designs by J. S. GWILT.

London: Longman, Brown, Green, and Longmans.

Just published, imperial 8vo., handsomely bound, 34s.,

**THE USE of a BOX of COLOURS.** By **HARRY WILLSON**, author of "Fugitive Sketches in Rome, Venice," &c. &c. Being Practical Instruction on Composition, Light and Shade, and Painting. Illustrated with beautiful Patent Lithotint examples, plain and coloured. Also a Box of general Landscape Tints have been prepared to accompany the same.

London: Smith and Warner, 34, Marylebone-street, Regent's Quadrant; Tilt and Bogue, Fleet-street; and all other Publishers, Stationers, &c.

**UNDER THE SUPERINTENDENCE OF THE COUNCIL OF THE GOVERNMENT SCHOOL OF DESIGN AT SOMERSET HOUSE.**

This day, October 1 (to be continued every alternate Month), price 3s. 6d.,

**THE Third Number of a DRAWING-BOOK**; containing Elementary Instructions in Drawing, and Illustrating the Principles of Design as applied to Ornamental Art.

This work will be published in Numbers, and the Council have arranged that it should be sold at a price little exceeding the cost of production, so that, as far as possible, it may come within the reach of all classes of persons desirous of instruction in Drawing and the Art of Design.

The First Part is to be devoted to elementary instruction, and will exhibit a course of Outline Drawing (including both Geometrical and Free-hand Drawing) and Shadowing, illustrated by numerous examples, as well modern as ancient, so as to form a complete course of instruction in ornamental design, preliminary to drawing from nature. The series of examples for outline drawing will be comprised in about Four Numbers, each containing Fifteen Sheets, accompanied by descriptive Letter-press, price 3s. 6d.

**CHAPMAN and HALL, 186, Strand.**

**OAK CARVINGS for CHURCH DECORATIONS, &c.**—Messrs. **BRAITHWAITE and CO.**, Proprietors of the patent method of CARVING in SOLID WOOD, beg leave to invite the Nobility, Clergy, and Architects, to view their Specimens of Oak Carvings, suitable to the Gothic Embellishments of Cathedrals and Churches, such as Stalls, Panelling, enriched Tracery, Chairs, Communion-tables, Tables, Altar-screens, Pulpits, Reading-desks, Lecterns, Stall-heads, Finials, Organ-screens, Gallery-fronts, &c., at one half the price usually charged.

Estimates given, and contracts entered into, for the entire fitting-up, restoration, or repairs, of any Cathedral, Church, or Mansion.

By their process a most important saving in expense and time will be found in the fitting or repairs of Churches or Mansions, either in the Gothic or Elizabethan style, in any description of wood. It is equally applicable to Elizabethan or Gothic Furniture, such as Chairs, Book-cases, Cabinets, Tables, Picture-frames, Coats of Arms, Mouldings, &c., &c.—No. 5, HENRIETTA-STREET, COVENT-GARDEN.

# ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.

**C. J. ECKFORD, 45, FLEET-STREET,** corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

**SPLENDID AND SUPERIOR GILT FRAMES.**  
**CHARLES McLEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**TO MINIATURE PAINTERS, &c.—W. WARRINER, 39, GREAT CASTLE-STREET, REGENT-STREET,** Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

## RAND'S PATENT METALLIC COLLAPSIBLE TUBES FOR OIL COLOURS.

**J. RAND, the Inventor, Patentee, and sole** Manufacturer of the above, during the time they were known to the profession solely under the name of "Brown's Patent," has made arrangements with Messrs. Winsor and Newton, of 38, Rathbone-place, by which that firm are supplied by him with Tubes of the same description as those so long supplied by J. Rand to Mr. Brown.—August 1st, 1842.

WINSOR and NEWTON, of 38, RATHBONE-PLACE, respectfully announce, that they have on sale Oil Colours in Rand's Patent Collapsible Tubes, wholesale, retail, and for exportation.

### THE PATENT EASEL.

**WINSOR and NEWTON** respectfully inform the Profession and the Public, that this admirably-constructed Easel, the invention of M. BONHOMME, of Paris, is manufactured by them with considerable improvements on the French model, and with the advantage of the best English workmanship.

W. and N. are induced to submit this Easel to the Profession in England by the high encomiums and great patronage bestowed upon it in France, where the ingenious Inventor, not only obtained a prize for the merits of his Easel at the National Exposition of Manufactures and Inventions, but also received from the Government a liberal reward for the assistance he rendered to the Professors of Art.

Though possessing the advantages of the largest Easels, by standing firmly and holding steadily paintings of a very large size, M. BONHOMME's invention occupies no more space than the smallest of the Artists' Easels now in use, and certainly not so much as the greater number of them.

The position and height of a painting may be adjusted with the utmost facility by a novel arrangement, which permits even unusually large works to be, when placed on this Easel, as much under control as smaller ones. The painting can also be sloped or thrown forward to any angle most favourable for the view, and this forward inclination can be adjusted with ease and exactness.

It presents a neat and even elegant appearance, and is peculiarly fitted as well for all purposes of exhibition as for the studio; affording the utmost convenience for the advantageous display of large or small works. The connoisseur who desires to exhibit his gems of Art in a manner adapted to make the most favourable impression, obtains in the improvements here brought forward an auxiliary hitherto much required.

The Easel to be seen at WINSOR and NEWTON'S, Artists' Colourmen to Her Majesty and His Royal Highness Prince Albert, 38, Rathbone-place, London.

## NEWLY INVENTED SKETCHING PENCILS.

BB. Very black for the foreground.

HB. Middle tint.

N. Neutral tint, for distance.

E. WOLFF and SON beg to recommend their new invented BLACK CHALK PENCILS and CRAYONS, which will not rub off or smear. They are richer in colour and superior in working to any other Pencil hitherto known. The great advantage derived from these Chalks, are their capability of producing effect with little labour, combined with their adhesive qualities, which will admit of the drawings being kept in a portfolio without fear of smearing.

May be had of all Artists, Colourmen, and Stationers; and at the Manufacturer's, 23, CHURCH-STREET, SPITALFIELDS.

**CHIMNEY GLASSES, PICTURE FRAMES, CHEVAL and TOILET GLASSES, CONSOLE TABLES, WINDOW CORNICES, SCREENS, and every department of CARVING and GILDING,** of superior quality, supplied cheaper than by any other manufacturer, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane.—P. G. manufacturing every article on the premises, is thereby enabled to offer them at such low prices that he defies competition. An extensive assortment of Ornamented Gilt and Fancy Wood Picture Frames kept ready. Regilding in all its branches in a superior manner, at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given free of charge. A list of the prices of Plate Glass, &c. sent, pre-paid, to any part of the Kingdom. A quantity of Picture Frames of every size, that have been some time on hand, at reduced prices.

**NOTICE.—PATENT RELIEVO LEATHER HANGINGS and CARTON-TOILE OFFICE,** 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foliage, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c., &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.

L. COMETTI and CO., 10, Rue Basse du Rempart, Paris.—May 25, 1842.

**DIMES and CO. (LATE WARING and DIMES), ARTISTS' COLOURMEN, 91, GREAT RUSSELL-STREET, BLOOMSBURY.**

**F. DIMES** begs to inform the Profession, that the PARTNERSHIP subsisting between himself and Mr. George Waring has been DISSOLVED by mutual consent, and that in future the Business will be continued under the name of DIMES and CO.

To those Gentlemen who have given their patronage to the late firm, he begs to return his grateful acknowledgments, trusting to have their continued support, assuring them that all the articles he manufactures and sells shall receive every attention to insure the best quality. Subjoined is enumerated a few Articles, to which attention is respectfully requested:—

**CANVASS WITH INDIA RUBBER GROUND.**—The eligibility of this article having been thoroughly acknowledged, and it having received the patronage of the first artists in the kingdom, those gentlemen who desire that the labours of their pencils should be preserved from the effects of time (too visible in some of the finest productions of the Art), this Canvass is particularly recommended, as it is never subject to crack or peel, and the surface is very agreeable to paint on.

**RAND'S PATENT COLLAPSIBLE METALLIC TUBES FOR OIL COLOURS.**—Mr. J. Rand, the Inventor and Patentee, and Manufacturer of the Collapsible Metallic Tubes, having thrown them open to the trade, D. and Co. beg to state that they can supply them filled with oil colours in any quantity; also, tubes of Varnishes, M'Guelp, and Asphaltum.

**Zinc Tablets for Painting in Oil.**—The surfaces of these Tablets are well adapted for highly-finished paintings, and superior to panels or milled boards.

**Water-Colours in Cakes or Moist, filled in mahogany or japanned boxes for sketching.**

**Whatman's Drawing Paper,** all sizes and thicknesses. J. D. H., ditto.

**Tinted or Academy Paper,** in great variety of tints for chalk or pencil.

**Genuine Cumberland Lead Pencils,** warranted of pure lead.

**Chalks and Crayons of all descriptions.** French, Hog, and Sable Hair Brushes for Oil and Water-Colour Painting.

**Marble Slabs mounted,** prepared for Miniature Painting.

**Drawing Boards, Easels, T Squares,** and every article for Architectural Draughtsmen.

Drawings and Paintings lent to copy.

## SKETCHING SEASON.

**AQUAOLEUM,** or a new Preparation of MOIST COLOURS to give the effect of either Oil or Water-Colour Painting.

Invented by **GEORGE ROWNEY and CO,** Colour Manufacturers to Artists, 51, Rathbone-place, London.

These Colours may be used either on Canvass, Millboard, Panel, or Paper. If used as Water Colours, water is the only medium required; but if to present the effect of Oil Painting, a macgculp prepared expressly for the purpose is necessary: they are applicable to any style of painting, but most particularly useful in sketching from nature. The dislike that many person (especially ladies) have to oil colours, on account of their smell, is here entirely avoided, as they have rather a pleasant odour, and any stainer soil from them may be removed with water. They dry nearly as fast as water colours, but if the evaporation be too rapid, it may be controlled by the use of the macgculp. The sketches, if done to represent oil colours, may be varnished as soon as dry.

These Colours are sold in compressible tubes, or in small earthenware pans, and are called Aquaeum, or a new Preparation of Moist Colours, and sold at the usual charges of Cake Colours generally.

N.B.—Specimens may be seen in the different styles to which they are applicable, and printed directions furnished with the article.

## PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES, for COLOURS, OILS, VARNISH, MAGYLE, ASPHALTUM, &c.—THOMAS BROWN** begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Gennine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

## MILLER'S SILICA COLOURS.

The daily increasing patronage bestowed on these Colours by Artists of the first eminence, while it is gratifying in the highest degree to the inventor, is, at the same time, an acknowledgment of the soundness of those principles upon which they are manufactured. It will be sufficient to repeat that, being composed of substances identical or similar to those used by the old masters (the brilliancy of whose works, after the lapse of centuries, is an incontestable proof of the superiority of ancient colouring), the Silica Colours will ever retain their freshness, transparency, and gem-like lustre uninjured by atmospheric influence and unimpaired by time.

Prepared for Oil and Water-Colour Painting of the under-mentioned tints, viz:

Pale and Deep Blue.	Pale and Deep Red.
Pale and Deep Orange.	Pale and Deep Yellow.
Pale and Deep Green.	Pale and Deep Purple.
White and Half Tint.	Pale and Deep Brown.
	Grey and Black.

## VAN EYCK'S GLASS MEDIUM. FOR OIL PAINTING.

No. 1. For first and second painting.

No. 2. For third painting, finishing, and glazing.

Any of the above Media may be thinned, according to the taste of the Artist, with Miller's Florentine Oil.

## MILLER'S GLASS MEDIUM. FOR WATER-COLOUR PAINTING.

No. 1. For first colouring.

No. 2. For second colouring, glazing, and finishing.

T. M. begs to call the attention of Artists to his new Drawing-Paper, made of pure linen only, without undergoing any chemical process.

**MILLER'S ARTISTS' COLOUR MANUFACTORY,** 56, LONG-ACRE, LONDON.

## NOTES ON BRITISH COSTUME.

## PART THE FIRST.

BY FREDERICK W. FAIRHOLT.

A correct knowledge of costume has become an acknowledged essential to the historical painter. The reign of imaginary costume is rapidly reaching its close. A conviction of the necessity and value of "truth," in this particular, has been the slow growth of the last half century. A deaf ear was long turned to the urgency of critical antiquarians by whom it had been studied. Assertions were constantly made of the impossibility of accomplishing their desires, and twice the necessary amount of trouble was taken in inventing a heterogeneous costume than would have been required to procure accuracy. This fault pervades the whole series of engravings in a well-known national work—the prints to Boydell's *Shakespeare*; it is in fact almost an entire anachronism: the figures exhibit costume and armour utterly unknown to the age in which they lived, and are not unfrequently represented in dresses that never had been worn by anybody at any time, being a mere fanciful compound of those of various epochs. Similar cases might easily be multiplied; they are, in fact, nearly as numerous as our productions in historic art; but a reference to this great work will suffice, as it may be presumed to have had no small influence upon national taste.

We owe to our continental neighbours the advantages derived from an impetus given to the study: to their accurate delineations of historic scenes we are mainly indebted for the more correct pictures now given to the world, and for directing and enforcing by example the pursuit of accuracy in all the accessories of historical painting. But while we have abundant authorities for the faithful delineation of every event in our national history, it is much to be regretted

that many of our works, professedly accurate guides to costume, are in reality seldom to be depended on. The name of Strutt ought never to be mentioned without reverence, because of his unceasing exertions on this subject, as well as in regard to the manners of our ancestors in general; but even he is not fully to be depended on for his dates, and has often misled the student by confounding the costume of one century with that of another. Other authors have trusted for early costume to such vague grounds as antique coins, of so barbarous a character, and avowedly copied from badly executed representations, that they may be almost considered as little better than mere inventions. Dated designs and monumental effigies, or actual relics of still earlier periods, have been left for our own age to study and compare, and thus to arrive at truth. The "Monumental Effigies" of the late C. A. Stothard paved the way to an accuracy of delineation hitherto unknown; and the feeling and character of the original sculptures were so beautifully preserved by him, that an eye familiar with such matters can immediately detect, by the general style that pervades it, the period at which the original may have been executed. Mr. Planché, in his excellent little "History of British Costume," attending also solely to the evidences of fact, for the first time directed the student safely on his course, and gave him the true test by which he might detect the proper costume of any period. Good illustrations are, however, wanted in this work; and the only book we possess, that rightly combines art and literature, is Shaw's "Dresses and Decorations, from the Seventh to the Seventeenth Centuries," now publishing, the plates in which, being correct fac-similes, may be relied upon.\*

The increased taste for the study of correct costume and its absolute "essentiality" to the artist, render it matter of deep regret that there is no library or collection of prints devoted exclusively to his use; and which might be under the superintendence of some person, who, while instructing him upon what he might depend, would also caution him against these professedly correct works upon which no dependence is to be placed—the one being quite as necessary as the other. The Royal Academy would surely profit by such an arrangement; and a great deal of valuable time would be saved by the artist, who has now to hunt almost without a guide for that which has become an important part of his profession. The great expense of the necessary books is no small hindrance to the many; but an influential body collecting such works, under the guidance of a person who could separate the good from the bad, and arrange his examples, in which might be included specimens (taken off by surface friction) of the brasses in our churches, and directing the collecting of them before they are totally destroyed,† thus rendering them available for general use, would be conferring a vast benefit. In our theatres such persons are actually employed. It is absurd that the artist, whose painting is less evanescent than the scenes of a drama, and is destined to last for centuries, should not have equal, or greater, advantages.

The proposal for fresco paintings with which to decorate our new Houses of Parliament, and the

\* It frequently happens, that what is but a little bad drawing or false perspective, is altered into an important feature in modernising too freely from rudely-drawn originals. Thus I have seen the off-side of the rim of a helmet, in which the line has been carried down the side of the face in attempting to give it the effect of going round the head, converted into an over-lapping protection to the nose; and so forth.

† "The Turks broke up the Elgin marbles to make mortar for their Athenian bowels, and we call them barbarians. These things go on amongst us even now. In an old chapel of ease, in the neighbourhood of Stratford-on-Avon, was, a few years ago, one of the very fine recumbent figures of a Templar. The figure was missed by a clergyman who sometimes visited the place, and he asked the sexton what had become of it. The answer was, 'What! that crossed-legged chap? Oh! I mended the road with him; a saved a dead o' limestone.'"  
—"William Shakspeare, a Biography," by Charles Knight, p. 99.

late demand for costume at her Majesty's "Bal Costumé," and the generally increasing fashion for this matter, add other reasons to those already enumerated for canvassing the subject.

At present the most available sources from whence the artist may gather information on this head, are the British Museum reading and print rooms, Westminster Abbey, and Hampton Court Palace. The British Museum is of course the richest store-house. Admission to the library may be obtained on application by letter from any Member of Parliament, clergyman, or gentleman of name or respectability, whose responsibility shall be considered as a sufficient guarantee for the character of the applicant. Such note, addressed to any of the heads of the various departments there, will meet with that kind attention for which these gentlemen are distinguished. An admission to the print-room, by the same process, may be obtained from H. José, Esq., the keeper.

The monumental effigies and brasses of Westminster Abbey rank next in utility, and open a rich field for the student. The written recommendation of any member of the Royal Academy, addressed to the Dean, or the Rev. Mr. Milman, will at once obtain the necessary privilege.

At Hampton Court (rendered easy of access by half an hour's ride on the Southampton Railway), is to be found an exceedingly valuable collection of ancient pictures, from the time of Henry VII. upwards, from which the best examples of costume may be obtained. An application to Edw. Jesse, Esq., not better known as an author than as a gentleman of exceeding urbanity and of obliging manners, will obtain full permission to sketch from any picture in this extensive collection.

Many of our churches in London also afford fine examples of the dresses of various periods; among which may be instanced St. Saviour's, Southwark; St. Helen's, Bishopsgate; the Temple Church, &c. These will be detailed in the course of my notes.

As I have entered the field solely from a desire to be useful, my remarks, though necessarily brief, I shall take pains to render truthful. No conjectures will be admitted, or if necessarily admitted, not treated as truths. Ancient authorities and ancient delineations will be solely confided in, and in all instances the authorities will be fully quoted. As far as possible, fac-similes of the original delineations will be given, though sometimes glaring errors of drawing may be corrected; but this as little as possible: and no change of position will be attempted, by which the general effect of the costume, and its form, might be misrepresented. All the drawings will be made upon the wood for the engraver by myself, and a great number will consist of specimens now for the first time engraved; but in all instances each illustration will be copied from the original, whether engraved before or not. Much that exists has not been sufficiently made available, from the circumstance of their publication in books of price, or else scattered through many expensive volumes not devoted to the subject. These I shall have to collect and refer to.

For some years I have given close and continual attention to this subject, and have carefully noted down all illustrative matters in connexion with it. In my endeavours to lay before the artist the materials thus collected, I am stimulated, as I have said, solely by a desire to be useful to him, and I shall consider myself amply repaid for my labour if I find that I have been so. I shall not shrink from any sacrifice of time or trouble; my object and my hope being that I shall enable the artist to save much of both. My purpose is not, however, to enter into lengthened disquisitions upon, or descriptions of, costume, but rather to note the general characteristics of the several epochs, and to direct the artist to the sources—in books, illuminated manuscripts, monuments, brasses, &c. &c., where he may obtain all the information he may require. In short, my de-

sign is to act as a guide rather than a lecturer—to show where sufficient knowledge may be obtained, rather than to seek to communicate it.

#### THE EARLY BRITONS.

But little information can be gleaned from the writers of antiquity, concerning the dress or appearance of the early Britons before the invasion of Julius Cæsar; a few meagre notices are all that we can meet with. From a comparison of their accounts, it would seem that, in nearly every particular, they bore a striking resemblance to the South-Sea Islanders, as described by Captain Cook. According to Pomponius Mela, who flourished about the year of our Lord 45, the Britons dyed their bodies with woad (which bore a small flower of a blue colour) after they had been tattooed. Herodotus, at a still earlier period, declared the same fact, adding, "that it was with them a mark of nobility, and its absence a testimony of mean descent." Pliny describes the operation as performed in infancy by the wives and nurses of the British; and Isidorus says, "They squeeze the juice of certain herbs into figures made on their bodies with the points of needles." A comparison of these, and other descriptions of the aboriginal inhabitants of the British Isles, and an examination of the contents of the sepulchral mounds, or tumuli, in various English counties, have furnished the material for the picture of an ancient Briton, as given to us by Sir S. R. Meyrick and C. H. Smith, Esq., in the work jointly produced by these gentlemen on the "Costume of the Original Inhabitants of the British Islands." Their words are:—"The Celtic tribes, in the progress of their migrations to the British Isles, had, like the inhabitants of the South Sea, lost the antediluvian art of working metals; and the few copper weapons which, from its extinction, glittered as rarities in the hands of their chiefs, disappeared, in all probability, ere they reached their ultimate destination. The Cimbrian savage, therefore, of Britain and Ireland, clad in the skin of the beast he had slain, issued in search of his prey from a cave hollowed by nature, or a hut scarcely artificial, which the interwoven twigs and leaves presented in a wood. His weapons were a bow and some reed arrows, headed with flint so shaped as to resemble the barbed metal piles of his ancestors, or pointed with bones sharpened to an acute edge. To assist in carrying these missile implements of carnage, he manufactured a quiver from the osier twigs that grew at hand; or he proceeded to the chase, for his feats in hunting were but the peaceable representations of his deeds in war, with the spear and javelin, formed of long bones ground to a point, and inserted in an oaken shaft, held in the end of which by pegs, they became formidable weapons. Or he waged the savage fight with the death-dealing blows of the four-pointed oaken club. His domestic implements were a hatchet, sometimes used as a battle-axe, formed of an elliptical convexly-shaped stone, rounded by the current of a river, which he fastened to a handle with the fibres of plants; a large flint adze for felling timber, fitted for use in the same way, and a powerful stone hammer. To these he added a knife, formed also of a sharpened stone. Unbaked earthen vessels, the shells of fish, and a few wooden bowls, served to contain his meat and drink. These were all his possessions, save his flocks and herds. The partner of his life passed her time in basket-making, or in sewing together, with leathern thongs or vegetable fibres, the skins of such animals as had fallen victims to her husband's prowess, employing for that purpose needles made of bone exactly similar to those used for the heads of arrows. Clad, by preference, in the skin, if to be procured, of the brindled ox, pinned together with thorns, a custom still with the Welsh peasantry, ornamented with a necklace formed of jet or other beads, and with the wild flowers entwined

in her long but twisted locks, she attractively became the soother of his toils."

We are indebted to the researches of Mr. Cunningham Sir Richard Colt Hoare, and the Rev. W. Douglas, for the only actual illustrations of the arms and ornaments used by our ancestors at this remote period. The two magnificent volumes published by Sir Richard on "Ancient Wiltshire," abound with specimens that, after the lapse of ages, were disinterred from the burial places of the early Britons, in that most interesting county so rich in relics of remote antiquity, while Douglas's "Nenia Britannia" gives us many others of equal interest and beauty. The contents of these graves then, are the only existing relics remaining to us of those early times; and from them, and the descriptions of ancient authors, must the artist realize the aboriginal inhabitants of Britain. The modes of sepulture vary in many of these graves, and that circumstance enables the antiquary to decide on the priority of each that he investigates. The most ancient graves supply us with specimens of arrow-heads of flint and lance-heads of bone, with stone knives and battle-axes, as used before metal ones were introduced, and the art of making them was taught in the British Islands by the Tyrian traders.

The central object of the above group is a spear-head of bone; the hole at the bottom received a pin of wood or bone, and so fastened it to the top of the lance; at each side is a lance-head and dagger or knife, also of bone. Beside them are several varieties of stone arrow-heads, chipped rudely into their various shapes. Beneath are stone battle-axes and knives; the axe heads

(1, 2, 3,) show the holes through which the handles passed. The knife (4) is of the earliest form; similar ones are seen upon the sculptures of the ancient Egyptians, by whom they were also used, and are held by the hand closed round the narrow top of the stone.

Thus, inartificially, lived the ancient Britons, until the Phœnician traders arrived, who communicated to them the art of manufacturing their warlike implements of metal. Although their composition was a mixture of copper and tin, and consequently soft and brittle, they were much superior, both in appearance and utility, to the bone and flint weapons in use before this time. The engraving, represents a few of these improved implements.

No. 1 is a sword; the handle was of horn; and the holes show where the pins that fastened it were inserted. No. 2 is a spear-head of bronze, showing the socket in which the staff was fixed. No. 3 is the hunting spear; the head, and ferrule at the butt end, of metal; the handle of wood. No. 4 is also the head of a spear, which was fixed upon the staff by a pin passed through the two holes at its base. No. 5 is also the head of a spear. Moulds for making such spears have been discovered both in Britain and Ireland; engravings of them may be seen in "Archæologia," vol. xiv. and xv.\*

But perhaps one of the most beautiful implements discovered in these tombs is the dagger here delineated; it was found carefully preserved

in a sheath of wood, lined with cloth, and was probably worn at the girdle of some chieftain. The wooden handle of another dagger is represented under it, and is a remarkable specimen of early art, which Sir R. C. Hoare declared, "exceeded anything he had yet seen, both in design and execution, and could not be surpassed, if indeed equalled, by the most able workman of modern times." In the annexed engraving will be immediately recognised the British zig-zag, or the modern Vandyke pattern, which was formed with a labour and exactness almost unaccountable, by thousands of gold rivets, smaller than the smallest pin. The head of the handle, though exhibiting no variety of pattern, was also formed by the same kind of studding. "So very minute, indeed, were these pins, that the labourers had thrown out thousands of them with their shovels, and scattered them in every direction, before, by the necessary aid of the magnifying glass, we could know what they were; but, fortunately, enough remained attached to the wood, to enable us to develop the pattern." A few of these pins, of the actual size, are shown in the cut, beside the dagger handle. The bronze weapons called celts were axe-heads,

\* "Archæologia, or Miscellaneous Tracts relating to Antiquity," is the title of this work, to which I shall have frequent occasion to refer. It is published by the Society of Antiquaries at intervals, and contains those papers on antiquities that have been communicated to the Society by its members and others. Its publication, which commenced in 1770, has continued since; and it has now reached 29 vols. in quarto, containing many hundreds of essays on subjects connected with the history and antiquities of this country, and the more remarkable antiquities of others. As a rich storehouse of materials for the historian, the topographer, and the student in general, it is without a rival. A copy is regularly presented to the British Museum by the Society, and is kept in the Reading-room there, for the reference of its frequenters.

and were fixed in handles similar to the stone hatchets of the South Sea Islanders. Some few are represented in the next cut.

A singularly curious British shield has been engraved in the 25th volume of the "Archæologia" of the Society of Antiquaries; it is one of these that "were used by the Britons before the Roman invasion, and such as they had been taught to manufacture by the Phœnicians; for when that people commenced trading with the Britannic Isles their targets were of wicker work, in which the natives are said to have excelled, of a circular form, flat, and covered with a hide." The bronze shields were called *tarians*, or *clashers*, from the sound they emitted on coming into collision with an enemy.

It will be perceived that it was held at arm's length, and a handle with a concavity for that purpose is observable on the inside, while the latter forms the conical boss without. The Anglo-Saxon shield was used in the same manner, but the umbo, or central knob, was of iron, the rest being convex and of wood. The ornament on this British tarian consists of two series of round bosses between concentric circles. All the bosses are punched in the metal except four, two of which form the rivets to the handle, and two are the rivets to the metal extremities apparently of a strap, these four bosses being consequently moveable. This interesting object was found in October 1836, in the bed of the river Isis, between Little Wittenham and Dorchester, a neighbourhood that formed the site of many an engagement between the early Britons and the Roman invaders. It is now in the British Museum. By comparing this with the Highland target, we shall find that, although the Roman mode of putting it on the arm has been adopted by these mountaineers, the boss, thus rendered useless, is still retained, and the little knobs are imitated with brass nails.

The ordinary dress of a Briton at this period was the skin of the brindled or spotted cow, of the beasts killed in hunting, or a cloak of sheepskin. After their connexion with the Phœnician traders, the arts of dressing wool and flax and spinning coarse cloth were introduced. The early Britons and Gauls excelled in the art of dyeing cloth. Pliny enumerates several herbs used for this purpose, and tells us that they dyed purple, scarlet, and other colours from them alone. The peasantry in Wales have the knowledge of several indigenous plants valuable for imparting colours, and use the leaves of the foxglove and sorrel as preparatives for the purpose. They extract a beautiful yellow from tansy, brown from nut leaves, and other colours from lichens. But the favourite with the ancient Britons was the blue produced from the woad, and which they had formerly used in tattooing their bodies. This and red predominated.

Before the Roman invasion the dress of its chieftains consisted in a close coat or covering for the body, called by Dio a tunic, and described as chequered with various colours in divisions. It was open before, and had long close sleeves to the wrist. Below were loose pantaloons, called by the Irish *briggs*, and by the Romans *brages* and *brachæ*; whence the modern term breeches. Over his shoulders was thrown the mantle or

cloak, called by the Romans *sagum*, and derived from the Celtic word "saic," which signified a skin or hide, and which was the original cloak of the country. On his head he wore a conical cap, which derived its name from the "cab," or hut of the Briton, which was of similar form. On his feet were shoes made of raw cow-hide that had the hair turned outward, and reaching to the ankles. Shoes so constructed were worn within the last few years in Ireland, and we engrave two from specimens in the Royal Irish Academy.\* One is of cow-hide, and drawn together by a string over the foot, as also is the other by a leather thong, that passes round the top of the boot and over the toes; this is of untanned

leather, and is all in one piece, sole and upper leather.

In time of battle they stripped themselves naked to be free for the encounter, and appear to have worn occasionally a species of skull-cap, from which hung long feather-like appendages. Their swords were suspended by a chain from the waist. A remarkable breast-plate of gold was found at Mold, in Flintshire, which is conjectured to be of this early period; it is now in the British Museum, and has been engraved, and described in vol. xxvi. of the "Archæologia," with an extra plate of the ornamental details, which will be of much value to the artist, as it shows the taste of this early age, and the pattern then generally adopted.

Martial has a line of comparison—

"Like the old brachæ of a needy Britain;"

and they seem to have been the distinguishing mark between the Romans and the less civilized nations of antiquity, who were frequently styled "breeched barbarians" by this haughty people. Perhaps the best idea of an ancient Briton may be obtained by an examination of the statues in the Louvre of the Gaulish chiefs there exhibited, and who in point of costume exactly resembled them; one of these figures is here engraved.

The Britons, like the ancient Gauls, allowed their hair to grow thick on the head; and although they shaved their beards close on the chin, wore immense tangled moustachios, which

\* In the Highlands of Scotland, according to Mr. Logan, they were also in use; he says that they were exceedingly pliable, and were perforated with holes to allow the water to pass through, when their wearers were crossing morasses.

sometimes reached to their breasts. Among the Townley marbles in the British Museum, is a magnificent bust of a barbaric chieftain, or king, who was a captive to Rome; it so completely gives us the fashion of hairs worn by the British chieftains, that it has been conjectured to be a bust of Caractacus, whose noble character was held in high esteem by the Romans.\* The loose neglected hair, growing over the forehead, and the ferocious, yet majestic melancholy of the face, is worthy the study of the artist who would faithfully represent this early English hero, who has at least no unworthy counterpart in the bust here given.

Round the neck, bands of twisted gold wire, called *torques*, were worn, and bracelets on the arms of similar construction. Various specimens are scattered through the many volumes of the "Archæologia."

Of the female dress of this early period no relics save ornaments remain; of these some few specimens are here engraved.

Fig. 1 is a necklace of beads, each bead being cut so as to represent a group of several, and give the effect of many small round beads to what are in reality long and narrow ones. Fig. 2 is a necklace of a ruder construction, consisting of a row of rudely-shaped beads, its centre being remarkable for containing a rude attempt at representing a human face, the only thing of the kind ever discovered of so ancient a date in Britain. Fig. 3 is another necklace, consisting of a series of curious little shells, like the *hiras* horn† used by the Britons, which are perforated lengthways, and thus strung together. Fig. 4 is a pin of iron, supposed to have been used as a fastening for a mantle; it is ornamented with two moveable rings. Fig. 5 is a small gold ornament, chequered like a chess-board, and suspended from a chain of beautiful workmanship, which in

\* It has been beautifully engraved in one of the plates of ancient marbles, published by the "Dilettanti Society," accompanied by a learned description, by R. P. Knight, the distinguished antiquary, who has declared the opinion above expressed.

† These horns were generally formed from that of the ox, and were used for hunting, and also for drinking. The "Pusey horn," which was given by Canute to an ancient member of that family, according to the mode then common of thus conveying landed property, and which the inscription upon this horn commemorates; was made, so that by screwing on a stopper at the smaller end it could be used for drinking from; as in ancient MSS. we frequently see them.

taste and execution bears a striking similarity to our modern curb-chains. Fig. 6 is an earring, a bead suspended from a twisted wire of gold. Fig. 7 is a brass ornament, and fig. 8 a similar one of gold; such ornaments are usually found upon the breasts of the exhumed skeletons in our barrows, and were probably fastened on their clothes as ornaments. Their cruciform character might lead to a doubt of their high antiquity, if we were not aware of the fact that the symbol of the cross was worn as an amulet or ornament ages before the Christian era.\* They are here engraved, to convey an idea of the sort of ornamental taste displayed by our forefathers. In Douglas's "Nenia Britannia" some beautiful specimens of these ornaments, and cloak clasps, or fibulae, may be seen, together with many curious ornamental relics of this early period.

These are all the articles of dress actually remaining to us; but the description of Boadicea, left us by Dion Cassius, will help us to form a fair notion of the general appearance of a British female. She wore her long yellow hair flowing over her shoulders; round her neck a golden torque, and bracelets ornamented her arms and wrists. She was attired in a tunic of several colours (blue, red, and yellow, or a mixture of these colours predominated), which hung in folds about her. A cloak was thrown over all, which was fastened by a fibula, or brooch.

The details of the earliest English costume have been thus entered upon, because it was felt necessary to guide the artist, in his delineation of ancient life, by *fact illustrations alone*; and many attempts have been made in expensive works and of much pretension to accuracy, that may considerably mislead him in his details; authorities have been cited and used that are in reality of little value, and plates, the result of this *guess-work*, are fortified by learned description, and quotations apparently unquestionable, of authorities by no means valid, and from which it would not be difficult to manufacture the most absurd figures. The descriptions of ancient writers should be the groundwork of the design, and all its accessories may be readily obtained by a reference to the works treating on the contents of early British sepulchres, where alone the real articles are to be met with that once decorated our forefathers, and which have never yet been fully used. The style of ornament at this period may be gathered from the simply-varied decorations of the breast ornaments in *Hoare's South Wiltshire*, "Tumuli," pl. 10 and 26, or else from the many vases engraved in the same work. From these and the figures of Gaulish chiefs extant, or the bas-relief upon Trajan's column, enough for the artist's purpose may be obtained; but on no account should he depend implicitly upon any attempt to realize these people in modern designs, however they may be backed by learned statements; for they all fall in truthfulness in many particulars, upon a comparison with any genuine antique figure.

Druidic costume was of patriarchal simplicity. Long white garments covered their persons, and hung upon the ground. A mantle also of white (but bordered, say some authors, with purple), hung from their shoulders, and fell in broad folds to their feet; it was fastened upon the shoulders by drawing a portion through a ring.

\* In the "Description de l'Egypte," published by the French government, under Napoleon, is an engraving of a small cross with a hole at the top, by which it was suspended, as they are now worn in Catholic countries, and which was disinterred in an Egyptian sarcophagus. We are also told that the Druids used this symbol in the earliest times. Sir S. R. Meyrick, in his "Costume of the Original Inhabitants of the British Islands," has represented one of them in the back ground to his design of Druidic costume. He says that they were set up in public places, being formed of the stump of an oak-tree, with pieces fixed on each side, like the arms of a man, above which insertion they placed, according to Lucan, the T, tau, or symbol of God, in shape also like a cross, with the upper limb; and upon the other cut the names of their national deities.

They were crowned with oak-leaves, and the Arch Druid bore in his hand a sceptre. A singularly interesting bas-relief was discovered at Autun, and engraved in Montfaucon's "Antiquité Expliquée," and affords us the best and only actual authority for Druidic costume.

It represents a Druid in his long tunic and mantle, holding in his right hand the sacred symbol of the Crescent; the Arch Druid beside him is crowned with oak-leaves, and bears a sceptre. The Druids were divided into three classes—the Druid (Der-wydd) or superior instructor, distinguished by the "proud white garments," mentioned as his characteristic costume by the ancient Welsh bard Taliesin, who wrote in the sixth century; the Ovate, from Go-wydd, or O-wydd, subordinate instructors, who wore robes of bright green, symbolic of the learning they professed, and their knowledge of the secrets of nature whose colours they wore; and the Bards (Beirdd), or teachers of wisdom, and "wearers of long blue robes." Noviciates were clothed in garments of three colours—blue, green, and white, or red, which were disposed in stripes or spots; for a disciple about to be admitted a graduate is allegorically described by the bards as "a dog with spots of red, blue, and green."

Various Druidic remains have been discovered from time to time in England and Ireland. In the Royal Irish Society are preserved some exceedingly beautiful specimens of the ornaments worn upon the breast of the chief priest—the Jodhian Morian, or breast-plate of judgment, believed to be endowed with the power of strangling the wearer who gave false judgment. There is a beautiful engraving of one of these breast-plates in the "Archæologia," vol. vii, and also of the "Liath Meisicith," or stone of judgment, a large crystal set in silver, and surrounded by other stones. They no doubt had their origin in the Jewish "Urim and Thummim." In the second volume of the "Archæologia," there is an engraving of a lunar ornament, similar to that held by the Druid priest in the Autun bas-relief; it is tastefully and beautifully ornamented by indented work in lines and zig-zags, as they all are. From the circumstance of the point of the crescents having upon them at right angles two small circular plates about the size of a guinea, they were also conjectured to be breast ornaments, for by passing loops over these they would become readily and conveniently pendulous from the neck of the wearer. They were very thin: the one here mentioned weighed but one ounce and six pennyweights.

Many other antiquities of the Druidic era may be found scattered through the various volumes of the "Archæologia" of the Society of Antiquaries, "Hoare's Wiltshire," "King's Munimenta Antiqua," "Vallancey's Collectanea de

Rebus Hibernicis," and "Douglas's Nenia Britannia."

#### THE ROMANS IN BRITAIN.

After the subjugation of the Britons by the Romans, their rule extended over a period of more than 300 years; it is, however, a period that need not detain us long, as authorities for its costume may be readily met with. The Britons became Romanized thoroughly in their dress, adopting that and the manners in general of their conquerors: the brachæ were discarded, and the short Roman tunic and capacious mantle was their ordinary covering. Among the Arundelian marbles at Oxford is a bas-relief, found at Ludgate in 1669,\* to the memory of a British soldier of the Second Legion: he is represented with long hair, a short lower garment fastened round the waist by a girdle and fibula, a long sagum flung over his breast and one arm, ready to be cast off in time of action; naked legs; in his left hand a scroll, and in his right is held a long two-handed sword, the point resting on the ground. Pennant regarded this very curious bas-relief as a representation of a British soldier, probably of the Cohors Britonum, dressed and armed after the manner of the country. The slight difference between his costume and that of a Roman Legionary will be at once seen. The figure beside him, wearing the long and capacious mantle, is copied from a Roman sepulchral bas-relief found at Cirencester in 1835.

In "Archæologia," vol. xxiii., is engraved a curious military relic of this early period. It is the exterior coating of an ancient British shield, such as the Britons fabricated after they had been induced to imitate the Roman fashions. It was held at arm's length, by a handle fitted into the groove made by the ornament, the gripe being guarded with a convex boss. This shield appears to have been originally gilt; the umbo is ornamented with pieces of red cornelian fastened by brass pins; and, says Sir S. R. Meyrick, in whose possession this curious relic remains, "it is impossible to contemplate these artistic portions without feeling convinced that there is a mixture of British ornament with such resemblances to the elegant designs on Roman work, as would be produced by a people in a less state of civilization." We engrave this unique curiosity with the ornament beside it, on a large scale, that its peculiarity may be more distinctly seen. It was

\* It was discovered during the excavations that were so extensively carried on by the commissioners appointed by the Government for rebuilding the City of London, immediately after that stupendous event, the Great Fire of 1666; and it is the most interesting of their discoveries, which, being made at a time when attention to these antiquities was not so general as at present, have not been fully recorded.

† A body of soldiers expressly raised to defend the island from the attacks of the Scots and Picts, guard the coast from Saxon pirates, and preserve the power of the Romans within it.

found in the bed of the river Witham, in Lincolnshire.

The female dress underwent little or no change. The British gown, from whence comes the modern "gown," came down to the middle of the thigh, the sleeves barely reaching to the elbows; it was sometimes confined by a girdle. Beneath this a larger tunic reached to the ankles. The hair was trimmed after the Roman fashion, and upon the feet, when covered, were sometimes worn shoes of a costly character, of which we know the Romans themselves to have been fond. An extremely beautiful pair was discovered upon opening a Roman burial-place at Southfleet, in Kent, in 1802. They were placed in a stone sarcophagus, between two large glass urns, or vases, each containing a considerable quantity of burnt bones. They were of superb and expensive workmanship, being made of fine purple leather, reticulated in the form of hexagons all over, and each hexagonal division worked with gold.

Many passages in ancient writers mention that great attention was paid by the Roman ladies and soldiers to the ornaments upon their shoes, which were as rich and costly as the circumstances of the wearer could permit. They were buried, perhaps, as the most valuable and showy article of dress, and one that the deceased would least wish to part with.

#### THE ANGLO-SAXONS.

For the costume of the Anglo-Saxons we have abundant authority in the drawings executed by their own hands, and still existing among our collections of illuminated\* manuscripts. It will be sufficient, however, for our purpose and that of the artist, to confine our notice to a few of the more important ones, which most fully illustrate the general dress of the community; and nearly all that is wanted may be found in two manuscripts in the Cottonian Collection,† now in the British

\* The term "illuminated," was applied to those drawings executed in gold and body-colour to be met with in ancient manuscripts, by the earlier continental antiquaries; and it has been retained as expressive of the brilliancy and beauty with which they are executed, and of which this word conveys perhaps the best idea.

† So called from Sir Robert Cotton, who collected these MSS. during the reigns of Elizabeth and James I., and suffered much persecution on their account, as many private letters and papers of state were among them, and he was for years debarred the privilege of their use. His son, Sir Thomas Cotton, augmented the collection considerably.

Museum, marked "Claudius, B. 4,"\* and Harleian MS.,† No. 603; the first a translation of the Pentateuch into Anglo-Saxon, written and profusely illuminated in the tenth century, by Ælfricus, Abbot of Malmesbury, at the command of Æthelward, an illustrious Balderman. It contains a vast variety of valuable illustrations, nearly every incident mentioned being delineated in a drawing, and all the characters represented in the costume of the period when the manuscript was executed; it being a custom (fortunately for the antiquary) with the artists to represent the subjects he was about to illustrate, precisely as they would occur in similar circumstances in his own time. This has afforded a valuable fund of materials to the student of ancient costume and manners, and gives a reality to the study not to be found elsewhere. The dress, carriages, implements of war and husbandry, the pleasures of the chase, or the amusements of the people, are here fully delineated. The second manuscript is, probably, a century later, but it is executed with less finish, the drawings being slight, but valuable and varied, and furnish some very curious pictures of manners. I have also made some selections from another manuscript in the Harleian collection, No. 2008, the Missal of the church of St. Augustine's, Canterbury, and some others.

But, perhaps, the finest specimen of the arts in the tenth century, is to be found in the library of his grace the Duke of Devonshire. It is a splendidly decorated Benedictional, executed for St. Æthelwold, and under his auspices and direction, to be used in his see of Winchester. It was completed between the years 963 and 984, and it is this known date that stamps so much value on the manuscript. With great liberality, its noble possessor allowed the Society of Antiquaries to engrave fac-similes of the thirty illuminations contained in the volume; and they were published, together with an account of the book, in the 24th volume of the "Archæologia." As these are the finest specimens of the arts of design at present existing of this early period, and the book is more easily accessible than the others I have quoted, I would almost prefer directing the artists' attention to the admirably-executed fac-similes there published, and which will supply him with the costume, and more particularly the ornamental designs of the period, as fully or more fully than may be obtained from any other source. The late Mr. Otley, so well known for his knowledge of art and its history, declared "he thought these drawings in the highest degree creditable to the taste and intelligence of this nation, at a period when, in most parts of Europe, the fine arts are commonly believed to have been at a very low ebb."

For the Royal Costume of the Anglo-Saxons we meet with many authorities. The grants by King Edgar to the abbey of Winchester, which were written in letters of gold in the year 966, and which contains, opposite their names, the marks of the King and Saint Dunstan, and is now in the British Museum, Cotton MS. No. 906, gives us the portrait of this monarch and his costume. In its details his dress is exceedingly simple, consisting of a plain tunic, over which is thrown a mantle or short cloak, and his legs are

\* This is one of the "press-marks" originally used for the convenience of finding the books easily. They stood in presses or cases, over each of which was a bust of one of the Cæsars. Thus this book was in that one over which a bust of Claudius was placed; it stood on shelf D., and was the fourth book upon that shelf. The collection having been used for upwards of two centuries by learned men of all countries, and their references to the books used as their authorities given thus, it became essential that upon their removal no alteration should take place in this particular; and hence they are still referred to as they originally stood in the library of the Cotton family.

† This collection of manuscripts is so named from Robert Harley, Earl of Oxford, and prime minister to Queen Anne, and his son Edward, the second and last Earl of Oxford, who brought together nearly 8000 vols. of letters, papers, charters, and documents of all kinds, illustrative of English and foreign history, inclusive of illuminated books on all subjects, many of an exceedingly rare, beautiful, and curious kind.

enswathed in bands to the knee. A finer example of royal costume is, however, to be found in the Benedictional above mentioned, and which

is copied above. It represents one of the Magi approaching the Virgin and Child with his offering. He wears a crown of a simple form, with a plain purple tunic reaching nearly to the knees, and confined round the waist by a linen girdle. His short blue cloak, bordered with gold, covers the left arm, leaving the right one perfectly free, as it is fastened on the right shoulder by a gold fibulæ or brooch. The kind of bandaged stocking, so common on all Saxon figures, is seen in this instance to greater advantage than in any other known to exist. His legs are enswathed up to the knee in garters of gold, tied in a knot at the top, from which hang tassels. This peculiar feature of Anglo-Saxon dress was in common use among the shepherds and country people of France as late as the 15th and 16th centuries, and was called "des lingettes." In the Appennines, the Contadina wear a kind of stocking bandaged all the way up; the bandages generally crossing each other. In the Cotton MS., Tiberius C. 6., is a representation of King David playing on the harp, whose legs are crossed with bandages diagonally; this was the original "cross-gartering" as mentioned by Shakspeare in "Twelfth Night," and the fashion lingered in England at a still later period. Barton Holaday, who wrote fifty years after our great dramatist, speaks of

"—— some sharp, cross-gartered man  
Whom their loud laugh might nick-name Puritan."

The costume of a queen appears to have been nearly the same as that worn by the noble and wealthy ladies of the land; in a similar way that of their kings differs in no degree from the ordinary costume of a nobleman or chief, except in the addition of the regal diadem.\* The figure selected as an example of queenly costume occurs in Harleian MS., No. 603. She wears a long gown which falls in folds round her feet, and having full hanging sleeves, the figure is in outline in the manuscript, but the colours have been indicated by inks of different tints; this gown is coloured red. Over the gown is thrown a capacious blue mantle, which almost entirely envelops the figure; it is wound round the waist and thrown over the left shoulder, from whence it descends behind the back and nearly reaches the ground; it is so disposed as to cover the left side of the body from the waist downward leaving the right side partially free; the mantle hanging in folds from the left arm. This graceful disposition of so important a portion of the costume has a peculiarly grand and dignified effect, which is aided not a little by the extreme simplicity of the entire dress, which is perfectly unornamented.

\* The crowns of both these royal figures are of the simple form so common in Anglo-Saxon illuminations, that of the Queen being decorated with fleur-de-lis, which are the usual ornaments upon them, and are more like our modern ideas of a French crown, than the crowns worn at this early period by French sovereigns, as depicted in contemporary MSS.

The ecclesiastical costume may be well illustrated by the annexed figures, copied from an illumination in the ancient Missal of St. Augustine, formerly belonging to the monastery at Canterbury, and now in the Harleian collection, No. 2908. It represents Abbot Elfnoth, who died in the year 980, presenting his book of prayer to St. Augustine, the founder of his monastery, and is one of the earliest representations extant of the official ecclesiastical habits used at this early period, the drawing having been executed in the abbot's life-time. The saint is in full costume as archbishop, and wears the chasuble,\* a purple mantle bordered with gold, that covers the upper part of the body and reaches beyond the waist and as far as the wrist, when the arms were allowed to hang beside the body; and which hung in a half circle in front, when the arms were uplifted. Over this is the pall, a narrow strip of woollen cloth, upon which crosses were embroidered, and which passed over the shoulders of the metropolitan or archbishop, and with which he was invested on his nomination to the see. Immediately under the chasuble is the dalmatic† (coloured yellow in the original) which has long sleeves reaching nearly to the wrist; beneath this appears the ends of the stole, a band or scarf that passed over the shoulders and round the neck. The undermost part of the dress being the alb,‡ of blue with tight sleeves to the wrist. His shoes are black, and he wears no mitre, its first appearance in the Latin church being about the middle of the eleventh century.

Abbot Elfnoth wears a chasuble of green bordered with gold, which projects upwards to a point behind his head, similar to a hood; a dalmatic of yellow embroidered with leaves (as is also that worn by the archbishop), and an alb of blue. Behind is an attendant priest, dressed in a yellow dalmatic similar to the abbot's, with a plain close collar and a blue alb; he carries the pastoral crook, which is of singular simplicity, varying in no degree from that of an ordinary shepherd. It had, indeed, an allusion to the Saviour as "the good shepherd," and all the other portions of priestly costume have an allegorical allusion to the Christian faith. Thus the cha-

\* So called from the protection against the weather it afforded the wearer, it was also called the pluvial for the same reason.

† The dalmatic was the name given to the long flowing dress worn by priests, and resembling a gown in its form. The name is also frequently applied to the gown with wide sleeves, so common upon royal figures as late as the reign of Edward the Fourth, and which was a peculiar feature in royal costume, as we shall see in the course of these remarks.

‡ The alb was a long garment reaching to the feet, which, notwithstanding its name, was not always necessarily white, nor was it invariably made of linen cloth. It was intended to represent the white garment which Herod placed upon the Saviour after he had despised and mocked him.

The details of ecclesiastical costume have been thus minutely entered on, because much confusion has arisen from the changes in name and form produced by centuries, and which render them difficult to be understood by the general reader; and this must be my excuse to some of the readers of these papers for what may seem to them to be unnecessarily minute descriptions—but of which I and other artists have felt the want.

suble represents the purple garment which the soldiers put upon Jesus Christ; the stole, the cords with which he was bound, &c.

The general civil costume of the Anglo-Saxons appears to have been exceedingly simple; a plain tunic enveloped the body, and reached to the knee, fastened round the waist by a girdle of folded cloth of the same colour, or secured by a band slightly ornamented. The tunic was sometimes enriched by a border of ornaments in small compartments, generally representing leaves, or the usual square and circular simple patterns so common at this period. The Saxon name for this article of dress was tunic; for in an illumination, to be seen in the Cotton MS., Claudius, B. 4, representing the brothers of Joseph bringing to Jacob his "coat of many colours," they exclaim "par tunican pe fundon" (this tunic we found); and it is a curious instance of the simplicity of the Saxons in this article of their dress, that the "many colours" of the tunic are endeavoured to be conveyed to the eye of the spectator by the gradation of one tint only—blue, which is the colour of the tunic; and spots of darker and lighter blue fill the centre, while a border of light blue edges the bottom and wrists. This tunic, from the circumstance of its being held in the hand, and not worn upon the body, is clearly distinguishable in all its parts; it is made to fit closely round the neck, and is open half-way down the breast. It is also open at the sides, from the hip to the bottom. A short cloak was worn over this tunic, as before observed, and generally fastened over the right shoulder; but sometimes by a brooch in the centre of the breast, the cloak or mantle hanging over the arms when uplifted, and sometimes reaching below the knee. A wide cloak was also occasionally worn, wrapped round the figure, similar to the mantle of the queen engraved above. The shorter mantle sometimes loosely enveloped the right arm; and in the Benedictional of St. Ethelwold we see a pattern upon those worn by higher personages, generally composed of circles surrounded by dots, or cross-shaped ornaments, enriched by simple lines: this mantle sometimes pulled over the head, as a hood; coverings for the head being seldom met with, and, when they are, being generally conical hats or caps, completely Phrygian in shape, as the war helmets of the time were; and it would seem that the head was always uncovered, except in the time of war; but many examples occur of war scenes where the combatants have no protection for the head whatever. The hair was worn long, and hung upon the shoulders, being parted from the centre of the forehead, and tucked behind the ear; the beard was worn trimmed round the bottom, or else allowed to hang several inches upon the breast, and divided from the centre like a fork.

"Brech" and "Hose" are alluded to by Saxon writers. The breeches were tight to the leg, and sometimes ornamented round the thigh and middle of the leg with coloured bars; but sometimes they were wide at the bottom, and reached only to the calf of the leg—such a one is seen upon the mounted soldier engraved below. The hose made of skin or leather is sometimes alluded to. Those reached to the knee; and when unornamented by the bandages before described were sometimes bordered at the top. Their shoes are generally painted black, having an opening down the instep; no fastenings appear in the drawings, but they were secured by thongs. Strutt, in his "Horda Angel-cynan," has engraved all the four varieties he could meet with; they are extremely simple in form and are entirely unornamented, although, as we shall have occasion to observe a little further on, the fashion of enriching them with embroidery, and even precious stones, became common among the noble and the wealthy, while the middle classes indulged themselves with painted or embroidered shoes of a very ornamental character, and which may have been the work of the ladies, who were celebrated for their ingenuity in this way.

The female costume appears to have rivalled in simplicity that of their lords. A long gown fell in folds over the feet, and a tunic reaching to the knee was worn over that; it seems to have been confined at the waist, but to have covered the hands entirely. In the figure here, engraved from the Benedictional so frequently referred to, the book is held in the left hand, without the removal of the tunic; the right hand is however protruded, and shows the ornamental wrist of the sleeve, which fits tightly, but in a number of folds similar to that of the men, and which may sometimes represent a series of bracelets; for we are told by the writers of their own period, that they were in the habit of loading their arms with them. A hood covers the head, and hangs over the shoulders, and completes the nun-like costume then commonly worn. Another good example of female costume occurs in the Harleian MS., No. 2908. The figure is intended for the Virgin Mary, but, as usual, it is but the figure of one of the upper class. The two tunics are here very clearly seen: the upper one with its border and wide sleeve to the elbow, over which is a mantle that falls behind; and the hood which seems wound about the head. Females of all ranks are seldom or ever seen without this hood; the Royal ladies wear it under their crowns. When the hair is seen, it generally lies in flat curls upon the head, and is bound by a fillet, slightly ornamented. The long gown, short upper tunic, and hood is then the ordinary costume of the Saxon females; and in their dresses, as in those of the men, the prevailing colours are blue, red, and green, with sometimes pink and violet, but few are perfectly white.

The military costume differed but little from the civil costume. Many warriors are represented with no other weapons but a shield, spear, axe, or bow and arrows, and without any addition to their ordinary dress.

The mounted warriors, here exhibited, wear no extra clothing of defence: one of them poises a

spear in his right hand, and holds a shield in his left by the strap in its centre; he has a tight dress and full trowsers; his shoes are pointed, and the spur, of the most ancient form, consists of a single goad. The warrior beside him flourishes a double axe or bipennis in his hand, an instrument derived from the nations of earlier times. We sometimes see soldiers and husbandmen with tunics drawn up to the girdle at its sides, to allow of greater freedom in motion; for this reason the short tunic was preferred, or the close fitting vest and trowsers, as worn by the figure above delineated, and which occurs in the Harleian MS., No. 603.

The two figures here engraved from the same MS. give us good examples of the foot soldiers of the day. One is habited in the tunic and long mantle, and holds in his hand the "kite-shaped shield" that came into use at the end of their dynasty. A spear with its pennon is also held in the same hand, but no sign of armour and no helmet appears on him. The other warrior has a short tunic, and over that a cuirass that covers the body to the waist, where it ends in points. It would seem from the indications in the original drawing to have been formed of scales—the "scaly mail" of their early bards—made of overlapping slices of horn sewn upon coarse linen. He carries a round convex shield in his left hand, with the central boss and projecting spike which always appears upon their shields. They were formed of leather, the rim or boss of iron, and of this metal were their other weapons, which consisted of broad double-edged swords, daggers, long spears, and javelins. Some of these shields were large enough to cover the whole person. A curious example occurs in the Har-

leian MS., No. 2008: it represents a soldier asleep at the sepulchre of Christ. He is dressed in a simple tunic, close trowsers, and black boots reaching to the ankle, which have a double row of white dots running round the top and down the centre. He holds a spear in his hand, its head of curious form, and behind him is an immense shield ornamented with red rays springing from its central boss.

The general forms of Anglo-Saxon helmets may be gathered from the group here brought together from various sources, and which exhibits every variety to be met with. No. 1 shows the form of the square helmet, as worn at an early period by the Saxons; it gives its shape much clearer than any representation to be met with elsewhere, and is copied from a plate in Montfaucon's "Antiquities of France," where it is worn by the guards of Lothaire, in a representation of that monarch and his court, executed in the ninth century. One nearly similar is worn by Fig. 3, with the addition of a sort of crest, called by their writers "camb on helme," or the comb of the helmet, in allusion to its analogy to that upon the head of a fowl; it occurs in the Harleian MS., No. 603. Fig. 2. gives us the Phrygian-shaped cap, borrowed from classic times, and formed of leather, bound with metal, or made entirely of that substance; it is copied from Vol. 24 of the "Archæologia," in a facsimile from Æthelwold's "Benedictional," the figure who wears it representing Enoch the prophet. No. 4 is a pointed helmet of a simpler form, displaying a slight variation from that previously described. It occurs in the Harleian MS., No. 603, as also does No. 5, the back of which is serrated like a cockscomb, and has the point projecting forward. No. 6 gives us the commonest form of helmet, and that most frequently met with: it is a plain conical cap, with a rim probably of metal, and occurs in the Cotton MS., Claudius, B. 4. This head and No. 3 also exhibit the only two varieties of beard worn by the Saxon; in one instance it is trimmed closely round the bottom, uniting with the whiskers, the upper lip being shaved; in the other instance the beard is parted from the centre of the chin. Both varieties are equally common.

[The next part will comprise the Anglo-Danish period, and the reigns of Edward the Confessor and Harold, including the entire series of Norman kings, and detailing the many curious changes of costume, both civil and military, introduced by them, or adopted during this eventful era. And here we shall begin to find our authorities of a more tangible kind than we have yet met with, although it has, in the course of these remarks, we think, been pretty fairly proved, that an *imaginary* costume, even for the earliest period of our history, is not absolutely the only one that can be adopted; for, slight as the notices are, enough remains to found a picture on, although it will be attended, probably, with some thought and trouble to the painter. As we progress, however, and get beyond the reign of Henry II., we shall find the most ample authorities, not only for general costume but even for that of individuals; and these will be carefully referred to, although the abundance rather than the paucity of our materials will present the only difficulty in our selections of references to the best examples, and those most calculated to be useful to the historical painter.]

## THE SUBJECT OF ANCIENT GROUNDS.

TO THE EDITOR OF THE ART-UNION.

SIR,—In resuming the subject of Ancient Grounds, I must first call your attention to particulars, here inserted, which were necessarily omitted in my former letter. I therein took occasion to name the various woods selected by the ancients for panels, such as cedar, larch, cornel, cypress, box, holly, sycamore, and oak; a preference having been given in Holland and in Flanders to oak, as being less liable to be infested by the worm. But it was early perceived that even this wood was greatly injured by its ravages; on which account, painters of those days, who set a due value upon present, and who hoped to enjoy future, reputation, made frequent use of plates of copper, and they even took the precaution of gilding them. Many of the smaller pictures of Correggio were painted on copper thus treated. The chief difficulty, perhaps the only one, with respect to copper, is that, when of large size, the plates become unwieldy on account of the weight. The largest picture ever painted on copper is recorded to have been done by Bartolomeo Spranger, a native of Antwerp, and born in 1546, who, having been appointed court painter to Pius V., was by him employed in the Palazzo Belvidere, where he spent three years on a 'Last Judgment,' the plate whereof was *six feet in height*, and contained 500 heads! This performance was so highly valued, that on the death of the pope it was placed over his monument!

It has been already shown that, at a very early period, canvas was used for covering wooden panels. The necessity for it is understood to arise from the liability of wood to crack, and by its depriving the colours, mixed in an aqueous vehicle, of a portion of their moisture, which, besides adding to the unavoidable difficulty of painting a *colla*, endangers the firmness of the joints and warps the wood. It was Margaritone's invention, as Vasari asserts, to glue canvas over wood, and thereupon to apply his plaster of Paris or gypsum (*gesso*). Vasari's account of the transaction is as follows:—"Ora tornando a Margaritone, per quello che si vede nelle sue opere, quanto alla pittura, egli fu il primo che considerasse quello che bisogna fare quando si lavora in tavole di legno, perchè stiano ferme nelle committiture, e non mostrino aprendosi, poi che sono dipinta, fessure o squarci, avendo egli usato di mettere sempre sopra le tavole per tutto una tela di panno lino, appiccata con forte colla fatta con ritagli di cartapeccora e bollita al fuoco, e poi sopra detta tela dato di gesso, come in molte sue tavole e d'altri si vede."

In the 20th chapter of Vasari's works, allusion is again made to this subject, where he says, with apparent contradiction, that the old Greek masters practised this method; for he observes, these old masters "usavano nello ingessare delle tavole questi maestri vecchi, dubitando che quello non si aprissero in su le committiture, mettere per tutto con colla di carnicci tela lina, e poi sopra quella ingessavano per lavorarvi sopra." The only difference in the two methods seems to consist in this, that Margaritone used size made of *parchment* shreds, while the ancient Greek masters made theirs of raw hide (*carnicci*).

I have already stated that gilded grounds, invented by Margaritone, were common in the days in which that master lived. There are many reasons why gold should have had the preference for grounds; it is capable of greater distension than other metals without becoming *honey-combed*; neither would it be corroded by the vehicle or by the colours, or would it re-act upon them. These are reasons perfectly distinct from the consideration that a layer of metal between the ground of gypsum and the picture colours was expedient, if not absolutely necessary, to prevent many of them from changing. The advantage of this method was evident to Vasari, who speaks with the highest delight of the state of preservation in which he found the pictures of Margaritone and his contemporaries; and this was after a lapse of at least 250 years.\*

An attempt was made by Giotto to substitute, for the usual gold ground one of other materials, and the occasion, we are told, was this,—that being employed at Pisa to construct a building of

\* See in the last ART-UNION a most interesting letter from a correspondent from Antwerp upon this subject, page 189.

marble, one side of which would face the sea; and it being also intended that he should adorn portions of the exterior with fresco paintings, he first examined the state of the edifices there, and finding that marble and even bricks were greatly injured by the joint effects of damp, a saline atmosphere, and other agents, he thought of a remedy: he composed a mixture of lime, gypsum, and finely-pounded bricks, and this he applied to inlay or incrust such parts of the building as were to be painted in fresco. Notwithstanding, the paintings soon exhibited marks of rapid decay, parts of the paint being corroded, the carnations blackened, and even the plaster itself peeled; for, says Vasari, it is in the nature of gypsum to rot when mixed with lime: "Che avendo quelle pitture patito umido, si sono guaste in certi luoghi, e l'incarnazioni fatte nere, e l'intonaco, scortecciato; senza che la natura del gesso, quando è con la calce mescolato, è d'infacciare col tempo e corrompersi; onde nasce che poi per forza guasta i colori, sebben pare che da principio faccia gran presa e buona."

The composition here described is not very dissimilar to one recommended by Leonardo da Vinci, and which I will extract from the English translation of Mr. Rigaud:—"After you have made a drawing of your intended picture, prepare a good and thick priming of pitch and brick-dust, well pounded, after which, give it a second coat of white lead and Naples yellow. The picture, when finished, is to be varnished with clear and thick oil, and then to have a glass fastened over it. Another and a better method is, instead of the priming of brick-dust and pitch, to take a flat tile well vitrified, then apply the coat of white and Naples yellow, and all the rest as before." Other examples of the kind might be quoted, but what I have here given are sufficient for my present purpose.

It is impossible to read the works of Vasari and not feel towards him the greatest admiration. His diligence, his research, his patience, his labour, his critical powers, and his impartiality, are all qualities which rarely meet in the same individual—and that individual too, himself, a great master. He has rescued from almost oblivion the memory of many great men—of Margaritone, of Cimabue, of Giotto, of whom, but for Petrarch, we might not have known anything—except from Dante's *Commedia*:

"Credette Cimabue nella pittura  
Tener lo campo, ed ora ba Giotto il grido;  
Si che la fama di colui oscura."

And except for Vasari, we should have known nothing of their methods: he has informed us in what manner they worked and prepared their grounds, and with what kinds of size they tempered their colours. This being a subject of much importance in our present inquiry, I trust you will excuse my dwelling upon it at some length.

I again repeat Vasari's assertion, that Margaritone made his size of parchment shreds, and that the Greeks made theirs of an inferior kind of skin. The same author says of Cennini that, being greatly devoted to the Arts, he wrote a book with his own hand, treating of painting in fresco, in distemper, in egg-size, and in gum; and he quotes a passage from that writer, which I will translate. Treating of the various arts described in his book, he thus speaks of them and himself:—Cennino di Drea-Cennini, was taught these arts, at the age of twelve years, by Agnolo di Taddeo, of Florence, my master, who himself learned the same of Taddeo, his father, who was baptized by Giotto, and was his disciple twenty-four years. This Giotto translated a work on the Art of Painting from the Greek \* into Latin, and from this again into the vernacular tongue, which he accomplished better than any one else. The work, therefore, is of the highest authority and importance; and as it embraces many of the branches of Art, respecting which the moderns require to be instructed, why is it not better known? Why is it not in the hands of every amateur in the country? Of not less interest is the work of Theophilus, who thus describes himself:—"Theophilus servus servorum Dei, indignus nomine et professione monachi omnibus mentis desideria animaque utile manuum occupatione et delectabili novitatum meditatione declinare et calcare volentibus retributionem premii."† In the chapter "*De Coloribus cum*

*gumma tereadis*," he directs the use of white of egg. In another chapter:—"Quomodo aurum vel argentum libris imponatur," he recommends the same size:—"clarum ex albugine ovi." And in that chapter headed, "*De tabulis—et glutine casei*," he describes how boards are to be joined with caseum, or the glue of cheese.

Vasari mentions as a common method in fresco painting (though not approved of by him), finishing in gum, in *tragacanth*, in egg, and in other similar things; and Van Mander, in his lives of the brothers John and Hubert Van Eyck, remarks, that "di gebroeders Joannes en Hubertus Van Eijk, maakten veele Stukken in die lijm en eierwe." Now though Van Mander wrote many years after the death of Vasari, the same sources of information were doubtless open to both; but even if this were not so, sufficient information is furnished by the other writers, to whom I have referred, to show that, with the exception of the size of egg (for the making of which Vasari gives directions), the kinds of size anciently used for distemper painting were similar, and perhaps the same as those now manufactured for other purposes connected with Art.

We must now inquire *what size* was used for the composition of grounds for oil painting? And for an elucidation of this subject we have no published authority older than Vasari, who directs us "how to paint in oil upon panel and upon cloth;" in which we are directed to make the priming of white lead, and to be beat down by hand! till equally and uniformly spread; and this, he says, is called *l'imprimatura*. Elsewhere he observes:—"But canvass cannot be prepared in the same way as panels, for the former must be kept flexible, and if plastered, would crack on being rolled up." He therefore recommends that a paste be made with flour and linseed or nut oil, though nut oil, he adds, is better, as being less liable to become yellow. To this paste of flour and oil is to be added two or three measures of white lead. The canvass is first to have three or four coats of thin size (which he elsewhere directs to be made of parchment shreds), and the paste and lead is to be then laid on with a knife, the artificer having a care that all the holes be properly stopped. This done, one or two coats of soft size is to be passed over it, and upon this the *mestica* or *imprimatura*.

The method here given of preparing grounds with flour paste will account for the result at which M. Merimée arrived. I will quote from the English translation of Mr. S. Taylor. Having "had occasion to analyse a portion of the ground of a picture by Titian, painted on wood, the ground was composed of plaster of Paris, with starch and paste, but no glue or size, flour paste being used instead of gelatine."

I now come to the second part of my inquiry: respecting the colour of the grounds used by the old masters. I find it here necessary to repeat what I stated in my former letter—that the mere colour of a ground is not of vital consequence to the durability of a picture. It may or it may not add to its beauty, in some respects, perhaps, to its transparency, according to the method by which it has been painted; but its durability or premature decay will certainly depend upon whether that method correspond to the nature and qualities of the ground. To make this observation intelligible I will quote another passage from the work just alluded to, as it embraces my meaning: "In considering simply what constitutes the true manner of each school, and of the several masters, so far as regards merely their technical process, we perceive that the entire code may be reduced to two points, viz., *transparent* and *opaque* painting. The former, a most important quality in colouring, has been particularly attended to by the ancient artists. To gain this essential object, some painters have laid in their pictures with thin washes, and have used but little colour; others have commenced with solid painting, and then finished by glazing, which method has produced the most transparent effects, and thus by different modes obtaining similar results; for we find that the solid paintings of Titian and Rembrandt are equally transparent with those of Fra Bartolomeo and the Bronzini."‡

Their washes, if laid on a dark ground, must, from its known nature, be absorbed, and so, in

like manner, of the other parts of the painting: wherever there is little body of colour, there the whole of the middle and other tender tints will, in time, disappear, and in the course of some years, a picture thus painted will exhibit little else than unmeaning *starey* lights, and dark and undefined shadows. It therefore follows of necessity, as I conceive, that "Fra Bartolomeo and the Bronzini" painted on a light if not a perfectly white ground. Such white ground in their pictures would act in the manner of a foil, bringing light from behind the colours, and thus giving them their true and full force, their clearness and transparency, without the aid of much glazing.

In *opaque painting* the operation is reversed, the lights are laid on in body, massively; so also are the half-lights and middle tints, and even the shadows, cut out upon the lights, are laid on in body, that is with much colour. The clearing up and giving transparency to every part, and harmonizing the whole, are reserved for the glazing process, in which even *thin washes* may be practised. In this way, the original colour of the ground is often absolutely and effectually obliterated, as in the pictures of Claude; and yet the most brilliant, transparent, and aerial effects are produced, while the durability of the picture and the permanency of its tint are thoroughly secured. Of this class, and painted more or less in this manner, are the pictures of Correggio, Domenichino, Titian, Giorgione, Mantegna, Gaspar Poussin, Rosa Trivoli, Rembrandt, Eckhout, Claude, J. Jordans, Vanduyke, Salvator Rosa, Murillo, and numbers of others of every nation and school. I have given the above names, I must remark, without any reference to the comparative merits of the masters, but merely as they came into my mind. It is worthy of remark, that the paintings of these masters which were done on a *white ground* are, for the most part, in a more perfect state at this day than those painted on a reddish or dark ground; and they bear a higher price in the market. This observation applies particularly to the pictures of both the old and the young Teniers, and of Gaspar Poussin, and almost all fruit and flower painters.

The masters who adopted the slight and transparent methods were Wynants, Berghem, Wouvermans, Cuyyp, and as has been stated "Fra Bartolomeo and the Bronzini." To these names might be added numbers of others from the Dutch school.

For the sake of comparison and of bringing names together, I will here instance, though out of order, those of the Tenebrosi, who painted on *dark and oily grounds*. Their pictures have all greatly faded, and in some cases are undistinguishable. Some of their names are the following: Rutilio Manetti, Tintoretto in his worst period, Guido in ditto, Padovanino, Carpinio, Enea Salmeggia, G. And. Donducci, Geo. Bat. Paggi, Cesare Dandini, Maria Nuzzi della Penna, Pietro Ricchi, Francesco Maffei, Giov. Boulanger, G. Maria Crespi, Simon Gernyn, Gfod Schalkin, John Van Hagen, Francis Krause, Egbert Hermiskirk the old, and others too numerous to mention, ranging from the years 1550 to 1700. As this is not merely matter of opinion, but rests upon the authority of historians whom I shall quote, I will proceed with my subject.

The colours of Margaritone's grounds are easily determined, as he painted on gold-leaf laid on armenian bole, probably in the manner described by Vasari. The practice of Cimabue and Giotto, and their contemporaries and successors, were the same; and as it prevailed till towards the end of the fifteenth century, it survived the distemper methods. It is, therefore, more than probable, although the fact remains to be determined, that Van Eyck, who made his discovery of oil painting in the early part of that century, used gold-leaf grounds. His pictures, however, are too scarce, and infinitely too valuable to admit of their being examined in a way that would set the question at rest. Nor is it of much consequence to my argument; since every one who has had the opportunity of seeing and admiring his pictures must be confident that he painted upon a very light ground. There is as little doubt that Reubens, who continued the practice of Van Eyck, adopted also his grounds for easel pictures, though he often painted large subjects—larger even than the life.

[It is with extreme regret that we find ourselves compelled to divide this interesting and valuable communication. The remainder must be, however, postponed to our next number.]

\* Perhaps of Apelles?

## ARCHITECTURE AROUND THE BANK.

"Heaven be praised," says Malcolm, "old London was burnt." Streets close, confined, and intermixed, leading no-where, ill-drained, and worse lighted; houses incommodious and ill-built, each story overhanging the other, and approaching its opposite neighbour so affectionately as nearly to shut out fresh air and the sun-light, were the prevailing features of the metropolis of "old-time," and such as could not be got rid of too soon, or too entirely. Bad as all this was, and apparent now as the necessity of some alteration in it would seem to have been, so difficult is it to induce men to make even trifling temporary sacrifices for ulterior advantage, or indeed even to convince them of the unfitness of what they have become accustomed to, and the necessity of change, that many, many years would have elapsed without any wholesale and satisfactory improvement in London streets but for that occurrence, which was then felt to be so calamitous and distressing. The same short-sighted views as those above hinted at, with other causes, prevented full advantage being taken of the fine opportunity which was then afforded for making London a model city. Much was done, but more remained undone, and so will remain, until men see their real interest more clearly than at present, or accident forces abruptly on them the changes they themselves should long ago have prepared for and worked out.

The destruction of the old Royal Exchange in 1838, and the determination to re-erect it on a scale suitable to the metropolis of the first trading country in the world, presented an opportunity for most important improvements in its neighbourhood. It is to be regretted that this occasion has not been fully made use of, but that, for the sake of a comparatively trifling sum of money, the locality is much confined, and evils undeniable are probably made perpetual. We do not now speak of the building in progress of erection, but of the approaches and the locality, leaving any opinion of the former (further than what was expressed at the time of the ill-managed and humiliating competition for designs,) until its completion; suffice it to say, the structure is proceeding very rapidly, and that it is not likely at present to excite any violent predisposition in its favour. Let us, however, hope for the best. Mr. Tite is unquestionably a man of ability and skill, and although he entered on this matter under circumstances that induced much ill-feeling against him and made him many enemies, should not be prejudged or otherwise unfairly treated.

Now, notwithstanding that more ought to have been done to obtain a perfect site for the new Exchange, to create new, or improve existing, thoroughfares, it is certain that when the block of houses at present occupied by the Sun Fire Company and others is cleared away as intended, a good open area will be obtained, and the general aspect of this part of the City rendered strikingly handsome. The Mansion House, which does not deserve the heavy share of abuse lavished on it by one writer after another, in the follow-my-leader fashion too often adopted; the church of St. Mary, Woolnoth, a design displaying much originality and boldness;\* the new buildings in King William-street and Princess-street, the tower of St. Michael's, Cornhill, and part of the Bank of

England, will all come into the view, and assist the *coup d'œil*. Hereafter, too, it is to be hoped that one side of the Poultry, at present so narrow as to be totally inadequate to the traffic, will be taken down and put back, so as to render the new Exchange visible from Cornhill. At present, however, we will leave what may be done and speak of what is. In order to improve the approaches on the north side of the Exchange, the church of St. Bartholomew, erected by Sir Christopher Wren in 1667, and celebrated as the burial place of Miles Coverdale, one of the earliest reformers of the church, was taken down. On its site the Sun Fire Assurance Company, displaced, as already mentioned, from their old offices, have erected a very extensive building, which may claim praise for some originality in design. Occupying the corner of Bartholomew-lane and Lothbury, it displays two frontages, each of considerable length, and is well seen. The extreme angle of the edifice next the Exchange is taken off, and in the square face there formed is placed the chief entrance, adorned with fruit and foliage. Above it are windows, the top-most of which is surmounted by a large "Sun" in stone, and other emblems, somewhat coarsely executed; indeed we can hardly help remarking, that none of the sculptured foliage has that grace and elegance which is to be desired. The building, which is wholly of stone, is in three stories, terminating with an enriched cornice, and in style may be described as Grecianized Italian. In the centre of the upper story, on each side, a recess is formed, wherein are placed three detached columns, with bell-shaped composed capitals, of rather doubtful outline. The windows at each extremity of the building have projecting balconies, the soffit of which is panelled and ornamented; foliage fills up the space between the upper and lower windows, and the pedimental heads contain sun-flowers and other sculptured decorations. The whole front displays much pleasing variety of light and shade, a desideratum not easily attainable in street architecture; and although open to some objections in detail, as for example, to the modillion in the cornice, where the same form is applied twice, must be considered an ornament to the metropolis highly creditable to Mr. Cockerell, the accomplished architect employed.

Immediately adjoining this building, in Bartholomew-lane, the Alliance Assurance Company have erected an extensive edifice, designed by Mr. Thomas Allason. The architect has here unfortunately chosen a very hackneyed type, which it had been hoped was almost exploded. The centre of the building consists of an attached Corinthian portico of four columns (termed technically *tetrastyle*), rising from a plain basement; the entablature is continued to the extremity of the building, and the angles of the front terminated with pilasters. Between the columns (which it may be remarked are not at equal distances, the centre opening being larger than the others) appear two stories of windows, producing the feeling that the portico must have been built up as an after-thought, or that a modern house had been erected within the ruins of an ancient temple. Columns and entablature from ancient models are such available means of gaining an appearance of magnificence, and are so likely to be appreciated as such by the multitude, that it is not very wonderful architects have continued to drag them in neck and heels on all occasions. It is quite time, however, that they were put on one side, and used only when wanted, or, at all events, where fitting. We make these remarks rather with reference to a system than an individual instance: we know well that "if to do were as easy as to know what 'twere well should be done, chapels had been churches, and poor men's cottages princes' palaces;" and we would not willingly hurt the feelings of any. The order employed is from the temple of Vesta, at Trivoli, similar to the Bank: some of the details are nicely designed.

The Wesleyan Missionary Hall, in Bishopsgate-

street, is another building displaying precisely the same management of front, and open to the same objection, with additions; for it has, apart from its radical defect, a certain gawkiness far from pleasing.

The new building on the site of the French Protestant Church in Threadneedle Street, called the Hall of Commerce (the exact destination of which has given rise to a vast deal of surmise and suggestion), is rapidly approaching to completion. Its characteristics externally are, a noble simplicity, and an amount of sculptured decoration greater in proportion to the size of the front than has yet been attempted in London. The elevation consists but of a colossal doorway, with two windows of proportionate size on each side of it, a deep wide panel above these extending nearly the whole length of the building, and an enriched entablature terminating the whole, the frieze of which is adorned with a continued scroll somewhat too coarsely worked. The tablet contains a *bas-relief* of very large size, representing the results of commerce and enterprise, of very superior design and execution, and entitled to what we shall hereafter give it, namely, a lengthened examination and description. It is the work of Mr. Watson, proves him to be a man of more than ordinary ability, and materially aids in producing the very satisfactory whole which the front presents. The interior is formed into two magnificent apartments, besides others of less importance. The principal room is perhaps about the size of Freemasons' Hall, lighted by three lanterns in the ceiling, and very profusely ornamented with friezes, pilasters, and columns. The second room is less; it is lighted by the front windows, and has a semicircular tribune on the opposite side, the upper part of which is of glass. The whole of the scrolls, cornices and foliage with which these rooms are adorned, is cleverly modelled in very high relief. Mr. Moxhay, the spirited proprietor of this building, is said to have been his own architect; but for the truth of this we would not venture to vouch, indeed we are hardly able to believe that any but a professional man could have carried out the details of the structure, although another may have given the general arrangement and design.

A new building for the French Protestant Church has been raised in Aldersgate-street, nearly opposite to the Post-office, and promises to be a pleasing little structure; the style is Tudor-Gothic. Mr. Higgins, the well-known surveyor, and Mr. Owen, his son-in-law, are the architects. The cost of the building will be about £5000, exclusive of the resident minister's dwelling which adjoins it on the south side. This congregation hold a charter granted them by Edward VI., and have several points of interest in their history.

In conclusion of these brief remarks, it is satisfactory to observe the increasing use made of stone externally in building, to the prejudice of what is called *compo*. Mr. Cooper, in his work on England, remarks, "were London to fall into ruins, there would probably be fewer of its remains left in a century than are now found in Rome. All the stuccoed palaces and Grecian façades of Regent-street and the Regent's-park would dissolve under a few changes of the seasons. The noble bridges, St. Paul's, the Abbey, and a few other edifices would remain for the curious, but I think few European capitals would relatively leave so little behind them of a physical nature for the admiration of posterity." If the constantly recurring cost of repairing and colouring our imitation fronts were properly taken into account, it would be seen, in many cases, that stone might be used with very little increase of expense, and with how much advantage in respect of appearance and durability it is needless to say.

\* The author of the "Churches of London," in his notice of this edifice, says truly, "Its architect, Nicholas Hawkmoor, a pupil of Sir Christopher Wren, may be classed among the numerous victims who have been offered up at the altar of epigram. That there are 'more echoes than voices' in the world, none can doubt. The majority of men will not take the trouble to judge for themselves, but prefer to adopt at once the opinions of others, and promulgate them as their own; and when those opinions are couched in smartly-turned periods, are condensed into pithy sentences, or measured into jingling rhymes, easily retained by the memory, they are transmitted from mouth to mouth (sometimes from century to century), as truth beyond inquiry, and work effects either for good or evil, as the case may be, which those who first uttered them could not have anticipated."

## THE PROVINCIAL EXHIBITIONS.

## LIVERPOOL.

**LIVERPOOL ACADEMY.**—The Eighteenth Exhibition of Works of Art, by British Artists, was opened to the public on Monday, 12th September. It is, in all respects, creditable; at least, on a par with any exhibition of a former year, although the prizes of the London Art-Union have naturally contributed to lessen the supply; and contains very few pictures indeed, from which either instruction or enjoyment can be obtained. The arrangements of the rooms, too, give evidence of judgment, taste, and impartiality; the best places being accorded to the best paintings; and no inconsiderable skill having been shown in displaying them to advantage, by consulting the distribution of the light. The principal room at Liverpool is admirably calculated for the purpose. But the entrance to the Academy is poor to a degree; and we hope the time is not far distant when the funds of the Institution will justify some improvement in this respect. As will be supposed, the collection—which consists of 594 works—is supplied chiefly by artists of the metropolis. Among the denizens of Liverpool, however, they have several worthy competitors. An Art-Union Society is in progress; and, as usual, a prize of £50 will be awarded to one of the contributors.\*

No. 11. 'Hastings Fishing Boats on the Beach, Ebb Tide,' J. WALTERS. A work of no inconsiderable promise; the production of a Liverpool artist. It is forcibly and delicately wrought; and manifests a love for truth and nature.

No. 14. 'In Yorkshire,' T. CRESWICK. A pure, fresh, and natural work; remarkable for the grace which distinguishes all the productions of the painter. A more striking and a more interesting picture, however, is No. 69, 'A Farm Yard,' into which are skillfully introduced the figures of an aged woman and some playful children—her grandchildren—whose sports she is watching.

No. 16. 'Farrier's Shop,' H. BODDINGTON. A capital interior. Of this excellent painter's works we have three examples; each of them possesses much merit, and one, No. 166, 'The Gipsy Haunt' is a production of very high order.

No. 24. 'Scene from the Sentimental Journey,' W. P. FRITH. We noticed this work at the British Institution. It is here seen to greater advantage, for it is worthily placed.

No. 25. 'Dutch Boats beating into the Scheldt,' No. 41, 'Dutch Punt ashore at Scheveling,' E. W. COOKE. Two admirable pictures; the former especially fine. They are evidently painted with great care, yet with a boldness and freedom akin to the character of the scene and its accessories.

No. 26. 'The Nook at Ambleside,' No. 55, 'The Grange, Borrowdale,' W. COLLINGWOOD. Two landscapes of much ability by an artist of Liverpool; he has studied nature, and studied where she is best seen. He paints with care, and seems not to grudge his labour.

No. 27. 'Shane's Castle, Lough Neagh, Co. Antrim,' W. G. HERDMAN. This also is the production of a Liverpool artist, and is one of right good promise. He contributes several works, in each of which he exhibits unequivocal signs of a firm and graceful pencil. This scene is very true; the old ruined castle is introduced with fine effect, overlooking the waters of the broad lake, with its strange legends and traditions of other days.

No. 34. 'The Death of Sir William Lambton at Marston Moor,' R. ANSELL. This work we noticed at the Royal Academy. It is by a Liverpool artist also. Another, No. 177, 'Portraits of Red Deer in Knowsley Park,' is an excellently

arranged and ably executed picture. The artist has indeed established his claim to a distinguished place in his profession. He is, we understand, extensively occupied at Knowsley—the seat of the Earl of Derby; the selection by his lordship does him credit.

No. 35. 'A Highland Glen,' F. R. LEE, R.A. Mr. Lee is a large contributor to this collection, and has added very materially to its importance and value. Three or four of his pictures are here seen for the first time; one, No. 53, 'Ware Mill,'—a lonely mill in the midst of mountains—may be classed among his best performances. It is redolent of nature and full of poetical truth. Here too is his large work, 'Desolation,' which formed one of the features of the Exhibition at the Royal Academy.

No. 37. 'Scene from the Vicar of Wakefield,' T. M. JOY. This picture—it is a highly creditable one in all respects—describes the first interview between the Vicar and Olivia, after sad afflictions had visited both. The story is clearly told; the countenances of father and daughter are full of true expression, and the painting is executed with much care and finish. Mr. Joy exhibits another—No. 119, 'The Fair Fille-de-chambre,' a single figure, cleverly drawn and gracefully wrought.

No. 42. 'The Death of Gelert,' THOMAS CRANE. The work of a Liverpool artist; and of no inconsiderable merit. It tells the old story of the Welch Prince slaying his hound. The subject is well conceived and treated; although perhaps it might have been served by a little less straining after melodramatic effect. The painter exhibits other works, from all of which we are justified in arguing his good progress and his fame hereafter.

No. 44. 'The first Interview of the Duke and Duchess with Don Quixote and Sancho,' J. GILBERT. This work and another—'Corporal Trim and Uncle Toby,' were among the late attractions at the British Institution. They are capital pictures, of a high class as regards conception, arrangement, and truth of character; and are painted with much judgment and skill.

No. 48. 'The Lost Child,' PHILIP WESTCOTT. Again by a Liverpool artist. It is a most melancholy and painful picture; but one that fully carries out the design of the artist. We have seldom seen a portrait of more entire loneliness, or one that makes a stronger appeal upon sympathy. The little deserted wanderer sits alone in the midst of scenery as arid and unhopeful as her fate; the tone of colour—sad and dark—is in harmony with her destiny. Her countenance expresses nothing of the child, but its utter helplessness. The drawing, moreover, is good, and the execution altogether possesses much merit. The artist should paint a companion—a happy child in the hour of its heartiest glee, twining the wild flowers of the gay valley.

No. 60. 'A Serenade,' D. MACLISE. Like all the works of the accomplished painter, giving evidence of genius; it will be remembered at the British Institution. It certainly is not one of the best or the pleasantest productions of the artist's pencil.

No. 76. 'Industry,' No. 140, 'The Effects of Poaching,' SAMUEL EGLINGTON. Here too, we have the productions of an artist of Liverpool. The first represents an aged woman at her work; the second tells a sad story of industry misapplied; the poacher has been wounded and is in bed, attended by his wretched family, while a comrade watches at the window, a pistol in his hand. The story is a frightful one; it has been well and effectively told.

No. 83. 'The Gipsy's Toilet,' P. F. POOLE. Mr. Poole contributes three works; with two of them we are familiar; but this, we presume the latest, is by much the best. It is an exquisite picture of a brown girl bending over a stream, which reflects the long black tresses she is settling. There are hundreds who will covet this happily conceived and ably executed "bit," and, small and unpretending as it is, it will extend the fame of its producer.

No. 86. 'The Watering Place,' T. S. COOPER. This and 'Drovers seeking their Sheep after a Storm,' (the picture which obtained the prize at the British Institution,) are the contributions of Mr. Cooper. The first-named is new; it is an exquisite work, and to the full worthy of the established reputation of the artist in a walk of Art in which he remains unrivalled.

No. 93. 'Christ and the Woman of Canaan,' J. S. AGAR. In this work there is much to praise; free, bold, and broad painting; fine conception of character, and an incident skillfully rendered.

No. 94. 'Portrait of the Right Hon. Lord Stanley,' T. H. ILLIDGE. This portrait of the Colonial Secretary has been painted for the Collegiate Institution of Liverpool; it is an admirable and striking likeness; the expression and manner of the original have been happily caught. It is full-length; the attitude is easy yet commanding; and some valuable accessories have been judiciously introduced, which give relief to the composition without attracting attention from the main subject. The drawing is correct and the colouring unexceptionable. Mr. Illidge also exhibits a graceful and very effective portrait of a lady—No. 184.

No. 100. 'Maria,' T. UWINS, R.A. This beautiful little picture, a gem of the purest water, was one of the sweetest, though most unassuming, of the works in the recent exhibition of the Royal Academy.

No. 111. 'A Lady Drawing,' J. GRAHAM. A work of elaborate finish, yet full of freedom and grace. The industry displayed in working out the conception may give a hint to many of our modern painters.

No. 129. 'Cherubim,' H. LE JEUNE. Exquisitely drawn and coloured; a very simple composition, but full of power.

No. 141. 'Gipsies Fording a Brook,' H. JUTSUM. A good example of an artist who is always pleasing, generally excellent, and, at times, bids fair to be a candidate for a high place among landscape-painters.

No. 145. 'Virginia Discovered by the Old Man and Domingo,' H. J. TOWNSEND. This picture was exhibited at the Royal Academy; it is here seen to great advantage; and bears us out in the high opinion we formed of its merits. The sad incident is related with great effect. Mr. Townsend exhibits another work—'Passing the Cup,' from a passage in the "Deserted Village"—

"Nor the coy maid half willing to be pressed,  
Shall kiss the cup to pass it to the rest."

The scene is the interior of a village ale-house; the light is singularly but happily managed; and with a degree of skill seldom attained by artists who encounter so difficult a subject; it is obtained from the single candle; so that the major point of the picture is in shade. The work is of an excellent order, and will add much to the reputation of the artist. There are few pictures in the collection that surpass it in some of the rarer qualities of the art.

No. 149. 'Haddon Chase, Derbyshire,' A. VICKERS. A landscape of a right good class.

No. 150. 'Scene from the Devil on Two Sticks,' A. EGG. Though not a pleasant subject, this work possesses merit of the very highest order; and cannot fail to elevate the artist greatly in the opinion of all who see it. We have long watched the progress of the painter; with much hope at the commencement of his career, but with less as he proceeded from year to year; he seemed indisposed to make the advance we anticipated. His two latest productions, however—this and the 'Cromwell' now exhibiting by the Art-Union—manifest a resolve to proceed onward and upward which cannot be mistaken; and we again augur his large success at no very distant period. This scene from "Le Diable Boiteux," describes a simple, silly youth supping with a pair of "Lucretias;" the character and expression given to each are admirable; the weak wonder with which the victim admires the white hand of the sly wanton he is caressing, is capitally portrayed. As a composition it is very excellent; and the execution is equally meritorious.

No. 155. 'Aspiration,' SR. GAMBARDILLA. The production of an Italian artist resident in London, to which we referred in treating of the British Institution. It is a work of high order.

No. 156. 'Looking across the Great Hall of Karnack, Thebes,' D. ROBERTS, R.A. One of the famous works of Mr. Roberts exhibited at the Royal Academy.

No. 167. 'Bad News from Sea,' R. RED-GRAVE, A.R.A. With this touching and beautifully wrought picture most of our readers are familiar.

No. 174. 'Fresh Water Fish,' G. BULLOCK. We have never seen fish so naturally copied; there is a wonderful degree of truth in the portraiture.

\* From the year 1830 to the year 1841, both inclusive, eleven prizes, of £50 each, have been awarded by the Institution, to the following artists, for the following pictures:—Robert Lauder, 'Bride of Lammermoor,' in 1830; William Boxall, 'Cordelia receiving the Account of her Father's Sufferings,' in 1831; D. MacLise, R.A., 'Mokanna Unveiling his Features to Zelica,' in 1832; George Patten, A.R.A., 'Maternal Affection,' in 1834; S.A. Hart, R.A., 'Richard the First and Soltan Saladin,' in 1835; Charles Landseer, A.R.A., 'Plundering of Basing-house,' in 1836; George Lance, 'Melancthon's first Misgivings of the Church,' in 1837; T. Sydney Cooper, 'Halt, on the Fells, Cumberland,' in 1838; J. K. Herbert, A.R.A., 'The Brides of Venice,' in 1839; C. W. Cope, 'Altar Piece—Christ's Intercession,' in 1840; Thos. Webster, A.R.A., 'The Boy and many Friends,' in 1841.

The group consists of a perch, a jack, a gudgeon, a carp, a tench, and a trout.

No. 176. E. M. WARD. The picture of 'The Blacksmith swallowing the Tailor's News,' a work of great ability, upon which we commented in noticing the British Institution.

No. 191. 'Evening,' J. TOWNSEND. A landscape of considerable merit; finely toned, and characteristic of nature in her calmest and happiest mood.

No. 194. 'Harold the Dauntless,' R. R. M'IAN. A bold and vigorous delineation of a romantic scene; conceived in the true spirit of the author.

No. 198. 'Kirkstall Abbey,' No. 200. 'Cattle on the Moor,' J. T. EGLINGTON. Very pleasing examples of cattle painting in landscapes, by an artist of Liverpool. They are painted with care and study; and although miniature copies, are still veritable copies from life.

No. 213. 'A Sluice,' J. STARK. This good and true painter, whose works are so essentially English, contributes three or four pictures, all of them of rare value; such as will be sure of appreciation with genuine lovers of nature and art.

No. 214. 'Nature,' R. ROTHWELL. This is a work of unquestionable genius—a simple, and apparently unstudied, picture of a young child playing on the sea shore. It has no accessories to heighten effect; it startles at once by the surpassing beauty of the model, the sweet and natural expression of the countenance, and the artless and graceful attitude into which the figure has been thrown. The face in its pure loveliness is as near an approach to reality as we have ever seen upon canvass; it scarcely requires imagination to imbue it with life; one might kiss the little laughing mouth, the fair forehead, or the rosy cheek, again and again, almost without knowing that it is a mere transcript of nature. So marvellously true is the mode in which it has been copied. We have seen nothing of Mr. Rothwell's that leaves so strong an impression of his ability; perhaps its great advantage is that he seems to have made no effort to produce it; for it is notorious that he sometimes loses his effects by endeavouring to work them up too highly. On the whole, it is the gem of the Liverpool Exhibition.

No. 217. 'Paul and Francesca of Rimini,' H. O'NEIL. This work will be recollected at the Royal Academy; it is a loftier essay than our artists usually attempt, and it is a highly successful one.

No. 232. 'Boys dressing Guy Fawkes,' T. CLATER. A capital picture; the subject familiar to our own boyish days. The march of intellect has sent Guy Fawkes to the tomb of the Capulets, but here is a monument of his existence that will gratify all whose young memories yet live. The group of urchins are "dressing" the Guy in a stable; the work is nearly completed; and the patient donkey stands by, ready to parade him through the streets. One of them is putting the peacock's feather into his sugar-loaf cap; others are finishing the decorations of his ragged garments; and all are full of enjoyment of the coming fun and pence. The story is told with great skill; and will add to Mr. Clater's fame in picturing subjects of this class.

No. 237. 'Buy, Buy,' W. BOWNESS. A clever and remarkably well-painted picture of an Itinerant Italian Image-seller.

No. 240. 'The Bay of Naples,' G. E. HERING. This also was exhibited at the British Institution; the two other works, exhibited there by the same artist, are now in the gallery of the Art-Union Society. It gave us pleasure to refresh our sight by looking again upon this picture; a beautiful copy of one of the finest scenes in nature from the pencil of a painter who can do full justice to the glories of Modern Italy.

No. 246. 'The Avvocata, near La Cava,' J. UWINS. This young artist continues to improve, gradually but safely, in the best school and on the soundest principles, like his accomplished relative and master. His pencil has now obtained much settled power; in his colouring he is firm and vigorous; he cautiously eschews the meretricious, both of design and execution; and trusts for success alone to those whose discernment and appreciation are valuable. Already, he is behind few of our landscape-painters; and he is on the way to pass by the majority of them. His time in Italy was not squandered. This picture may be classed among the best in the Liverpool collection.

No. 269. 'Nell and the Widow,' FANNY M'IAN. A touching transcript of a touching incident. It will be remembered at the exhibition of the Royal Academy.

No. 271. 'River Scene with Cattle,' J. TENNANT. A fine example of the ability of one of our most graceful, natural, and true English painters of landscape. The arrangement of the composition is in fine keeping with the character of the scene—a happy harmony of Art with Nature. The details are very simple; and they tell by their simplicity; for there are few unfamiliar with the circumstances that make up the picture. No. 308. 'Distant View of Erith' is a work of another class, but of equal merit.

No. 378. 'A View of Bolton Abbey, Yorkshire,' COPLEY FIELDING. This large landscape painting, in oils, the production of a master in the art of painting in water-colours, was one of the features of the late exhibition of the Royal Academy. Hung somewhat too high, in the great room of the gallery, and placed among gaudier and more attractive displays, it attracted comparatively little attention; and its singular merits were, in a great degree, overlooked. Those who examine it in this collection, where it is far more advantageously situated, will not hesitate to pronounce it a *chef-d'œuvre* of the Art—a work, in all respects, calculated not only to uphold, but to increase the reputation of its accomplished producer. To arrive at this conclusion, however, it must be scrutinized closely. It will bear it. At first sight, the colouring seems thin and poor; but looked into, the most consummate skill will be sufficiently evident. It is a true copy of nature; a pure, refined, complete and consistent example of Art. There is in it, indeed, nothing to startle; but everything to satisfy. It is the offspring of a fine mind; the production of the pencil of a thorough master; of one who we are full sure, if he please to paint a dozen pictures in this style, will, when the dozen have been painted, rank second to no artist in Great Britain.

No. 291. 'The Fetch of the Beloved,' C. A. DUVAL. A painted poem. It pictures an Irish superstition. The shadowy semblance of the beloved appears to her lover at night-fall—the sure augury of an early and sudden death. The light drapery and misty form of the departed maiden are rendered with singular effect. The stars and the outlines of the mountains are seen through them; yet the "spirit" is clearly and distinctly expressed. The countenance of the lover is finely rendered; it conveys rather the idea of confiding hope than of unmanly terror; as if the warning were a welcome. The execution is equal to the conception—both are masterly.

No. 344. 'The Billet-Doux,' A. SOLOMON. A work of good promise. If the artist continues to progress in proportion as he has progressed within the last year or two, that promise will soon become performance. He is proceeding in the right path.

No. 352. 'The Drachenfels and Königswater—Departure of the Ferry Boat,' H. GRITTEN. A good example of one of our "rising" landscape painters; who brings care and industry to the aid of talent.

No. 357. 'An Autumnal Evening,' S. A. PERCY. A good bold and manly style of work.

No. 399. 'Study of Goats,' C. JOSE. A work of elaborate finish, yet producing a most desirable effect, by its truth to the originals. The painter (with whose pictures we have been made familiar on the walls of Suffolk-street) comes very near some of the most valued of the old Flemish masters.

No. 401. 'The Reprieve,' C. H. LEAR. A bold attempt; and by no means an unsuccessful one. The figures are well drawn, and the story is told with striking effect.

No. 434. 'The Flower and the Leaf,' W. B. SCOTT. Old Chaucer is reading his poem to John of Gaunt and his sisters. The picture is an exceedingly clever one, and bears intrinsic evidence of thought and study. The drawing is good, and although the colouring is comparatively weak, the artist has made amends by the judicious manner in which he has distributed his lights and shades.

The room devoted to water-colour drawings contains above a hundred good examples; and among the works in sculpture, albeit, there is no "room" for them, are several valuable specimens—the leading contributor being Mr. Spence, an artist of Liverpool.

## MANCHESTER.

THE Twenty-first Exhibition was opened at the Royal Institution, Manchester, on the 3rd of September. It consists exclusively of the works of modern artists, and contains 522 pictures. A considerable number have been already exhibited in London: the Society of British Artists are extensive contributors; but the aid received from our leading painters has been singularly, and we believe unusually, small. There is not, indeed, in the collection, one of a very striking character, nor one by which a reputation has been either obtained or secured. We cannot, therefore, congratulate the Directors on their success; there is evidently a want of energy somewhere; the wealth of Manchester, notwithstanding its recent drawbacks, is proverbial; and, in gone-by years, it was a famous market for works of Art of all classes. For some time past, however, its annual "shows of the season" have been gradually deteriorating; few good pictures have been sent; consequently, few have been purchased; and the artists seem tacitly to have considered the trouble, and cost, and transmission, to be more sure than the chances of sales. There are, notwithstanding, some new works of merit; to these our comments will be principally applied.

No. 4. 'Fishermen preparing for Sea,' A. CLINT. A work of high order; excelled by few of its class; the time is evening; the scene, 'on the Yorkshire coast,' the boats are on the shore: the effect of sun-set is admirably given. The subject is well conceived, and carefully executed. Great skill has been shown in the grouping and arrangements of the materials.

No. 7. 'Scene from Twelfth Night,' H. O'NEIL. Good, but scarcely good enough for the painter. He contributes two other works—to which the remark will apply.

No. 21. 'Children Crossing a Brook,' J. G. POLLITT. The artist is, we understand, a native of Manchester. He exhibits several works, and each advances some claim to notice—for each supplies evidence of fine feeling and thought; although, in the whole, there is a sad lack of power in execution. No. 54, 'The Orphan and her Friend,' is full of good matter; and No. 27, 'One of Ireland's Fair Daughters,' is as veritable a copy of nature as we have ever seen.

No. 23. 'Hungarian Ark, at Offen, on the Danube,' J. ZEITZER. The artist contributes a series of his Hungarian pictures; we are familiar with most of them, but they will bear to be looked at again and again, for they have excellent qualities that make amends for a meretricious glare of colour that pervades the whole, and which Mr. Zeitzer will do wisely to study to get rid of.

No. 29. 'Woodland Scenery,' H. JUTSUM. A pleasing and graceful composition; the cows are plodding homewards through the woodlands. The colouring is even more "spotty" than usual, a defect against which Mr. Jutsum should guard.

No. 43. 'A Flower Girl of Andalusia,' F. Y. HURLSTONE. A portrait of much merit, but marred by the eternal blue. Mr. Hurlstone is an extensive and valuable contributor to the exhibition; and his works, chiefly, are here seen for the first time. No. 274, 'A Water Seller of Seville and Spanish Ragamuffins,' is one of his best productions.

No. 44. 'On the River Lea, near Bow-bridge,' W. A. BRUNNING. A landscape of right good character, with evidence that the painter has studied in the right school; the source upon which he draws may be, indeed, a little too apparent in this work, but it is less so in others equally clever; for example, No. 291, 'On the Sands at Boulogne.' We are not familiar with the painter's name, but augur, from what we have here seen, better things hereafter.

No. 47. 'A Mother and Child,' B. R. FAULKNER. Very pretty, and very graceful, and with much merit as a work of Art.

No. 52. 'Touchstone, Audrey, and William,' W. K. KERLING—is full of true and forcible character, and painted with skill and judgment. He exhibits other excellent works, and among them—No. 273, 'Admonition.'

No. 85. 'Salvator Rosa,' A. J. WOOLMER. This and its associate—No. 91, 'Scene from Tasso'—are liable to the serious objection of containing far too little matter for the sizes of the canvasses. They are clever works, undoubtedly; but

a small picture from the same hand—No. 309, 'Viola at Olivia's Gate'—is worth them both. This is, indeed, an exquisite little bit, full of talent; and although, as usual, sketchy and unfinished, may be taken as an example of true art. Mr. Woolmer may produce great things, if *he will to do so*; but he must not shut his eyes to nature, and paint as if his lights and shades were all the creations of his dreams.

No. 92. 'Scherazade and the Sultan,' E. JACOBS. The work, we understand, of a foreigner—the first work he has exhibited in England. It is one of very remarkable character—singular in its execution, and almost fantastic in its style, but possessing unquestionable merit. Its leading feature, is the effect of a brilliant Eastern sun-set, thrown upon the picture, and which, at first, seems produced by artificial means.

No. 102. 'An Old Water-mill—approaching Shower,' J. WILSON, jun. This is on the whole, perhaps, the gem of the Manchester Exhibition. It is a landscape of the highest merit, surpassed by very few productions of our British school, and not unworthy to rank with some of the most famous of the Flemish masters. It may be lauded in the most unqualified terms; as an accurate copy of nature, it has been rarely excelled, and it affords abundant evidence of careful finish. There is no attempt to produce effects by "slap-dash;" every part has been pondered over; industry has been as busy as genius. The style is bold and manly; yet it would seem to have been minutely and elaborately wrought. We might select this as one of the most satisfactory examples of a class of Art in which our country has arrived at acknowledged eminence.

No. 109. 'Madge Wildfire and Jeanie Deans,' W. P. FRITH. A comparatively early work of this accomplished painter, and one that, perhaps, gave the first evidence of his ability. It was easy to perceive that the producer of it was destined to achieve a reputation.

No. 115. 'Pilot going on Board,' J. WILSON. A work which, like all the works of the painter, has many excellent qualities, and which gives no tokens of "falling off."

No. 123. 'The Blind Boy at one of his Pranks,' J. P. PHILIP. The work of an accomplished mind. The story is told in three "compartments"—in the centre, the mischievous boy is floating down a stream, on a lily leaf, in his bower of roses, the bower he has just built in the bosom of a tender lass, whose portrait is graceful and beautiful; and on the other side she is consigning her dangerous ally to the mercy of the current. The painting is delicate in a high degree; it is, perhaps, unfinished, but the conception is unexceptionable, and the drawing admirably true.

No. 128. 'The Invalid,' J. W. KING. An old and pleasant acquaintance. There are two or three other excellent works by the same artist. No. 150, 'The Garden Seat,' is a most touching picture; we noticed it as one of the best performances of younger aspirants in the exhibition of the Society of British Artists.

No. 140. 'The Autumnal Noddy,' Miss HUNT. An exquisitely finished painting of flowers.

No. 163. 'Interior in the Cliffs of Hastings,' J. TENNANT. The production of one of our best landscape-painters; but this is an attempt, and a perfectly successful one, at another class of Art. The interior of a fisherman's cottage—the fisherman, his wife, and child being introduced. The figures are painted as if the artist had been long familiar with a style too much neglected by landscape-painters; they are capably drawn, carefully finished; and the expression—for a story is told—is admirable. Every part of the work has, indeed, been carefully gone over; nothing has been slighted; the back-ground, a bare wall, is toned with singular force, so as to throw out the points desired to be more prominent. The work is that of an artist of great ability, and is not the less welcome as an effort apart from an accustomed course. Mr. Tennant contributes several excellent landscapes that would do honour to any exhibition.

No. 165. 'Windmills near Ramsgate,' J. C. BENTLEY. A capital work; true to nature; and with a depth and vigour of tone for which we were unprepared.

No. 171. 'View of the Head of Loch Fyne, with Dundarra Castle, Argyllshire,' COPLEY FIELDING. No one who looks upon this work

will hesitate to believe, that the painter in water-colours may, if he pleases, master the less manageable material. It takes time to persuade the world, that an artist can become famous in a new walk; and many who have been accustomed to see him only in one character, distrust the evidence of their eye-sight, when they perceive him excellent in another. In this evil originates the vice of "mannerism," of which all painters are more or less guilty. Copley Fielding has already done much to overcome this prejudice, and will, undoubtedly, do more. This is a noble and vigorous work, leaving no suspicion that the producer of it has been all his life an artist in water-colours.

No. 172. 'View of Rivault Abbey—the Rainbow,' J. RADFORD. A work of good promise, with too much effort at being "fine" in parts, but with evidence of taste and judgment notwithstanding.

No. 186. 'Scene from the Antiquary,' J. PERL. A clever conception, describing the moment when Edie Ochiltree destroys the day dream of the Antiquary—"I mind the bigging o't."

No. 206. 'Moon-rising—Composition,' J. B. CROME. An excellent example, in a style of art in which the painter continues unapproachable.

No. 223. 'Lady and Child,' A. DU VAL. A fine portrait—or rather fine portraits—of two most auspicious subjects.

No. 242. 'Near Cheddar,' J. B. PYNE. A most true copy of nature; free as nature herself.

No. 244. 'Money Changers—Siout, Egypt,' W. MÜLLER. A work of the highest merit; the production of an artist who has secured a reputation second to that of very few who do honour to their country. The whole arrangement of this picture (money changers of Egypt) is excellent; it is full of strong character—a deep reading of the human mind; and as an example of colour, it is in all respects masterly.

No. 247. 'Landscape, with Cattle,' T. S. COOPER. A very large picture—too large for the materials it contains, but worthy of the admirable artist.

No. 258. 'Boats on the Medway,' M. E. COTMAN. A carefully studied work, with evidence of much improvement.

No. 286. 'Blondel,' G. F. WATTS. A well-drawn figure, coloured with much skill, and made to tell the story with no inconsiderable tact.

No. 290. 'The Chapel of the Virgin, in the Church of St. Pierre, Caen,' S. RAYNER. An interior. The artist promises well.

No. 294. 'May-Day,' T. CLATER. A most agreeable picture, describing the pleasant sports of the olden time. The figures are somewhat too "nice;" their holiday gear seems to have been all put on for the first time; but the group is capably arranged, and variety is preserved without confusion.

No. 342. 'Children heart-merry in a Graveyard; an old and contemplative Man looking thoughtfully on,' H. LE JEUNE. The artist has exhibited better works, but there is in this the same evidence of genius that may be found in all his productions.

No. 366. 'Poor Nell,' W. BOWNESS. A touching portrait of the hapless heroine of a sad story. The subject has been conceived and is executed in a fine and natural spirit; the picture is not unworthy to associate with the book.

No. 372. 'The Glee Maiden,' Miss M. FAULKNER. A most elegant and graceful portrait; a piece of painted poetry.

No. 386. 'Holy Water,' H. PICKERSGILL. A young maiden at the entrance to a church; carefully drawn, ably coloured, and a fine conception of truth in character.

No. 387. 'Percy Bay, Northumberland,' T. M. RICHARDSON. An excellent landscape, thoroughly English.

No. 402. 'A Street Scene, Salisbury,' W. CARPENTER. A very clever work—the production of a young painter who is "rising" rapidly. Much taste has been shown in the management of very simple materials; the figure of a young woman is admirably wrought.

No. 411. 'The Portrait of a beautiful Maniac—from the tale of "Le Diable Boiteux,"' A. SOLOMON. The work has merit of no common order, and justifies us in expecting much from the artist hereafter. It is forcibly conceived; the appalling character is conveyed, indeed, with mar-

vellous strength; and, as a finished work, it is of considerable excellence.

Our limits will not permit us to enter at greater length into this collection. As a whole, it is not satisfactory, although it contains many good and valuable works.

We understand an "Art-Union" Society is in association with the Institution; the sum subscribed as yet is small; but surely we may hope for a large one in wealthy Manchester.

#### BIRMINGHAM.

THE Exhibition of the "Society of Artists" was opened at the Rooms of the Society, late the Athenæum, on Monday, the 12th of September. Our readers are aware that this is a "removal" from the "Society of Arts," where the annual exhibitions have been heretofore held. The new gallery is very convenient, and sufficiently spacious; it is well lit; and the pictures here appear to great advantage.

On the whole, we do not hesitate to describe the present exhibition as the best that we have ever seen out of London. It really contains no pictures decidedly bad, and very few that can be characterized as *mediocre*. The parties intrusted with the arduous task of collecting them were fortunate as well as indefatigable; we could scarcely have conceived it possible to bring together so many satisfactory works, after the other Provincial Institutions had been supplied, and while the "stores" of the Art-Union Society hung upon the walls of Suffolk-street. This looks well; it carries conviction of an *esprit du corps* on the part of the artists—to which, unhappily, the profession is too little accustomed; and shows that they will act in concert whenever and wherever there is just occasion so to do. We trust that the patrons of Art in Birmingham will see this matter in its proper light, and give their co-operation to the managers of the Institution, by making even more purchases than usual. A large proportion of the works exhibited may be coveted by any collector of judgment and taste; and very many of them will have been here seen for the first time. The rooms contain 422 works; and among them is the 'Hamlet' of Maclise; some of the best paintings of Etty; 'Dignity and Impudence,' a *chef-d'œuvre* of E. Landseer; sundry exquisite landscapes by Lee; and a beautiful sketch—the *Comus*—of Hilton's.

The judicious arrangement of the pictures deserves marked commendation; the "hanging" is very just; due care has been taken to place the works, according as the lights may best serve them; and no portraits—with one exception, a compliment to the estimable President of the Royal Academy—have been placed "upon the line," a plan by which the portrait-painters do not suffer, and which materially enhances the value and interest of the exhibition. The £50 prize, we should observe, will be again given.

No. 1. 'The Reverie of Alnaschar,' J. BRIGSTOCK. Full of character, and remarkably true to the famous story. We noticed the work in the exhibition of the Royal Academy.

No. 6. 'Charles I. receiving Instruction in Drawing from Rubens,' S. WEST. To this excellent work the observation also applies. It is here seen to great advantage, and will do good service to the reputation of the painter.

No. 6. 'Godalming, Surrey—a Showery Day,' J. MORRIS. A landscape of much ability, manifesting close and careful observation of nature.

No. 10. 'The Lake of Nemi,' W. LINTON. With less of effort than usual; and therefore, perhaps, better. The picture is redolent of Italy.

No. 11. 'A River Scene,' T. CRESWICK. Mr. Creswick is a large contributor to the collection, to which he has sent some of his best works. It was his duty so to do; for he is a native of the town,—a fact of which his fellow townsmen are justly proud.

No. 12. 'Windsor Castle,' W. FOWLER. A pleasant and well-painted copy of the glorious Palace-castle of England; its character, and that of the adjacent scenery, have been happily caught.

No. 25. 'La Siesta,' P. F. POOLE. A title borrowed from Italy, to a scene and circumstance as thoroughly English as Cheshire cheese. This savours of affectation; which we should imagine to form no part of the painter's character, for very few artists are more natural and true. Here is an example. A boy sleeping by the hedge-stile;

a young girl has just discovered him, and looks down upon the unconscious youth with a happy mixture of mischief and pleasure. It is a sweet work, happily conceived and executed.

No. 30. 'Rouen Cathedral,' H. GRITTEN. A work of very considerable merit. The venerable structure has been admirably copied, and the characteristic groups that surround it are introduced with skill and judgment. The artist has performed, with much ability, a very arduous task; for it is no easy matter to render such a subject picturesque and attractive.

No. 37. 'The Embarkation,' W. COLLINS, R.A. One of the beautiful, impressive, and effective compositions of the master, in which landscape and figures are happily blended.

No. 38. 'Dignity and Impudence,' E. LANDSEER. Few who have seen it will have forgotten this picture. It was the gem of the exhibition, last year, at the British Institution; and has been kindly lent to the Birmingham artists by its fortunate possessor, Jacob Bell, Esq.

No. 45. 'A Contest of the Lyre and Pipe in the Vale of Tempe,' F. DANBY, A.R.A. This work will be remembered in the exhibition of the Royal Academy. It possesses merit of a high order—fine as a composition, beautiful as a landscape, and altogether excellent in execution.

No. 46. 'The Dance,' W. ETTY, R.A. The admirable work of the master, exhibited also at the Royal Academy. The collection contains others of Mr. ETTY—all capital and valuable aids to the student.

No. 48. 'Portrait of a Boy,' Sir M. A. SHEW, P.R.A. A work that possesses qualities of rare merit; it is the production of a careful hand and a judicious mind, whose taste, knowledge, and experience forbid any fanciful freaks, as apart from the purpose of the portrait-painter.

No. 49. 'A Lane Scene near Kinfare, Worcestershire,' H. H. LINES. A well-arranged and skillfully-painted landscape, the production of an artist of Birmingham.

No. 54. 'The Unrelenting Lord,' J. R. HENBERT, A.R.A. A painful subject, the choice of which is not compensated for by the merit it undoubtedly has, in composition and execution.

No. 56. 'Fruit,' G. LANCE. As usual, a work of wonderful excellence. Such pictures will surely lessen the "marketable value" of productions—copies of similar objects—by some of the old masters.

No. 61. 'The bashful Lover and the Maiden coy,' F. STONE. A pleasant picture, true to nature and to "fact."

No. 65. 'The Look-out—Swiss Soldier of the Sixteenth Century,' J. A. HOUSTON. If we mistake not, this picture was in the exhibition of the Royal Academy; at least we remember one very like it, hung where we had some idea of its merit, but where it could not be fully appreciated. Here it has absolutely startled us, as the production of an artist whose name is comparatively unknown. It may be placed in comparison with any work of its class, the production of modern times. If the artist be a young man (of which we have some doubts, for the picture looks matured), he is destined to occupy a foremost rank in his profession. The drawing is admirable; the whole arrangement of the subject is unexceptionably good; and its execution is at once delicate and vigorous. The expression of the soldier on 'the look-out,' from the summit of a cliff, which commands the adjacent valley, is highly characteristic, and all the minor details are "put in" with care and thought. There is in the subject, apart from the mode in which it has been treated, absolutely nothing; yet genius can make, in a better sense than that intimated by the adage, mountains of molehills. Mr. Houston, be he who he may, is an acquisition to the Arts. We bid him go on and prosper.

No. 70. 'Dorothea,' J. J. HILL. This also is the production of an artist of good promise. The old familiar subject is given with much taste and judgment.

No. 71. 'Landscape,' No. 77. 'Water Mill,' W. MÜLLER. This admirable artist is a large contributor to the exhibition; but his works, we believe, are lent by proprietors of them, resident in Birmingham. Here are two exquisite examples of the one class of Art, painted with exceeding truth to nature and with great vigour and delicacy: a little less use of sombre tints, and Mr. Müller would hold a very foremost rank as a landscape-

painter. It is not, however, only in this department of the art that he excels; he has here one or two examples of groups, that have rarely been surpassed for vigour of tone, accuracy of drawing, and expression of character.

No. 74. 'The Raising of Jairus's Daughter,' THEODORE VON HOLST. This was one of the prize pictures of the British Institution last year. It is a noble work; of the highest and best class. We fear it has not found a purchaser; and this we regret, first as lowering our estimate of the taste of the age, and next as discouraging to the artist, whom we have been very anxious to see devoting his pencil to the production of works less *outré* than he generally produces.

No. 75. 'The Play Scene in Hamlet,' D. MACLISE, R.A. This picture would alone form an exhibition: fortunes have been made by "carrying" works infinitely inferior throughout the country. It is here seen to very great advantage. The more we have examined, the more we are disposed to class it almost, if not altogether, at the head of the British School of Art, among the imaginative and inventive of its creations. It is so full of matter, so finely treated; it affords such indubitable evidence of genius of the highest order; and is at once so glorious in conception, and so admirable in execution, that we laugh to scorn the hypercriticism that would take no note of its vast merits, because of certain defects of colour that, in marring its value, amount to about as much as a spot on the sun.

No. 79. 'Portrait of James Montgomery,' T. H. ILLIDGE. A striking and capably painted likeness of the poet.

No. 86. 'Venice,' J. HOLLAND. Very beautifully wrought; the arrangements of the work being all in good taste and judiciously introduced.

No. 92. 'Portrait,' F. T. LINES. An excellent portrait; carefully studied and finished; the production of a Birmingham artist.

No. 93. 'Furness Abbey,' F. H. HENSHAW. Also the work of a Birmingham artist; and a good and agreeable copy of the famous abbey.

No. 94. 'The Road-side Inn,' H. M. ANTHONY. An excellent work, of right good promise. We are not familiar with the artist's name, but expect to meet it often hereafter. There are few works in the collection that possess greater merit.

No. 95. 'The Duel Scene from Twelfth Night,' W. P. FRITH. A new work by this admirable artist, and one that will, at least, sustain his fame. It is a capital reading of the subject, painted with matured skill; the characters have been happily rendered; and it is well drawn, and coloured with great ability.

No. 100. 'Wild Flowers,' R. ROTHWELL. A simple portrait of a simple child; a work of great delicacy and refinement, and with sure evidence of genius in the conception and execution.

No. 103. 'The Return of the Knight,' D. MACLISE, R.A. Another of Mr. MacLise's famous productions, and by no means the least interesting or meritorious of his works.

No. 105. 'The Saint Manufactory,' T. UWINS, R.A. This work was exhibited at the British Institution. It is full of matter, treated with skill, judgment, and a thorough professional knowledge.

No. 108. 'Fisher Boys,' H. THOMPSON, R.A. To examine a work by this excellent artist is a rare treat now-a-days, for Mr. Thompson has long relinquished the pencil and retired from a profession to which he did honour. This is a sweet and simple picture; one of the best of the modern school. It was engraved in Mr. S. C. Hall's "Book of Gems."

No. 112. 'Going to Plough,' D. COX. A waste common; very true to nature; carefully and thoughtfully painted.

No. 113. 'The Lady in the Enchanted Chair,' W. HILTON, R.A. A sketch of rare value. One of the few legacies of the great painter to lovers of veritable Art.

No. 116. 'Landscape,' F. R. LEE, R.A. A beautiful work, worthy of the accomplished artist. [We pass over the collection of paintings in water-colours, of which there are many admirable examples.]

No. 200. 'Fruit,' W. DUFFIELD. We have not, heretofore, met the name of this artist; and have been not a little astonished to behold a work of surpassing merit—equalled by none of its class, with the exception of the productions of one painter; and even these we except with some hesitation.

The 'Fruit' of Mr. Duffield is less perfect in minor details, less highly wrought in its small "finishings;" but as a copy of reality, it is fully equal to anything we have ever seen.

No. 219. 'King James conferring the honour of Knighthood on Richard Monoplies,' J. E. LAUDER. A capably painted picture; full of point and character.

No. 246. 'The Stile,' R. REDGRAVE, A.R.A. A beautiful little work, that "smacks" of the green hedge-rows, and the nature that lives among them.

No. 263. R. DADD. This work was one of the attractions of the exhibition at the Royal Academy, notwithstanding that it was placed where the mere crowd of gazers would pass it by unnoticed. It pictures that passage from the *Tempest*, where the fairies gather by moonlight on the "yellow sands;" and it is not unworthy of the fine poetry it illustrates.

We must draw this notice to a close; and still leave without comment many excellent, valuable, and interesting works. With a large proportion of the remainder, however, our London readers are acquainted: such are those by WARD, 'The Widow of Edward IV. delivering up her Children;' O'NEIL, 'A Monk Reading;' W. PATTEN, 'The Dead Bird;' JOY, 'Don Quixote Disarmed;' STARK, 'Windsor Great Park;' PYNE, 'Shoreham;' E. W. COOKE, 'Dutch Fisher's House;' WOOLMER, 'Lucy Ashton;' RIPPINGILL, 'The Two Daughters of the Brigand;' R. S. LAUDER, 'Meg Merrilies;' T. S. COOPER, 'Sheep and Goats;' JUTSUM, 'Mill, North Devon;' LATILLA, 'The Orphan of the Alps;' A. MONTAGUE, 'Cottage near Windsor;' M. CLAXTON, 'The Madonna della Sedia;' H. H. HORSLEY, 'The Weary Drover;' &c. &c. &c.

BIRMINGHAM SOCIETY OF ARTS.—An exhibition of "works by deceased masters of the Italian, Spanish, Flemish, and English schools" has been opened at the rooms of this Society. It consists of 316 pictures; several of which are of vast value; but, as will be supposed, the greater number are worth little more than as aids to contrast, and to augment the catalogue. The principal contributors are the Marquis of Anglesey, Sir Francis Lawley, Lord Lyttleton, Earl Craven, and Langford Kennedy, Esq.; but many of the gentry in the immediate neighbourhood of the town have assisted in forming the collection. The number of "lenders" amounts to 85; and of the artists, whose works are exhibited, there are no fewer than 116. The principal pictures are those by Rembrandt, Quintin Matsys (a duplicate of 'The Misers'), Canaletti, Guido, Vandyck; Hobbima, Claude, Murillo, and David Teniers; the catalogue contains a brief but interesting memoir of each, compiled with care and industry.

The exhibition is very interesting and very useful, and cannot but supply vast stores of knowledge, upon which the artists of Birmingham may draw.

[We cannot quit this subject without offering a few remarks, in reference to the unfortunate differences that have led to a separation of the "professional" and "unprofessional" members of the Birmingham Society of Arts. "Unfortunate" we term it unhesitatingly; in union there is strength; a house divided against itself falleth to the community, at any rate, no possible advantage can arise out of the division, and in the end it will work evil to the artist as well as to the other party. We had great hopes that the dispute might have been settled by "arbitration;" but this seems now out of the question: the Birmingham artists have obtained the co-operation of their brethren—a fact creditable and honourable to both; they have, as we have shown, succeeded in getting up an admirable exhibition, and they are consequently indisposed to "listen to terms," even if terms were offered. They must now, consequently, work alone; we earnestly hope they will be successful—not in getting up an annual exhibition—of that we have no doubt; or of making it answer their own individual purposes—of that we have as little; but in extending a taste for, and a knowledge of, Art in the good town of Birmingham—a town where the improvement to be derived from the Fine Arts is especially needed, and where it may be made most practically useful.

Having made all due inquiry into the subject,

we do not hesitate to acquit the artists of Birmingham of all blame; circumstances as they were, we do not well see how they could have acted otherwise than they did act; for the inevitable consequence of the new arrangements of the Society was to "shelve them" altogether; to make them nominally members, but in reality no more members than the porters who wait at the gate.\* This ought not to have been; there was neither wisdom nor necessity to justify such a course, and the artists manifested a right and proper spirit in resisting it. Besides their greater professional knowledge (which of course cannot be disputed), they were at least upon a par with a large majority of the members as regards the positions they occupy in society. Intellectual pursuits confer rank—a rank that may not be so readily acknowledged in a trading town, but which is recognised in higher places and by higher authorities. Without desiring to go very deeply into the matter—but wishing rather to forget it—we must say the law which protected the artists was abrogated in spite of justice, and that they were not dealt with either fairly, generously, or wisely.

We owe so much to those gentlemen, whose cause we may have seemed to have deserted—merely because we waited to examine into the cases prepared by both; and had some hopes that the dispute would have been adjusted without asking for a verdict.

We regret, exceedingly, that such has not been the result; and now we earnestly hope that both institutions will do all the good they can for Birmingham—that the artists will take care to make their annual exhibitions satisfactory and useful—but that they will not stop there; that they will bear in mind they have duties less agreeable and less profitable, but infinitely more important; and that the Society of Arts will render their branch of the School of Design really and practically useful to the youth of their town, and fill their library and studio with works more advantageous than a copy of Piranesi, and casts of the Venus and Apollo.]

#### NORWICH.

The first exhibition of "The East of England Art-Union" has been opened at Norwich. It is highly satisfactory; and will no doubt contribute to reinstate the Arts in the wealthy and prosperous county of Norfolk. The collection consists of 215 works; a large proportion of them have been supplied from London, but not a few by artists of the good town and neighbourhood. Our limits will not permit us to particularize; but we may mention among the list of contributors the names of Stark, Tennant, Pyne, Zeitter, Joy, Jutsum, Clint, Hoffand, Ward, Rothwell, J. Wilson, Knight, E. W. Cooke, Hollins, and Prentis.

The selection has, we perceive, been properly made, with a view to answer the purposes of the Art-Union Society; and we trust the subscription will be such as not only to have justified the experiment, but to lead to one upon a higher and more extended scale.

**PLYMOUTH.**—The drawing of the prizes of the West of England Art-Union will take place at a public meeting, to be held in Plymouth for that purpose, on Monday, the 3rd of October.

**YORK.**—**THE SCHOOL OF DESIGN.**—Our readers are aware, that a branch of the School of Design is about to be established in the ancient and venerable city of York. W. Dyce, Esq., the

\* "In the union with the Society of Arts, in the year 1830, certain powers and privileges were accorded to the artists, to secure to the Society the full advantage of their professional knowledge, and to enable that knowledge to be brought to bear upon the Institution, and through it upon the town at large. For twelve years the artists have exerted themselves with success, and by no act have they forfeited their right to those privileges; in spite of this, the Unprofessional Committee of the Society of Arts proposed and carried a measure at a General Meeting, July 12, 1842, depriving the artists of the privileges alluded to, thereby reducing them to such a position in the Society, as would be degrading to them as a body, and render their exertions in the Institution utterly useless.

"In this extremity, the artists determined—rather than that those results on the public mind, which they had effected with so much perseverance and application, should be lost—that they would establish a new and independent society for the support and advancement of the Arts, to which they could apply that experience which was the only guerdon of their long services."—*Address of the Artists.*

Director of the Metropolitan School, was a few days ago introduced to the Yorkists, at a public meeting, by his friend and brother artist, W. Etty, Esq.—a native of the old city, of which he is justly proud, and to which he has, on many occasions, rendered essential services; his success in obtaining this advantage for York, being not the least of them. On this occasion, he delivered an eloquent speech; from which we must content ourselves with extracting a few passages:—

"It was determined to establish six provincial branch schools for three years as an experiment. It has been my good fortune to obtain for my dear native city one of these, and the first that has been begun; its being continued to be patronised by Government after that time will depend upon its success, and on the manner in which the objects it is intended to promote are carried through. Their object is not to create a race of artists for the higher and more intellectual exertions of Art; their aim is directed to a less ambitious, but I hoped more useful end; it arises from a prudent and wise design on the part of government, to give our manufacturers and artisans in every branch of industrial occupations which the art of drawing is at all applicable to improve, the means of competing with our continental neighbours in matters in which until now, and even yet, they are presumed to be our superiors, by the taste and skill in designing patterns. It is intended to improve, amongst others, the painter on glass, that modern works may more successfully imitate ancient excellence; that our masons may be able to design and work in the true taste, and successfully restore our dilapidated churches; it is intended, in short, to apply those assistances which have so long been wanted, to all the various trades and professions which require the skill of the draughtsman. These, then, are the legitimate objects of this School of Design.

Mr. Dyce delivered an introductory address, in which he dilated upon the present condition of this country with reference particularly to designs in manufactures, pointing out the difference that existed in the taste as to designs between this country especially and France, and dwelling at some length upon the great advantages that would result to this country by the formation and successful carrying out of the objects contemplated in branch schools of design generally. He was of opinion, that York was a most favourable locality for a branch school of this description, being a place retired, in a certain degree, from manufacturing districts; and at the same time situated in the neighbourhood of extensive manufactures."

In reference to these "Schools of Design," we hope to have some communication to make ere long. Upon this subject, however, hitherto we have been pretty much in the position of the "Needy Knife Grinder:—

"Story, Lord bless ye, I've none to tell, Sir."

**BELFAST.**—An Exhibition of Pictures by British Artists is announced to be opened, during the month of October, in this wealthy and enlightened town of the north of Ireland. The pictures are to be received in Belfast "on or before the 1st of October;" so that this notice will be of no value to those who may read it. We regret that information on the subject was not conveyed to us at an earlier period; for sure we are that many artists of London would very willingly have contributed; circulars, however, have been sent pretty extensively, and we trust that a good exhibition will be the result. The projectors, however, must not be discouraged if this first attempt should be a comparative failure; for the three English provincial exhibitions have absorbed nearly all the available materials of the painter. An Art-Union Society is to be incorporated with the Institution; the following is the leading paragraph of the prospectus:—

"That for the purpose of giving general satisfaction to the public, and avoiding all grounds of complaint on the part of the artists concerned, the system of prizes, as acted on by the London and leading Provincial Art-Unions, be adopted, which leaves the choice of Works of Art to the taste of the Prize-holders themselves, merely limiting the selection to Works of Art in the Exhibition."

**ROYAL IRISH ART-UNION.**—The Hon. Sec., Stewart Blacker, Esq., has addressed a letter to the *Athenaeum*, in consequence of an assertion having been made in that journal to the effect that the price asked by the artists themselves for all the pictures in the Irish (Hibernian) Academy, from which selection was to be made by the society, did not amount to so large a sum as the amount subscribed by the Art-Union. This was so evidently a mistake that we were surprised at the journal's falling into it; we ourselves, indeed, thought and said that the whole collection was not worth the £3700—which the Society had to expend. But the producers of the works, of course, thought otherwise; and it appears the aggregate value—ac-

cording to their estimate—was £6000; not double the sum subscribed. It would not, however, puzzle us much to account for this; Mr. Blacker could easily point out pictures valued at £50, for which no person in his senses would give £5; and he knows, also, that in many cases the sums asked were not the sums given. Mr. Blacker asserts that the exhibition was the best that has been opened in Dublin: our only answer need be, "bad is the best." The Art-Union did—we say it without the fear of contradiction—purchase many wretched productions because they were compelled to expend a large proportion of their funds in the gallery, and had previously bought all the pictures that were good. This evil will not occur again; it cannot if artists of ability will contribute to the collection; it shall not be our fault if they do not. We turn to a more pleasing part of Mr. Blacker's letter:—

"1. For several years previous the exhibitions of the Hibernian Academy had been gradually growing worse; they did not pay their own expenses; and nothing supported them but the praiseworthy zeal of the artists and a trifling government grant; and the year before our Society was established there was no exhibition in the Irish metropolis. Since our operations commenced the exhibitions have been every year steadily improving in the appearance of the works and the attendance of visitors, and are becoming more creditable and remunerative in every way to the Academy and to the artists.—2. At one of the first meetings of our Society, it was stated by a gentleman connected with the Hibernian Academy, who ought, from his position, to have been the best cognizant of the fact, that for the four previous Annual Exhibitions not a single purchase has been made from the walls of the Academy with the exception of three water-colour drawings for thirty shillings. Since our Society has come into operation, I am glad to say, that, independent of the handsome sums it has brought to bear on this desirable object, private patronage has been not merely stimulated into action, but, I may say, as far as this country is concerned, absolutely called into existence; and the committee have had to scramble with some of their own members for the best works, and in several instances have been fairly thrown out—the private purchaser anticipating them by a prompt and liberal offer to the deserving artist.—3. With reference to its effects on the higher and middling classes, in a country where, from the prevalence of political and religious animosities, it has been found hitherto impossible to make the various parties coalesce in one common object for national improvement and civilization, such has been the softening and refining influence of this Society, that persons of all shades of politics and religious opinions meet as if on a common ground, and work together with the greatest cordiality and good feeling. With reference to its effects on the lower classes, the Society throws open annually its exhibition of the works selected by the committee to the public at large. For the last fortnight this has been daily thronged by crowds of all classes: respectable operatives and their families, schools and public institutions connected with education, mechanics and servants of all ages and conditions, yet not a single instance of injury or irregularity occurred. Donnybrook Fair was raging at the time, and several masters, who refused their apprentices and dependents leave to join its drunken revelries and demoralizing vortex, made up for it by sending them to the Art-Union Exhibition."

We heartily wish Mr. Blacker and the Committee the success they deserve; hoping they will not, hereafter, be compelled to make purchases of which they are ashamed; nor be forced, by pressure from without, to pay another hundred pounds for the loan of a water-colour drawing.

#### ART IN CONTINENTAL STATES.

**ITALY.—BOLOGNA.**—*Academy of Fine Arts.*—The programme has been published by the Academy of Fine Arts for the competition for 1843. We merely give the subjects proposed:—

*For Architecture.*—Designs for a Custom-house on a great scale, for a large city. Besides the elevations of the building, there must be given, on a larger scale, separate drawings of the principal parts, and a clear account of the artist's views as to the disposition of the whole.

*Historical Painting.*—"Menelaus and Meriones, who carry the Body of Patroclus, while the Trojans, who wish to seize it, are repulsed by the two Ajaxes." To be painted in oil; in height seven Roman palms, in breadth ten.

*Drawing of Figures.*—Judas in despair throwing the price of his treachery before the high priests and elders.

*Plaster Ornaments.*—Baptistry for a Cathedral. *Engraving.*—Copper engraving of a picture by a good master, which has not before been well

engraved. It must contain at least one whole-length, or more than one half-length figure.

The prizes are gold medals of various values. The works for competition must be presented at the Academy of Fine Arts on the 30th of June, 1843. The competition is open to the artists of all nations.

**FRANCE.—PARIS.—Hospital of the Young Blind.**—For some days past the extremity of the Rue de Sévres has been crowded by persons wishing to see the front of the Hospital of the Young Blind, which has been uncovered. It is very fine, both as to invention and execution, and is the work of M. Jouffroy, that young artist whose statues of 'A Young Girl confiding her Secret to Venus,' and 'Disenchantment,' were so well received by the public at the exhibitions in the Louvre.

**Duke of Orleans.**—The Duchess of Orleans has presented to General de l'Etang a full-length portrait of the late Duke, requesting him to consider it as a testimony of the attachment the prince bore to him, and as a remembrance of his afflicted widow.

**Académie des Beaux Arts.**—The Royal Academy of Fine Arts has given its judgment on the competition in engraving. The first prize has been gained by M. L. D. J. Delemer, of Lisle, aged 28, pupil of M. Müller; the second by M. A. A. S. Coiller, of Paris, aged 21, pupil of M. Forester. Subsequently the prizes for Architecture and Sculpture have been adjudged: the first great prize in Sculpture to M. Pierre Jules Cavalier, of Paris, aged 28, pupil of Messieurs David and P. Delaroche; the first great prize in Architecture to M. Philippe Auguste Titeux, of Paris, aged 28, pupil of MM. Blouet and Depret.

**BEZIERES.—Public Monument.**—The bust in marble of the Père Vanière, a celebrated Latin poet, and a native of this place, has recently arrived: it is destined to be placed on a column, to ornament some part of this town. It is the work of M. David d'Angers, and is taken from a medal struck in the time of Louis XIV.

**GERMANY.—FRANKFORT ON THE MAINE.—Goethe.**—The governments of Austria, Prussia, Bavaria, Württemberg, and Saxony, have agreed mutually to become the purchasers of the house at Weimar, inhabited by Goethe, and of the rich treasures of objects of Science and Art which are collected there. They are to be kept together intact, and presented to the German Confederation, to be formed into a national and public museum, under such regulations as shall be thought proper by the Germanic Diet, under whose direction and superintendence it shall be placed. The heirs of Goethe, considering the noble objects of the five governments have offered the property for the sum of 600,000 florins (£60,000), being a third less than the sum at which the house and effects have been estimated.

**COLOGNE.—The Cathedral.**—The foundation-stone for the works to complete the cathedral of Cologne, was laid on Sunday the 4th of September, with great pomp by his Majesty the King of Prussia. A document was placed under the stone, to the purport that the completion of the cathedral is a testimony of the piety, concord, and fidelity of the various German states. There are appended the signatures of about sixty royal, noble, and distinguished personages, commencing with those of the King and Queen of Prussia; among them is the illustrious name of Humboldt. Of English we observe Prince George of Cambridge and Lord Cardigan. The names of the president of the committee for the cathedral, Steinberger, and Zwirner, the architect of it, are also included.

**BAVARIA.—MUNICH.**—It is believed that the Kings of Prussia, Saxony, and Württemberg, the Grand Dukes of Baden and Weimar, and other German princes, have accepted the invitations of the King of Bavaria, to be present at the inauguration of the Walhalla.

**ST. PETERSBURGH.—HORACE VERNET.**—The court of St. Petersburg shows friendly feelings towards France. The court put on mourning for a fortnight for the Duke of Orleans, and it is said that Horace Vernet is much in the good graces of the Emperor Nicholas, inasmuch that he is reported to be the bearer of a letter to Louis Philippe, whose scope is political as well as consolatory; and also of a verbal confidential message. If so, Horace Vernet is an Ambassador—the first painter so employed since Rubens.

**AMERICA.**—Pettrich, the American sculptor, who we believe was said to have been murdered in his studio at Philadelphia, is recovering the effects of the wounds inflicted on him. He has lately modelled a statue of Washington, for the inhabitants of Philadelphia, the cost of which was, as usual, to be defrayed by subscription, but the amount subscribed has been lost, "by some misadventure;" a circumstance which prevents the execution (at least at present) of the work in marble. Mr. Healey, one of the most distinguished artists of the United States, has executed portraits of the President and some members of his family, which are very highly spoken of.

**NEW YORK.—An Art-Union Society**—called "The Apollo Association"—has been established at New York; the object of which is "to advance the cause of the Fine Arts in the United States, to cultivate and improve public taste, and to afford additional encouragement to our national artists, by the purchase and distribution of their works. This Association, the first of its kind established in the United States, has, in the short time since its commencement, distributed among its subscribers fifty-eight works of Art in painting and sculpture, costing 6264 dollars, and the members of the two last years have each received a copy of two elegant engravings, costing about 1000 dollars." We have been long anxious to obtain some idea of what the artists are doing, and how the Arts progress in the United States; but have been hitherto unable to obtain any satisfactory information on the subject. In England we have seen very few of their works.

## CORRESPONDENCE.

### METALLURGY AS A FINE ART.

**SIR,**—In considering the ductile, fusible, and other peculiar properties of the metals, gold, silver, iron, bronze, &c., in contradistinction to the nature of the productions requisite for embodying the ideas of the sculptor and architect, viz. marble, stone, wood, compositions, &c., it becomes a self-evident truth, that they afford facilities for the execution of a species of design, exclusively applicable to themselves, and unattainable in any of the latter materials; and that, consequently, by their means, the sphere of genuine Art may be enlarged to the increase of our means of refinement, and the great benefit of the manufacturing and commercial interests of the country.

In viewing, however, the present state of the art of design in metals, more particularly silver, it will almost invariably be found, that, with the exception of designs ranging within the province of the sculptor's art, they belong to a class termed manufacturing, a species of design, in the production of which, the genuine principles of Art are either not understood or disregarded, or wherein the Art, if any be exhibited, is subordinated to utility, facility of execution, &c.; and the attainment of novelty, or a desire to meet the caprices of fashion, is the only aim of either the artist or manufacturer. Now in reference to all articles of use, it may probably be better that such a state of things should continue to exist; that all household utensils for instance, after having served their purpose for a few years, or a generation, should give place to others of greater interest; as exhibiting the progress of the national taste, and the changes or improvements in the mechanical arts. But notwithstanding the limited extent to which the arts in silver structure have been carried, it is obvious, that the class of works denominated ornamental, prize, and presentation plate, which, whether regarded as commemorations of events, or as honorary tributes to individuals, are peculiarly destined to preservation; and therefore, most legitimate objects for historic and poetic design, in due subordination to the genuine principles of Art.

In turning attention, also, to our more important and extensive works in the baser metals, that of iron especially, we find, that with the exception of those of the civil and military engineers, and the ordinary works to which this metal is exclusively applicable, it has never been legitimately employed; for instance, it has of late years been found desirable on account of its cheapness, durability, non-combustion, &c., to introduce this staple commodity of our country somewhat exten-

sively into works of architecture; but hitherto such introductions have, almost invariably, been in disguise: it has been merely used as a convenient substitute for stone, &c.; and although most successful works of Art have been produced in bronze, silver, &c., these are at all times recognised as appertaining to the art of sculpture. In not a single instance, either ancient or modern, will it be found that the designs of such works exhibit the various characteristics or capabilities of their material, sufficiently to bring them under the denomination of works of metallurgy, as a distinct branch of the Fine Arts.

There remains, therefore, to be created, or perhaps it may be only to be introduced and worthily patronised, a style of Art, exclusively applicable to the peculiar properties of metals; and when this is achieved, an impetus will not only be given to these important branches of national industry and commerce, but the art of metallic design, instead of being as heretofore regarded merely as a mechanical attainment, will become a distinct and important branch of the Fine Arts; which, being no longer limited to painting, sculpture, and architecture, will have their boundaries enlarged by the addition of that of metallurgy—*equally as distinct from either of those branches of Art as they are from each other.*

It is much to be regretted, that we have not extant any important examples of Grecian metallic art, as from the description given by Homer of the shield of Achilles, it may be inferred, that not only the art of sculpture was exhibited in that work, but that by the judicious use of several metals, and the various methods of working and finishing them, a combination of the effects of the art of painting also was produced, which the moderns, especially in this country, have hitherto failed to imitate. This, however, is the utmost that can be attributed to the Greeks; and indeed the description referred to affords no proof that these methods were practised as a Fine Art. It is possible that the work in question might, in this respect, have exhibited no more than a mechanical imitation of nature: but, even allowing that the combination of these two branches of Art was by them attained, we have no evidence that the Greeks did more than this. The introduction of the principles of architecture into metallic design, independent of its abstract imitation, appears to have been alike unthought of, both by ancients and moderns; and how far the combination of the principles of the respective arts of architecture, sculpture, and painting, is attainable in this distinct, and, in result, independent art of metallurgy, remains with our national genius to exhibit, and our national patriotism to encourage.

This combination of the principles of the three branches of Art, must particularly be understood as referring to the general application of the laws, by which those branches are governed, not the actual imitation of any of their respective productions, those of architecture and painting more especially. No artist would be justified in affirming that his productions occupied this newly-discovered field, or that he enlarged the boundaries of the Fine Arts, unless he embodies and gives a new direction to principles, the seeds of which exist in nature, and frames his works upon laws, which have hitherto remained undiscovered, or in his case are newly and peculiarly applied. If his productions are but the prototypes of any previously existing, and are amendable only to known and established rules, he but leaves the Arts where he finds them: but while an artist of truly inventive and original genius is allowed to be a law unto himself, such laws must be an elucidation of those recognised, and fundamental principles, or elements, whose prototypes exist in nature, and in which the experience of ages has proved that true excellence can alone reside.

And in the last place, in reference to that most difficult and important point to arrive at, in relation to all works of genius, viz., the finding a *just and competent tribunal*, to which to refer them, it must be remarked, that high Art is of that subtle and metaphysical character, that it requires not only a peculiar quality of mind, but a long course of study and observation, combined with a deep knowledge of the pure elements of classic Art, to enable an individual to arrive at a correct conclusion, in reference to any of its productions, even in those works in the department of which examples of excellence (founded on the consent of ages)

exist, by which they may be tested. But in the case of all works of a creative and original character, the difficulty is doubly increased. Here indeed it may emphatically be asked, where is a competent tribunal to be found?—and it will, perhaps, be replied, in public opinion. In the introduction of such works, the moral, commercial, and manufacturing interests of the country, are deeply involved; and yet the pursuits of the vast majority of the community are *directly opposed* to those which are necessary to constitute an individual an amateur of Art. In our highly commercial nation we have to deal with the physical and actual, with things that can be weighed, and measured, and numbered; whereas the very reverse is the process by which high Art is achieved, and, consequently, *the reverse* by which it can be truly estimated.

Thus it is, that the eye of taste and cultivated imagination, with a subtle apprehension, not only of the proportions of the Grecian architecture, but a susceptibility of feeling for the poetry and sentiment expressed in innumerable instances, throughout the whole range of classic Art, will not fail to possess the requisites for the due estimation of the character of artistic designs. To such individuals will the artist be willing to submit his works; in the testimony of these ought the public in general to confide; for in the exercise of a judgment, unworped by narrow prejudices, and unalloyed by the spirit of envy and of private interest, *such alone* are enabled to pronounce a just decision upon creative artistic merit.

Yours, &c.,

W. VOSE PICKETT.

Tottenham, Middlesex, Aug. 9th, 1842.

#### THE "CONTRAST" OF COLOURS DEPENDENT UPON PHYSICAL CAUSES, NOT A MATTER OF TASTE.

It has long been known, especially by the female sex, that in articles of dress, paintings, &c., to produce pleasing contrasts requires the admixture or combination of some peculiar colours in preference to others; and that the indiscriminate mixture of colours produces unpleasant effects to the eye. This principle is by most people regarded as a matter of taste; but, if closely examined, it can be proved to be essentially connected with the phenomena of complimentary colours.

By complimentary are meant any colours which, when mixed with others, produce white light; the former are then considered as complimentary to the latter. That the admixture of certain opposite colours produces white light, may be readily proved by painting on a wheel, or any rapidly-revolving body, the colours supposed to be complimentary; and when this wheel is put into rapid motion the colour produced is white. Complimentary colours are readily produced in several ways; in Newton's rings the transmitted and reflected rays are complimentary to each other; also, when polarized light passes through any doubly-refracting crystal, on turning either the polarizing or analyzing plate through a quarter of a circle, the colours first produced are complimentary to those which appear after the change of position. The colours thus elicited bear the same relation to each other as those which are popularly said to contrast well; and thus I propose to those who may not be possessed of good judgment in this matter, to use the above-mentioned means. Ladies, in the choice of colours for dress; carpet, shawl, and curtain makers or designers, paper stainers, &c., will thus obtain the most striking contrasts and the greatest effect. In cases where an unavoidably existing colour may wish to be dispensed with, advantage may be taken to make use of these means, as in the

cases of people whose complexions may be dark, tawny, or of a brownish green colour (especially ladies), their articles of dress should be deep in colour, and somewhat partaking of their own, as green, violet, puce, or deep purple. Those who are very fair should wear brilliant colours, pale blue, white, pink, yellow, &c. I have annexed a table of the complimentary colours as obtained by the polarizing apparatus:—

White.	Black.
Green (yellowish but dark).	Red (lake tinge).
Light blue.	Brownish orange.
Indigo blue (deep).	Pale yellow.
Deep purple.	Pale yellowish-red.
Pale yellow.	Deep blue.
Violet.	Pale yellow (greenish tinge).

The question of the cause of the pleasurable sensations excited in the mind by the peculiar combinations of colour cannot be entered upon here, being a question more in physiology than optics; but a concluding remark or two may not be out of place. It is well known that if the eye be exposed to a strong-coloured light, and then closed, the colour complimentary to the one first perceived now occupies its place; the one here produced is denominated "accidental," and is described in works on "Optics" under that head. Now, it appears most probable, that if an accidental colour be thus produced, and under favourable circumstances be distinctly visible, when a fainter colour is presented to the eye, a correspondingly faint accidental colour must be produced, although it may be overpowered by the first; and thus, by its mixture (in the case of badly-contrasting colours) with those, either not of the same tint or not complimentary, may produce the unpleasant admixture which is familiar to every one.

J.W.G., M.D., F.L.S., &c.

August 8, 1842.

#### VEHICLES.

SIR,—I must beg your pardon for troubling you on the interminable subject of "Vehicles." In common with many of your readers, I confess that I have tried all the nostrums that have been recommended, having been seduced from the old Magylyp by the parade which was made of the Borax and Silica mediums.

The *Drying Oil*, *Mastic Varnish*, and *Magylyp*, prepared by the colourmen, are notoriously bad; I am, therefore, certain that many artists, in common with myself, will feel truly grateful if some fortunate individual who has these costly secrets will kindly communicate receipts for making the following:—

1. *Drying Oil*—To be a strong dryer, and yet as colourless as possible.

2. *Mastic Varnish*—To be rich and colourless.

3. *MAGYLYP*.—To be what none of that you buy from the colourmen is, viz.—1st. Not horny and tough; 2nd. That it be well *amalgamated*, so that the two principles of oil and mastic do not subsequently separate; and 3dly. That it be smooth and flowing.

If some of your artist readers will tell us how they manufacture their drying oil and mastic, to make this much NEEDED MAGYLYP, they will confer no trifling benefit on some of their brothers of the brush; but let us have exact receipts, and not "a little of that and a small portion of this." One piece of advice I would venture to give to my young artist friends; and that is, not to heed one iota about the new nostrums. I have wasted more time and spoiled more pictures therewith than I can well afford.

Yours, &c.,

MAHL-STICK.

Glasgow, 10th Sept., 1842.

#### TO BLEACH AND PURIFY LINSEED OIL.

SIR,—Every artist knows the value of a pale, limpid, quick-drying, pure Linseed Oil. There are a great many modes of bleaching and purifying that useful vehicle, but the one I am about to describe I have found the best. Obtain a stout glass vessel, of any size, but one that will hold two quarts I prefer; get a hole drilled at the side, about midway, into which introduce a small spout for the purpose of drawing off the oil when sufficiently bleached and required for use. Into this vessel put nearly a quart of water, and add a quart of oil; shake the whole well together; do not cork, but tie it over with a piece of coarse linen cloth that will allow evaporation, and yet prevent the admission of particles of dirt or dust. Place this on the house-top, or any other place most exposed to the sun and light, secure from the effects of wind, &c., by a stay of copper wire, as indicated in the diagram: in three or six months much of the colouring matter will be extracted by the light, and if it remains a sufficient time, it will become nearly as pale as water. I have practiced this mode for many years, and thinking it might be useful to many artists not previously acquainted with it, I respectfully offer it for their adoption.

Yours, &c. R. D. TONGUE.

The appended sketch will best explain my purpose.

#### "RHYMES ON ART"—ISTS.

SIR,—Seeing that these are dull times for the Arts,—their Parliament having been, as it were, prorogued,—and believing that your ingenuity must be somewhat taxed to fill your paper, perhaps you will give insertion to these rambling rhymes.

Yours, &c.,

S. C. H.

Who says that THE ARTS do not flourish? Let's see

What to have and to hold, as their own, they possess?

Though the Arts, like the nation, are ruled by a SHER!

Under petticoat government long may they be!

May thy shadow, Sir P. R. A., never grow less!

But your Body grow greatly too large for the den,

Into which they have squeezed your Peers—thirty and ten!

Ask what their estates are—in tail or in fee?

Only think of the HILLS, GROVES, and MEADOWS they yield;

Why, they've two noble rivers—a SEVERN and LEE—

Sundry WOODS, and a FORREST, a LANE, and a FIELD!

They've WELLS and a POOLE; BRIDGES, RHODES, on their land

A WARREN, a PARKE, and some capital COLE;

A lake—that's an EASTLAKE—pure, graceful, and grand!

A SHEPHERD and LANDSCAPERS to watch o'er the whole!

If the Arts have no marble, they've certainly STONE—

Nay, a STONEHOUSE—WARDS, KITCHEN, a ROOM, and a HALL;

And a TOWN—with a TOWNSEND, of course—is their own,

And a BELL and a PORTER to answer a call.

Of artisans,—“Painters and Glaziers,” they've more

Than they wot of; a MILLER, a TAYLOR, a DYER,

Two COOPERS, two CARPENTERS, SMITHS half a score;

One TURNER,—*mem.*, fortune made, going to retire.

See what titles to church and to state they can bring!

They've an ABBOT, a DEACON, a DEANE, and a PRIEST;

They've a SARGENT, an EARLE, they have DUKES, and a KING,

They've a BAILY, a MARSHALL, and one KNIGHT at least.

They own DERBY and LANCASTER, RICHMOND and ROSS,—

Bare of trees, to be sure—and at this the muse grieves:

They have but a THORNE, BIRCH, and PYNE, and some MOSS;

But one S. PROUT, that may furnish a forest of leaves.

They've no deer, but one BUCK; they've no horse, but one MAIR;

They've no bull, but one BULLOCK; no goat, but a KIDD;

They've one KOG, yet no hens, but of Cox they've a pair;

They've a LOVER, a HATTEY, a SMIRKE, and a LEAR.

Of birds they have plenty—a MARTIN, a DAWK,

A PARROT, a PIGEON, a SWIFT, and a CRANE;

An ARCHER, a FOWLER—a FAULKNER to awe

The PARTRIDGE transferred to a Court from the plain!

Their numerous progeny talk without noise,

Yet they sell them, or hang them, and never seem sad;

If they have but one CHILDE, they have certainly BOYS,

THOMSONS, RICHARDSONS, JACKSONS, yet only one DADD.

They have AVILING, PAYNE, PHYCK, and yet a good HART,

Their KNELL may be heard, but it cannot annoy;

For they've LAUDERS to praise them whenever they depart—

They've their GRAVES, it is true, yet they still keep their JOY.

## THE WORKS OF WILKIE.

LIKE the first edition of a Poet's "Remains," may be considered those exhibitions at the British Institution, which present to us the works of a deceased artist. Thus has a due and grateful homage been formerly rendered to Reynolds, Lawrence, Hilton; and thus, at the present moment, a similar compliment to the genius of the lamented Wilkie offers to the thousands who admire his productions an opportunity of the most solid mental gratification.

In these exhibitions we become witnesses, by a *coup-d'œil*, of the principal labours of the painter; his intellect from youth to age appears to be expanded before us. Step by step we accompany him in his efforts, from the vigorous burst or timid trial—as the case may be—of inventive genius, to the finished product of its maturity; with what interest one is enabled to mark the methods of "going to work;" the pen and ink sketch, the careful register of a *thought*, the rapid brush of an effect; and then to discover the varieties in handling, from the dry stipple to the richest freedom and luxury of colouring. In truth, it is on these occasions that the painter encounters an ordeal, trying indeed to him, but most gratifying to his brethren and to the public—that of being compared with himself! *Nemo mortalium omnibus horis sapit*; according to Father Prout, "Every man is a fool sometimes;" and thus the slips of a man of genius, like those exceptions which prove the rule, tend to demarcate with more certainty the true path which led to ultimate and permanent success. If the process of wear and tear, of removal and reparation, cause at least a septennial change in all the component particles of the body, it is no less true that the structure of the mind undergoes changes as constant and more palpable. Hence, in a painter arise his variety of "styles." Not only does he himself, at different periods of life, see things through different media, but he is likewise desirous of adapting to altered views the means of communicating his ideas to others. Though these changes be not unfrequently changes for the worse, the contemplation of them is pregnant with interest. We pursue them as travellers follow the mazy windings of some *Robin Goodfellow*, "through bog, over brier;" lost in equal amazement, at last, as to the place where we missed the true fire that at first illumined our way. With some such feeling the public, at the Academy exhibitions, have been for some years regarding Sir David Wilkie's productions. It seemed a heresy to complain of, and yet no one seemed to retain a true faith in, the emanations from his studio. He appeared scarcely to be the same Wilkie around whose early paintings, if report be correct, the careful railing was necessary to ward off the press of the anxious crowd. The prestige of the name was little borne out by works in which that original love of character and truth of imitation had become lost in masses of asphaltum and a flood of magyly; while his large paintings—such as the 'Josephine,' the 'O'Connell,' the 'Sir David Baird,' and 'Napoleon,' though, doubtless, pictures of merit (as how could it well be otherwise)—still seemed rather magnified exemplifications of his peculiar falseness of style, and of his inadequacy to meet, on those extended surfaces, the expectations which the public had been taught to form from the crowded excellences of his smaller works. Many who had contracted this opinion of Wilkie, and have now visited the collected works exposed at the gallery in Pall Mall, have come away delighted beyond measure with the extent of his genius. In both of these feelings we confess ourselves to have cordially acquiesced; and many of the hot days have we whiled away in examining these interesting relics of a deep-thinking sagacious mind. Let those who would give the foreigner an insight into English Art—the growth of our own country—conduct him to the British Institution; and there, if he have a feeling for kindred humanity, if his soul be not all-absorbed in speculations of "high Art" and "loftiness of design," he will be delighted with those pure and noble works—the 'Monumentum ære perennius,' on which Wilkie has recorded his name. What is the secret of this undoubted success? What is it that he so possessed in common with the distinguished men who have made the canvass a vehicle to carry down their fame to a remote posterity? It was not his method of art,

for that he learned from the Dutch, and others have equalled it without securing a tithe of his renown: it was the *tale that he had to tell*. His destiny was to send out such forcible delineations of human life in various phases, as the circumstances of our own day could enable us to seize upon and appropriate with an instant sympathy, while they have so much of common human nature that they appeal to the feelings of every age and of all climes. Others had observed, and some had recorded, the same *facts*; but when Wilkie placed them in the focus of his imagination, and rendered them to the public by the force of his acute intellect, and with all the charm of his art, they became familiar and oft-recurring images, with an enduring influence on the moral perceptions of the public. 'Distraint for Rent,' and the 'Rabbit on the Wall,' are perfect extracts from the joys and sorrows of yeoman life. The deepest pathos moves in one, happy quiet delight in the other. Like Dickens, he conducts us to the dwellings of the poor; and in looking at the 'Rent Day,' 'Guess my Name,' the 'Penny Wedding,' and others of the same nature, we are led to sympathize in the kindest feeling for

"Their homely joys and destiny obscure."

It is this merit of affecting the better portion of human sentiments that elevates Wilkie, and for which he will obtain his reward. From grief to joy—the ends of the scale—he traversed the intermediate passages with equal felicity. Learned as he was in, and fond as he was of, the *matériel* of his art, he never forgot that art's highest aim is to be the vehicle of influential ideas; he never lost sight of the poetry of painting; and although that poetry was sometimes only of a lowly or a didactic species, it was invariably the best of its class.

## OBITUARY.

THOMAS FEARNLEY.

A sketch of the life of this artist may not be uninteresting to our readers—we quote a Norwegian account, merely omitting one or two circumstances, which we believe to be incorrectly stated. "Norway can ill afford to lose one of the few artists who are her glory and her pride. The list is easily reckoned—Dahl, Ole Bull, Fearnley; and hereafter we trust to add the name of Tidemand. In so small a circle a blank is soon perceived. The germ of all these talents was nurtured and strengthened in childhood by the power of rude Norwegian nature, and through all their after developments the stamp remained essentially Norwegian. But Norway would not mature them into excellence, for that, they bent their steps to the south; there they struggled for their true place, and there in their creations they honoured their native land. From the south they returned again to the north; and it is only necessary to remember what Christiana was twenty years ago, in regard to comprehension and feeling for Art, and to compare that with what she now is, to be aware what Dahl and Fearnley have done for our advancement in this respect. A link of this chain is broken, and far from his fatherland, in the prime of his years, Fearnley is dead. The news of his death was received with deep and general sorrow, and the sense of his worth seemed, if possible, more strongly expressed than ever. We believe that a brief notice of his life will not be unwelcome to our readers.

"Thomas Fearnley was born on the 27th of December, 1802, at Frederickshall, where his grandfather, an Englishman, settled about the middle of last century. He married the Fraulein Herforth; and their son Thomas, a merchant like his father, married also into a respectable family, and his son is the subject of our memoir, Thomas Fearnley, the landscape-painter. Till his fifth year, he remained in his father's house: he then went to live with an uncle in Christiana; and to this circumstance is probably owing the direction of his future life. He received an education preparatory for a military life, for which he was intended; and was on the point of receiving a commission, when, in his sixteenth year, he yielded to the wish of his uncle to become a merchant. Already, however, his taste for Art had in some degree shown itself. He excelled so much in drawing at the military school, that he was allowed to receive private lessons in drawing besides his studies there. A quarrel with one of the

persons in his uncle's establishment made him determine to change his residence; and having gained the first prize for drawing at the School of Arts, he resolved to follow the profession of a painter, and to try his fortune at Copenhagen. There he entered the Academy, and he found friends able to appreciate and rejoice in the rapid progress he made. He received many proofs of kindness from various persons, and was well received in society, when his stay was accidentally shortened. The Crown Prince Oscar was at Copenhagen in the course of his travels in 1822. He saw the works of our artist, and ordered a large picture—'A View of Copenhagen.' This was executed and forwarded to its destination. On the return of Fearnley from a pedestrian excursion through the Danish islands, he found that no tidings had ever arrived in regard to the fate of this picture, and he determined to go to Stockholm and make inquiries himself. He went; and favourable circumstances induced him to remain from 1823 to 1827. In that year it was his intention to have made a long journey southwards, but he was detained by illness at Copenhagen, and returned once more to Norway. In November 1828, he set out again on his long desired journey, by Hamburg and Berlin to Dresden, where he happily spent the first days of the year 1829 with Professor Dahl, whose acquaintance he had previously made in Norway. He resided in Dresden for eighteen months; and in the summer of 1830 he travelled over Bohemia in company with the Danish artists Ruchler and Pesholdt, and after remaining some time at Salzburg, he took up his winter quarters at Munich. At this period he painted many of his best works. In 1833, accompanied by the Danish medallist Christensen, the architect Constantine Hanfen, and the preacher and bookseller Bindesvøll, he made the tour of Lower Italy and Sicily. At Naples he met Ole Bull, and with him returned to Rome, and they passed together the following winter there. He had intended to extend his travels to Greece, but family affairs, consequent on the death of his father, obliged him to turn his steps northwards. He went by Florence, Carrara, and Milan, to Switzerland, where he made many diligent studies. He loved singular and difficult subjects—thus he painted the Blue Grotto of Capri with all its peculiarities, and he now passed a whole fortnight in studying the Glacier of Grindewald. The result of this was a large picture so true to nature, that it makes you shiver with cold to look at it. It became a favourite subject with him, and he repeated it several times. From Switzerland he went to Paris, and from thence to Brussels, Antwerp, and Rotterdam; he also paid a short visit to London, and on the 12th of June, 1836, arrived in his native country after an absence of eight years. The autumn of the same year he again left Norway for England, where, visiting various parts of the country during the summer, and passing two winters in London, he remained a year and a half. He returned to Norway and made a tour in Spitzbergen; afterwards another journey through Germany to Switzerland, during the summers of the two years he remained amongst us, also painting many pictures, some purchased by his Majesty, others by private individuals in Norway and in Holland, and in other parts of Europe. In July 1840, he married the daughter of Mr. Andersen, a merchant, and left his native country for the last time in September, to go by sea to Amsterdam. Here unhappily his health began to be impaired; he hastened his departure for Munich, where he arrived intending to make arrangements for a long residence; these were just completed when his health continuing to decline, his life closed on the 16th of January, 1842, in the prime of his days, and in the enjoyment of every blessing. His marriage had proved a happy one; and he was the father of a little boy some months previous to his death, while his success in his profession seemed to open before him an honourable and prosperous career. Norway has no fit schools for the sons of Art, no academy for what is beautiful. The pictures of Fearnley must be a school for others, where they must study with open eyes and earnest feeling. They are fresh and bright, while the hand that produced them has faded away; and fresh and bright shall his remembrance remain among the Norwegian people, though we shall never see him more."

Fearnley was personally known to several of our English artists, by whom he was greatly respected, and who are among the mourners for his death.

## VARIETIES.

**THE ROYAL COMMISSION.**—We have little to say this month in reference to the subject now, and likely to be for some time, of paramount importance to the artists of Great Britain. We shall in our next, however, enter at some length into the matter—chiefly in reference to the mooted point of Competition; and endeavour to show that in all ages and countries, the great masters of the arts of sculpture and painting have not considered themselves unworthily employed, or looked upon it as derogatory to their stations, in competing with the merest professional tyros. Meanwhile we may quote the opinion of the highest existing authority—the President of the Royal Academy. In his “Outlines of a Plan for the National Encouragement of Historical Painting in the United Kingdom,” originally addressed, in 1809, to the Directors of the British Institution; and 28 years afterwards—i. e. in 1837—“respectfully submitted to the consideration of Lord John Russell,” then Home Secretary, Sir Martin Archer Shee thus deals with the question:—

“There may possibly be painters who have no relish for competition, and who would be better pleased to see Government dealing out large commissions, in which the reward at least would be certain, however unskilful or disgraceful the work. Such persons however, if there are such, must not be allowed to discredit their more able and honourable brethren, who desire no rewards but those which they may be found to deserve; who work for nothing more than an opportunity of generous emulation, and are willing to adopt, as the motto of their fortune and their fame,

“*Palmarum qui meruit ferat!*”

“It must always be the interest, and I am convinced it is the inclination, of eminent artists to discourage everything of a mercenary or mechanical character in the exercise of an art so noble as that which they pursue; and the manner in which the principle of direct competition obviously operates to produce this effect, forms one of the motives for particularly recommending it.

“It is desirable that the genius of the country should have a fair, public, and honourable trial, before it can be discredited by an injudicious or corrupt choice of those who may be appointed to furnish the world with examples of it; before the liberality of some future Pericles shall set on foot public works, to be undertaken, perhaps, in the spirit of a contract, and executed in the spirit of a tradesman.”—pp. 86, 87.

To these eloquent observations we beg to direct the attention of the artists—of such, more especially, as would fain persuade themselves that they are justified in drawing back from competition, either from an unworthy fear of being outstripped in the race, or from an idea—equally unworthy—that government should “deal out commissions,” to which a “certain reward” should be attached, “however unskilful or disgraceful the work.”

We shall, as we have intimated, have much more to say upon this subject—and upon various other matters appertaining to it. At present, however, we must content ourselves with this quotation. The opinion thus given was not lightly formed; it was recorded when the accomplished President was a young man—struggling for fame and fortune; but it was repeated when both had been secured; when he stood, proudly and honourably, at the head of his profession. Twenty-eight years had not changed it; and we have a right to assume that in 1842 he thinks as he did in 1837. If for above a quarter of a century he held these opinions—expressed them and impressed them—it is not likely that within the comparatively small period of five years they could have been altered—altered, too, just at the moment when the great purpose of his “Appeal” had been attained—“National Encouragement of Historical Painting in the United Kingdom!” We make these remarks because rumour has been busy—“Rumour painted full of tongues.”

IMPORTED PICTURES.—In the ART-UNION for July 1839, we published a statement of the number of pictures imported into Great Britain during the years, from 1833 to 1838, both inclusive. They were received from Italy, Holland, Belgium, and Germany; and averaged about 8000, annually, in number. We have now procured an account of the number of pictures imported into the United Kingdom, and the amount of duty paid thereon, during the four years ending 5th January, 1842. It is as follows:—

	Pictures imported and entered for Home use.	Number.	Amount of Duty received thereon.
Yearended 5th Jan. 1839	.....	9,620	..... 2844
1840	.....	11,641	..... 3299
1841	.....	11,920	..... 3628
1842	.....	13,108	..... 3681

It will thus be seen that the increase has been enormous; only think of 13,108 “veritable” Titians, Berghems, Rembrandts, &c. &c., being put into circulation throughout Great Britain within the past year—eight of which are probably of value; but 13,100 of which are, no doubt, miserable and trashy copies. It is really wonderful how and where these things are disposed of; and it is not a little humiliating to find the evil anything but diminishing. To these 13,108 “old masters” (for very few of them profess to be modern), we must add the number of *genuine* pictures manufactured in this country and sold to foolish buyers. We have heard a variety of illustrative anecdotes of the modes in which such works are produced; and some “artists” have been named to us who ought to be ashamed of lending themselves to such base and scandalous impositions. This evil, under the existing law, has no remedy; but really the makers of forgeries should be known and exposed; the profession should cast them out utterly. To copy old pictures, knowing they are to be passed off as genuine, is bad—very bad; but to make copies of modern works for a like purpose is infinitely worse. Yet every day this is done; and there is no sort of punishment either for the forger or the vendor.

**THE SOCIETY OF BRITISH ARTISTS.**—A considerable augmentation of this body is likely to take place before their next annual exhibition; several new members have already joined the Society. We cordially hope—and, indeed, have some good grounds for expecting—that with an addition of numbers there will be an accession of strength; and that, hereafter, good sense, sound judgment, and generous principles, will preside at their councils. In that case there need be no dread of its permanent well-being and complete success. If, however, the Society shall continue to be misguided and misgoverned by a selfish and narrow-minded few, who, resembling the fly on the chariot-wheel, persuade themselves that the Arts were invented for their benefit, it will be the duty of all who take a broader view of the mighty subject to encourage the establishment of a society that shall stand, as it were, between the Royal Academy and the British Institution, deserving and receiving the cordial co-operation of both. We trust, however, that the accessions to which we refer will place the Society of British Artists on a safer and sounder basis than it has hitherto been; and that hereafter their proceedings will keep pace with the liberal and enlightened spirit of the age, elevating and adding dignity to the profession, instead of humbling and degrading it.

**ART-UNIONS OF GERMANY.**—The project for drawing closer the connexion between the lovers of Art in this country and in Germany, progresses more favourably than our most sanguine hopes could have anticipated. Already a very large number of subscribers have entered their names on the lists of the societies of Dusseldorf, Berlin, and Dresden: those lists are rapidly augmenting. The experiment has been completely successful;

and the result cannot be otherwise than satisfactory and serviceable to the artists and amateurs of the Arts in Great Britain. First, it will increase the intimacy between the kingdoms, that must be pregnant with good to all; next, it will familiarize us with those higher qualities of Art in which the Germans are universally admitted to excel, and which are perhaps best exhibited by their engravings; and next, it will inevitably lead to an acquaintance with the “style” of the German school, by introducing collections of its best productions into England. The time is auspicious for the attempt; the British artist has been at length called upon by the Nation to aim at loftier objects than those with which he has been, hitherto, generally content; our beneficial intercourse with Germany is becoming daily more frequent and useful; and we have learned to know and appreciate the vast sources of enjoyment and information they possess, with the most ready means of rendering them available. We have examined, at the dépôt of Mr. Henry Hering, 9, Newman-street, the prints that have been already issued by the several societies, and those that are in progress for the members of 1842. They are all of them of rare excellence and value; each is fully worth the amount of the subscription, setting aside the chances of prizes; there is not one that is not calculated to improve the taste and elevate the mind, for the selections have been made exclusively from pictures not only painted by the best artists, but painted with the grand and lofty purpose of conveying a high moral lesson by the Arts. For example, the two works—one a line engraving, the other a large lithographic print—to be given to each subscriber of one pound to the Dresden Art-Union—the one illustrates “the Power of Music,” the other exhibits the famous “John of Leyden administering Baptism to an adult Female at Munster, A.D. 1533.” As we have said, great good must follow the introduction among us of the works of the master-minds of Germany; and sure we are, there are thousands in this country who only require a knowledge of the advantage within their reach to avail themselves of it.

**SCHOOL OF ART.**—Under very varied circumstances do artists come forward to court the notice of the public. Many are the roads by which the hill of fame is scaled; while a few vigorous spirits gain the top, some “perish by the way,” and the mass stop at a middle station. Much depends upon the starting point. There can be no doubt that in other countries the system of *ateliers*, or of long and careful instruction by the more advanced in the ranks of Art, tends most materially to foster a higher amount of general excellence in the scientific departments of painting. Drawing, perspective, and the principles of composition, it is admitted on all hands, are things to be *taught*; though intuitive perception may advance far without instruction, a careful process of education will much more rapidly and surely eliminate the latent qualities, and place the student at an earlier period in possession of the accumulated experience of ages. Though it be a characteristic of genius to surmount difficulties, still it is ever a part of the general scheme of education to remove these difficulties from its path, to facilitate its onward progress. Nevertheless, how many are carried away by the notion, that genius should be left to “make the giants first,” and “then slay them.” Many a painter has had, consequently, to lament that his early career was not directed by the mind of experience when first the strong tendency to Art had manifested itself. The professional education of artists is, indeed, a matter of considerable interest. It is most true that no school, no master, can *make* an artist; “born a poet, or never a poet,” applies in its full force to the brethren of the brush and the chisel; but early cultivation may nourish the germs that are afterwards to ripen into a fruitful maturity. Thus it was that the greatest painters of antiquity

laboured early and diligently under the direct superintendence of a "master." The examples are familiar as are their works—Raffaëlle, Titian, Tintoretto, Spagnoletto, Murillo, Jordaens, Vanduyck, original as are their productions, sought in the commencement the learned guidance of another. In this manner indeed it would be easy to trace, through centuries, the transition of knowledge from one celebrated studio to another, by the simple educational process of master and pupil. The genius which might exist in the latter was guided by the science and stimulated by the example of the former; not only was the spark excited to a more vivid combustion, but the fuel for its support was also supplied. The examples of modern France and Germany appear to have had little influence, in these respects, upon our own country, where, if we are rightly informed, this system is generally rejected by the foremost of our painters; though when adopted, as by Lawrence and Haydon, the pupils have reflected renown on their instructors. Entertaining these views, it is with much pleasure that we point attention to the *School of Art*, in Charlotte-street, Bloomsbury, a prospectus of which, under a new management, has just been forwarded to us. This school, it will be remembered by many of our readers, was till lately under the admirable guidance of Mr. Sass, in whose hands it obtained an extended reputation, as affording a valuable introduction to the Royal Academy as well as the most efficient plan of study to those who did not design to enter upon the profession of Art. Among the artists, however, it has numbered in the ranks of its scholars some of the most distinguished and rising. This establishment, "possessing every requisite as a probationary school for the Royal Academy, is now conducted on the same principles as heretofore, by Mr. F. S. Cary, with the aid of Mr. Redgrave, A.R.A., who is engaged as visitor." Having recently visited the studios, we were much pleased with their lofty proportions, good light, and general adaptation to the purposes of study. Admirable casts from the antique, drawings, works on Art, and prints, make up a collection from which the most valuable information may be gleaned, and the instruction embraces the principles and practice of Art in its many branches. Of Mr. Redgrave, we may remark, that to the genius which manifests itself in the happy sentiment, invention, and careful finish of his paintings, he superadds long-tried excellence as an instructor. Mr. Cary is fortunate, therefore, in having secured his assistance as Visitor. With regard to Mr. Cary himself, his character as a gentleman and an artist of considerable talent gives every assurance of his ability to wield such an educational instrument with success. The requisites for directing such an institution are many: artistic excellence alone will not suffice; the faculty of conveying knowledge is demanded, and it should be seconded by urbanity of manner, and a quick perception of the characters of those whose studies are to be directed. With such advantages of management and of means, therefore, we anticipate for Mr. Cary a career of considerable success; and, deeming the school one of public interest, have seized the earliest opportunity of transferring these impressions to our pages.

**THE ART-UNION EXHIBITION.**—Upwards of one hundred thousand persons have visited the rooms in Suffolk-street, to examine the exhibition of prizes selected by the Art-Union Society, during the few weeks it has remained open, and we understand without any injury having been sustained by the pictures. This is very gratifying intelligence, and will go far to remove all objection to admitting the public generally to public depositories of works of art. The rooms were lent gratuitously by the Society of British Artists; but a sum of money will no doubt, as last year, be granted to that body as some small recompense for "wear and tear." A correspondent complains strongly of the difficulty of examining the pictures in consequence of

"the crowd";—we should willingly bear the evil for the sake of the good.

**MODELS IN CLAY.**—We have been much gratified by a visit to the studio of Signor San Giovanni, in Wardour-street—an Italian artist, who has been for some years a resident in England; and who, like many of his countrymen, was compelled by political changes to abandon fame and fortune in his own country, and to depend for honourable maintenance upon the pursuits he had previously adopted for amusement and enjoyment. Foreigners, however, will live where an Englishman would starve; it is to the honour of this gentleman that he is not ashamed to ask Genius for bread. His models in clay are very beautiful specimens of Art; drawn with an accuracy which few achieve; and rendered with a degree of poetry that greatly enhances their value. He teaches the art; and the student will at once perceive from his examples that he is a competent and accomplished teacher. There are many—ladies particularly—who may thank us for thus directing attention to his skill, taste, and knowledge; for many who will not venture to cope with the difficult art of sculpture, can easily master the comparatively facile art of modelling. Signor Giovanni's specimens consist of groups and figures, the majority of them being Greeks and bandits, selected, perhaps, because of their picturesque costumes: they are amazingly true. But his copies of dogs are certainly the most masterly we have ever seen: the collection embraces every variety, from the small greyhound of Italy to the noble animal of Newfoundland. There are hundreds who strive to obtain portraits of such "pets." Of the higher "animal," man, he also models "likenesses," singularly accurate and faithful. We hope our brief note of introduction may procure some visitors to the studio of a most able artist, whose reverse of fortune is not of his own creating.

**THE CHIRAGON.**—We have seen a simple little instrument called the chiragon, enabling the blind and tremulous to write straightly and steadily—it is invented by a Mr. Stidolph of Kensington—and cannot fail to be of value, especially to those who are afflicted with loss of sight; even to artists, who are subject to the sad evil of tremulous hands, the invention may be a most serviceable acquisition. Its advantage consists in its remarkable simplicity: our readers must take our opinion on trust, for it is impossible to describe it in words. The hand is guided so that straight lines and equal distances shall be at all times secured. Mr. Stidolph well deserves the thanks of thousands for this addition to the enjoyments of those whose sources of pleasure are sadly abridged.

**SALES OF THE MONTH.**—MR. ACAMAN OF BRISTOL.—The collection of this distinguished connoisseur has been recently sold by public auction. Our readers are no doubt generally aware that the failure of his great iron factory, in Bristol, rendered this step necessary: from misfortunes in commerce the meritorious are no more exempt than the undeserving; the man of taste is, to say the least, as liable to them as the mere slave of gain. It is a consolation to this excellent and estimable gentleman, that he retains the respect as well as the sympathy of all who know him; and there are few without the hope that he will yet live to see replaced the collection, or one equal to it, he had gathered with so much judgment, and upon which it is not too much to say his affections were placed. Some years have passed since we visited his house in Bristol, and enjoyed one of the rarest treats ever submitted to us. We rejoice at an opportunity of bearing testimony to the kindness, courtesy, and liberality of its owner. We copy some remarks on the sale, and a list of the principal pictures sold, from the columns of the *Times*:

"The collections of pictures might, indeed, with propriety have been designated as princely; it had been made not only at a vast expense, but with rare taste and judgment, and a painful interest was excited, even in the stranger, by its utter dispersion. Indeed, an instinctive sympathy would seem to impress upon the most heedless, that there can be few worldly losses more trying than that of parting with a long-cherished collection of the highest objects of Art. Mere property, lands, messuages, and tenements, may be speedily replaced by money power; but a mass of intellectual riches like the present—the work of a lifetime to bring together—when once scattered abroad, can never again

fill their accustomed places. To those who have long been familiar with choice paintings—who have, by frequent examination, become thoroughly acquainted with their rare, and varied, and less obtrusive beauties—who, in a word, have appreciated the high talent and lofty genius enshrined on the canvases, and have formed, as it were, attachments to particular Claudes, Titians, Salvator Rosas, and Carlo Dolce—it must be a severe test—a terrible uprooting of the *lares* and *penates*—to resign such treasured friends for ever to the charge of strangers. The collection contained some noble specimens of the renowned Italian artists, and was particularly rich (though lacking Rembrandts) in Dutch and Flemish subjects. There was, we believe, only one Claude, a delicious landscape, steeped in quietude, with a 'Holy Family' reposing in the foreground; and but one, and by no means a characteristic specimen ('St. Francis') of the great Spanish master, Murillo, an artist more at home in dealing with peasants and roguish vagabonds than with saints. It is not our purpose to be guilty of offering what might at this time of day be almost termed the impertinence of criticism on the works of men, who, like the heroes of Ossian, have long ago 'received their fame,' and expressions of admiration may be deemed equally superfluous; nevertheless, it is a labour of love to mention, in passing, a few of the pictures, though without reference to their money value. Amongst the richest gems we would place the 'Ecce Homo' and a 'Head of the Virgin,' both by Carlo Dolce. The depth of suffering and resignation of the one countenance, and the grace, sweetness, and tranquillity of the other, with the air of spirituality imparted to both, combined with the chastest colouring and most exquisite finish, riveted the attention of the spectator, and fixed these subjects on the memory long after the gaze had been transferred to other objects. The former picture was from the cabinet of the deceased French Premier, Cassimir Perrier, and the latter from that of Lord Arundel, of Warburton. It would far exceed our limits to dwell upon the varied beauties of other Scriptural pieces, by Luini, Albano, C. Maratti, N. Poussin, Domenichino, Guido (a delightful picture, the 'Magdalen in Adoration'), Parmegiano, Dietrich (a splendid 'Descent from the Cross'), &c. Conspicuous amongst the moderns was Westall's brilliant piece, 'Psyche discovering Cupid Sleeping'; and, scarcely less so, Müller's two admirable works, 'A Frozen River,' and 'The Hoar Frost'; paintings which will go far to create for the artist a name which the world will not willingly let die; Rippington's 'Recruiting Sergeant'—of itself a study for an afternoon, abounding as it does in character and episodes of humble life, as spiritedly and distinctly placed before the spectator as if accompanied by letter-press descriptions by 'Boz.' There was also a charming 'View of the Wye and Severn,' by Johnson. The following is a list of the prices obtained for some of the first-rate lots:—'Travellers on a Road, near a Castle,' De Heusch, 52 guineas; 'The Piazza of St. Mark,' Canaletti, 62 guineas; 'An Interior,' Zorh, 81 guineas; 'A Calm, with Vessels,' Van de Velde, 52 guineas; 'A Seaport,' Lingelback, 61 guineas; 'The Judgment of Solomon,' W. Mieris, 702 guineas; 'A Man-of-War and other Vessels,' Backhuysen, 129 guineas; 'The Dentist,' Teniers, 320 guineas; 'The Ferry-boat,' J. and A. Both, 410 guineas; 'Ecce Homo,' C. Dolce, 140 guineas; 'A Vase with Flowers,' Van Os, 60 guineas; 'A Town on a River—Moonlight,' Van der Neer, 50 guineas; 'The Gipsy Tinker,' Weenix, 50 guineas; 'A Shipwreck,' Vernet, 82 guineas; 'A Calm,' Vernet, 53 guineas; 'The Confectioner's Shop,' Schalken, 81 guineas; 'A Wood Scene,' Der Heyden and Van de Velde, 97 guineas; 'The Descent from the Cross,' Dietrich, 100 guineas; 'La Belle Dormeuse,' Metz, 200 guineas; 'The Virgin and Child,' Vanduyck, 56 guineas; 'The Deserted Garden,' James Johnson, 52 guineas; 'A Woody Landscape,' Moucheron and Van de Velde, 544 guineas; 'A Hunting Party attacking Deer,' Ruyssdael and Wouvermans, 62 guineas; 'An Interior,' V. Harp, 52 guineas; 'A Seaport, with Camels, &c.,' Weenix, 59 guineas; 'Pastoral Scene, with Figures,' Swanefeldt, 50 guineas; 'The Recruiting Sergeant,' Rippington, 111 guineas; 'Cavaliers Halting at an Inn-door,' J. Ostade, 86 guineas; 'Head of the Virgin,' C. Dolce, 73 guineas; 'The Trumpeter,' Terburgh, 185 guineas; 'A Group assembled at the door of a Cabaret,' Teniers, 155 guineas; 'Men-of-War and Fishing-boats in a Gale,' Backhuysen, 100 guineas; 'A Party at a Chateau preparing for the Chase,' Wouvermans, 310 guineas; 'Mulleaters Arriving,' with, perhaps, one exception, the *chef d'œuvre*, by Berghem, 1570 guineas. This last was the choice picture of the collection, and it excited considerable competition. The purchaser was Mr. Nicuwenhuys, a dealer, from Brussels, who paid for it the above large sum. We understand that a person having a commission to a much higher amount was attending the sale, but happened accidentally to be absent from the room at the time it was put up. It was, we believe, sold by the late Mr. Christie for £850. It will now, it is said, pass into the possession of the King of the Belgians. The produce of the first day's sale amounted to £2396 6s. 6d.; that of the second to £2017 18s.; and that of the third to £477 11s.; making a total of £8891 9s. 6d.

\* In a few hours after the sale of this picture, an express arrived from the Prussian ambassador, to purchase the Berghem, under a limit of £2500, for the King of Prussia.

## REVIEWS.

**OWEN'S ETCHINGS.** P. and D. COLNAGHI & Co. To the pre-eminent qualities of Fine Art that distinguish painters' etchings, the pages of this journal have often borne a willing testimony. The process of etching on copper affords, indeed, under the guidance of an artist's mind, every facility for the expression of his feelings; whether he desire to embody his ideas by simplicity of design, variety of execution, or depth of tone and colour, all are in this way attainable; let him eschew "rules and regulations," and, having made himself, by practice and experience, thoroughly aware of the means within his disposal, freely adopt the point of the needle, the scrub of the mezzotint tool, the brush of the sand-paper, to obey his bidding. The wise general is he who best knows how to dispose the forces that chance has placed at his command; and it is the remark of the best artists, that to the mind, and not to the material, must we look for the finest qualities of Art. Where, however, there is considerable choice as to the *méchannique*, we wish to signify how absurd is that rule which would bind the painter to make what is termed a "legitimate" etching. It was not in such a way that the great master, Rembrandt, applied himself to the coppers whose products have delighted many generations. He appears to have looked upon every adjunct that chance or invention threw in his way as fair game, only intent upon the ultimate realization of the grand idea that pervaded his mind. In etching, such as it may and ought to be, the manner will necessarily be regulated by the animus of the painter; the perceptive and imaginative qualities are at once the immediate guides of the tool whose agency may be employed; and while superficial observers may dwell with delight on regularity of line, neatness of execution, clearness of cut, give us the bold vigorous stroke, dash, or even jag, of the painter's hand,—that natural touch which obeys the first impulse of the creative mind, when the work comes, like the iron from the forge, glowing with the original ardour of its formation.

Previous numbers of this journal have placed before our readers an account of the whole process of a painter's etching; and multiplied indeed it is before reaching that state in which a tolerable satisfaction arises to the mind of the conceiver. It is our purpose on another occasion to enter into an examination of the etchings of old masters, and subsequently to make a *résumé* of those by painters of our own day. The object of our present remarks is the introduction of a volume, recently placed in our hands, of etchings which, though executed by neither painter nor engraver, claim from us the credit that might be assigned to both. The author is a clergyman, whose duties have not interfered with the collection of so great a number of original etchings as would have graced the leisure of the most unemployed (though deserving) of our artists; and yet, so allied are the Fine Arts with every feeling that tends to cultivate and refine the soul of man, that we at once acquiesce in the belief, that the time devoted to these offsprings of a peculiar talent has by no means been unprofitably stolen from the more stringent and important labours required by the flock committed to his charge.

The etchings contained in this volume—a volume of large, but portable size—not only display a knowledge of the *pratique* which is extraordinary, but they likewise astonish by their number. Their dates, it is true, indicate the continuance of Mr. Owen's exertions through a pretty long series of years, but it is evident from the quantity he has brought to maturity, that many may have been spoiled; and thus he proves that to the original talent required for the prosecution of Art, he unites that without which no talent can achieve great results—assiduity. In buildings and streets Mr. Owen's forte evidently lies. The ruins of old places excite him to do his utmost. In them he appears to revel with all an antiquary's love of minutiae; still are the details presented to us with all the finished breadth of an artist. Seldom, not even in the finished works of Piranesi and Pinelli, have we seen greater strength of colour united with so admirable a variety of tone. The distances are peculiarly exquisite; and we shall, by and by, point to specimens which surprise and gratify by the admirable management of aerial perspective. In figures, where they form the centre of attrac-

tion, and consist of the human species, we certainly are far from approving of Mr. Owen's labours. Introduced as accessories to his landscapes, they indicate a choice of position, and disposal of light and shade, that would do credit to the most finished artist; but, when they become the principal objects, and the picture consists of them alone, the faults, the want of careful study and academical learning, are peculiarly manifest. The grotesque usurps the place of humour, and it is the grotesque without an aim. These are, however, but the erratic steps of Mr. Owen's genius; for in his cowsheds the figures of herds and herdsmen are grouped with the skill, and almost with the knowledge of old Ostade himself. Certainly, we say, in defiance of disproof, that Mr. Owen's light and shade is almost unexceptionable; there are here and there hard lines of dark and of light running unpleasantly through an otherwise perfect composition; and, in certain cases, there is an evident want of perception of the value of some one positively cutting dark and light, to come out and strike the eye from the mass of light and shade. The prevailing character of these works, however, is that of a vivid perception of the sombre beauties of *chiaro scuro*; and no small credit is it to Mr. Owen that the more difficult perceptions are those which seem first to have been presented to his mind.

Mr. O. does not appear to work with the dry point so much as by means of the absolute etching process; and he has thus obtained all the brilliancy which results from the colour of the paper between broad and powerful lines. There is another plan adopted by him (suggested by a knowledge of effect) which adds not a little to the painter-like qualities of the etchings; the size of the India paper on which they are printed is so admirably adjusted as to reach no further than the margin of the work, thus giving all the advantage acquired by the "mounting" of a water-colour drawing. The printing again is most admirable; by whom it is executed we know not, but, with the exception of the Etching Club's 'Deserted Village,'\* we have seldom seen a more excellent execution of this important portion of a publication. Artists desirous of proving their etchings, cannot be too anxious on this point; though beauty and force lie in the hands of the etchers, the printer not only has it in his power to mar their best efforts, but his skill, when carefully directed, may be made productive of increased effect to the painter's production. So much so, that Rembrandt is said to have worked at a press of his own, and thus, in many of that shrewd man's works, we can trace the finest variations in tone and colour to the skilful management of the *printing*. The magic processes of "wiping out" and "leaving a tone," the quality of the ink, the scraping of the burr—upon these so much depends, that the enthusiastic etcher will never communicate his produce to the press, but through his own hands or those of a skilful friend.

Having thus disposed of our case, let us proceed to call evidence, and wishing to leave the cause of the defence to triumph as it ought, we proceed first to mention those etchings against which the "still small voice" of censure has been pronounced.

The first interior, though excellent in some points, fails entirely from the want of truth. On the right hand, the articles of crockery, &c., against the wall must be transparent indeed, in order to produce such luminous shadows, though situated nearest the powerful light. The battles and the cobbler subjects, of which there are four or five, are the eyesores of the collection; not excepting, however, the two figures 'Scaramouche and Smutty,' where the etcher has been evidently so doubtful of his subject, that he has failed even in the etching. We confess that these figures, like those in the 'South Transept Door, St. Mary's,' are a riddle to us. Mr. Owen's landscapes, streets, and old buildings are so admirable, that the introduction of these figure-pieces is much to be regretted. In the 'Tower, near Welch Bridge,' as in some of his best productions, the mass of black deteriorates materially from excellence. Perhaps this may be slightly remedied in the printing, if all the impressions be not as yet struck off.

Of the etchings that afford a thorough satisfaction, we will select for mention two or three Ryedale-looking landscapes: 'St. Mary's Font,' 'The Abbey, Salop,' 'Grey Friars,' exquisitely wrought

\* Printed by Messrs. Gadd and Kenningale.

and admirably designed; the 'Castle Gates,' the effect of which is beautiful and full of air; the 'Welch Bridge,' passim; and lastly, the 'Bridge of Vardome,' where the positive black is put in the right place, and assists to produce the appearance of atmosphere around.

Although this work was placed before us as that of an amateur—a respected clergyman of the Established Church; and although thus presented for the laudable purpose of contributing, by its sale, to the benefit of a charity, it nevertheless challenges criticism, not alone by its ability to meet it, but by exciting the desire to award commendation to works that afford true gratification. Looking at these etchings with the demands arising from an intimate acquaintance with the products of the etching needle, we feel called upon to suggest to every collector of works of Art the pleasure he may derive from making such a collection his own. To Mr. Owen, in parting, we observe that he must cherish a feeling of honest pride in having accumulated and perfected so many specimens of his skill in, and love of, Art, and at having thus indelibly registered his name on the rolls of artistic celebrity.

**THE GEMS OF STUART NEWTON, R. A., with a Memoir and Descriptive Notices.** By HENRY MURRAY. Publishers, LONGMAN and Co.

We give this book a very hearty welcome; it is a just and fitting tribute to the memory of one of the best artists of our time. We have here a series of engravings from his most popular works, collected into one elegant volume; a volume similar in appearance to the larger 'Annals,' but worth the whole of the season's trifles put together; for these are really gems of Art—exquisite pictures beautifully engraved, and of a size sufficient to preserve their character and convey a fair idea of their merits. Poor Newton! his fate was a sad one. It was our privilege to know him in the zenith of his fame; when those who admired him and his paintings little anticipated the heavy affliction by which he was destined to be visited—

"The last extremity of noble minds."

He died in an insane asylum. The finest and ablest productions of his graceful pencil are here gathered, and the collection will delight all who can appreciate excellence in the Arts; his single figures are perhaps the most successful: who can look upon these three—'La Penserosa,' 'The Deserted,' and 'The Forsaken'—without being moved? Here is a glorious transcript of the passage that describes the dying Lear attended by his devoted daughter. Here is a capital work of another class—the scene from 'Gil Blas,' where "the Prince of Spain visits Catalina;" and here again one of another order, the 'Abbot Boniface,' a realization of the famous portrait of Sir Walter Scott. Each of the assemblage is interesting and valuable as a work of Art, and a rare acquisition to the collector. Thus gathered together, they form a most attractive volume—"got up," to use a technical phrase, with exceeding elegance, very splendidly bound, and forming a more desirable present than any that "the season" can hereafter produce: at a rate, too, of unusual cheapness, for half the number of the prints are fairly worth the cost of the whole. Each engraving is accompanied by a couple of pages of judicious and well written remarks from the pen of Mr. H. Murray.

**THE TRIAL OF EARL STRAFFORD.** Painted by WILLIAM FISK. Engraved by JAMES SCOTT. Published by THOMAS BOYS.

The amplitude of Westminster Hall has afforded the artist, for the effects of his composition, advantages which few other interiors could afford; although it is at once perceptible that to turn such to the utmost profit, demands powers of literally the highest order. The subject is highly important and interesting, and in its treatment here it comes forward as a scene pointing to some issue involving the most serious human interests. The foreground of the composition is open, giving importance to the principal figure, that of Lord Strafford, who stands upon a platform delivering his memorable speech; he is pointing to his children, and pronouncing the words—"My Lords, I have now troubled you longer than I should have done were it not for the interest of these dear pledges a saint in heaven hath left me." The figure is erect and dignified, bespeaking well the character of the

man. The other figures of the picture amount in number to a multitude, wherein we find every living cotemporary of Lord Strafford, entitled by position to a seat in the court. Near him are seated some of the peers, and around stand members of his own family; he is immediately confronted by Pym, behind whom are others of his persecutors, scarcely less active.

We can appreciate the labour and perseverance of the artist, in surmounting the difficulties which must at first have presented themselves to his bringing forward his design in the manner in which it has been executed; and our meaning will be understood when we state the fact of fifty-two portraits appearing in the composition. In a distant part of the Hall is seen the throne, and near it sit Charles the First and his Queen; and near them the Prince of Wales, afterwards Charles the Second. Among those conducting the trial are Cromwell, John Hampden, Selden, and Fairfax; also are present, John Evelyn, Denzil Holles, Oliver St. John, and many others more or less remarkable in the history of those times. The work is highly finished in mezzotint, and will form a valuable addition to our collection of historical engravings; notwithstanding that, we may not class it as foremost among them.

**PORTRAITS OF THE ROYAL FAMILY, AND MOST DISTINGUISHED NOBLES, &c., OF GREAT BRITAIN.** By S. DIEZ. Published by A. H. BAILY and Co., 83, Cornhill.

This work is executed in lithography; it appears in monthly numbers, each containing two portraits; and it is proposed to publish fifteen such numbers. Those which have appeared are of her Majesty, Prince Albert, the Duchess of Cambridge, the Princess Augusta of Cambridge, the Duke of Sussex, the Duke of Wellington, Lord Lyndhurst, and Lord Hill. The royal and noble personages represented may or may not have sat to the artist; if they have, he has by no means availed himself of the occasion, since the lithographs seem rather recollections than attempted identities from actual sittings. There is about the whole an unbecoming character of length; so that in fact they are emphatically "long"-faces. With respect to her Majesty, in the worst portraits of her we have not seen so entire a failure: there is a shrewish *pettesse* in the features altogether foreign to them, and to the total exclusion of the benign dignity which characterizes the brow of our Sovereign. And if the Duke of Wellington be anything like his portrait, we must, with *Dogberry*, say he is "not the man we took him for:" the face is akin to the stone on which it has been drawn. The whole of these prints are individually distinguished by some one or other of the great disqualifications of portraiture. The Princess Augusta of Cambridge is represented in a manner vulgar beyond precedent: it is curious, but there is in the sentiment a somewhat reminding us of a portrait of H. R. H. the Duke of Cambridge, exhibited, we believe this year, on the walls of the Royal Academy, in which he was painted in tears. The name of Diez is new to us—the bearer, we presume, is a rising artist: we would that he had fleshed his maiden pencil in material less dear to us than the heads of those "whom we love too well to see belied." We shall recur to this series as it progresses, and aid him with our advice. We censure thus lightly from a conviction that this painter has mistaken his line of Art.

**MISS JIM-IMA CROW.** Painted by W. HUNT. Drawn on stone by T. FAIRLAND. Publishers, GRAVES and WARMESLEY.

Full of point, character, and humour—one of the most striking examples of the peculiar talent of Mr. Hunt. A negro wench is sitting by the fire-side, showing her white teeth, and laughing and looking as if the cares of the world sat lightly on her shoulders. It has been capitally copied by Mr. Fairland.

**THE WIDOW.** Painted by E. LANDSEER, R.A. Engraved by J. BURNET. Publishers, H. GRAVES, and Co.

As an example of mezzotinto engraving this work is of rare excellence; it has been wrought with a happy combination of force and delicacy, and at once carries conviction of the master hand. The subject, however, might have received sufficient justice in a space far more limited: a print this

size—about 2 feet by 18 inches—should contain matter in proportion; and here, after all, we have nothing but a bank, a pond, distant mountains, and a *couple of ducks*: the ducks to be sure are Landseer's; and they are made to tell a story—the widow is lamenting over the body of her dead husband; and really a degree of sorrow almost human has been expressed in the "countenance" of the bereaved. Still the picture is better suited for a book illustration than for publication on so grand a scale. Unhappily, when the works of an artist become popular, publishers imagine that the public will be contented with any production from his pencil; and as there are at all times a number of collectors of engravings after him, any print, no matter what it contains may "do" to a certain extent. This principle, however, proceeds upon hollow ground: it will fall away ere long; the public will grow tired of Mr. Landseer, as they have wearied of other artists, if he thus presume upon the favour he has acquired; or if the publisher—as is more likely—is willing to risk his fame by trifling with it.

**THE SKETCHER'S GUIDE.** By W. F. ELLIOT. Published by S. and J. FULLER, 34, Rathbone-place.

This is an apparatus for drawing landscape in correct outline, and perspective *without* elementary knowledge; and is well adapted to assist amateurs and *tyros* in drawing correctly objects as affected in their appearances by perspective. The invention consists of a framed glass, through which the sketcher views the scene he is desirous of drawing, and delineates correctly on the glass the objects in their respective sizes and positions; the distance of the eye from the glass plane being determined by a sight-hole. When thus traced, it is transferred to the sketch-book, the outlines on the glass are obliterated, and he proceeds to another view. It is not, however, proposed that the draughtsman is to work entirely in the dark with respect to perspective—the essential of Art: "The Guide," is accompanied by a short treatise, wherein perspective and effect are familiarly explained, and illustrated by a number of vignettes sufficiently large to assist the text, of which, by the way, we must say, that it is written without pretension, and sometimes offers as much information in one line as may be gathered from a page of some laboured treatises.

**THE WANDERINGS OF AN ARTIST IN ITALY.**—We have been much gratified by the perusal of a series of stories published under this general head, in "Bentley's Miscellany." They are from the pen of Mr. Rippingille, whose lengthened residence amid the less frequented parts of Italy, which he describes, has enabled him to picture the wildest and most romantic scenes of these districts and their inhabitants with a force and spirit which the reader feels to be essential truth. They bear the fresh impress of the nature of the places and people of which they treat; and these are admirably adapted in character to each other, being, on the one hand, the wildest fastnesses of the land, and on the other a fierce and lawless race of men, setting at naught, in their acts of blood and violence, the nerveless governments under which they lived, and scorning all the inborn ties of humanity. We have heard occasionally of the Italian banditti through the newspaper police reports of foreign journals, but never have their habits and manner of life been so faithfully described as in these papers; the substance of which is gathered from individuals, who themselves have been members of these dreaded gangs, or from others who have lived in connexion with them. The author of these papers has, we are glad to hear, received commission from H. R. H. the Duchess of Cambridge, and also from Lord F. Egerton, to paint from some of the most striking incidents he describes; and there are many affording the most remarkable subject-matter for the pencil. We agree in the necessity of artists seeing all that has been done by the old masters, but we cannot concur in the value of the practice of spending years in making copies, as the bulk of our painters do. Those who are so far moved by nature as to paint it well, could scarcely fail to write about it well. We would that artists would write more than they do, taking an independent view of all they see about them; for such writings must, more or less, have a professional

tincture, and would undoubtedly be serviceable. We are induced to offer these remarks by the tone of Mr. Rippingille's papers; he shows himself one of our few Sicilian bees who returns to the hive rich from the thyme of Hybla.

**DIPLOMA OF THE PHARMACEUTICAL SOCIETY.**—We have seen a fine print (engraved for this Society) by Mr. H. C. Shenton, after a drawing by H. P. Briggs, Esq., R.A. The engraving is in a good bold style, suited to the work, but exhibits the burin of a sound master. It is just such a production as we desire to see more of—in which nothing has been frittered away to produce "niceness," although every touch has been minutely copied. The print will add to the reputation of Mr. Shenton. The drawing of Mr. Briggs is—as our readers will readily believe—admirable. The two supporters are designed with a broad and manly effect; and the flowers, "professional," of course, are beautifully and minutely made out. The print is honourable to "the Society," and augurs well for their judgment and taste.

**ART-UNION MEDALLION.**—Mr. Pickersgill's design for the Art-Union Medallion has been engraved on steel, upon a reduced scale; and the plate has been presented to the Society by the engraver, Mr. H. W. Collard. It is very beautifully executed, and does credit to his abilities. There is great refinement in the touch; the outlines are given with considerable ability; and the background is put in without disturbing the harmony of the composition.

**TO CORRESPONDENTS.**

**FRESCOS.**—The *Kentish Standard* contains a long and elaborate article, written with no inconsiderable ability, in reference to the two frescoes recently painted by Mr. Mills, for the Literary and Scientific Institution of Gravesend; he is about to undertake two others for the same place. The subjects are 'The Descent of Diana to Endymion,' and 'Aurora Dispersing the Clouds of Night.' The writer speaks of them in very rapturous terms. We hope to have an opportunity of examining them.

Mr. Britton's letter was somewhat too late for insertion in the present number.

The letter of "J. H. M." in our next.

**A YOUNG ARTIST.**—*Chiaro scuro* means literally light and shade. Breadth is a treatment by broad masses of light or shadow, unbroken by objects so harshly thrown in as to fret the eye. Keeping is the general propriety of a composition—a perfect adaptation of all its objects and circumstances, and their contribution to the main effects. Harmony of colour is the prevalence of tones which *harmonize* with each other. Air is that particular quality of execution which shows objects through an atmosphere: this is commonly done by charging the atmosphere slightly with mist. This correspondent says, that in looking at pictures "painted on the spot," he sees nothing like nature, except the lights and shadows; in seeing which, he sees the main excellence of the work. From the tenor of his note, we suspect he is charmed by colour; he will do more by attending to these same lights and shades: for these he must consult nature, in doing which colour must follow. His friends recommend him to study from nature—and we repeat, that her school is the only one in which he will profit.

We have in type reviews of the "New Law of Copyright," "Ancient and Modern Architecture," the "Environs of London," "Guides to Wicklow and Belfast," the "Portrait of Prince Albert," "Heraldry of Fish," &c. &c.

**TO GENTLEMEN, ARCHITECTS, and Others.**—**SLOPER'S CONTINENTAL MARBLE PAPER HANGINGS**, invented and manufactured only by J. SLOPER, No. 106, HIGH-STREET, MARYLEBONE.—J. S. solicits an inspection of his Continental Marble Papers, expressly adapted for halls, staircases, &c., being natural imitations of the most beautiful foreign marbles, worked in blocks of any dimensions, and differing in every way from anything hitherto manufactured in England, well deserving the attention of all connected with good buildings. Good bed-room paper, 1d. per yard; handsome drawing-room, 8d.; dining and library, 6d.; best gold moulding, 6d. per yard. House painting and decorating 15 per cent. less than usually charged. Estimates given. Patterns sent to all parts of the country.—Observe, J. Sloper, 106, High-street, Marylebone.

# THE ART-UNIONS OF GERMANY.

UNDER THE PATRONAGE OF HIS ROYAL HIGHNESS THE DUKE OF SUSSEX, HIS ROYAL HIGHNESS THE DUKE OF CAMBRIDGE, AND THE NOBILITY.

## Berlin, Düsseldorf, and Dresden.

The extraordinary popularity and success which have attended the "Art Union Societies" in Great Britain, afford unquestionable evidence of an increased taste for and appreciation of the Fine Arts; and a widely-spreading desire, on the part of the public generally, to become better acquainted with them in their various and important ramifications.

This country, however, cannot claim the merit of originating these valuable institutions for their promotion. A society having similar objects was established at Düsseldorf, so early as January 1829. It was followed by establishments, formed for the same great purpose, in Berlin and Dresden, under the immediate patronage of the King of Prussia; and under the protection and encouragement of all the Foreign Courts.

The immensely varied and inexhaustible resources offered by the different schools throughout Germany, the Communities of Artists of Berlin, Düsseldorf, Dresden, Frankfort, Munich, and other cities, afford annually a rich and endless variety, including productions of genius of that transcendently beautiful character, for which the Schools of Germany are so justly famed.

That there exists a strong desire in many of the Members of the English Society to become associated with those of Germany, is manifested to the Councils of the several Unions, by the number of applications that have been made for admission to the Subscription Lists; and to such an extent has this feeling evinced itself, that the establishment of a direct British Agency has at length been determined on. The Councils of the Art-Unions of Germany have, at their respective Meetings at Berlin, Düsseldorf, and Dresden, come to the resolution to establish in London a direct Agency and Dépôt for the reception of the names of Subscribers, for the exhibition of their works, and for the distribution of their prizes; thus affording to the English Nation an opportunity of enjoying all the privileges of their Associations.

They have therefore to announce that they have completed an arrangement with Mr. Henry Hering, 9, Newman-street, Oxford-street, London, appointing him as their sole Agent and Manager for the United Kingdom,

For the Reception of Subscribers' Names,

For the Issue of Tickets,

For the Distribution of the Prospectuses and Prizes,

For the Exhibition of the Engravings which, from the establishment of their Institution to the present time, have been selected as the Presentation Prints to the Subscribers; and for the management of the general business of the German Art-Unions in Great Britain; and they beg to acquaint the Nobility and Gentry of England, Ireland, and Scotland, that from Mr. Hering can be obtained every information respecting their Institutions, and that to him all communications are to be addressed.

Mr. HENRY HERING, in pursuance of the Resolutions of the Councils of the German Art-Unions, has the honour to intimate to the Nobility and Gentry, the Lovers and Patrons of Art in the United Kingdom, that he has established an Office at No. 9, NEWMAN-STREET, for the express purposes of the Institution, where will be exhibited daily, Specimens of the Engravings which have been published by the Unions and presented to the Subscribers from year to year, and where books are opened with the names of Subscribers in England, Ireland, and Scotland. Correct Translations from the German of the Prospectus issued by each of the Unions, viz., Berlin, Düsseldorf,

Dresden, Munich, and Frankfort, will be also registered for inspection. The only essential particular in which the Unions of Germany differ from that of England is the manner in which a selection is made of the Pictures which are to form the Prizes. In the German Associations one principal object is kept in view—that of improving the Public Taste, by delegating to a competent Committee of known judgment, Twelve in number, the choice and selection of such Pictures as will form the Prizes. A double advantage is thus gained; no encouragement is given to inferior productions of Art, nor is the public taste left without some guidance by Professors of acknowledged experience in Art.

It is further intended, that if the amount of the Subscriptions in England shall realize the expectations of the Council, a Gallery shall be opened for Two Months in each Year in London, for the reception and exhibition of all the Pictures that will form the Prizes at the next ensuing distribution, to which exhibition free access will be given to every holder of a Ticket.

A liberal proportion of Tickets will be appropriated by the Councils of the several Unions for disposal to the British Subscribers, each of which Tickets will bear the Signature of the accredited Officers of the Institutions, and must be countersigned by Mr. Hering as their Agent.

The price of the Subscription Tickets in either of the Associations, viz.: Berlin, Düsseldorf, or Dresden, will be 20s. each, which sum will cover every expense of Postage, Duty, Freight, and Delivery at the Repository in Newman-street, of the Prizes that may be awarded, and also of the Engraving which will be presented to the holder of each Ticket. The Price of each Ticket to be paid in advance, for which a Receipt Ticket will be given, which Ticket will entitle the holder to all the advantages of the Institution to which it appertains. For the convenience of Subscribers residing at a distance, Share Tickets will be forwarded in course of Post, upon the Receipt of a Cash Order, payable in London; or a Post-office Order, or a cross Cheque. Each Subscriber will be entitled to one Copy of the Annual Presentation Engraving, from the date, and during the continuance, of his Subscription, which will be delivered within from One to Three Months after the close of every drawing, and also be at liberty to purchase, at the rate of 20s. each, an impression of any one of the Engravings that have been already distributed. One Month's Notice will be given in the Daily Journals of the intended Day of Appropriation of the Prizes in each Union; and it is Mr. Hering's intention to proceed to Germany, in order to be present at the Drawing, and to represent the interest of every one who has, through his Agency, subscribed to these Institutions. A similar notice will also be given of the latest day on which Subscriptions can be received, after which the Lists for that Year will be closed, and the numbers forwarded to the various Committees of Management. Mr. Hering begs most respectfully to assure all who may honour him with their Names as Subscribers to the German Art-Unions, that the utmost endeavours shall be exerted by him to protect their interests, and to prove himself worthy of their confidence.

GERMAN REPOSITORY OF ART,  
Newman-street, Oxford-street, London.

That independent and interesting Monthly Journal, "THE ART-UNION," in speaking of the facilities now offered to persons resident in this country of becoming associated with the Art-Unions of Berlin, Düsseldorf, Munich, Dresden, and Frankfort, thus says:

"It is proposed to extend the benefits of the Art-Unions of Germany to this country, an enterprise which must cause a considerable circulation of German Engravings among us, and whence can result nothing save improvement."

And in alluding to the Engravings which have been gratuitously presented to the Subscribers, the same Journal adds:

"In 1839 the Art Union of Düsseldorf presented to subscribers an engraving by T. Felsing, from a picture by Bendeman, entitled 'Girls at the Fountain.' The title, which might admit of a much less refined illustration than exists in this beautiful engraving, is not worthy of the work; for, in the composition, the fountain is a mere accident, the whole force of the theme being settled in the expression of the countenances of two girls, which involves a tale of the heart. The engraving is in line, and in the perfection of that style. In 1840 the same Art-Union presented to its subscribers an engraving by Felsing, from a picture by Köhler, entitled 'Poetry.' The subject is made out by a figure in a sitting position, winged and draped, and writing in a book the inspirations she is invoking. This figure is also in line engraving, and is as much superior to ordinary allegory, as good poetry is to bad. In 1841 this was followed by 'The Queen of Heaven,' engraved by Professor Keller, from a picture by Deger, exhibiting the most exalted feeling for religious painting."

"In 1839 the Berlin Art-Union presented its subscribers with 'Die Lurley,' an engraving by Mandel, from a picture by Carl Begas. The subject is from one of the legends of the Rhine, in which a maiden is described as luring by night passengers out of their way by the sweetness of her music. The figure is on a cliff supposed to overlook the Rhine, and a traveller is seen ascending the rock. The figure is admirably drawn, and is characterized by much of the beauty of the greatest works. The same Society, in 1837, gave to its subscribers 'Das Trauernde Königspaar,' engraved by Lüderitz, from a picture by Lessing, and enforcing the moral, that no "flesh" is exempt from sorrow—"Das Königspaar" a king and queen are seated lamenting the evils of humanity, from which their high estate cannot secure them."

"Each of those works is of a high standard of Art. We find in them aims to approach the most celebrated works of the Italian school; and it must be confessed that they do excel works to which attach even celebrated names of that school."

"We anticipate the most favourable results from a nearer connexion with schools that have studied so closely the great models."

## THE SUBSCRIPTION LIST TO THE ART-UNION OF DRESDEN WILL SHORTLY CLOSE.

TWO BEAUTIFUL PRINTS WILL BE PRESENTED TO EACH SUBSCRIBER, viz.,

'THE POWER OF MUSIC;' after Professor RIETSCHEL.

\* 'JOHN OF LEYDEN ADMINISTERING BAPTISM TO AN ADULT FEMALE AT MUNSTER, IN WESTPHALIA, IN THE PRESENCE OF HIS ENTHUSIASTIC FOLLOWERS;' after BAEHR. Size 21 by 16.

\* This Print is finished, and now on view at the REPOSITORY, 9, NEWMAN-STREET.

Subscriptions also received by MESSRS. LEGGATT and NEVILLE, 79, Cornhill.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

**ART-UNION OF LONDON.**—In consequence of the numerous applications made for the Engraving of 'THE SAINTS' DAY,' due to the Subscribers of the year 1841, the Committee feel compelled to publish the following (the last) letter received from Mr. Chevalier, the Engraver, in explanation of the delay which has occurred, and to assure the Subscribers that no endeavours shall be wanting to obtain the immediate completion of the plate:—

"Oct. 17, 1842.  
"MY DEAR SIR,—I proved the 'Saints' Day' on Saturday last. Two of the proofs will be sent to the Committee to-morrow. I trust the gentlemen on inspecting them may be satisfied with the work I have added to the plate since the last state sent in. Mr. Knight, I trust, will be able to examine the present state in a few days, and I hope soon afterwards to bring the subject to a finish.

"I ought to have written to you before this, for I promised to send in proofs much earlier; but my mind has been so engrossed in working on the plate, and cramped by having been so out in my calculations respecting time with this work, and the inconvenience and trouble the Committee must have felt, that I have forgotten many things.—I remain, dear Sir, yours very truly,  
W. CHEVALIER.

"To the Honorary Secretaries of the Art-Union of London."

The Engraving due to the Subscribers of 1842, from Hilton's Picture, 'UNA ENTERING THE COAST,' is in a forward state of preparation.

Subscribers of the current year will receive copies of an Engraving from SIR AUGUSTUS CALLCOTT's picture, 'RAFFAELLE AND THE FORNABINA,' which is already far advanced.

The Lists are now open, and an immediate subscription is solicited.

Geo. Godwin, Jun., } Hon.  
Lewis Pocock, } Secs.

4, Trafalgar-square, Oct. 25, 1842.

## TO ARTISTS—ART-UNION OF LONDON.

—SIXTY POUNDS will be given for the best consecutive Series of TEN DESIGNS in OUTLINE, size, 12 inches by 8. The subject is left at the option of the Artist, but must be illustrative of some epoch in British History, or be taken from the work of some English Author. Simplicity of composition and expression, severe beauty of form, and pure, correct drawing, are the qualities which the committee are anxious to realize in this Series. If it should be deemed expedient to engrave the compositions selected, the Artist will receive a further remuneration to superintend the publication. The Drawings, accompanied by a sealed letter containing the name and address of the artist, must be forwarded to the Honorary Secretaries on or before Lady-day 1843.

George Godwin, Jun., } Hon. Secs.  
Lewis Pocock, }

4, Trafalgar-square, October 11, 1842.

## TO SCULPTORS—ART-UNION OF LONDON.

—The Committee beg leave to notify that they will be ready to purchase, for THIRTY POUNDS, a FIGURE or GROUP, 15 inches high, calculated for being cast in Bronze, carefully finished off in Plaster, and exhibited at one of the Metropolitan Exhibitions for 1843.

George Godwin, Jun., } Hon. Secs.  
Lewis Pocock, }

LOWER PORTION OF EL KHASNE.

Price £1 1s. .... Proofs, £1 11s. 6d. ; and a few copies, coloured and mounted, in imitation of the original Drawings, in a Portfolio, £2 2s.

## THE HEROIC ACTION OF GRACE DARLING AND HER FATHER.

WHO, AT THE IMMINENT PERIL OF THEIR LIVES, RESCUED THE SURVIVORS OF THE  
WRECK OF THE FORFARSHIRE STEAM PACKET

FROM PERISHING ON THE ROCKS OF THE FERN ISLANDS, ON THE 7TH SEPTEMBER, 1838,

From a Picture painted on the Spot, by H. P. PARKER and J. W. CARMICHAEL, containing PORTRAITS of the HEROINE and her FATHER.

The Forfarshire steam-packet, on her voyage from Hull to Dundee, was overtaken on the night of the 6th September, by a tremendous storm, and driven on the Fern Islands, a group of barren rocks lying off the coast of Northumberland, between Bamborough Castle and North Sunderland. The ill-fated vessel struck about two o'clock on the morning of the 7th, and the wreck was first perceived by Grace, the daughter of William Darling, the keeper of the Longstone Lighthouse, while she was attending to her customary occupation of trimming the lamps of the revolving light : she immediately aroused her father, and they listened through the hours of darkness to the cries of the perishing souls, heard in the pauses of the storm, without power to render any assistance. As the day dawned, they perceived some of the passengers on the rock : but the storm still raged with the utmost violence ; the distance from the wreck was two miles, by a tortuous and narrow channel between the rocks, through breakers ; they had only a small and slightly built boat (called a coble), which would hardly live in such a tremendous sea ; and, the greatest difficulty of all, William Darling had no one to assist him,—his son, who generally lives with him, being unfortunately away on the main land, a distance of nine miles. To afford any succour under such circumstances seemed impracticable ; and the old man was reluctantly compelled to abandon all hope of saving his famishing fellow-creatures : in a few hours they must have been washed away by the tide that was rapidly advancing upon them, had they been able to survive the inclemency of the weather, and their sufferings from hunger and cold—the spray constantly dashing over them during the night.

The point of time chosen for the picture is that when the little boat is nearing the rock : in the fore-ground are seen William Darling and his daughter, toiling through a sea that would have daunted the bravest heart that ever beat beneath a sailor's jacket ; the old man is plying his oars, and Grace, who manages the aft-oar, is trying to avoid a huge fragment of the wreck that seems about to be dashed by the fury of the waves against the boat, threatening to destroy it. In the middle distance are the remains of the wreck ; the vessel had broken in two, and the after-part had been carried away, but the fore-part, with the disabled paddle-wheels, lies on the rocks, the sea beating over her, so that no one could be on board and live : near it, on a fragment of rock, to which they managed to get from the vessel, are the few half-clad sufferers, whose gestures express their transports of joy and gratitude at the prospect of speedy deliverance, mingled with prayers for the safety of their preservers, and thanksgiving to the Divine Providence that has spared their lives. In the further distance is Longstone Lighthouse, its light dimly shining through the grey of the morning, whose first ruddy streaks illumine the wild watery horizon, and reveal the whole expanse of the tempestuous ocean. Over head, two or three screaming sea-gulls buffeting with their native element, seem almost beaten down by the hurricane that drives on the rack of storm-clouds, mixing the clouds and spray ; the crests of the leaping surges are seen relieved against the sky on every side.

Prints, £1 1s. .... Proofs, £2 2s. .... Proofs Before Letters, £3 3s.

### NEARLY READY,

A Series of Etchings and finished Plates to illustrate

## EDWIN LANDSEER'S DEER-STALKING IN THE HIGHLANDS.

The Work will consist of Etchings by EDWIN LANDSEER, R.A., and Engravings by J. H. ROBINSON, C. FOX, T. LANDSEER, and other eminent Engravers.

PREPARING FOR PUBLICATION,

A MAGNIFICENT WHOLE LENGTH EQUESTRIAN PORTRAIT OF

## HIS GRACE THE DUKE OF BUCCLEUCH AND QUEENSBERRY.

PAINTED BY

JOHN WATSON GORDON, ESQ., R.S.A. A.R.A.

Ms. MOON has much gratification in being enabled to announce to the numerous Friends and Admirers of this Patriotic Nobleman, that he is preparing for publication a fine Engraving from this Portrait. No engraved Portrait of the Duke of Buccleuch is in existence, and every effort will be made to render this one worthy of the expectations of the country.

London : F. G. MOON, 20, Threadneedle-street, by Special Appointment, Printseller in Ordinary to Her Majesty.

NOTES ON BRITISH COSTUME.  
PART THE SECOND.

BY FREDERICK W. FAIRHOLT.

## THE DANES.

THE short period during which the kings of this people kept the ascendancy in Britain is very meagre in authorities upon which we may depend for the illustration of their peculiar costume. From an examination of what little we possess, and from stray passages to be met with in the writers of that early period, we find they differed but little from the Saxons; and the silence of the Saxon writers, who have carefully noted the peculiarities of their own countrymen, is a tacit argument for the fact. In the colour, however, a change may have occurred, if not in the shape, of their garments; black being the favourite tint of this people, and "the black Danes" the common appellation by which they were recognised; a feeling carried out by themselves in the choice of the raven as their national emblem, and which figured on the celebrated standard of this "black army." They eventually discarded this colour, as they also did their original garments—the garb of sailors—so befitting their voyaging and piratical propensities; and, having achieved conquests to be enjoyed, became as gay in clothing and effeminate in manners as their neighbours; at least, so say the chroniclers, who also blame them for too frequently attracting the wives and daughters of the nobility by their fopperies. Long hair, which they regularly combed once a day, was a distinguishing feature with them, and one on which they prided themselves, exhibiting the most devoted attachment to this natural ornament, and in this particular completely rivalling the ladies. The "lover of the lady, *beaugeois in his locks*," mentioned in

"The Death Song of Lodbroc,"\* seems to usurp the praises that would be bestowed, according to modern notions, more appropriately upon the lady herself. The hair of King Canute is described as hanging in profusion over his shoulders, and the locks of many gentlemen descended to their waists; and so careful were they of their precious curls, that an anecdote is related of a young Danish warrior, whose "ruling passion, strong in death," induced an urgent request to the executioner, neither to allow his hair to be touched by a slave, or even to be stained with his own blood during the decapitation he was about to suffer.

A manuscript register of Hyde Abbey is in the possession of the Duke of Buckingham, at Stowe, executed about the middle of the eleventh century, which gives us various illustrations of the costume of this period, as well as full length figures of Canute and his Queen Alfyfe. "The drawings are executed," says Dr. Dibdin, "in that peculiar style of art which characterizes the productions of the tenth, eleventh, and frequently the twelfth centuries, namely, tall and somewhat disproportionate figures, flowing, or rather fluttering draperies, elongated hands and feet; and a general delicacy of expression throughout both faces and figures." He has engraved (in the first volume of his "Bibliographical Decameron,"† where this remark occurs,) a group of Saints and Martyrs, a glance at which will show the exact similarity of their costume to that of the Anglo-Saxons already described. Canute is represented in a plain tunic and mantle, the only novelty being that his mantle is tied by cords, ending in conical ornaments or tassels; he wears stockings nearly reaching to the knee, the tops ornamented by a band, similar to the modern Highland stocking. The Queen is also perfectly Saxon in appearance; a simple gown with wide sleeves, a mantle tied like that of her husband, and a close covering for the head, beneath which peeps the royal circlet of gold and jewels, complete her costume. The figure of the Virgin, delineated above her, is also in all points the same as the Anglo-Saxon figures already engraved and described, as are also the saints and apostles who appear in the same scene, and throughout the volume. That representing Canute and his Queen has been engraved in Strutt's "Horda Angel Cynan."‡

\* This wild rhapsody is an ancient Danish poem, supposed to have been uttered by Regner Lodbroc, King of Denmark, who is generally believed to have flourished in the eighth, or beginning of the ninth, century. After a variety of adventures he was, at last, made prisoner by Ella, a Northumbrian prince. He was condemned to die by the bite of vipers, and, during the operation of their poison, is reported to have sung this death-song. A similarity of manners, in this particular, characterized the Indian warriors, who sang their exploits at their deaths, and taunted their conquerors.

† This work is constructed upon the model of Boccaccio; but it is entirely devoted to "ten days' pleasant discourse upon illuminated manuscripts and subjects connected with early engraving, typography, and bibliography." It is profusely illustrated with beautifully executed fac-similes, on copper and wood, of the more remarkable designs that occur in ancient literature, and contains a vast fund of information, couched in the language of pleasant discourse. As a volume of light reading, embracing deep knowledge of the subjects discoursed on, it can scarcely find a rival. The illustrations are exceedingly valuable to the student in the history of this particular branch of Art; and the first 225 pages of the first volume are devoted to an historical disquisition on illuminated manuscripts, with many exquisite illustrations, which fully preserve the feeling and beauty of the originals, many of which, as works of Art, could scarcely be exceeded in the present day.

‡ Or, as the title continues, "A Complete View of the Manners, Customs, Arms, Habits, &c., of the People of England, from the arrival of the Saxons till the reign of Henry the Eighth," a work containing much that is valuable, mixed with some few errors. "In estimating his performances," says Dr. Dibdin, "we should not so much compare them with what might have been expected, as with what had been previously performed in our own country. In short, till the ardent and enterprising genius of Strutt displayed itself, we had scarcely anything which deserved the name of graphic illustrations of the state of Art in the earlier ages. When one thinks, too, that such a labourer was oftentimes working for subsistence "for

The Danish warriors were more expert as bowmen than their Saxon opponents, and they prided themselves upon this warlike accomplishment. "Amidst the gust of swords ne'er did the string of his unerring bow dismiss his belts in vain," is the praise bestowed upon a warrior in "Lodbroc's Death-song." "The flexile yew sent forth the barbed reed—clouds of arrows pierced the close ring'd harness," are expressions, among many to be found in this spirited poem, indicative of the dependence placed upon this portion of a Danish army. The ringed armour alluded to was worn by the Anglo-Saxons before the Danish kings were seated upon the British throne; and is met with, but not frequently, in the illuminations of that period; it consisted of a tunic, perhaps of quilted cloth or leather, upon which was fastened rings of steel, side by side, covering the entire surface, exactly similar to those worn by the soldiers of William the Conqueror, which have been engraved a little further on.

The principal object in the above group is the singularly-shaped shield that appears to have been peculiar to the Danes, who had, however, the orbicular shield also in use.\* This is perfectly Phrygian in form; and is another instance, added to the many, of their preservation of the form of antique war implements among them from very remote periods. The bow and arrows, the former of which is richly ornamented, is from Cotton MS., Tiberius C. 6. The hatchets, spears, shield, swords, &c., are collected from Strutt's "Horda Angel Cynan," Meyrick's "Critical Inquiry into Ancient Arms and Armour," Cottonian MS., Claudius B. 4, and Harleian MS., No. 603, and give a general idea of the weapons in use during this period.

Twenty-four years before the invasion of William the Conqueror the crown of England reverted to the Saxons, and during that period Edward the Confessor and Harold the Second were seated on the British throne. Driven for safety to Normandy, when but 13 years of age, Edward returned at 40 to his native land, a Norman in manners; and the feeling generated

the day that was passing over him—that the materials he had to collect were not only frequently scattered in distant places, but incongruous in themselves—that scarcely an Englishman had turned a turf in the same field before him—all the severer functions of criticism become paralysed in a generous bosom; and we are compelled to admit that Joseph Strutt is not only 'a fine fellow in his way,' but is entitled to the grateful remembrance of the antiquary and the man of taste." What a strong satire and reproach is the industrious life of Strutt upon the "learned leisure" and unemployed time of many more independent and better educated men.

\* "Red were the borders of our moony shields" is an expression made use of by the hero Lodbroc.

by 27 years' intercourse with the people of another land, at an age when the mind is most susceptible of lasting impressions, clung, of course, to him through life. His Norman predilections were visible in all he did; he spoke in their language, and introduced their customs into his palace, which was pretty nearly populated by Norman adventurers, whose company the king generally, from long habit, preferred. The Saxons, who desired to be well with their monarch, learned to speak French, and urge their claims to notice in the favourite language of their masters; and the dress, fashions, and manners of the Normans were as faithfully imitated, much to the disgust of the genuine Saxon lords, and which daily caused enrolments in the ranks of Earl Godwin, and others of the disaffected, who were loud in their condemnation of the changes wrought by the king. One novelty was introduced by Edward, for which we may be grateful—the introduction of the "Great Seal,"\* which has continued from his era to our own, and furnishes us with the authentic regal costume of each sovereign in undoubted accuracy; and combined, as it generally is, with an armed figure on the reverse, it becomes of considerable value. Upon his great seal Edward is represented seated in regal costume, consisting of a plain robe reaching to his feet, and having tight sleeves, over which hangs a mantle, covering the left arm and leaving the right arm free, upon the shoulder of which it is secured by a brooch or fibula. He holds in his right hand a sceptre, upon which is a dove. This sceptre is a staff of considerable length, reaching to the ground, after the fashion of the antique; a sword is in his left hand. Upon his head he wears the regal helmet, a fashion not unfrequent with the Danish sovereigns, who are often represented as wearing it, upon their coins.†

This may not be an improper place to say a few words on the subject of early regal head-dresses and crowns. The earliest form of a distinctive ornament for kings is to be met with in the regal fillet, or head-band of gold and jewels, or, as it sometimes appears, of strings of jewels alone, and which is to be seen upon the earliest coins of our national series. Upon the coins of the Kings of Mercia it is very distinctly visible, and two examples are here given. Fig. 1 (next col.) is copied from a coin of Offa, who reigned between A.D. 757 and 796; Fig. 2 is from a coin of Behtulf, who flourished A.D. 839–852; Figs. 3 and 4 are of a later date, from Strutt's "Horda Angel Cynan:" in some instances tassels or strings occur dependent from it at the back of the head. On the coins of Egbert and Ethelwulf, a round close cap or helmet appears, which becomes very distinct in those of Ethelred and Canute: in the first of these two instances it is

\* Previously to this period farms or estates of land were granted or disposed of by our kings and great lords only by word of mouth, without writing or charter, by the gift of the donor's sword or helmet, or his drinking horn or cup. (The Pusey horn, by which that family held their land from Canute, has been already alluded to in part the first.) Tenements were held by gift of a spear, a bow, arrow, &c. Grants of land were sometimes confirmed to religious houses by laying a sod of the ground given upon the altar of the church. Written charters succeeded, and as few even among the kings or nobles could write, they affixed the mark of the Cross to their names, as a sacred mark of the inviolability of the grant then made. Edward the Confessor added to this the seal of the subscribing party, which became confirmed into law, the one being as necessary as the other. Thus he commenced the custom of witnessing by "Hand and Seal," which he had learned in Normandy.

† The chest, containing the body of Edward the Confessor, was opened during the reign of James the Second, when there was found under one of the shoulder bones of the royal corpse a crucifix of pure gold, richly enamelled, suspended by a chain of gold 24 inches long, which, passing round his neck, was fastened by a locket of massive gold adorned with four large red stones. The skull was entire, and was encircled by a band or diadem of gold one inch in breadth. Several fragments of gold, coloured silk, and linen were also found, the relics of the regal dress in which it was customary then, and centuries afterward, to inter kings.

visibly a helmet, encircled by the points or rays of a crown; in that of Canute it takes the form of a close helmet, projecting over the forehead, or else of that conical shape so common to warriors of his day, and which has been already described when treating of that period. The best representation of this regal helmet I have yet seen occurs in Cotton MS., Tiberius C. 6, which is engraved above, at Fig. 5; that of Edward the Confessor from his great seal, as rendered by Sir S. R. Meyrick, is placed beside it, Fig. 6. Of crowns many varieties occur, and we frequently see them of the apparently inconvenient square form that the helmet of the soldiers appear to have also taken: an example (Fig. 7) is selected from Cotton MS., Tiberius C. 6, and others might easily be quoted. There is a representation of King Edgar, in Tiberius A. 3 of the same collection of manuscripts, in which that sovereign appears with a richly ornamented crown of that shape (Fig. 8), and similar ones are worn by Lothaire, and other early French kings; as may be seen on reference to the plates of the first volume of Montfaucon's "Antiquités de la Monarchie Française." The most common form of crown, however, in Anglo-Saxon times appears to have been that depicted as worn by Edgar, in a representation of that monarch which occurs in his book of grants to the Abbey of Winchester, in the year 966, and which is still preserved in the British Museum among the Cotton MS., marked Vespasian A. 8; it forms Fig. 9 of the above group. Fig. 10 is from Harleian MS. 603; Fig. 11 from Cotton, Tiberius C. 6, and is remarkable for the arch that springs from its sides, which are decorated with florid ornaments strikingly resembling fleurs-de-lis, and which are of such frequent occurrence on all these ancient diadems. Edward appears in crowns of various shapes upon his coins: one has a double arch (Fig. 12); and Harold the Second wears one still more richly decorated upon one of his coins, and which exhibits clearly the pendants that hang from the back of it (Fig. 13).\*

During the reign of Harold the Second, who had also visited and resided in Normandy at the Court of William, the duke of that province and afterwards the Conqueror of England, we meet with the same complaint of the prevalence of Norman fashions. The Monkish Chroniclers declare that the English had transformed themselves in speech and garb, and adopted all that was ridiculous in the manners of these people for their own. They shortened their tunics, they trimmed their hair, they loaded their arms with golden bracelets, and entirely forgot their usual simplicity. The custom of covering the arm from the wrist to the elbow with ornamental

\* A glance at the plates of Ruding's "Annals of the Coinage of Great Britain," or Hawkins's "Silver Coins of England arranged and described," will furnish other examples to those already given, and bear out these remarks more fully.

bracelets has been before alluded to; they appear to have been marks of distinction, of which they were not a little vain. There is a curious representation of the Temptation of Christ in Cotton MS., Tiberius C. 6, in which the evil one is displaying the "riches of the world" to the Saviour, and these bracelets form a conspicuous part of the "glory thereof."

The Bayeux Tapestry, of which we shall have much to say during the next reign, gives a curious representation of the coronation of Harold. The monarch is seated upon a raised throne, and holding a florid sceptre of a singular form and of considerable length. On his right stand two courtiers, who appear to be vowing allegiance upon the sword; on his left stands Stigand, Archbishop of Canterbury. It is altogether a valuable illustration of the regal, noble, and ecclesiastical costume of this period. Harold is also represented previously in a plain red tunic, yellow cloak and stockings, a blue close cap, and blue shoes.

"In the military habit," says Mr. Planché,\* "Harold ordered a change which led to his decisive success in Wales. The heavy armour of the Saxons (for the weight of the tunic, covered with iron rings, was considerable) rendered them unable to pursue the Welsh to their recesses. Harold observed this impediment, and commanded them to use armour made of leather only, and lighter weapons. This leathern armour we find to have consisted in overlapping flaps, generally stained of different colours, and cut into the shape of scales or leaves; it is called corium by some of the writers in the succeeding century, and corietum in the Norman laws. It was most probably copied from the Normans; for in the Bayeux Tapestry we perceive it worn by Guy, Count of Ponthieu, and Odo, Bishop of Bayeux, the brother of William the Conqueror; and it continued in use in England as late as the thirteenth century."

The ladies during all this time appear to have escaped censure, by their adherence to the simple garb so long in fashion among them; though we shall see that, when they once "broke bounds," about a century after this period, they ran to the other extreme, and obtained a full share of that monkish censure that was now exclusively appropriated by their lords. During the period of which we are treating, they seem, with some few exceptions, to have been of a most exemplary character, exercising the domestic duties with virtuous unostentation; every incidental or casual notice exhibiting them in the amiable light of kind mothers and good housewives. They and the clergy shared the learning of the age between them. All remember the beautiful story of Alfred's mother, the good Osburgha, who wedded him to learning by the promise of a splendidly-ornamented volume of Saxon poetry, which caught his youthful eye while she was reading it surrounded by her children, and which he won by first successfully endeavouring to read its contents. Editha, the neglected wife of the priestly Edward the Confessor, was as remarkable for her mental accomplishments as for her

\* History of British Costume.

beauty, her gracefulness, and cheerful amiability of temper. Ingulphus, the monk of Croyland, who was her contemporary and personal acquaintance, speaks of her with a homely and subdued enthusiasm that is singularly touching, declaring that she sprang from Earl Godwin, her rough and turbulent father, as the rose springs from the thorn. "I have very often seen her," says he, "in my boyhood, when I used to go to visit my father, who was employed about the court. Often did I meet her as I came from school, and then she questioned me about my studies and my verses, and, willingly passing from grammar to logic, she would catch me in the subtleties of argument. She always gave me two or three pieces of money, which were counted to me by her hand-maiden, and then sent me to the royal larder to refresh myself."

The ladies were also much skilled in physic, and the time unemployed in the practice of that art was devoted generally to works of charity, to study, or to needlework, in which art they were great proficient; their value consisting in the due performance of their duties as mothers and housewives, it gave them a permanent influence and authority greatly beneficial to society in general. Alfred, in his translation of Boethius, has given us a beautiful picture of conjugal love, which may have been sketched from nature by this learned and good man, on whom the name of King could cast no additional lustre.

#### THE NORMANS.

The Great Seals of the kings of this dynasty exhibit each monarch in a dress that varies but in the slightest degree from another. A tunic, reaching half way below the knee, and a mantle thrown over it and fastened by a fibula on the shoulder, or in front, completes the costume. William the First holds a sword in the right hand, and an orb, surmounted by a cross, in his left; as also does his son Rufus. Henry I. and Stephen bear also swords and orbs, but the crosses upon them are surmounted by large doves. Of William the First various representations occur in that valuable picture of the manners and costume of his period, known as the Bayeux Tapestry, and which is traditionally recorded to have been worked by his Queen Matilda, and the ladies of her court, to commemorate the invasion and conquest of England by her husband, and by her presented to the cathedral of Bayeux, in Normandy, of which Odo, the turbulent half-brother of William was bishop; it reached completely round the cathedral, where it was exhibited on great occasions. It is now preserved in the Town Hall of the city (having been removed from the cathedral since 1803) where it is kept coiled round a roller: the tapestry measures 20 in. in breadth, and is 214 feet in length; it ends abruptly, and some portion is wanting. Dr. Dibdin, in his "Tour in Normandy," has engraved the tapestry on its roll, as it usually appears, and also has given a fac-simile of one of the portraits of William, copied, thread for thread, in imitation of the original needle-work. The Society of Antiquaries, feeling the value of this curious historic production, despatched Mr. C. A. Stothard to Normandy to copy it in the most accurate manner, which he effected with minute truthfulness; and copies of his drawing, one-fourth of the original size, were published in the sixth volume of their work, the "Vetusta Monumenta." This pictorial history of the Conquest commences with Harold's visit to Normandy at the instigation of Edward the Confessor; and gives all the incidents of his stay at William's court, his subsequent departure, the death of Edward, and his funeral at Westminster, the coronation of Harold, William's invasion, the battle of Hastings, and Harold's death. In addition to all this, many minute facts are recorded, and persons depicted and named that have escaped the chroniclers.

Besides the figures of William in this tapestry, there is a full-length portrait of him in a manuscript that formerly belonged to Battle Abbey

(which was founded by him to commemorate his conquest), and relates to its affairs until A.D. 1176: it is engraved in Dr. Dibdin's "Bibliographical Decameron," vol. i., from the original in Cotton MS., Domitian 2. In the public library at Rouen is a curious manuscript by William, Abbot of Jumièges, to which abbey William was a great benefactor, and in whose presence the church was dedicated to the Virgin by Saint Maurille, Archbishop of Rouen, in 1067. At the commencement of the book is a drawing representing the Historian offering this book to the Conqueror. The copy here given was drawn by me from the original while at Rouen two years since, and is now for the first time engraved. It is the best regal figure of William we possess; his tunic has wide sleeves with a

richly ornamented border, and a cloak is fastened to his right shoulder by a brooch, or fibula. His crown is of singular shape, seeming a combination of cap and crown,\* and he holds in his left hand a sceptre of somewhat peculiar form. His face is so carefully drawn that it bears the marks of portraiture, and a broad full face seems to be the characteristic distinction of the Conqueror in all contemporary representations of him.

The ordinary costume of the people during this reign appears to have been as simple as that of the Anglo-Saxons: short tunics, with a sort of cape or tippet about the neck; and drawers that covered the entire leg, and which were known as "chausses," were worn sometimes bandaged round the leg with various colours, or crossed diagonally. William is represented in one instance with blue garters and gold tassels over his red chausses, very similar to the regal figure engraved as an illustration to the previous account of this fashion among the Saxons. Full trousers reaching to the knee are not uncommon, as may be seen in the instances here given; and one example occurs in the tapestry in which they end in a series of vandykes, or points of a different colour to the trouser itself. The tunic too was sometimes variegated in perpendicular stripes from the waist, which was confined by a coloured girdle. Their mantles, as before observed, were fastened by brooches or pins of an ornamental character, either square or round, and which, having been common for ages previous, remained in fashion centuries afterwards. Three specimens are here engraved; one of the most ancient form (Fig. 1) is copied from Douglas's "Nenia Britannia;" the others, which combine both pin and

\* The *Saxon Chronicle* describes William as wearing the regal *Admet* "thrice every year when he was in England. At Easter he wore it at Winchester, on Pentecost at Westminster, and in mid-winter at Gloucester."

† This work is styled by its author "A Sepulchral History of Great Britain, from the earliest period to its general conversion to Christianity," and is devoted to accounts of the opening of tumuli, and engravings of their contents, being similar to the volumes on "Ancient Wiltshire," by Sir R. C. Hoare, already described in the previous part of these notes, but containing many valuable illustrations of ornamental, domestic, and warlike implements, which add to the knowledge which will be obtained by a perusal of that work of which this was the precursor.

brooch, and were most probably executed about this period, were drawn by me from the originals in the collection of the Royal Irish Academy, and have never before been engraved.

Their shoes are represented of various colours upon the tapestry; we find them yellow, blue, green, and red; they wear also short boots reaching above the ankle, with a plain band round their tops.

The male costume is, throughout the tapestry, similar to that worn by the figures to the left of Harold in the cut of his coronation before alluded to, and which in fact varied but little from that of the Saxons.

There was, however, one striking peculiarity in the Normans who came with William, and that was the singular fashion of shaving the back of the head as well as the entire face. It was so great a novelty, that the spies sent by Harold to reconnoitre the camp of William declared they had seen no soldiers, but an army of priests.

"One of the English who had seen  
The Normans all shaven and shorn,  
Thought they were all priests,  
And could chaunt Masses;  
For all were shaven and shorn,  
Not having mustachios left.  
This he told to Harold, that the duke  
Had far more priests  
Than knights, or other troops."

Such are the words in which this incident is described by Wace, the Anglo-Norman poet of the twelfth century, and the historian of the Dukes of Normandy and their descendants.

The engraving here given of two mounted soldiers from the Bayeux Tapestry shows this fashion very clearly; the central tufts of hair are sometimes covered by a close coif, or cap, which passes over the centre of the head from the tip of each ear, and leaves the back quite bare of covering for the purpose of displaying this fashion the more fully. Mr. Planché, in his "History of British Costume," says that this fashion was adopted from the nobles of Aquitaine, who had been distinguished by this extraordinary practice for many years previous to the Conquest; and who had spread the fashion after the marriage of Constance, Princess of Poitou, with Robert, King of France in 997, by following her to Paris and there exhibiting themselves thus shorn; their general manners being, according to contemporary authority, distinguished by conceited levity, that

and their dress being equally fantastic. But fashion, who can invent nothing too ugly or too absurd for her votaries to adopt and defend, and whose way is as blindly submitted to in our own day as it was by "exquisites" in that of William of Normandy, spread these absurdities amazingly; much to the annoyance of the clergy, who lamented over the changes they could not avert, and the simple honesty of the "good old times" of their forefathers, with as much zest as the writers of a later period, when talking of this visionary era—a golden age that existed only in imagination.

Once established in England, and revelling in the riches their rapine procured from its unhappy inhabitants, the courtiers of the Conqueror gave way to their ostentatious love of finery, which increased during his reign, and in that of Rufus arrived at its height; producing a total change in the appearance of the people. The King having set the example, of course the courtiers followed it; and the clergy are declared to have been equally distinguished with them for their love of dresses both whimsical and expensive. Not content with the amount of ornament their dresses could contain, they sought extra display by enlarging them to the utmost; allowing their garments to trail upon the ground, and widening their sleeves until they hung, not only over the hand entirely, but several inches beyond it, and falling to the middle of the leg when their arms descended. One of the royal figures here engraved from Cotton MS., Nero C. 4, exhibits these sleeves very clearly. In the

original this group is intended to represent the three Magi. The figure to the left shows another kind of sleeve frequently seen in the illuminations of this period, and which looks like a very broad cuff turned over from the wrist; it is generally gilt in the delineations where it is met with, and widens as it reaches the elbow, towards which it tapers to a point projecting from the arm. The mantle of this figure is tucked under the arm to prevent inconvenience from its length in walking. These mantles were made from the finest cloths and lined with costly furs; and Henry I. is said, by the historians, to have had one presented to him by the Bishop of Lincoln that cost £100.

The length of their garments and the love of amplitude that characterized the fashionables of this period, induced them to discard the close shaving they had introduced at the conquest, and to allow their hair and beards to vie with their apparel in length and inconvenience, and which extorted from the clergy the title of "filthy goats," which they applied to its wearers. The cut of the Magi will show the fashion very clearly (as also will some others a little further on); their beards are carefully combed, and the moustachios are allowed to hang to considerable length over it in single well-formed locks.

The earliest sculptured effigies of English sovereigns we possess are those of Henry I. and his Queen Matilda, at the sides of the great west door of Rochester Cathedral, and of which the

above engraving is a copy. They are much mutilated; this may have been the work of Cromwell's soldiers, who committed so many acts of similar wanton mischief in other of our cathedrals, but in no one more so than in Rochester.\* The King is in the flowing dress of the period: a long tunic lies in folds over his feet, and it appears to be open in front—it is partially covered by the dalmatic or upper tunic, which is gathered round the waist, but no girdle is visible; a long mantle lies in folds over his left arm, and is partially tucked beneath his right hand, in which he holds a sceptre; a small model of a cathedral (intended for Rochester, which he nearly built) is in his other hand. The crown is much damaged, but appears to have been very simple in its ornaments. His beard is trimmed round, but his hair is allowed to flow in carefully-twisted ringlets upon his shoulders, and is apparently hanging luxuriantly over his back.

A singular dream, which happened to this monarch when passing over to Normandy in 1130, has been depicted in a manuscript of Florence of Worcester, in Corpus Christi College, Oxford. The rapacity and oppressive taxation of his government, and the reflection forced on him by his own unpopular measures, may have originated the vision. He imagined himself to have been visited by the representatives of the three most important grades of society—the husbandmen, the knights, and the clergy; who gathered round his bed and so fearfully menaced him, that he awoke in great alarm, and, seizing his sword, loudly called for his attendants. The drawings that accompany this narrative, and represent each of these visions, appear to have been executed shortly afterwards, and are valuable illustrations of the general costume of the period—one of them is introduced in the next column.

The King is seen sleeping; while behind him stand three husbandmen, one carrying a scythe, another a pitchfork, and the third a shovel. They are each dressed in simple tunics with plain close-fitting sleeves; the central one has a mantle fastened by a plain brooch, leaving the right arm free. The beards of two of these figures are as ample as those of their lords, this being an article of fashionable indulgence within their means. The one with the scythe wears a hat not unlike the felt hat still worn by his descendants in the same grade: the scroll in his

\* The buff-coats and bandeliers of some of them yet remain there; and it would be well if these were the only mementoes of their visit, for, during that period, the stained glass windows were destroyed, and the monuments battered in the most reckless manner.

left hand is merely placed there to contain the words he is supposed to utter to the King.

Such then was the costume of the poorest of the commonalty; ascending a slight degree in the scale of life, we shall find an increase in the ornamental details of dress. The figures here en-

graved give us the ordinary costume of the people during the reigns of Rufus, Henry I., and Stephen. The youngest figure (intended for David with his sling, in the original delineation) is habited in a long tunic reaching nearly to the ankles; it is red, with a white lining, and has a collar gilt in the original, as also are the cuffs; it is bordered with a simple ornament, and is open on the left side from the waist downward, a fashion that appears to have been very common at this period. He has tightly-fitting chausses, and high boots with ornamented tops. The figure beside him (who represents, in the original MS., Noah with his hatchet about to build the Ark) wears a hat similar to the Anglo-Saxon helmet in shape; a moustache and beard of moderate proportions; a very long full red tunic with hanging sleeves, over which is thrown a green mantle bordered with gold. His tunic is open from the side, displaying what appears to be a stocking, that reaches to the knee, and is certainly much the earliest representation of that article of apparel yet noticed; his shoes are ornamented by diagonal lines crossing each other, and complete what may be considered as a fair sample of the ordinary costume of the age.

\* For which see part first.

We have here the common travelling dress in use at this period. The original is intended for the Saviour meeting the two disciples on the road to Emmaus. The dress worn by the Saviour varies but little from that of Noah in the last cut, except that he wears an under tunic, and his mantle, fastened by a narrow band across the chest, is held up by the right hand. The figures of the disciples are, however, the most curious, the central one particularly so, as he would seem to wear a dress expressly invented for travelling: his large round hat, with its wide brim, seems to be the original of the pilgrim's hat so well known in later times, and which formed so distinguishing a mark in their costume; and his short green tunic, well adapted for journeying, is protected by a capacious mantle of skin, and provided with a "capa" or cowl, to draw over the head, and which frequently was used in lieu of a hat. His legs are covered with a white stocking, ornamented with red cross stripes, which gives it the look of a modern Highland one; they end, however, at the ankle, where they are secured by a band or garter, the foot being covered by close shoes. His companion wears the common cap so frequently met with; and he has his face ornamented to profusion by moustache and beard, each lock of which appears to be most carefully separated and arranged in the nicest order. He has an under tunic of white, and an upper one of red, and a white mantle bordered with gold; he also wears the same kind of stocking to the ankle, but he has no shoes: this frequently appears to be the case when the leg is thus covered, and the wearer is about a journey. A selection has been made from the MS. that has supplied us with these examples—Cotton collection, Nero C. 4\*—and which exhibits nearly all the varieties to be met with.

Fig. 1 is a curious swathing for the lower part of the leg, above the shoes, that is worn by the shepherds at the nativity of the Saviour; it looks very like the hay-bands of a modern carter.† Fig. 2 are a pair of the richly-ornamented shoes before referred to as frequently worn by the richer classes. Fig. 3 is a sock or half-boot, also ornamented round the top. Fig. 4, a shoe ornamented by lines crossing each other diagonally. Fig. 5 shows one of the footless stockings, with the band securing it round the ankle; and Fig. 7 a boot, the top of which is cut much like the cuffs upon the royal figures, and others before engraved and described; from the ankle upwards it is ornamented with red cross-bars.

From the feet let us ascend to the head, and consider the usual coverings worn there. Fig. 1 gives us the flat close cap; and also displays to much advantage the mode of dressing the beard. Fig. 2 has the common round skull cap. Fig. 3 wears one of a Phrygian shape; and Fig. 4 has the cowl, as usually worn over the head. These and the full length figures given before comprise nearly every variety worn. (See next col.)

\* A manuscript which contains a series of drawings of scriptural subjects, which are of much value for the accurate delineations given by the ancient designer of the costume of his own age, in which he has clothed all the figures.

† Some writers, indeed, affirm that the practice of enswathing the legs with hay-bands was the origin of the cross-gartering, so fashionable among the Saxons and Normans.

During this period the ladies gradually merged from the simplicity of the Anglo-Saxon costume into all the extravagance of shape and material revelled in by the gentlemen. The alteration appears to have commenced in the sleeves; and the figure to the left in the following cut depicts this alteration. The long narrow sleeve sud-

denly becomes pendulous at the wrist, and is about a yard in length. All the other parts of the dress are precisely similar to that worn by the Saxon ladies, and described in the first part of these notes. They appear to have gradually grown longer and wider, and are sometimes tied up in knots. They are generally of a different colour from the rest of the dress. Their gowns also, like the tunics of the gentlemen, are excessively ample, and lie in folds about their feet, or trail their length behind them; these were also sometimes tied up in knots, and the symmetry of the waist was preserved by lacing, in the manner of the modern stays. The illuminator of the MS. from which we have so frequently copied (Cotton collection, Nero C. 4), in the representation of Christ's temptation, has satirically dressed his infernal majesty in the full costume of a fashionable lady of this period. His waist is most charmingly slender, and its shape admirably preserved by tight lacing from thence upwards; the ornamental tag depending from the last hole of the bodice. His long sleeves are knotted on his arm; and his gown, open from the right hip downward, is gathered in a knot at his feet. It is an early instance of a fondness for caricature, which was indulged in occasionally by ancient illuminators.

But the hair of the ladies was indeed "a glory unto them," for they far outdid the doings of their lords, extravagant as they were in this particular. They wore it in long plaits that reached sometimes to their feet. The effigy of Queen Matilda, at Rochester, presents us with an excellent example of this fashion; it descends in two large plaits to the hips, and terminates in small locks. These treasured ornaments were bound with rib-

bons occasionally, and were sometimes encased in silk coverings of variegated colours. The lady to the right in the last cut is represented as wearing one of these ornamental cases, which reaches to her feet and ends in tassels.

The ecclesiastical costume of this period is chiefly remarkable for the increase of ornament adopted by the superior clergy, and which called forth the strongest animadversions from the more rigid precisians of their own class. Sump- tuary laws were made and partially enforced; for both now and afterwards it was found much easier to make the laws restraining excess in apparel than to enforce the rich to keep them. The cut exhibits the costume of a bishop and an abbot: the former of whom is arrayed in a chasuble, richly bordered, apparently with jewels; his dalmatic\* varies from that worn by the Anglo-Saxon prelates in being open at the sides—it is very richly ornamented. The first approach to a mitre is visible in the cap that covers his head, from which hang the pendant bands called the vittæ, or insule, which always appear upon mitres, and frequently upon crowns.† The adjoining figure is more plainly habited, a novelty appearing in the upper part of his dress, the sort of ornamental collar which falls from the neck over the shoulders; one very similar is also seen upon the figure of Roger, Bishop of Sarum, who died 1193, and which is now in Salisbury Cathedral; it has been engraved in Britton's History of the Cathedral, and forms the first plate in Stothard's "Monumental Effigies."

Among the military of this period, a most important body were the Archers, who did the Conqueror invaluable service at Hastings, and made the bow for many centuries the chief strength of the English lines. Its practice was greatly encouraged; and Henry I. made a law, to the effect that no archer should be punished for murder, or charged with it, who had accidentally killed any person while practising with his weapon. The following engraving represents four of these archers from the Bayeux Tapestry, and it scarcely need be mentioned that they are fac-similes of the original, where they are placed above each other, although they are intended to be side by side. Two of them are dressed nearly alike, in a close vest, with wide breeches to the knee; another has full breeches, apparently gathered in the middle of the thigh and at the knee, and ornamented with large red spots; the fourth is more fully armed, he wears the steel cap, with its protecting nasal, and a close-fitting dress to the knee of ringed mail, formed by sewing metal rings upon leather or cloth. The quiver is suspended from the waist, or else

\* These articles of priestly costume were fully described in part the first of these notes, to which we beg to refer the reader.

† It has been supposed that they were originally used for fastening their beneath the chin. The crown on the Great Seal of Henry I. shows these appendages very plainly; and a story is told of Ralph, Archbishop of Canterbury, who snatched the crown from the head of this king and broke the ansule, or clasp, which fixed it upon the head.

from the shoulder, from whence arrows are taken as wanted, although one of these soldiers holds in his left hand several ready for shooting.\*

The ordinary costume of the Norman soldiers is here given from the same tapestry. The military tunic, or hauberk, "which was of German origin," says Meyrick, "was probably so entitled from 'haufen,' to hew or cut, and 'berg,' a defence; that is, a protection against cuts or stabs. It fitted the body pretty closely, being slit a little way up in the centre both before and behind, for the convenience of riding; although, occasionally, it appears to have ended in close-fitting trousers to the knee, like the body armour of this period. It appears to have been put on by first drawing it on the thighs, where it sits wide, and then putting the arms into the sleeves, which hang loosely, reaching not much below the elbow, as was the case with the Saxon flat-ringed tunic. The hood attached to it was then brought up over the head, and the opening on the chest covered by a square piece, through which were passed straps that fastened behind with tasselled terminations, as did also the strap which drew the hood, or 'capuchon,' as it was called, tight round the forehead." Mr. Planché contends for "the evident impossibility of getting into a garment so made," of tunic and trousers in one; but so many examples occur of close-fitting trousers of mail reaching to the knee, and which are too distinctly delineated to be considered as merely bad drawing, or an imperfect representation of the opening in the long tunic, that it certainly appears to have been thus worn, and may have been divided at the

\* These figures have been modernised in Meyrick's "Critical Inquiry into Ancient Arms and Armour," vol. i., pl. 8.

waist. The hood of mail is seen in the figure to the right in the preceding cut as covering the head, and the conical helmet is placed over it. The wide sleeves of the hauberk reach to the elbow only, and are covered with rings, but the body of this defence appears to be composed of the kind of armour termed "trellised" by Meyrick, which was formed of straps of leather fastened on the body of quilted cloth, and crossing each other diagonally, leaving angular spaces in the centre, where knobs of steel were placed as an additional protection. His legs are also protected by ringed mail. He holds in his hand a gonfanon, the term applied to the lance, to which was appended a small flag or streamer, and which was generally carried by the principal men in the army, to render themselves more conspicuous to their followers, as well as to terrify the horses of their adversaries; hence it became a mark of dignity, and the bearing of the royal one was only entrusted to certain great and noble persons.\*

The other warrior is more fully armed: he has a sword, an axe, and a spear, the latter of which he is about to strike with. The axe continued in use long after this period. Stephen fought with his battle-axe at the siege of Lincoln, in 1141, until it snapped within his grasp. The long pointed shield, borne by this figure, has been termed by antiquaries "heater-shaped" and "kite-shaped," from its resemblance to both these articles. Various Sicilian bronzes exist, the figures holding similar shields, and it was from this people they were assumed. They were held by a strap in the centre.

The figures here given are of a later date, probably of the time of Henry I. or Stephen. They occur in Cotton MS., Nero C. 4. They wear the helmet, pointed forward, similar to the Anglo-Saxon ones before described; and have protecting nasals. The shield held by the first of our figures is bowed so as to cover the body round; the umbo projects considerably, and is of an ornamental character, ornamental bands radiate from it, and it has a broad border. It is admirably adapted for defence of the body, and is of common occurrence, being sometimes large enough to reach the ground, on which its point rests. A sword is in the girdle, and three spears are held in the right hand. The legs are unprotected, and high boots slightly ornamented cover the feet. The warrior beside him has a ringed hauberk opened wide at its sides, and through an opening at the waist the scabbard of his sword is stuck; it is on the right side, as will perhaps be noticed, but it frequently occurs on that side as well as on the other. A long green tunic appears beneath his hauberk, and he wears white boots.

\* The banner of the Conqueror had been presented to him by the Pope, who had given the expedition his blessing. Wace says, that under one of the jewels with which it was ornamented was placed a hair of St. Peter. It is represented on the tapestry as a simple square banner, bearing upon it a cross or, in a bordure azure.

This figure is copied from one in Cotton MS., Caligula A. 7, and exhibits the masled armour of this era. These *mascles* were lozenge-shaped plates of metal, fastened on the hauberk by a hole at one corner; and they were so worked one over the other that no openings were left between them. The soldier here engraved has a tall round conical cap, with a nasal, to which his hood of mail is affixed; and this was the commencement of a protection for the face, which afterwards became so much more complete. Little more than the eyes of the figure are visible, and the neck seems protected by a sort of tippet of mail connected with the hood, which completely envelopes the head, passing under the helmet. The legs are also incased, and he has the long-pointed toe, that became fashionable at this time, and which came into use during the reign of Rufus: they were strictly forbidden to be worn by the clergy, as too foppish; shoes were worn at this period with toes of great length, and stuffed with tow till they curled like a ram's horn. The shoes of horsemen generally curve downwards, and William of Malmesbury says, that they were invented by Rufus to keep the toes from slipping from the stirrup. Such shoes are worn by Richard, constable of Chester, in the reign of Stephen, whose mounted figure is here copied from his seal in the "Vetusta Monumenta" of the Societies of Antiquaries.

He wears a novel kind of armour, called by Meyrick "tegulated," and formed of little square plates, covering each other in the manner of tiles, and sewn upon a hauberk without sleeves or hood. He wears a tall conical helmet without a nasal, the fashion having probably been discontinued from the inconvenient hold it afforded the enemy of the wearer in battle—Stephen, at the siege of Lincoln, having been seized by the helmet and detained a prisoner; and this may probably have led to its discontinuance, and the unprotected state of the face then, have occasioned the invention of the close face-guards soon afterwards in common use. The long pendant

sleeves of the knight, and his flowing tunic reaching below his heels, was a Frankish fashion of oriental origin. He bears a small shield and a banner. He was standard-bearer of England in 1140. A very good coloured engraving, designed from this seal, may be seen in the first volume of Meyrick's "Critical Inquiry into Ancient Arms and Armour," plate 12.

Two other kinds of armour were also in use at this period. Scale-armour, derived from the ancient Dacians and Sarmatians, who may be seen thus protected in Hope's admirable "Costume of the Ancients." It was formed of a series of overlapping scales similar to those of fish (from whence the idea was evidently taken), which were formed of leather or metal. The great seal of Rufus represents that monarch thus habited. The other kind is termed by Meyrick "rusted armour," and consisted of rows of rings placed flat over each other, so that two of the upper row partially covered one in that below, and thus filled up all interstices, while free motion was obtained for the wearer.

[The next part will be devoted to the costume worn in England during the reign of the Plantagenets, and will carry us down to the death of Richard II. A new fund of information will now present itself in the monumental effigies of this period, which will be abundantly referred to; and, in order to enter fully into this rich field, an extra month will be devoted to research. The third part will appear on the 1st of January.]

A letter has been placed in my hands by the Editor of the ART-UNION, which has been called forth by a remark made in the first part of these notes, on the Highland target, and its similarity to the ancient British shield. It contains some interesting information on this subject, and runs thus:—

October 20.

SIR,—In the ART-UNION of last month, Mr. Fairholt, in his "Notes on British Costume," implies that the Highlanders have copied the Roman fashion of wearing the target, retaining the boss of the Celtic shield as an ornament only. On the contrary, it is of the greatest use, being the foundation in which the spike is fixed, sometimes screwed—thus rendering the Highland target an invaluable weapon, whether for defence or offence. I have one in my possession, with a dirk-blade a foot long screwed in the boss. I assure you, Mr. Editor, 12 inches of Spanish steel, on a strong left-arm, is by no means an ornament only—it would hurt considerably; this was the ornament with which Gillies Macbane, Major of the clan Macintosh, killed three Sassenachs at the massacre of Culloden after his sword-arm was broken. Neither are the "brass-nails" intended as imitations of the "little knobs;" being used to fasten the leather, hide, or plates of metal to the wood beneath, as well as to render the surface impenetrable to a sword-cut. The swash-bucklers of Queen Elizabeth's time used shields with one wooden handle fixed in the concavity of the boss.

Yours, &c., MAC. NAN. CLAIMH.

Now, the fact of the matter is that the remark is not my own: it comes from a much higher quarter, and has passed unquestioned for years. It was first made by Sir S. R. Meyrick in the twenty-third volume of the "Archæologia of the Society of Antiquaries," when describing a shield precisely similar in construction. It is repeated in the text to his "Engraved Illustrations of Ancient Arms and Armours," in Mr. Planché's "History of British Costume," and elsewhere. On looking at that shield and the one engraved in the ART-UNION, certainly a strong resemblance is visible between those and the Highland one, enough to incline us to think it a general imitation, modified by time, circumstance, and experience. The use and construction of the modern Highland shield has, however, been very clearly pointed out by the writer of the above letter, and coming, as it evidently does, from a Scotsman well acquainted with the subject, it is valuable, more particularly as the costume of the Highlander has been so vaguely descanted upon, and so many conflicting statements made, that anything bearing the stamp of truth is particularly acceptable; and I am glad of the power thus given me of correcting the erroneous impression that has so long passed current on this one subject. And, in conclusion, I beg to assure my correspondent, that the greater share of time and trouble in getting together these notes has been devoted to endeavouring to reconcile contradictory statements, ascertain the truthfulness of quoted authorities, and so make deductions from fact alone. Those only who have waded for days through volumes, with little or nothing to show for the day's labour, can fully appreciate the mental annoyance of the task.

F. W. F.

## THE SUBJECT OF ANCIENT GROUNDS.\*

It may be expected that the more immediate pupils of Van Eyck, as Rogier Van Brugge and others mentioned by Van Mander and Sandraart, would adopt the style and manner of their master; there is, in fact, reason to believe that such was the fact. In like manner we may believe that Antonello da Messina would carry the same principles, after the death of his master, to Venice, where, on his second arrival, he sold the secret he had learned of Van Eyck, and when also the state granted him a pension, which probably he enjoyed till his death; though of this his biographer is silent. Would it not be worthy of the consideration of the members of our Royal Academy, to send some person, duly authorized and properly qualified, to Venice to examine the archives of that city for ancient MS. documents, which civil wars and other calamities have spared from destruction.

DePiles states, that early in the sixteenth century, Giovanni Bellino laid the foundation of the Venetian school, by the use of oil; his pictures are on a white ground. He died about the year 1516. Titian was his pupil; and M. Merimée has proved that in one instance he found the ground of Titian's picture to be composed of gypsum, starch, and paste: therefore Titian also used the white ground of his master. Vasari was the friend of Titian; let us see, therefore, what ground he recommends. He directs that it should be composed of *white lead, flour, and nut oil*; and so particular is he lest the purity of a white ground should be tainted, that he objects even to the use of linseed oil, because the nut oil, "*ingialla meno*," is less liable to become yellow. We may, therefore, consider that in the best days of Art, white grounds were deemed to be a *vine quânon*.

We must, however, admit evidence on the other side; and certainly Vasari does speak elsewhere of coloured grounds, such as a mixture of white and Naples yellow, &c.; but it must be recollected towards the latter period of his life, the palmy days of Art having then passed away, the influence of the Tenebrosi were beginning to be felt, and he assuredly did not oppose to this growing influence, either by precept or example, the means at his command, and which might have been expected of a man of his capacity of mind. It would have been worthy of his genius, and it might then have been effectual. Titian's quarrel before this period with Paris Bordone and Tintoretto, whom he banished from his studio, prepared the way for many injudicious changes in the practice of these masters, and in the preparation of colours and of grounds generally. With respect to colours, each was striving to obtain the brightest; as if merit could be judged of alone by colour: thus, as De Piles informs us, the head of the Venetian school grew dissatisfied with the white-lead of the shops; and that to obtain the brightness of that of the old distemper painters, he prepared the pigment according to their method, i. e. with size. But he adds, the labours which attended this process soon disgusted Titian, and he laid it aside.

Lanzi informs us that Tintoretto departed from the practice of Titian, of painting on white grounds: "Vario anche il metodo di Tiziano nel colorire, servendosi d'imprimature non più bianche, e di gesso, ma scure; per cui le sue opere in Venezia han patito più che le altre." We are also told by the same writer, that the pupils of Paul Veronese varied the grounds of their master, which were white, and that they deviated also from his way of colouring. Yet the pictures of this master "glow with the grace which he so well knew how to shed over them." I must refer the reader for further information upon this subject to the elegant lectures of Sir Joshua Reynolds, than which for their extent there is no work in the English language upon Art which has superior or perhaps equal merits.

To so great a height did the spirit of rivalry and hostility between Titian and the other artists of his time arrive, that Giovanni da Pordenone, † fearing to be insulted by his rival (Titian), worked with a sword by his side, and a buckler tied about him, as was the fashion, says de Piles, with the bravoes of that day; and literally in this costume did he paint the "Cloisters of St. Stephen, at Venice." Apart from all consideration of the bad moral effect arising out of these quarrels, a door was opened for a general cor-

ruption of taste, and for the loss of the oral tradition of the studio, which followed on the death of Titian. Indeed at so low an ebb had respect for the art reached, that Paul IV. commanded one of the frescoes by Raffaele in the Vatican to be destroyed! Thus it ever is with Art and the other accessories of civilization: perfection once reached, the downward flight commences. The seeds of the brightest flower and of the most noxious weed are bedded or sown scattered in the same soil—there they germinate, and if both be suffered to grow together, the glories and the sweetness of the more tender plant will dwindle and decay. "Ogni scuola, per quanto vanti gran fondatore, a poco a poco va infevolendosi; e ha bisogno a tratto a tratto di essere sollevata."

In the unfortunate days which I am now about to describe, there arose a new race of professors of Art, who suddenly usurped the loftiest places in the Italian schools, and appropriated their emoluments to private uses. Governed by no moral laws or human sympathies, insensible alike to persuasion and remonstrance, they overspread the land like the devouring locust, whose approach is not perceived till the whole earth is laid waste and desolated. This was the sect of the *Tenebrosi*, as Boschini styles them in his *Carta del Navegar*. Their grand nucleus was the city of Naples—where, fostered by a weak and pusillanimous Government, they had ample opportunities thoroughly to organize and systematically arrange their future plans. This junta was at this time ruled by Bellisario, and his associates, men for the most part of desperate and infamous characters. But to write a history of this dark sect would be equivalent to a secret history of Italy entire! a work requiring immense labour and research, and far greater talent than I possess. I will, then, but pass cautiously over the surface of a troubled ocean, which I trust some more talented inquirer will fathom and explore. I offer no apology, therefore, for departing from all method and chronological order, and confining myself exclusively to the subject under discussion, proceeded to the question of *dark grounds*.

Zanetti is of opinion, that Pietro Ricchi introduced the oily and obscure method of painting of the Tenebrosi into Venice. But as neither this author or Lemazzo furnish us with a date, we are at a loss to fix the period. We are however, told by the observant and acute Lanzi, that the pictures of Rutilio Manetti are easily distinguishable at Siena, by invariably partaking of a certain sombre hue, which destroys the due balance of light and of shadow:—*Simil eccezione han molti de' suoi coetanei, como avverto quas' in ogni scuola. Il metodo di purgare i colori e di far le mestiche era guasto.*" This Rutilio Manetti was born in 1571, somewhat later than the period pointed out by Boschini, wherefore, it is highly probable that the sombre style spoken of may have found favour in some of the schools at a considerably earlier date. Viewing the matter with the impartiality which is produced by time and removal from the scenes where party spirit so long prevailed, I think we may fix upon the year 1550, as that in which the Tenebrosi began their existence; and that it originated with Tintoretto. The principles of that sect were afterwards more completely developed by P. da Caravaggio, and assuredly its doctrines were promulgated by the partisans of Spagnolitto.

No one can doubt that Tintoretto was a man of vast genius—quick to invent, impetuous to execute: in the mechanical operations of the art, without, perhaps, an equal in his day. Capable of extraordinary efforts, and inspired by a true ambition, he bade fair to rival Titian, and to snatch from his brows the laurels which he had earned. There was, however, in the character of Titian, a steadiness of purpose, of which his formidable rival was totally deficient, as it eventually proved, though he showed no symptoms of the deficiency till after his career had been some time commenced. But it is a remark, founded on a close observance of man, that diligence is seldom long the attendant upon those who are more anxious to do much than to do well; or, as one of his biographers expresses it, "*La diligenza rare volte si occupa alla smania di far molto; vera sorgente in questo uomo e in moltissimi artifici del far male, o almeno men bene.*" And Anibale Caracci, describing to a friend the pictures of Tintoretto, wrote, saying, that in many of them he could not recognise Tintoretto: "E Paul Veronese, che tanto ne ammirava il talento, fu solito a querelarsi ch' egli apportasse danno

† See De Piles.

*a' professori col dipingere ad ogni maniera; ch'era per appunto un distruggere il concetto della professione.*"—(Ridolfi.) In short, at this time he laboured for profit, not for reputation; he invented (assisted therein by the fertility of his imagination) new methods for accomplishing his mercenary views; he worked on *dark oily grounds*, because they assisted him in the multiplication of pictures, and on account of the price of colours he painted with very little body. By these means, he fell so far behind Titian, that it became a matter of astonishment that he should ever have been his rival; and more, that he should have so nearly approached him. He survived Titian only six years, but during this interval, more even than before its commencement, he tainted the Venetian school with many grievous corruptions, which after his death were fomented and exaggerated by his pupils: "Es proprio di ogni scuola portare all' eccesso la massima fondamentale del suo maestro."

Having thus traced to Titian as the cause, and to Tintoretto the effect, of that vicious example which promoted the establishment of the sect of the Tenebrosi, I will now explain the principles upon which those dark colourists proceeded. *To study nature more minutely; to depict her without choice in the selection, in the forms and postures most suitable to the production of sudden and startling effects of light and shadow; to make Caravaggio in his plebeian style their model, and to paint, like him, on dark and oily grounds.* These were the chief features of their doctrines, but there were others, which I shall presently develop. As a natural consequence of the publication of these professional tenets, the venders of colours took advantage of the occasion to sell impure and badly-prepared pigments, and vehicles favourable only to despatch; and manufactured grounds suitable also to the same purpose, and composed of strong earthy bodies, dark, and possessed of absorbent and drying properties. Thus all things changed for the worse, even to the very grounds: "Se ne dà colpa al metodo delle imprimiture alterato in ogni luogo—per tutta Italia." And we are told, in reference to the pictures of these dark colourists, that they exhibited "un color tenebroso, che occupo allora e oggidì rende poco meno che inutile molti quadri." Thus Pado- vanino, in his day accounted little if at all inferior to Titian, whose style he imitated successfully, has shown by the darkening of his pictures and by the change in their tints, that he was associated with the Tenebrosi.

But one of the most painful examples on record is that of Giordano, who in his youth was so assiduous in his professional studies, that he did not rest from his labour even to take his meals; he merely opened his mouth to receive food from his father, who, with paternal solicitude, was ever ready and on the watch, to satisfy these mute calls of hunger. By such excessive study and application, he acquired over his pencil so complete a mastery, that he obtained the name of "Il Fulmine della pittura." Capable of imitating the style of the greatest masters of the preceding age with such precision of colour and execution, as to deceive even his personal antagonists; in the words of Palomino, "Imitando ya à Raffael, ya à Tiziano, à Tintoretto, à Corego, y à qualquier, de los mos iminentes, de suerte que es menester gran perspicacia para distinguirlos;" capable also, by the force of genius alone, of dictating to every school of Italy and of Spain, he fell from his giddy height, and from his own good style, to follow the vulgar manner of his first master, Caravaggio. The love of gain led this fine genius astray; and perceiving, as Spagnoletto had already done, that the plebeian style attracted the most purchasers, he turned aside from the path of fame which he had long and patiently trodden, "al gusto Caravaggesco, che per la sua verità, forza, effeto de luce, e d'ombra arresta la moltitudine più che lo stilo ameno,"—and by these means, though they enabled him to die wealthy, he left behind him a tarnished and a worthless reputation.

The ever memorable and successful efforts of the Caracci in Bologna, to arrest for a time the progress of decay, and to check the prevailing maxims of the Tenebrosi, subsequently to the plague which carried to the grave so many good artists, and left others in a state of superannation, is above all praise. Their example fills us with animation; and when we review the history of that one family, without money, without influence, beyond what

genius commands, and with the opposition of every master of the period arrayed, and inciting the public with animosity, against them, we feel every nerve within us strained for the glorious struggle; and in imagination we follow the great leader, persuaded, that however degenerate may be the age, however contemptible the state of Art, and however degraded its followers, the invigorating principle does but slumber, and when called forth from its state of apathy, it will again become active, and shine forth with renewed powers, striving with, controlling, and rising above, the evil passions of men, removing the errors of a corrupted taste, and spreading abroad a true and generous feeling for the Arts. These are privileges not, indeed, easy of attainment, but they are such as every Englishman may strive for, and which every lover of his country, of his species, and of civilization, must study to obtain.

In the days of the Caracci, however, the fashions of Art had so far changed, that it would have required the strength of a Hercules to thoroughly cleanse the schools; it will not then be surprising, if the dark grounds of the Tenebrosi infected the noble school of Bologna. This may, perhaps, be imputed to the circumstance, that its founder, Lodovico, was more addicted to fresco than to oil painting, in the former of which styles white lead is inadmissible; and thus, by a very natural train of reasoning, excluding that pigment from his oil pictures. The consequence has been, that his oil paintings have so much faded and changed in colour, as scarcely to exhibit the tracings of a great master; and it is by his frescos only that his merits can now be judged of.

It has fared very differently with the pictures of Domenichino and Guido Reni, the two best pupils of the Caracci school. Guido predicted the durability of his paintings, from his use of white lead; and this proves that there must have been great discussions at that time respecting the employment of lead at all as a pigment. The pictures of this great master, in his best period, however, are in a high state of preservation, and have fully justified his prediction. But Guido had another, and, alas, a very inferior style: he became addicted to gaming; and, to supply means for the gratification of this odious vice, he exhausted his fine imagination, and growing worse and worse as his necessities increased, he prostituted his great genius, and yielding at length to the facilities of the age and to those afforded by dark grounds, he became a mannerist and a Tenebroso; and not being possessed of the prudence of Giordano, he—who had been honoured by all the princes of Europe, lauded by its poets and envied by professors—fell into dishonour and degradation, and at last died in poverty and squalid wretchedness!

Prior to the death of Guido, in 1656, his mind being then uncorrupted, and while he was yet in the height of his career, the dangerous principles of the Tenebrosi were, as has been shown, extensively disseminated. The sect was at that time ruled by Bellisario, Spagnoletto, and Caracciolo; and it was an essential doctrine with them to vilify and oppress all who opposed the advance of what may be rightly termed the *black Art*. They obliged the Cav. d'Arpino, then engaged in a work in the Capella di S. Genaro, to take flight before it was finished, and even pursued him to Rome, whither he went for refuge and protection. The completion of the work was then entrusted to Guido, in the days of his rectitude; but no sooner was it perceived by the Junta that he was inimical to the principles of the Tenebrosi, than his expulsion was determined upon; and he accordingly received a message, conveyed to him by two desperadoes in disguise, offering him the alternative of immediate departure out of the city or instant death! The successor to Guido in this obstructed work was Domenichino, a man educated in the school of *adversity*, and whose integrity had withstood the severest trials. He was not one, therefore, likely to succumb to the dark sect. Finding all their attempts to seduce him fail, they loaded him with calumny, found means for adulterating his colours, of mixing ashes with his grounds, and, by a succession of the most wanton annoyances, they drove this great man from Naples. But whithersoever he went, he offered a determined and uncompromising opposition to the Tenebrosi, to whose malevolence he at length, it was said, fell a victim, by having had poison administered to him, of which he died, in 1641. "Fu sorpresa

da morte, affrettatagli o dal veleno, o almeno da disgusti, che soffriva gravissimi e da parenti e dagli emuli; la piena de' quali era ingrossata per la venuta de Lanfranco suo antico avversario."

Indeed, so vigilant were the rulers of the Tenebrosi, and so vigorous at this time the execution of their mandates, that either poison or the knife effectually silenced opposition. In this state of affairs, and when all was discord, the schools of Italy were depredated upon by a set of mendicants, artists whose lives were passed in travelling from city to city, in persecuting the *denounced*, in repeating everywhere the same sombre unimaginative pictures, and in propagating among the pupils the dismal and mind-subduing doctrines of the Tenebrosi: "Servendosi d'imprimature scurissime ed oleose, cosa che quanto aiuta alla celerità, tanto nuoce alla durezza." Of this class were the Zuccheri, the Peruzzini, and the Ricchi: "Il regno della pittura era nella mano loro." It is painful to dwell upon the events of this unhappy period, fraught as they were with the worst and the most mischievous consequences to genuine Art; most of the pictures of this epoch faded even in the life-time of the painter. But a few good and true men of genius still remained; and when these, convinced by sad experience of the errors in practice into which almost all had fallen, resolved to return to white grounds and pure colours, it was found that the methods of preparing them, after so long an interval, were forgotten and altogether lost! In this dilemma, from which there was no one to relieve them, they resorted to a style which had been adopted by Caravaggio for his frescoes, and to which the term *agraffiti*, or scratched work, was applied. This consisted in preparing first a very dark or black ground—sometimes the black side of tanned leather, even; and upon this to give an even coat of one colour, either pure white or flesh tint; and when dry, with the sharp point of an iron instrument or graver, to scratch off as much of the upper white or flesh-coloured coat as would allow enough shade to show through from the black ground, to produce the desired effects of strong light and strong shadow: the only contrast to which the age aspired. This style was practised in oils by Andrea Cossimo, Mortuo da Feltro, and others. In fine, the tide of the *dark ages of Art* was set in, and we are even now, in the middle of the nineteenth century and after a lapse of two hundred years, but slowly recovering from the effects of the *tenebrous pestilence*!

It may be asked why—if the old masters were beset with so many difficulties at various periods, from bad grounds and impure colours—any old paintings should be preserved to our days? The answer to the question is this; that pictures may be compared to children of wandering tribes: the strong and the robust alone survive the casualties by which they are so frequently assailed. And it is owing to these contingencies that the weak and puling offsprings of the Tenebrosi have gone to the long repose from which they will never arise. Peace to their manes!

I have been induced to lay bare many of the details of this lamentable history (from which I have purposely excluded most of its worst features) in the full hope, that it may hold out a warning to our own school and its professors against encouraging, either in themselves or others likely to be influenced by their example, errors which, in their incipient state, might be accounted puerile and insignificant, but which, as I have shown, will involve the most disastrous consequences. It is, therefore, with no feeling of disrespect that I here appeal to them as honourable men—that, from the columns of the ART-UNION, I present to them my humble address:—

GENTLEMEN,—You are men of acknowledged talent and integrity, anxious to promote the interests of Art and to encourage youthful genius. Be careful then that no party spirit disturb your councils or misdirect your decisions. That those whom you may enrol in your list of members be distinguished alike for their professional and general acquirements, for their diligence and for their moral virtues. Assume no privileges to which as academicians you may be entitled, if they are proved to be injurious to your unselected brethren. In the admission of pictures to your annual exhibitions, let merit be the rule, character the exception. Open your studies to the young and the industrious; and communicate instruction freely, and, to the profession, gratuitously. Inspect the

prepared canvasses and panels, as well as pigments and vehicles, on sale by the colourmen, and recommend such only as can be conscientiously approved of. Be just in the distribution of your rewards, and earnest in the discharge of all your public duties.

If you be animated by these principles, if you be united for mutual protection and mutual encouragement, and if you promote to the utmost in your power your country's glory and reputation, then you will be encouraged and protected by its Government, and obtain extensive patronage from the public. Thus will you be honoured and respected as the Margaritones and Cimabues of ancient days—the revivers and restorers of a lost Art; and thus will the rank of Royal Academician command for its possessor admittance to every society, and be a passport through every land!

After this digression I will state what I conceive to be the comparative merits of *non-absorbent* and *absorbent grounds*. It is evident that a ground of gold leaf, *per se*, must be non-absorbent, and such might be required in distemper painting. Now, the use of gold grounds declined in the fifteenth century; Van Eyck lived in the beginning of that century; therefore, and as I before observed, gold grounds survived the distemper methods, and were in use after the discovery of oil-painting. Again, Agostino Calvi, who lived in 1538, was the first to lay aside gold grounds in Genoa. Therefore the use of gold grounds continued 118 years after the discovery of Van Eyck. It brings us also near to the time of Titian's and Tintoretto's grounds, and consequently verges on the period when the latter commenced his experiments upon *dark grounds*. These dark grounds were absorbent: therefore, though the conclusion is not strictly logical, absorbent grounds were invented by the Tenebrosi. In support of this opinion, it may be stated that the grounds recommended by Da Vinci, the ground of Titian analyzed by M. Merinice, and the grounds of Vasari, must all be considered non-absorbent. Finally, the paintings upon polished stones, wherein the veins and other natural marks form parts of the subject painted, were done upon grounds absolutely non-absorbent. Have I not then established a case in favour of non-absorbent grounds, supported upon the authority of Vasari and others? I will, however, quote the opinion of a very sensible modern writer: "The admirers of absorbent grounds say, that they make the colours more pure, by absorbing the oils in the vehicles with which the colours are tempered; this may be granted, but we must inquire how much more oil, &c., is required to make colours work on an absorbent ground, than on one which is not in the least degree absorbent?" \*

But to make some further application of this subject to our own times and circumstances, I may observe, that in order to produce an absorbent ground, it is thought to be necessary to use animal size in the priming; this gives a greasy texture to the cloths; and in order to prevent the artist's colours from slipping off the surface, it is requisite to add to the composition of the priming a certain proportion of gritty matter, in order to give a tooth; an excrescence, I believe, never contemplated even by the Tenebrosi, though in other respects they seem to be alike: a strong argument for a change to something better. I regret to say that the grounds which most of our colourmen prepare are of the greasy, gritty, absorbent kind here described; and, to render them still more objectionable, they are of a sickly light yellow-green colour. If in the preparation of the canvass common size have been used, and it be painted upon while yet new, it will come through every tint and cover the picture surface with unsightly glue-coloured yellow; if the canvass be old it will crack; if it be prepared, as is now the prevailing custom, with India-rubber, the priming will be kept flexible, but will never harden. Something must, therefore, be done for artists; and it were better to return to the grounds of Van Eyck, Titian, and Vasari: these are either of gold, or of pure white lead with paste, and starch, and oil. And I am happy to have it in my power to say, that such grounds are now prepared by Roberson, of Long Acre, Brown, of Holborn, Messrs. Ackermann, of the Strand, and Davy, of Rathbone-place, who have hereby proved themselves to be great benefactors to artists and amateurs.

\* T. H. Fielding "On Oil-Painting."

I have now brought my inquiry to a close: if, Sir, I have been prolix, it has been owing to my want of skill in composition; if unintelligible, to my anxiety to place the subject in strong relief before the reader; and if I have gone into matters somewhat irrelevant, it has been from an earnest desire to present to the mind of the youthful aspirant after fame, a faithful and admonitory picture of all that, through corrupt example and abuse of power, has in times past befallen the art of painting: a knowledge of which in these days of education is absolutely necessary, and of which it would be disgraceful to remain ignorant. "*Nescire quid antea quam natus sis acciderit, id est semper esse puerum, quid enim est etas hominis, nisi memoria rerum nostrarum cum superiorum etate contexerit.*"

Yours, &c.,

A.

#### ART IN CONTINENTAL STATES.

**ITALY.—ROME.**—*The Egyptian Museum in the Vatican.*—The treasures of the Egyptian Museum, in the Vatican, are increased by a present sent by Mehemet Ali to the Pope. The gift is composed of 80 articles—mummies, tombs, vases, and bronzes of the highest importance.

*Loggie del Vaticano.*—Many improvements have been made in the third floor of the Loggie del Vaticano, in order to restore and preserve the famous pictures by Giovanni da Udine, Danti, Pomarancio, Paul Brill, &c. Professor Agricola directed all those operations with great satisfaction to the artists and connoisseurs.

**VENICE.**—*Monument to Titian.*—The municipal council of Venice has given orders for a monument to 'Tiziano Vecellio.'

**BOLOGNA.**—*Monument to F. Francia.*—The municipal council of Bologna has also given orders for a monument to Francesco Francia. Professor Baruzzi will be the sculptor.

**FRANCE.—PARIS.**—*Academy of Fine Arts. Annual Solemnity for the Distribution of Prizes.*

We have in our last number given the names of the artists who have received the prizes in the competition of architecture, sculpture and engravings. Here are now the names of those who have received prizes in the School of Painting. Subject, 'Samuel consecrating David.' First great prize, M. Victor Biennourry, 19 years old, pupil of M. Drolling. Second great prize, M. L. T. N. Duveau, 24 years old, pupil of M. Cogniet.

The assembly for this public ceremony was numerous and distinguished. Many celebrated persons of every nation were present, and among them, David, Mayerbeer, Carassa, de Humboldt, de Fortia, Libri, Delaroché, Walekenaer, Picot, Lebas, &c. &c. Before the distribution of the prizes, M. Raoul-Rochette, the secretary of the Academy, read the report upon the works sent by the French students at Rome. It was rather a severe one; and M. Delécluze, with many connoisseurs, affirms it was not just, principally regarding the delicious picture of M. Papety, a young artist of great hope. His work is original, and at the same time following the grand and pure principles of Art.

After the distribution of the prizes, M. Raoul-Rochette, according to the usual form, took the chair again, and delivered a lecture, or the eulogium of the sculptor Ramey, the friend of Prud'hon, the author of the statues of Napoleon, Kleber, the Cardinal Richelieu, and other public works of merit. The ceremony was ended by a "Cantata," a composition of a young artist, who received at the same time the prize in the musical department.

*The Portrait of the Count de Paris.*—Monsieur Noel had the honour of presenting to the King, Queen, Duchess d'Orléans, and Princess Adelaide, the drawing on lithographic stone of a portrait of the heir of the throne, the Count de Paris. M. Noel copied it from the picture by Winterhalter. The royal family appeared highly pleased with the work.

**PARIS.**—*Singular Discovery.*—A most interesting discovery was made the other day at the Museum of the Louvre. The details are given in a special memoir addressed by M. Letronne to the Academy of Inscriptions and Belles-lettres.

Connoisseurs have admired, since the year 1834, a charming votive statue in bronze in the Museum of the Louvre: they believed they recognised in it

the archaic style of the Greek artists anterior to Phidias. Ever since the statue was seen, a slight degree of efflorescence was observed at the fissures of the bronze, especially at the edges of the orifices of the eyes, which had once been covered with silver or enamel, but were now empty. Various means were tried to stop this efflorescence, but in vain: the continued corrosion threatened to destroy this beautiful remain of antiquity. At last it occurred to M. Dubois that, as the statue had been found in the sea, where it had probably remained for ages, it might be filled by mud, with saline particles which, preserving their humidity, caused the efflorescence. The idea being communicated to M. Cailleux, director of the museum, an experiment was immediately made.

The statue was sounded, and found to be full of a muddy substance which was still soft. Water was introduced at the orifices of the eyes, the only place, where it could be done, and, by repeated washings, a great quantity of mud impregnated with salt was drawn out, mixed with pieces of clay and brick, which M. Letronne considered to have been parts of the mould. At the end of the operation, the statue having been placed with the head downwards, there appeared at the opening of the eyes four small pieces of lead: these were with difficulty extracted from the narrow orifices, and one piece fell into such small fragments during the operation, that it was quite lost. The other pieces arranged by M. Dubois appeared to be fragments of one piece of lead, two centimetres in breadth and two millimetres in thickness. After being cleaned carefully the letters of a Greek inscription became visible. M. Letronne was applied to by the directors of the museum, and the results of his researches were given in the memoir to the Academy from which we extract as follows:—

1. The piece of lead contained the names of the artists who made the statue, of one of these names, which was on the lost piece, there remains only, the last letters "on"; the remainder of the inscription is—Menodates born at \* \* \* \* and \* \* \* \* a Rhodian made (the statue).

2. It was rarely permitted to artists to inscribe their names on their works. These artists have placed their names within the statue, because it was a consecrated statue of Apollo placed as a public monument in the temple, being the produce of a tithe, as may be seen by the inscription encrusted in silver on the left foot of the statue. In a similar case when the power of Pericles could not procure for Phidias permission to inscribe his name on his work, he consoled himself by chiselling his portrait as one of the heads on the shield.

3. The inscription was engraved, not in the usual manner on a square or oblong "tessera," but on a narrow piece of lead, calculated to pass through the orifice of the eye, the only means by which it could be placed in the interior of the statue.

4. M. Letronne is of opinion, from the inscription and also the style of the statue, that its antiquity is not greater than about 100 years before our era.

**PUBLIC MEMORIALS.—CALVADOS.**—The impulse appears great at present in the French nation for erecting memorials in honour of their great men. The council of the department of Calvados have given orders for a splendid monument to the memory of the lamented and gallant Admiral Dumont d'Urville.

**DUNKIRK.**—The council have ordered a colossal statue of Jean Bart.

**DEPARTMENT DE LOT.**—The general council have voted a sum, and have given the commission for the statue of J. Murat, brother-in-law of Napoleon and King of Naples.

**PAU.**—The noble marble statue of Henry IV., which had been for many months exhibited in the Court of the Louvre, has arrived at Pau, and the municipal council have determined to place it in the principal square of the town.

**Ancient Furniture.**—An interesting specimen is about to be added to the collection of antiquities in the Louvre; namely, a table presented by the Spanish Government to Henry IV. on occasion of his marriage. It was found in a garret in the office of the Minister of Commerce, and is being restored by his orders. It is curious in point of art as well as antiquity.

**M. G. Dauphin.**—The picture by M. A. Dauphin, which gained a gold medal at the close of the exhibition of this year, the subject being a Mater Dolorosa, has been purchased by the Minister of the Interior.

**GERMANY.—AUSTRIA.—VIENNA.—Exhibitions in Germany.**—The well-informed periodical "L'Alliance des Arts," confirms that all the exhibitions of painting in Germany have been far from brilliant. That of Vienna had almost nothing of importance—excepting some works by Bauer, Schnorr, and Steinmüller.

**PRUSSIA.—BERLIN.—The Artists and Works of Art in England.** 1 vol. 8vo.—Monsr. Waagen, the Director of the Royal Museum at Berlin, has published a very curious and interesting work, "Kunstler und Kunstwerke in England." (The Artists and Works of Art in England.) It is a book claiming attention from all connoisseurs, even from those who cannot partake all the opinions of the learned Director.

**SALZBURG.—The Statue of Mozart.**—The festival to celebrate the inauguration of the statue of Mozart took place with great solemnity. The concourse of visitors on the 1st had amounted to 18,000, and many thousands more were expected. We believe that all the conservatories and academies of music, from St. Petersburg to Naples, sent deputies. Among the noble visitors is the name of Lord Burgherab. The ceremonies commenced by the performance of the Mass composed by Mozart; after which the crowd moved to the spot where the statue was placed. The Chevalier Neukomm delivered a discourse, and the authorities proceeded to uncover the statue, which received universal applause. The idea it expresses is eminently beautiful and poetical. Mozart is resting one foot on a stone, and his head is turned upwards; he appears about to ascend to heaven, whose harmonies have already reached his senses; his mantle is falling off; his laurel crown is lying neglected at his feet, emblematic of indifference to the glories of earth. The statue was modelled by Swankhaler, and cast by Steiglmeier. The festival was protracted for two days, occupied by the performance of Mozart's music; the second day opened with the famous Requiem.

**LEIPSIK.—Congress of Architects.**—A congress of architects took place here on the 14th; the number assembled was 547. A place of meeting was fixed on for next year—Bamberg, in Bavaria. We believe it is the first meeting of architects that ever took place.

**DENMARK.—COPENHAGEN.—Thorwaldsen.**—The Commandeur Thorwaldsen has just arrived from Rome, in Copenhagen, in order to direct the museum called by his own name. The famous sculptor in April next will return to Rome, which he chooses to make his residence.

**RUSSIA.—WARSAW.—H. Vernet.**—The Emperor of Russia arrived at Warsaw the 1st of October. Among his suite was Horace Vernet. It is said that the celebrated French painter, who at present is in great favour at the Russian court, will accompany his Majesty in all his excursions.

#### COLOGNE CATHEDRAL.

It was briefly mentioned in our last number, under the head of Foreign Intelligence, that the first stone of the new works for the completion of this most extraordinary monument of medieval art and piety had been laid by the King of Prussia, with much ceremony. The importance of the building, the interesting nature of the event, and the intense interest it has excited throughout Germany, seem however to call upon us for something more than this short notice. Cologne Cathedral, if completed according to the original design, would unquestionably be the most wonderful and the most beautiful building in the whole world. For a long time the name and country of its designer were unknown. It would now seem, however, that the honour of giving birth to the author of it belongs to Belgium; a charter having been discovered, dated 1237 (the Cathedral was commenced 1248), showing that the monks of Cologne, in consideration of the services performed by Master Gerard, of St. Trond (*Gerardus de Sancto Trudone*), who directed the construction of their Cathedral, had assigned to him a certain estate of land.

The restoration of the choir, which has been more than 20 years in progress, having been satisfactorily effected, a firm determination to complete the building according to the original design, seemed suddenly to take possession of all Germany. The

King of Prussia was the most zealous in the cause (as he had been in perfecting the choir), and pledged himself for a large annual sum. Other potentates have followed the example, and private subscriptions in aid of the undertaking have been entered into, not merely in the various German States, but in Paris and Rome. September the 4th was the day appointed for the *Grundsteinlegung*, and a glorious sight it was to see the enthusiasm and the unanimity which actuated the large multitude assembled in Cologne on that occasion. The King, taking the mallet in his hand, uttered a noble speech, which nothing but want of space prevents us from presenting entire. "Here where the ground-stone lies," said he, "here by these towers, will arise the noblest portal in the world. Germany builds it: may it be for Germany, with God's will, the portal of a new era, great and good. Far from her be all wickedness, all iniquity, and all that is ungentle, and therefore un-German. May disunion between the German princes and their people, between different faiths and different classes, never find this road; and never may that feeling appear here which in former times stopped the progress of this temple,—ay, even stopped the progress of our Fatherland. Men of Cologne, the possession of this building is a high privilege for your city, enjoyed by none other; and nobly this day have you acknowledged that it is so. Shout, then, with me—and while you shout will I strike the ground-stone—shout loudly with me your city cry, ten centuries old, Cologne for ever!"

And then, while a thousand voices re-echoed "Cologne for ever!" the ancient crane on the top of the south tower was once again put into operation, and was seen slowly raising a ponderous stone!

The architect, E. Zwirner, calculates that a sum equal to £720,000 sterling will be required for the completion of the structure, and that it will occupy about thirty years—an amount of time and money (and both probably inadequate), which seems to render the noble desire of the German people somewhat doubtful. Let us hope, however, that the fear may be unfounded, and that this magnificent building may gradually gain its intended proportions—an emblem of unity, a worthy offering to God, and an ornament to the world. G. G.

#### OBITUARY.

##### MONSIEUR DE SOMMERARD.

The world of Art has sustained a loss, in the death of M. de Sommerard, which will not be easily supplied. He had been, for some time, in declining health, but his labours were never interrupted. Even the day before his life closed, he was occupied in correcting some proof sheets of his great work on "Les Arts au Moyen Age." He died at the Hotel de Cluny, so well known to every lover of Art, as containing M. de Sommerard's magnificent collection of Antiquities of the Middle Ages.

The early life of M. de Sommerard was marked by many hardships: a soldier from the age of fourteen, his youth was passed in camps, and he made the campaigns of Italy and of La Vendée.

At the close of the war he left the army and entered the "Comptabilité Nationale." There he was distinguished by his industrious habits, and was named "référéndaire" of the Court of Accounts. At this period, his circumstances being less limited, he began to indulge his love of Art, which chiefly showed itself in the patronage he bestowed on young artists, more by his knowledge and influence, than by pecuniary assistance. Messieurs Gudin, the famous painters of marine subjects; Eugene Lepoittevin, also a marine painter, and of pictures "de genre" so piquant and clever; the unfortunate Gericault, and many others, were daily the objects of the friendly exertions of M. de Sommerard, to promote their success by every means in his power.

Later in life, when appointed "Conseiller Maître" of the Court of Accounts, finding his time more at his own command, he began to execute a plan which had long been the subject of his thoughts—his great work on "Les Arts au Moyen Age." He had formed a collection of objects of that period by slow degrees, adding to it piece by piece till it became the magnificent collection of the "Hotel de Cluny." To strangers it was an object of attrac-

tion; and numbers, especially of English visitors, were daily received by M. de Sommerard, with a courteous politeness peculiarly graceful in one whose habits of study were so noted. Here are the chess-pieces of St. Louis, in crystal and precious stones; the bed of Francis I., of carved oak; Venetian mirrors, armour, knives, armories, and tables—all of the middle ages.

M. de Sommerard's work is a description, with lithographs, of the principal objects of his collection, the whole being too numerous to be included. We have now before us a part of it, and so various and interesting are the objects represented, that they make us more acquainted—they show us more of the interior of the lives of the various classes of persons in those times—than almost any work we can name. The distaff, the knitting-needles, the chatelaine of some great lady, tell not more the magnificence and rich ornament which was the fashion of the times, than that piece of furniture which seems an armory so minutely and laboriously carved by the monks of Cluny, and presented to their abbot, speaks of the monastic quiet and small value of time among the inhabitants of the monastery. It is an advantage which a Parisian or visitor to Paris possesses, that he can test the correctness of every drawing by comparison with the object from which it is taken.

We hope, at no very distant period, to bring the whole of this magnificent work into more intimate acquaintance with the British public. It is one that we think—notwithstanding its great cost—could not fail to obtain considerable circulation in this country, if its merits were known; for it is a vast storehouse of intellectual wealth, an inexhaustible mine of enjoyment, and a prodigious source of information to the artist and the amateur.

It was the intention of the French Government to have purchased the whole of this fine collection, but a ministerial change has, for the present, deferred, and may doubtless long defer, this arrangement.

The Hotel de Cluny is itself full of historical recollections of Mary of England, the wife of Louis XII., of Charles Brandon Duke of Suffolk, Francis I., &c.

##### M. DAVIGNON.

This celebrated painter of letters, who has made for himself a reputation, in his peculiar style, that has rendered his name European, as well for his talents as for his careless prodigality, died a few days ago in the Hotel Dieu. His death was suited to his life. After too liberal potations, according to his custom, he mounted a ladder, lost his balance, and fell. He was carried to the hospital, where he died in a few days.

##### M. A. FLANDRIN.

M. A. Flandrin, the painter, is dead at Lyons at the age of 34.

##### MR. JAMES EGAN.

This excellent engraver, in mezzotint, died at his lodgings in Pentonville on the 2nd of October, at the age of about 43. He was a native of the county of Roscommon, in Ireland, and was undoubtedly the best artist in his particular department of the Arts which that country has produced. Of his birth and early history little is known; he was of humble parentage, and was entirely the architect of his own fortunes. In the year 1825, he was in the service of the late Mr. S. W. Reynolds, in a menial capacity; but here he was employed occasionally in laying mezzotint grounds for his master, and received his first lessons in Art, which he was subsequently enabled to carry out in a manner that supplied proof of the natural energy and ability of his mind. He soon quitted his employment—which was little better than that of an errand-boy—and commenced his career as a ground layer for engravers, "without a shilling or a friend." Of the latter, however, he obtained many before the close of his brief life; and had he lived but a few years longer he would have been recompensed by abundant occupation and corresponding wealth—wealth, that is to say, to a man of very moderate expectations and desires. "His intense application and earnest desire to learn"—according to our generous informant, a brother engraver—"interested all who knew him." He worked on, willingly enduring hard labour and severe privations; but, at all times, with the proud spirit that distinguishes his countrymen, concealing his necessities from his acquaintances, and looking forward, with hope, to the acquisition of

independence by his own unaided efforts. Alas! this exertion and this endurance was followed by the too common result. About eight years ago consumptive symptoms began to manifest themselves; other bodily ailments assailed the overwrought mind. His health sunk gradually under their influence; but in spite of sickness he laboured on, with the same earnestness as ever, when periods of temporary relief permitted him to do so, until death terminated his sufferings, and gave "the weary rest."

His latest plate is undoubtedly his best, and it realized all the hopes of his friends, concerning the reputation he was destined to acquire. The work, however—'English Hospitality in the Olden Time,' after Cattermole, published a few months ago by Mr. Moon—was finished under circumstances and in a state of health frightful to contemplate; and when to this consideration is added the fact that the engraving was from a *drawing*, it may be safely classed among the most successful achievements of modern Art; it has certainly not been surpassed, if it has been equalled, by any artist of his standing in the profession. Mr. Egan married when very young; he has left three children to lament his loss, and without a protector. Upon this subject we direct the attention of the generous and considerate reader to an advertisement which appears in another column of the ART-UNION. We are sure that the appeal in their behalf will not be made in vain.

#### MRS. SOYER.

We regret to record the death of this estimable lady and excellent artist. Her husband, M. Soyer, had accompanied the Duke of Saxe-Gotha to Belgium; where his wife was taken suddenly ill in childbirth, from the effects of which she died. Although her name is sufficiently familiar to those who have visited recent exhibitions, she was better known as Miss Emma Jones. Some of her pictures exhibited here were the subjects of very general admiration; and such of our readers as visited the last exhibition at Paris (where Madame Soyer was even more popular than in England), will recall with pleasure her picture in the style of Murillo, of 'The Two Israelites,' which received so much praise from the French critics. The devotion of Madame Soyer to the art which she so much adorned by her talents, is illustrated as much in the number as in the excellence of her works, which form the basis of a lasting and honourable fame. Although but 29 years of age when she died, she had already painted no less than 403 pictures. Many of them are in the possession of distinguished collectors in this country.

#### VARIETIES.

**THE ROYAL COMMISSION.**—Upon this subject we have only to report, this month, that many artists are actively engaged in preparations for "the competition." A very large number of cartoons have been supplied by the makers; and we know that the exhibition-room, be it where it may, will be full. We are still, however, more than doubtful as to our leading painters engaging in the competition; but in reference to this matter, one of paramount importance, we must entreat the indulgence of our readers until next month. The "precedents" are numerous; but they lie scattered through many documents, and are not to be brought together without time and considerable labour. We may premise, that they will be sufficient to remove the scruples of any artist, who is willing to "copy the old masters."

**THE LIVERPOOL PRIZE.**—The prize of £50 has been adjudged by the Liverpool Academy to J. S. Agar, Esq., for his picture, No. 93 in the Catalogue, of 'Christ and the Woman of Canaan.' Upon this award there will be two opinions; the work is, unquestionably, one of merit—of considerable merit; but to distinguish it as the best in the whole collection is as certainly going too far. In such cases, however, other considerations, of which we cannot be aware, may have been brought to bear upon the choice; the Liverpool Academy give the prize out of their own funds, and have, therefore, it may be, a right to follow their own inclinations. There is one point, however, that must not be left out of sight—they have selected

an historical painting, and not a picture *de genre*, for distinction; another proof of an increasing taste for the higher department of the Arts.

**THE ROYAL ACADEMY.**—The election of associate members of the Royal Academy will take place, as usual, early in November; we imagine on the 1st of the month. There are, we believe, vacancies for three, and therefore three new associates will be chosen. We have, of course, as every other person will have, our own speculations upon the subject; and we have heard several rumours in reference to it. There can be, we think, little doubt that the best among the candidates will be chosen. Several excellent and justly popular painters present themselves; the choice of Members will be a far more difficult task.

**PICTURE FRAMES.**—We direct the especial attention of all persons interested in this subject, to the frames for pictures manufactured by Mr. Bielefeld. They are of papier machée; and the advantages they possess over the ordinary composition frames are so strong and so numerous, that they must, inevitably, be brought into general use. First, they are cheaper; being about two-thirds of the cost—much less, indeed, where the frame is of large size; next, they will not "chip" in carriage; and next, they are so much lighter in weight, as to supply an important item in their favour to those who are in the habit of transmitting large pictures from one place to another. This remarkable "lightness" is indeed desirable every where; for in many rooms, where the walls are thin or aged, it is impossible to hang large pictures in the usually ponderous frames. To exhibitors in provincial exhibitions these are no ordinary recommendations. But we refer chiefly to the *appearance* of these frames, which interests the collector as well as the artist, and, indeed, all persons who adorn their homes with pictures or prints, be they many or few. They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. The gilding tells with very brilliant effect; and, no matter how elaborate the pattern may be, they have a clearness and sharpness that we have seldom, or never, seen obtained in composition. Now that so many frames will be required for the prints about to be issued by the several Art-Union Societies, we conceive we may convey useful information to thousands, by recommending them to examine these frames; the patterns are infinitely varied; some have been designed expressly to meet these particular purposes; and their advantages are so obvious as to be at once appreciated by all by whom they are seen.

**"NATIONAL" ART-UNION.**—A plan is in agitation for establishing an Art-Union upon a scale of immense magnitude; having reference first to the distribution of pictures, in the usual manner, and next to the circulation of engravings, in accordance with the ordinary mode; but having some peculiar features by which its projectors expect to obtain the suffrages of a mass of parties in all parts of the United Kingdom. These are, if we are rightly informed, the forming an exhibition of the prize pictures, previous to drawing, in every town of note in England, Ireland, and Scotland; and so conveying a knowledge of British art to places from which it has been, hitherto, excluded; or where, at all events, it has made but limited and partial way;—and next, to remove the leading difficulty with which existing societies have to contend, and which forms a great barrier to their usefulness, by supplying to each subscriber a print at the time of his *subscribing*. This is, in fact, its leading mark of originality; and to do this effectually, we understand, arrangements have been made with Mr. Moon for the purchase of several of his plates; among others, of the two magnificent ones, engraved by Miller and Willmore, from Turner's pictures of "ANCIENT" and

"MODERN" ITALY, now on the eve of finish; prints that certainly, up to this time, would have been published at—and have been worth—two guineas each. It is proposed to give one of these prints to each subscriber; and to give him also his "chance" of a prize of some modern picture—the number and value of the collection of picture-prizes to depend upon the sum subscribed. LONDON is to be the grand dépôt; but branch societies, under proper jurisdiction, and with proper agents, are to be established in nearly every town of the United Kingdom. We merely give these "facts" as we have heard them, believing them to be correct, without being at present enabled to consider the "Plan" in all its huge and momentous bearings. Certainly it will, if carried out effectually, judiciously, and *honestly*, produce a complete Revolution in Art; for it will accustom the public to obtain for the sum of a guinea (or rather for half-a-guinea—half, it is understood, being devoted to the purchase of prizes) a print such as they have been accustomed to pay two or three guineas for. In numbers, however, there is strength; a large circulation of any work enables the producer to offer each copy at a comparatively reduced price; and we know that in the case of the Annuals great astonishment was at first excited by the selling twenty prints for twenty shillings, each of which would, a few years ago, have brought the whole sum. It is scarcely needful to observe, that this extraordinary change will be the result of the invention of the Electrotypes—an invention that is no doubt likely to render the finest productions of the burin as easily accessible as the commonest prints. We reserve our opinion upon the whole project until we have obtained more satisfactory information concerning it; but it will be perceived that we have a disposition to encourage it; first, because we believe it will be wise to direct a mighty stream into a safe channel; and next, because, come the design from what quarter it may, we shall rejoice to see fine works of the painter and engraver brought within reach of the multitude, the only sure way to improve the general taste, to elevate and instruct the universal mind, and to induce a strong desire (that will inevitably be gratified) to obtain things even yet better. For many years past, cheap and good Literature has been amply supplied; the researches of science may obtain for us Art, also cheap and good.

**PUBLIC PORTRAIT.**—A portrait, Bishop's size, of Mr. William Menzies, an accomplished musician and "estimable Scot," has been recently painted by Mr. Alexander Chisholm for the club of "True Highlanders," a benevolent society. The likeness is striking, and the Highland dress and arms, in which the figure appears, afforded the artist opportunity for imparting pictorial effect, in which he has been very successful. Besides the fidelity of the likeness, the painting is decidedly good. The pattern of tartan is the remarkably showy, but well arranged, *sett* which, as worn by Sir Niel Menzies's clan, attracted so much attention during the late gathering at Taymouth. The portrait was procured as a testimonial of respect by the personal friends of the gentleman, and they gave it for preservation to the club, of which he is the oldest member, and has been the staunchest friend. The ceremonial of presentation was interesting. About 300 individuals, comprising a number of respectable ladies, were present, the members and many others wearing the national costume, which gave an imposing effect to the assemblage. After delivery by the deputation, and acknowledgment by the chief in an appropriate reply, the picture was hung up in a suitable position, amid the loud sounding notes of "Fàilte Meinnich," or the Menzies's Salute. No more mutually-pleasing mark of esteem can be shown than in thus obtaining and bestowing the portrait of a valued friend. It is gratifying to the individual who has his "veritable effigies" preserved in an institution, the success of which he laboured to

promote. It is a disinterested and lasting tribute to worth, and a judicious employment of the artist's skill. A portion of the funds of societies which are expended on transient and unimportant objects might be laid out with much propriety in obtaining portraits of their most distinguished benefactors. If one was taken periodically, in process of time an extensive collection might be formed, which, to the members, would be always interesting and honourable; and the claim to such distinction being decided by vote, an emulation would be excited which could not but have a happy effect on the general interests of the association.

**THE CHAPEL ROYAL, WINDSOR.**—This beautiful chapel has received the adornment of a large west window, and another of stained glass in the choir. A writer in the *Times* thus refers to the old condition of the west window, and describes its present state:—"In the year 1774, the Rev. Dr. Lockman, canon of Windsor, collected, from various parts of the chapel, a great number of detached figures in stained glass. These were placed in the compartments of the great west window on a ground of plain white glass. The number of figures not being sufficient, however, to fill the whole of the openings, the glazier ingeniously composed some trellice patterns, which were formed in colours of the most discordant kind, to fill the remainder. The ramifications of the arched head were occupied by plain surfaces, chiefly of glaring orange and purple stained glass; yet with all these violations of good taste, perpetrated at the expense to the then chapter of £600, there was a certain degree of effect produced, particularly at sunset, which gave great brilliancy to the architecture. In the new arrangement by Mr. Willement, the whole of the ancient figures have been repaired, and instead of the crude ground of white glass, on which they were placed, each compartment has a diapered ground of warm yet quiet tint, with an architectural frame to each, formed by a base, columns, and enriched canopy, corresponding in design with the style of the chapel. Ten ancient figures, and as many entirely new, have superseded the formal and unmeaning patterns of the glazier. The lowest range of openings being considerably higher than the others, that space is now occupied most appropriately by a long label inscribed with the prayer, "God save our gracious Sovereign, and all the companions of the Most Hon. and Noble Order of the Garter." Within the arched head of the window the four principal compartments are filled by the initials, crown, and badges of King Edward III., the founder of the Order of the Garter; of King Edward IV., who began the erection of the present chapel; of King Henry VIII., who completed it; and of Queen Elizabeth, in whose reign so many additions were made to the Castle. The smaller openings are strewn with the Tudor devices on rich grounds of ruby and garter blue; in the centre, above a sculptured panel of the royal arms, are placed in stained glass the arms of the patron saint, with the initials of Sanctus Georgius; and above these, in the extreme apex, the sacred monogram I. H. S. By these judicious alterations, the whole surface of the window has become replete with the richest tints, sufficiently varied to obviate any monotony, and producing, with the greatest fulness of tone, an entire absence of that unseemly glare which too often pervades almost all modern attempts in this class of art. The arrangement conduces essentially to develop the great beauty of the stonework, a point most sadly neglected in most cases."

**MODELS IN CLAY.**—In reference to this subject, last month, we committed an error which we are anxious to rectify. The address of SANGIOVANNI is Nassau-street, Middlesex Hospital, and not Wardour-street. Notwithstanding this mistake, we are glad to find that we have induced some persons to visit his studio—the studio of an excellent artist, whose claims are of an order that will be readily admitted and acknowledged.

## THE STUDY OF ARCHITECTURE.

The increased attention paid at this time in England to the study of architecture; the interest in the protection of ancient buildings exhibited by various classes of society, and the dawning desire apparent on the part of the public that all new national buildings should be worthy of the country and the age, are amongst the most gratifying signs of the times, and can hardly fail to lead to most satisfactory results. Foremost amongst the means conducing to the good end in view we have always regarded the appointment of Professors of Architecture at King's College and the London University; and it was therefore with no common anxiety that we attended the introductory lecture of Professor Donaldson at the latter institution, on the 17th of last month, desirous to learn, in the first place, the spirit in which he would enter upon his most responsible office, and, in the second, the manner in which it would be recognised and supported by the profession generally. The result was in both cases most gratifying. The address was eloquent, instructive, and high-toned; and the theatre was crowded by an audience of no ordinary character, embracing nearly all the most distinguished members of the profession. Apart from the occasion itself, it was an opportunity of acknowledging, in some degree, the obligations which the profession are under to Mr. Donaldson for his strenuous efforts in establishing the Institute, which we were glad to find was not disregarded. We will not attempt to follow the whole course of the lecture, as it will doubtless be published, and so placed within the reach of all our readers, but must content ourselves with referring to some few passages in it. Tracing the general progress of architectural history, the lecturer pointed out briefly the peculiarities of the buildings of various countries, described some of the stupendous monuments of the earliest times still remaining, and showed the value of these relics as recalling the memory of past events with intense effect, and acting as so many pages of history to develop the progress of the human mind. "Who is there that has visited the Tuscan capital," said he, "and has not been struck with the frowning aspect of the Florentine palaces? Immediately the mind reverts to those times when the Bianchi and the Neri, the Guelfi and the Ghibellini, divided into two factions every street—every street: when the citizens deluged the roads with their blood; when every dwelling was in fact a tower of defence, and every palace a fortress. The rings still remain to which were attached the horses of the troops, the iron fastenings whence waved their banners, the massive lanterns which served to guide the steps of the retreating partisans."

The Egyptian temple, with its avenue of sphinxes leading to the sacred precincts, its enormous propylea, magnificent court, and densely-columned hall, was admirably described and illustrated, as also were the glories of Athens, and the sublime darings of the Middle Ages.

Of Style, the lecturer remarked, "it may be compared to language in literature. There is no style, as there is no language, which has not its peculiar beauties—there is no one that can be safely rejected. A principle reigns in each, which the architect may haply apply with peculiar fitness on some emergency." The necessity of recurring to first principles, and of investigating those laws which govern taste, and must be discoverable in the wondrous buildings which, whether in Egypt, Greece, Rome, Asia, or Modern Europe, have commanded the admiration of succeeding ages, was pointed out. "Never were they more needed than now," observed the lecturer, "for not only our own school, but those of our Continental neighbours, have reached a most critical period. We are all, in fact, in a state of transition. There is no fixed style now prevalent here, or at Paris, at Munich, or Berlin. There is no predominant predilection nor acknowledged reason for adopting any one of the old styles of Art. We are wandering in a labyrinth of experiments, and endeavouring, by an amalgamation of certain features of this or that style, to form a homogeneous whole with some distinctive character of its own."

The different departments of construction were touched upon, and the necessity of practical knowledge forcibly pointed out. Architecture is essentially composed of two divisions, imagination and

reason. Deprive it of the element of taste, it assumes the form of mere mechanical science. Take away its element of sound construction, its flights in the region of fancy degenerate into wild caprice and extravagance, having no ennobling end or object. The subject will accordingly be divided into two courses—Architecture as a Fine Art, and Architecture as a constructive science; and, if the prospectus published by Mr. Donaldson be fully carried out, they will be treated in a more perfect manner than has ever yet been attempted.

## THE TEMPLE CHURCH.

This renovated edifice will be opened for public worship on Sunday next, the 6th of November, by the Rev. Mr. Benson, the Master of the Temple. For some days past it has been thronged with visitors, although it is still in an unfinished state. The repairs were commenced in 1810; and the immense expenditure required has been jointly borne by the two Societies of the Inner and Middle Temple. We extract from the *Times* the following graphic and circumstantial account of the changes the venerable structure has undergone:—

"Those to whom the Temple Church was familiar in its late dress of plaster and whitewash will scarcely recognise the ancient structure in the gorgeously decorated appearance it now presents. The repairs were commenced in 1810. The dilapidated state of the building, in great measure, owing to the reckless manner in which the walls and pillars had been overlaid with heavy monuments, rendered these works necessary, and, in accordance with the improved taste now prevalent in the public mind, the benches were led to extend the mere repair into a restoration of the building as nearly as possible to its original state. The architect who commenced these works was Mr. Savage; but, owing to some differences between that gentleman and the building committee of benchers, the charge was transferred to Mr. S. Smirke on the part of the Inner Temple, and Mr. S. Burton, on that of the Middle Temple. It is, however, due to Mr. Savage to state, that the plans prepared by himself have been in a great measure carried out by his successors."

"The ENTRANCE PORCH is for the most part new, the excessively ornamented old doorway having been partly renewed, and the remainder re-worked and restored."

"THE CIRCULAR NAVE.—The six clusters of old Purbeck marble columns, which formerly supported the whole superstructure, have been removed, and new columns of the same material substituted. The ceiling of the centre part (a truncated dome of comparatively modern erection) has been taken down, and a new oak vaulted and grained ceiling substituted, painted by Mr. Willement, strictly in accordance with the style of the period. The whole of the walls, arches, and aisle vaults have been reworked, and new polished marble shafts substituted for the old columns. The sculptural figures of the Knights Templars have been restored in the most perfect manner, and will again occupy their former positions."

"THE TRIFORIUM OF THE NAVE has been converted into a depository for nearly all the monuments which formerly disfigured the walls of the church. This gallery, common in all cathedral edifices, now forms a handsome promenade of 12 feet wide and 15 high round the circle, the mural tablets of most of the eminent lawyers of the last two centuries being carefully arranged on either side. They are much better seen than formerly, and form an interesting collection of monumental sculpture."

"THE SQUARE CHANCEL.—This part of the church, hitherto filled with pews, which concealed the bases of the marble columns (themselves hidden by a thick coating of plaster and paint, through the over-anxious desire to efface all emblems of the Popish faith on the part of the Protestant lawyers shortly after the Reformation), and encumbered to a height of eight feet from the ground with oak wainscoting, shutting out the view of the elegant marble piscina on the south side of the building, has been entirely cleared of these unsightly additions. The huge pulpit and organ-screen are also removed, and a new and elegant gallery for the reception of that instrument has been erected on the north side, occupying one bay, with a vestry beneath. The walls of the latter small apartment are studded with monuments, among which the most conspicuous are those of Lord Eldon, Lord Stowell, and Oliver Goldsmith. The north and south aisles are each divided into five compartments; the eastern division will be occupied by the benchers' ladies, and that adjoining by the benchers themselves, every seat having distinct and elaborately carved elbows. The two next are occupied by the barristers, and the remaining division by the barristers' ladies. The members of the Inner Temple will occupy the south, and those of the Middle Temple the northern side of the church. The whole of the centre is fitted up with sittings for the students, in the cathedral style of arrangement. The most prominent object on entering the chancel from the western porch is the triple-lancet window over the altar. This beautiful specimen of stained glass, ex-

ecuted by Mr. Willemant, F.S.A., is intended to represent the principal events in the life of our Saviour. In the first division are the annunciation, the nativity, the angels appearing to the shepherds, the wise men before Herod, their progress towards Bethlehem, and their adoration of the infant Jesus. The centre division contains the flight into Egypt, the presentation in the temple, Christ before the doctors, the baptism, the marriage at Cana, the calling of St. Peter, the transfiguration, the entry into Jerusalem, the last supper, Christ before Pilate, bearing the cross, the crucifixion, Joseph begging the body of Jesus, the soldiers guarding the sepulchre, and, in the extreme upper point, the resurrection. The third division contains representations of those events which took place after the crucifixion. The interstices of each of the divisions are filled up with a mosaic of the richest coloured glass, and enclosed within broad and elaborately ornamented borders. On each side of this window are three other openings, containing subjects in stained glass illustrative of the history of the Knights Templars, viz., the Temple at Jerusalem, and the city of Bethlehem, the armorial bearings of the founders and benefactors of the order, and equestrian figures of those masters who commanded in England during the erection of this edifice. The style, details, and costume of every part evidence the most careful antiquarian study, and the arrangement of the various tints presents the most perfect harmony. On the south side of the church, facing the organ, is another painted window, totally different in character. In this the principal ornaments are five whole-length figures of angels, playing on various musical instruments. The remainder of the window is filled by delicately-drawn ornaments on a reticulated ground, relieved by rosettes and bands of coloured glass. In the clerestory of the round church there is at present only one window of stained glass, representing our Saviour enthroned between the evangelists. The prevailing colours used for the decoration of the walls and roof of the chancel are blue and red. The ceiling is divided into compartments, alternately ornamented with the armorial bearings of the two inns; the lamb and staff for the Middle Temple, and the flying horse for the Inner Temple. Figures of several of the early kings of England are embazoned on the western wall, and the shield of the holy cross worn by the Knights Templars is frequently introduced. The altar is entirely new, from the design of Mr. Smirke. The creed and commandments are painted black, on a gold ground, with illuminated initials, producing a remarkable richness of effect. The whole of the designs for the stall-ends and elbows, consisting of grotesque heads and foliage of the most elaborate description, have been furnished by Mr. Cottingham, of the Waterloo-road.

"The desk now erected is merely temporary, it being considered prudent to ascertain the most eligible position by actual experiment, previously to the definite adoption of a site for the handsome carved oak pulpit which is in preparation. It is not intended to erect a reading-desk—the creed and lessons will be read as in collegiate establishments. The organ, one of the few superb instruments built by Schmidt, more than a century since, has been entirely reconstructed by Bishop, who has greatly extended its power by the addition of 15 large pedal pipes, and corrected a few defects in the original. The floor is paved with glazed encaustic tiles, copied exactly from ancient examples. This is not expected to be completed by the day appointed for the re-opening of the church for public service, owing to the entire stoppage of the works at the Poteries, in Staffordshire, during the late disturbances.

"The bell, which was formerly in the roof of the circular nave (although that was not its original place), has been removed, and hung in a new stone belfry turret erected over the Newell staircase on the north side.

"The churchyard is being paved and otherwise improved, and it has been determined by the benchers to allow no more interments therein. It will be recollected that the musical service of the Temple Church was formerly a great attraction. The benchers have now decided on introducing a choir, and the service will be performed in the cathedral style.

### ART IN THE PROVINCES.

Art-Union Societies are spreading rapidly throughout the United Kingdom; in addition to those to which we referred last month—at Dublin, Belfast, Liverpool, Birmingham, Manchester, Norwich, and Plymouth—we have now to report their contemplated establishment at Exeter, Taunton, and Sheffield; incorporated in some instances with "INSTITUTIONS" for the promotion of the Fine Arts.

SHEFFIELD.—Our advertising columns will afford ample information concerning the project of Mr. Gilbert for the establishment of an Art-Union in this wealthy and populous town of Yorkshire. This county—the largest, and it may be said the wealthiest, of the English provinces—is peculiarly calculated to give prosperity to the establishment of such a Society. It is indeed matter of astonishment that it should have been so long without one, while they have flourished in so many other counties. Mr. Gilbert calls upon his friends and the public generally, to remove this reproach from their county. We have no doubt, whatever, of his entire success. It will be seen that he has obtained promises of support from several distinguished artists, in forming an exhibition, the period of which will be

duly communicated to our readers; and that he has introduced a novelty into his programme that cannot fail to prove attractive. Each subscriber will receive a print at the period of subscribing; and will not have to wait for it until time has enabled the engraver to produce it. To this important feature of his plan Mr. Gilbert directs especial attention: it is one which cannot fail to give universal satisfaction, inasmuch as the subscribers will be at once enabled to estimate the value of the work procured, which, to say the least, will be equivalent to the guinea he subscribes; and at a subsequent and not distant period, he will have the chance of obtaining a painting by some eminent British artist, selected by himself, of between the value of 10 guineas and 200 guineas. The works selected by Mr. Gilbert for distribution upon this principle are already published; but their circulation has not been in proportion to their merits; they will be in fact "quite as good as new" to nineteen-twentieths of the subscribers. "For every guinea subscribed, parties subscribing will receive, at their option, a copy of Watt's splendid line engraving after Leslie, R.A., of 'May Day in the Reign of Queen Elizabeth,' or the mezzotint engraving by Lucas, after Isabey, of 'The Return to Port.'" The first is especially valuable; and will contribute largely to extend a just appreciation of what is good and true in Art; for it is excellent as a composition and admirable as an engraving.

EXETER.—Plans are in progress for the establishment of an "Institution for Promoting the Fine Arts" in this enlightened city of the west. It is strange that Devonshire should have been so long without one—the native county of Reynolds, Northcote, Eastlake, Haydon, Hart, Prout, Brockedon, and several others, whose names we cannot at the moment call to mind. It will be established upon a scale worthy of the fine old city; and proper appeals will be made forthwith upon the intelligent and patriotic gentry of the shire. We shall take an early opportunity to "report progress."

PLYMOUTH.—This infant Society has made some progress. It is, however, conducted upon a limited scale. The results of the first annual meeting are thus reported by the committee:—"Their object was, at the outset of their undertaking, rather to secure a feeling of gratification in all their subscribers, by presenting a print, which each should regard as a prize, than to obtain the triumph of a few at the cost of general disappointment and dissatisfaction. The number of subscribers amounts to 306, producing a revenue of 153 guineas. Of this sum, £80 6s. 6d. has been appropriated to the purchase of the requisite number of engravings, and of the surplus, £45 has been divided into prizes of the following amounts, which will be presently drawn for:—One prize of £10, two prizes of £6 each, one of £5, and five at £3 each; 24 proof impressions of the print will also be drawn for as prizes. The balance has been expended in the necessary outlay of conducting the Society's operations. The print distributed is engraved by Mr. Ryall—and engraved with his usual skill—from a very pretty drawing by Mr. A. Penley. The Society, therefore, is doing good service,—at least, by the circulation of a pleasant print that cannot but stimulate to a desire to obtain better.

TAUNTON.—We copy the following announcement from the *Somerset County Gazette*:—"It is with pleasure that we announce the rapid progress towards completion of a scheme which well deserves the support of all who desire the diffusion of a taste for the Fine Arts, and the cultivation of intellectual enjoyments. An advertisement in another place describes the outlines of the plan; the details are not finally determined, but the main purpose is to unite in one institution, at a trifling annual subscription, the advantages of an Art-Union, of a Conversazione, of a Picture Gallery, and of a Literary and Scientific Association. The design is to take a large room, which is to be open every evening to the members; with periodical Conversaciones, at which the only refreshments permitted will be tea and coffee, occasionally a musical entertainment, and now and then a lecture, as opportunities may offer. The cost will be very trifling, the advantages very great. Many artists have already promised their assistance; almost every distinguished name in West Somerset is upon the list of members; it cannot fail to become a social centre, where the wisest and wisest will meet in a social intercourse upon neutral ground, where only politics and polemics will be forbidden. The prizes of the Art-Union will more than repay the subscription; and we can only commend it most heartily to our readers, entreating them to put down their names at once, that it may be commenced without delay, and promise that we will give a place in our columns to any suggestions that may be offered in advance of the scheme of which we have here presented a feeble outline."

GLASGOW.—The second annual exhibition of "The West of Scotland Academy" was opened on Saturday, the 1st October. To the *Scottish Guardian* we are indebted for this information, and also for a criticism on the pictures exhibited. "We are happy," observes that journal, "in being able to announce, that the present exhibition is much superior to the last; both in point of excellence and number of the pictures exhibited. The exhibition of last year contained 311 works of Art, contributed by 119 artists; whereas the present one contains 377, contributed by 147 artists: thus showing a considerable increase both in the artists who have supported the exhibition, and also in the number of works they have supplied. In the choice of subjects,

there is more variety, and a smaller preponderance of landscapes and portraits. An agreeable relief is now afforded by the introduction of several historical pictures, and a number of imaginative compositions. We are gratified to observe, among the new contributors, names already distinguished in the annals of Art, and that the younger artists have not only maintained their standing, but many of them made considerable advancement."

EDINBURGH.—The friends and admirers of David Roberts, Esq., R.A., gave to that estimable gentleman and accomplished artist a public dinner, on the 19th of October. There were about 100 gentlemen present, among whom were a large number of artists. The Hon. Lord Cockburn was in the chair, supported on the right by Mr. Roberts, Sir William Allan, President of the Royal Scottish Academy, Sir Henry Bishop, Right Rev. Dr. Gillis, Professor Wilson, W. H. Murray, Esq., &c. &c.; and on the left by the Lord Provost, Sir John Robison, &c. We regret that we received the newspaper containing a report of the dinner at too late a period in the month to do justice to the interesting occasion. We rejoice that the excellent painter has been thus "honoured in his own land." No man deserves it better; not alone because of his talent, which is of the highest and best order; but for his character and disposition, which have obtained for him "troops of friends." We must devote some space to a few passages from the speech of Lord Cockburn:—"I should not do justice either to him or to you, if I did not say plainly to him, that he is not to take this meeting as a mere compliment in honour or admiration of his genius: he must also do us the justice to receive it, as an expression of our admiration and esteem for his character as a man. This is not a part of the matter before me on which I shall do more than touch; but I may be allowed to say, that there are sometimes kindred failings which are apt to adhere to the fringes of a career like this; that these are often excusable and natural; but I have been delighted to find that I could discover no trace of them in him. I have heard Mr. Roberts much talked of and much discussed, yet I declare solemnly that I never heard of forgetfulness to any ancient friends; that I never heard of any paltry corroding professional jealousy—that I never heard of the slightest tincture of that folly or guilt by which genius is sometimes insulted in being made the apology." We record even this brief notice of the business of the day with exceeding pleasure; it is one of the high rewards of genius—one that repays for the past and encourages for the future. It is such a recompense as Mr. Roberts has deserved; one of which he may be justly proud—one which honours equally the artist and his native country. May it work as an example; and may we find, ere long, that genius in Great Britain will arouse something like the enthusiasm it invariably excites upon the Continent.

ABERDEEN.—STATUE OF THE LATE DUKE OF GORDON.—"We understand that Mr. Campbell, of London, the distinguished sculptor to whom the execution of this work was confided, has just paid a visit to this city, for the purpose of giving this most successful achievement of his talents and skill those finishing touches which no hand save that of the artist can effectively impart. The statue, which is of Aberdeen granite, is 10 feet in height, and will be placed on a pedestal of equal elevation. His Grace is represented in military costume, leaning on his sword, and with one foot resting on a piece of ordnance. Around his shoulders is thrown a cloak, the folds of which are managed in the most graceful and effective style. The conception of the work is marked by that noble simplicity and vigour which characterise all Mr. Campbell's productions. The likeness of the lamented duke has been preserved with singular fidelity; and every, the minutest, detail is given with extraordinary freedom and truth."—*Aberdeen Journal*.

### SPRING FLOWERS.

Bright-coated Crocus, early pledge of Spring,  
I mark thee from thy birth,  
Till, o'er the frosted earth, [fling I  
Thy green-sheathed flowers their look of gladness  
Along the box-edged walk,  
Alternate with the Snowdrop's slender stalk,  
What sweet associate thoughts thy petals bring!—  
Dreams of dear years gone by,—  
Joy that the laggard Sun,  
His wintry woof unspun, [eye.  
Bedecked with silken rays will shortly charm our  
Shipping the grasp of Winter's icy hand,  
Thou seizest, pretty flower,  
The earliest sunny hour,  
To peep once more above the sullen land!  
With blithest thoughts entwined,  
Thou art more welcome to the poet's mind  
Than ev'n the gems of Flora's summer band;  
They come when all is fair  
(Like friends of worldly wiles,  
Who smile when fortune smiles);  
Thy golden bloom makes glad when all around is  
bare.

1842.

HENRY J. TOWNSEND.

### THE CASTLES AND ABBEYS OF ENGLAND.\*

THERE are few subjects connected with our country of more general interest than this; and none that afford better materials for the artist. "They stand," to borrow a passage from the author of the work, "like monumental pillars in the stream of time, inscribed with the names of England's chivalry and early hierarchy, whose patriotic deeds and works of piety they were raised to witness and perpetuate." Many of them are still perfect—inhabited by the descendants or the successors of the founders; others are glorious in their ruins, every stone of which has a tradition, and every aspect of which affords a rich treat to the painter. We hailed the appearance of this work as a valuable addition to our illustrated literature: it might certainly have been better done; but it has been well done. There are artists more worthy to be intrusted with the pleasant task; but those who have been employed are not unworthy; and we have, undoubtedly, a book in all respects useful, agreeable, entertaining, and instructive; with a vast deal of information so judiciously blended with the romance of history, as to render the volume exceedingly attractive; independently of its pictorial embellishments, all of which are remarkably faithful, have been well selected, and are skilfully engraved. Dr. Beattie, whose previous works have attained high and deserved popularity, has not, indeed, aimed at that which his plan did not require—originality: he has gathered the gems of the old chroniclers, and strung them carefully together; describing the ancient state and the modern condition of the places pictured, in an easy, graceful, and intelligible style; so that the less initiated, as well as the more learned, reader may derive profit from his descriptions.

Our principal object is to introduce into our columns some of the illustrations of this work, which the courtesy of the author has permitted us to do; and which may advantageously occupy our pages, at this season of the year, when matters of more immediate importance do not press upon us. We shall, from time to time, pursue the same course in reference to other works; for, after all, it is by means of these illustrated volumes that the public generally will be taught to appreciate excellence in the Arts. The more of them that

\* By William Beattie, M.D., &c. &c. Volume the first, illustrated by upwards of 200 Views, taken on the spot. Publisher, J. Mortimer.

are published, the better; and it is highly essential that a strict watch should be kept over them—so that they may be made really to improve the general taste.

We have selected the engravings more with reference to the desires of our own readers than to their superiority among the collected series. The places described are those which artists ought to visit; and, if they do so, they cannot have a more useful guide and companion than this book. The appended engraving (below) is of Arundel Keep—the keep of one of the most famous of our English castles. It is now, although for so many ages the residence of a warlike garrison, abandoned to the owls and the bats.

The history of the castle, and of its lordly possessors for centuries—the Howards—has been written in a most agreeable style. It is full of racy anecdote, and the descriptive details are clear and comprehensive.

As a companion to this print we introduce the Keep of Carisbrooke Castle, of which a valuable history is given, referring chiefly to the stirring events of the reign of Charles I.

The other prints which illustrate this ruin—besides the steel engraving of 'The Castle from the North'—are 'The ancient Gate,' 'The ancient Donjon,' 'The Flag-staff Tower,' 'The Norman Gate,' 'The Garrison Well,' 'Queen Elizabeth's Tower,' 'The Apartment occupied by Charles I.,' 'The Window, one of the iron bars of which "he

sawed through with his own hands," and the 'Wicket of the Castle.' The two last named we transfer to this column.

We next select two views of the interior of Eltham Palace. The first pictures one of two recesses at either side of the dais, at the north end of the building. Each of these recesses still contains a beautiful bay window, the stone-work of which remains in a very perfect state.

The interior was, until lately, used as a barn, and in this state it has been very skilfully copied by Mr. Prior. When we last saw it—a few weeks ago—it was devoted to a purpose even less worthy: the corn and hay had been removed, and the noble hall was filled with lumber—broken bits of machinery, worn-out farming tools, and logs of decaying timber.

The history of the Royal Palace of Eltham is full of romance; and, though nothing of it remains but its banquetting hall, there is sufficient to indicate its former grandeur and beauty. Those by whom it has not been visited will do well to examine this interesting record of the olden time—taking Dr. Beattie as a guide: they may within an hour reach one of the richest stores of the picturesque accessible to dwellers in the metropolis. It is a keystone upon which the imagination may build.

Another of the most striking and interesting localities of London is pictured in this book—the old Abbey of Waltham.

It was formerly very extensive, covering many acres of ground. This gateway and the church are now, however, all that remains of the once noble edifice. Its glories are with the past.

Not so with the ancient Abbey of Tewkesbury; where restoration has been at work, and where modern renovation is strangely mingled with picturesque remains. The western portico, here engraved, is considered "the grandest in England for extent and effect." "It exhibits in various instances a gradual alteration of style, from the early Norman to that at the close of the fifteenth century. In the principal feature, the entrance doorway, there is a remarkable difference between those in England and upon the Continent. The German and French *portail* forms nearly one half of the total space, and is surmounted by a circular, or rose window, of vast diameter"—while in the instance before us, as also at St. Albans, the doorway bears no relative proportion to the magnificent window which rises above it. The ancient Abbeys of England are all of them deeply interesting; they are essential parts of the history of our nation; some of them, indeed, supply us with nearly all we know of our warlike ancestry. They form, therefore, valuable "studies" for all classes; but to the artist more especially.

The next engraving we select is of an opposite class—"The Queen's Chamber at Kenilworth," with the famous "Dudley Chimney Piece."

There are few of the old baronial houses of England so full of interest as that of Kenilworth—its history is, indeed, a romance. It is here written very circumstantially: the most striking and startling anecdotes connected with it have been culled from the old chroniclers; and it has been largely illustrated by the pencil of the artist.

## THE ART-UNION OF LONDON.

This being the time at which many artists are making their sketches and arranging their pictures for the ensuing season, we deem it incumbent on us to press upon their attention the large sums of money likely to be provided by this Association next year, for the advancement of the Arts, in order to encourage them to produce pictures worthy of the British School, and so to insure to the prizeholders a better field for choice than has hitherto been found. The sum appropriated by the Art-Union of London at the last distribution for the purchase of works of Art, namely, £8900 (and which was increased by the prizeholders to about £10,000), was divided as follows:—

For the purchase of sixty works of Art of the value of ten pounds each, forty works of Art of the value of fifteen pounds each, forty-four works of Art of the value of twenty pounds each, thirty works of Art of the value of twenty-five pounds each, twenty-six works of Art of the value of thirty pounds each, twenty works of Art of the value of forty pounds each, fourteen works of Art of the value of fifty pounds each, ten works of Art of the value of sixty pounds each, eight works of Art of the value of seventy pounds each, six works of Art of the value of eighty pounds each, six works of Art of the value of one hundred pounds each, three works of Art of one hundred and fifty pounds each, two works of Art of the value of two hundred pounds each, one work of Art of the value of three hundred pounds, and one work of Art of the value of four hundred pounds.

For the next year this same amount, if not more, may be safely calculated upon; and we do therefore urge on the artists of Great Britain, especially the younger members of the profession, the importance of making a right use of the advantages here held out to them. Let them sit down resolved to do their best, vigorously study and work out their subject, and aspire rather to produce one good picture, than many inferior ones. What the Committee said to the subscribers in their last Report may be usefully reflected on by artists:—

"To appreciate the highest efforts of Art, education and study are necessary. The power to do this, and the manifold delights this power brings with it, do not come by inspiration, but must be sought for diligently. All can comprehend the merit of a faithful imitation of a familiar object,—most persons can value representations of special and individual nature, so to speak. These however, useful and delightful as they may be, are not the works which elevate the beholder and immortalise the artist; it is universal and general nature which Genius grasps and delineates,—which exists everywhere in parts, nowhere as a whole,—which, when represented, is called the Ideal, but is, in reality, Nature freed from the disfigurement of accidents and circumstances, viewed at large and from on high."

We would further quote the termination of the same Report, and will then leave the matter in the hands of those to whom we appeal, satisfied that they will not misunderstand our remarks, or attribute them to any but the best motives:—

"To the Artists of the United Kingdom generally, your Committee, in concluding their Report, would point out the present scheme of prizes as an index in part of what the Art-Union of London may expect to require next year; and they venture to express a hope that efforts will be made to produce, not merely pictures for the wants of to-day, but works for posterity. Simply a pecuniary return for his labour and ability cannot be the aim of a true artist, of one proud to say, 'I too am a painter.' To induce new ideas and images, to uphold and inculcate the beautiful, to influence the growing mind of a country, to enlarge and elevate the enjoyments of the world; these are the motives which lead to fame, and may end in immortality. Let, then, our artists, in applying to the task so prompted, address themselves to the mind, and, satisfied that their endeavours will not now pass unregarded, find their chief delight in the production of truth and beauty, and know no higher reward than the exercise of their art. Every step forward will be a source of increased gratification, and every fresh triumph will make succeeding triumphs more easy."

By reference to our advertising columns it will

be seen that the Committee have offered a premium for a series of ten outline designs, 12 inches by 8 inches, illustrative of some epoch in British history, or of some English author. The qualities aimed at are simplicity of composition and expression, and correct drawing. In the event of obtaining a series of fine designs, of which we think there can be little doubt, it is proposed to engrave them, and present a copy, bound as a book, to each subscriber of some one year, in lieu of the annual engraving. This step, which cannot fail to produce much good, is likely also to be popular with the subscribers.

The Committee further give notice of their desire to purchase for £30, from one of the neat exhibitions, a figure, or group, 15 inches high, carefully finished in plaster, for casting in bronze. We have no doubt our sculptors will respond to the call.

For the bronzes which were distributed at the last meeting, Flaxman's fine group, 'The Archangel Michael and Satan,' was selected. It has been reduced by Mr. Edward Wyon, and is ready for casting, so that prizeholders entitled to it may expect to receive their copy in a few weeks. A group by Sir Richard Westmacott, 'Nymph and Child with Butterfly,' is to be reduced for 1843; and the group now advertised for will probably form the subject for the year after.

With respect to the engravings, we are glad to find that there are three in a forward state of preparation, and a fourth commenced. 'The Saints' Day,' however, intended for the subscribers of 1841, should have been ready for printing from in March last; indeed the engraver, Mr. Chevalier, had bound himself to complete the plate by that time. Even now it remains unfinished, to the great annoyance of the Committee, and the no small discredit of the engraver, who is, and must have been, aware how important it is that the Committee should keep faith with the subscribers. It is to be hoped Mr. Chevalier will no longer delay the completion of his work.

## CORRESPONDENCE.

## THE CARTOONS.

## TO THE EDITOR OF THE ART-UNION.

SIR,—In the Report of the Commissioners on the Fine Arts (p. 34) I observe the following remark:—"The details given by Armenini on the preparation of the cartoon (l. 2, c. 6), and on the practice of fresco, are the more valuable, because they were derived from his own observations of the methods employed by the best masters." Having obtained a sight of Armenini's work, I have found the above reference to be correct, and beg to offer you herewith a translation of the chapter on cartoons. There is perhaps little novelty in the methods described, but there is a satisfaction in knowing from an authentic source how the great artists worked. The first edition of Armenini's treatise, "De Veri Precetti della Pittura," is dated Ravenna, 1587; but many of the observations appear to have been made during the author's youth, at a much earlier period.

Yours, &c., L.

"In the hands of those who labour in the right direction, and who spare no pains to render their works complete, cartoons are found to be so useful, as a preparation for pictures, that the execution of the latter afterwards appears comparatively easy. For all sketches, drawings, studies from living models, in short, all kinds of preliminary labour and research, are undertaken with a view to the thorough execution of the cartoon in which they are combined. And to speak the truth to those who think such labours unimportant, and who, if they do undertake them, dispatch them carelessly, I say that such persons seem to take effectual means that their productions should be lightly esteemed by intelligent judges, and give the most open proof that they have little love for their art, and perhaps none for their own honour—a point assuredly to be regarded as highly as any other."

"In a well-finished cartoon we find the real difficulties grappled with in every particular, so that in following the forms thus arrested, the artist proceeds securely, having before him a perfect model of all that he has to do. In fact, the cartoon may be said to be the work itself without the colours; and for this reason we always find it completed with all possible industry and study by Michael Angelo, Leonardo da Vinci, Raffaello, Perino (del Vaga), Daniello (da Volterra), and other excellent artists. And I may here be permitted, having inspected the examples myself, to give such works the praise of consummate mastery; I appeal to the many specimens which are preserved in different cities, and

in the collections of inhabitants of rank, who justly set the highest value on them.

"The following is the usual mode of preparing and executing the cartoon. Having ascertained the dimensions of the space where the painting is to be, sheets of paper of the proper quality are pasted together, so as to form the size required. When dry, paste is again to be applied about two fingers' breadth round the edges, and the paper is then to be fixed to a clean wall. While the pasted borders are moist, water is to be sprinkled in the centre of the paper, which, in this damp state, may be properly spread; thus the surface, when dry, remains equally strained.

"The paper is then accurately squared, the divisions being made to correspond with the number of squares in the small drawing, and the design is carefully transferred with all its details to the cartoon. Some artists disapprove of this method of squaring, asserting, frivolously enough, that they thus lose the spirit of their first design, and that it would be better to draw at once on the large space, trusting to the eye alone. This supposed advantage is not worth considering; for, however accustomed any painter may be to draw in large, it will hardly be denied that in expanding a composition of about a palm in length, or a little more (for such is the usual size of a sketch), to ten or sometimes twenty feet, it is much easier to transfer it by means of squares, than without such an aid; not to mention the perspective appearances and the architecture, all which are defined according to rule in the small drawing, and hence are easily transferred, in the same proportions, with little trouble. Why then encounter useless difficulties, when the general forms are already fixed, and not only the general forms, but the place of every particular object? The artist having the certainty of their being in their true relative positions, without any confusion of lines; for the multitude of lines commonly sketched, even by the most expert draughtsman, before the satisfactory form can be arrested, is thus avoided.

"It is right, however, to observe, that no one should depend so entirely on his first small drawing, nor on the enlarged outline in the cartoon, as not to exercise a due criticism, and to correct the forms accordingly. We have examples enough that in small drawings great errors may lurk undiscovered, but in large works every minutest incorrectness is exposed. On this account repeated investigation and correction are necessary, without caring about the relation of the lines to the squares; and this is the method which I have seen and studied again and again in comparing drawings and cartoons by Raffaello, Perino, Giulio (Romano), Daniello, and Taddeo Zuccaro, and by other excellent artists who are still living, and who all confirm the truth of what I have stated.

"But to return to the cartoons: they are executed in various ways and with various materials, as I have already observed in speaking of small drawings (l. 1, c. 7); and although few are executed in water-colour\* there are very finished examples in the other modes. Those who like to finish their drawings on white paper—the outlines being transferred as before described—might shorten the labour of producing their shadows, by means of a small bag of pounded charcoal or black chalk; with this they should pounce the shadows lightly, repeating the operation for the darker shades. The tint should be so spread in different degrees as to cover more than half the figure, and the artist should then proceed to hatch on these flat shades with pointed charcoal or black chalk, repeating such hatchings throughout. This is to be done with that dexterity and care which we see in the works of practised masters, as it affords evidence of expertness in good drawing."

"But besides the small drawing, which we suppose to be kept at hand, another and a more important kind of study is now required before the work can be completed. This consists in again resorting to all those means which are necessary in order to attain the utmost certainty and intelligence in forms; the materials are derived from nature with the aid of acquired style, and from small models, as elsewhere described. (See l. 2, c. 5, where the use of small clay or wax models, to assist in studying the whole composition, is described.) Figures thus finished are found to have such force and roundness that they start from the cartoon, and artists, according to their industry and knowledge, may attain this excellence by adopting the thorough method of study here pointed out.

"The same means are employed for cartoons on tinted paper; but, in this case, it is sufficient, after hatching in the shadows, to rub them into a mass with the fingers, or with a piece of flannel or linen; this is a method adopted by many before giving the last finish. It now remains to add the lights; this requires to be done with judgment, so that they shall express the highest points of relief, with that gradation and management which we observe in good examples. Some make pastels of fresh plaster of Paris with an equal quantity of white-lead (ground in water), and this gives the lights great vivacity. Others prefer using nothing but tailor's chalk, while others again add white-lead to this for the lights on the most prominent points. By these means every great work in drawing is accomplished."

"To preserve the cartoon, when it is necessary to trace the forms on the surface to be painted, the best

\* Common ink; see l. 1, c. 7. The ordinary Italian ink is, or soon becomes, of a brown colour.

models to puncture the outlines with a needle, placing another cartoon underneath, which remains perforated like the upper one; and this punctured paper serves to puncture the outline as occasion requires, especially on fresh lime. Many, however, are not so nice, but trace the cartoon itself; this is still kept as a model, being fittest for the purpose, while the picture is executed in colours.

"I have now, I believe, treated with sufficient clearness all those modes of drawing which I promised to explain, as the most necessary and easy, for the use of those who desire in a short time (*sic*) to become excellent; by putting them in possession of every convenient resource for difficult undertakings."

#### THE OLDER MASTERS.

SIR,—I avail myself of the medium of your useful periodical to make some inquiry about Richard Wilson, R.A.; J. H. Mortimer, A.R.A.; B. Vander Gutch, and J. Cleveley. All these artists have left behind various works of their respective merits, and of each we find some literary memoranda in the dictionary by Bryan, "Edwards's Anecdotes," "Cunningham's Lives of Painters, Sculptors, &c.," but I seek in vain for the information required in the published memoirs of these and of many other writers on the Arts.

First of Wilson. I wish for accounts of some of his best portraits, and where they may be seen? his intimacy and association with Mortimer; and in what pictures by the former were figures painted by the latter? if there be any record or tradition of Wilson having painted a full-length portrait of Mortimer? This picture has been in my possession many years; and is a most valuable specimen of the artist, both in portraiture and in landscape. It is evidently a work of elaborate execution, in the face, hands, character, and colouring, whilst its landscape is in the finest and best style of the once unfortunate but now duly appreciated artist. The late Prince Hoare, James Christie, and Sir Thomas Lawrence, regarded and spoke of it as a work of unquestionable merit and beauty. There can be little doubt but it was a memorial of friendship, and worked up *con amore*. I am preparing to print a short essay on this picture, with a small lithographed print of it.

By Vander Gutch I have a series of twelve small pictures, representing so many incidents in the adventures of Hudibras. They are slight, but smart, vigorous sketches, coloured in the true Venetian style, and some of them are equal in character, composition, and expression, to any works of the best masters. They certainly far surpass the designs of Hogarth for the same author; yet I do not meet with any reference to this series of pictures, or to other designs by the same master, in Bryan or Edwards.

Of Cleveley I find but very little recorded, yet, from a small picture in my possession, it is clear that he painted sea-pieces in a style superior to any of his contemporaries, and approaching the best works of A. Vander Velde. It represents a single vessel, riding on a gentle surge, with a dark sky, a distant piece of coast scenery, &c.

JOHN BRITTON.

Burton-street, London.

#### "OLD" PICTURE SALES.

SIR,—You have often warned your readers against giving credence to the shameless deceptions practised upon the public by a certain class of picture-dealers, in palming off upon them the vilest trash as genuine examples of the old masters.

An instance of this kind has just occurred in this town. A large number of paintings were offered for sale on the 12th inst., as you will see by the catalogue enclosed: the title-page of which states them to be "The private Gallery of First Class Paintings, the property of a distinguished collector." If the stock-in-trade of a dealer from London may with propriety be denominated "the private gallery of a distinguished collector," you will not be surprised, on looking further into this precious production, to find how it abounds with the greatest names known to Art—they are indeed "as plentiful as blackberries"—nor at the eloquent and high-flown descriptions that would not disgrace the pen of a George Robins.

It seems that a proportion of these "first class pictures" were at one period the ornaments of the most renowned galleries—"No. 18 was formerly at Fonthill," "No. 20 is from the collection of Lord Radstock," "Nos. 30 and 34 are from the Soult Gallery," "No. 46 was formerly the property

of Lucien Bonaparte," "No. 47 belonged to Prince Poniatowski," and "No. 49, Rubens's celebrated 'Garden of Love,' is from the Duke of Mantua's collection;" "No. 43 is from the celebrated *Truck-stian Gallery*—a gallery of which I must own my ignorance, as well as of No. 42, from that of the *Marquis of Beeli*, and No. 62 from that of *Earl Moya*."

Now I do think that this is a most deplorable state of things. Here is a catalogue, drawn up and deliberately published to the world, expressly calculated to mislead and deceive the public. If men are permitted to act thus with impunity, what, I would ask, becomes of our boasted superior morality? I am, &c.

A CONSTANT READER.

Sheffield, Oct. 13, 1842.

[If people will be cheated with their eyes open, we must say they deserve no sympathy. A person, who will buy for a few pounds that which purports to be worth as many hundreds, must either be a rogue himself, or know that he has a rogue to deal with. Such cases as this to which our correspondent refers are of weekly occurrence: we saw, not many months ago, a collection of "ancient pictures by the great masters," consisting of twenty works offered by a dealer for a hundred pounds—any one of which would, if genuine, have been worth the hundred—a fact of which the dealer was of course fully aware. Several of them were pompously marked with the honoured names of the painters, upon whom they were forgeries. We have heard several singular anecdotes of forgeries of pictures—modern as well as ancient—and are endeavouring to collect a budget of them, which we shall hereafter publish; some of our correspondents may add to our gathering.]

#### GERMAN COMPLIMENTS TO BRITISH ART.

We know not whether our readers will be most amused or angry upon perusing the following singular document; it professes to be a criticism on the latest Exhibition of the Royal Academy, and is published in the "KUNST BLATT"—the great oracle of Art throughout Germany. We should have taken no notice of so miserably shallow a production, but that the journal in question is usually entitled to high respect, and the editor of it has acquired fame not alone in Germany, but in every part of Europe. The name of KUHLER will be accepted as a sufficient guarantee for the integrity of opinions circulated in a journal under his control; and no doubt on the continent they will consider that this tissue of abuse, without a single redeeming point, has received his sanction and approval. He is therefore, in a great degree responsible for the false notions he has assisted to pass current; and must at least hear his accusation, as an "accessary after the facts," of gross ignorance, injustice, and calumny: to take no note of the illiberality and want of generosity—a total absence, or concealment, of truth—that pervade the whole article.

The author of the criticism is Dr. Henry Merz—a name unknown to us and to persons within our reach, who are more familiar than we are with the writers of Germany. Before we offer any observations upon his "Report," to his countrymen, concerning the capabilities and achievements of the artists of Great Britain, we shall print a translation of it. After giving the numbers of the works—in their several classes—exhibited at the Royal Academy in May last (which by the way contains two or three striking errors, although the writer took ample time to concoct his article, the paper in which it appears bearing date the 23rd of August), Dr. Henry Merz thus proceeds:—

"We shall make a few remarks as to the spirit and degree of development Art has attained in England, before speaking of the merit or demerit of the works themselves."

"It is not uninteresting to observe, in the descriptions in the catalogue, with what accuracy it is pointed out, that the figures represented are really the true portraits of the persons designed. So especially in two large pictures, the not very fortunate one of 'The Trial of Charles I. in Westminster Hall,' by H. Fisk, No. 458, and 'The Heroes of Waterloo,' by J. P. Knight, No. 156. Of the first it is observed, that the portraits are all collected from private sources, and from the best authorities. The last gives the names of thirty generals and officers, the guests of the Duke of Wellington on the anniversary of the Battle of Waterloo, with all their titles and dignities. It is thus the English public

learns to reckon by number and measure; and the ideal becomes if not an object of horror, at least it is considered idle and useless talk."

"On this practical ground there is small space for Fancy; reduced and withdrawn into the every-day work of life, there is no room for her nor time for her in the real world: a wise man can employ his time better, so a wise man resigns the idleness of fancy and imagination."

"Thus goes, on one side, the prosaic sober course of trade and bargain; on the other hand imagination is sometimes lost and overwhelmed in airy dreams and empty sensibilities."

"Thus the art of painting, whose soul is fancy, becomes either a prosaic copy of materials laid before her, or if she creates, it is in a strange whimsical style without form or repose."

"The collection of paintings, like the history of painting in England, generally, offers no indication of a world-important and man-ruling idea, expressed in a complete and elevated manner."

"There is no clearness nor freedom of invention, no rich exercise of creative fancy, there is nowhere one great free production; but all are either timid, constrained reminiscences, or else they are intoxications of imagination, compared with which the wildest productions of the French romantic school have sense, form, and strength. To this is joined the coquetish sentimentality of the English school."

"It sounds strange, yet it is true, that the people, from among whom a Shakspeare came forth, can show no work in the pictorial art in which a free, lively imagination has given clear expression to an important thought. There is wanting to them in this art, a substantial agent, a living idealty, a soul."

"Even where a creative fancy in Art exists, there is wanting the power of realizing it; there is wanting just observation, true living study. The eye of the mind must see through the eye of the artist; the spiritual glance must look through the bodily eye, and go first to seek the mystery of life in the world around. To the want of idealty is joined the want of the other agents of Art, reality and objectiveness."

"In reproducing objects materially, the English artists show remarkable want of power, strange peculiarities, naive individuality, and vain repetition."

"A few examples will convey our proposition.—H. Geddes intends, in No. 159, to paint a 'Grecian Maiden at her Toilette,' he has merely painted an English miss. 'The Bayadere,' by J. B. Solomon, No. 16, is no further from London. Instead of a peasant youth this pencil can only produce a little fair-haired, rosy-cheeked, long nosed, and smiling young gentleman. Almost everywhere, there is a want of just character and living nature; yet more deficient are the more formal productions in drawing, colouring, and drapery."

"So wanting are all the elements of the technical parts of Art, that it is difficult to imagine how for these 74 years the Royal Academy has maintained its existence and its exhibitions. If they were to choose for their motto the passage of Symmachus, 'Omne quod in cursu est viget,' it should be translated, 'Not all things that continue their course advance.' Yes, gold cannot command everything. The Royal Academy has not yet established a school for very young pupils; they may be permitted to despair of the call of English genius to the art of painting. Have the gentlemen of the Academy themselves, this year, exhibited a single work of Art which is not so deficient in drawing, in style of drapery, and scholar-like colouring, that the lowest pupil at the Dusseldorf Academy would be ashamed to place it before the eyes of the public. Let any one contemplate the 'Eve' of G. Patten, No. 245; in every part there is want of drawing, weak flesh tints, want of execution. The 'Nymph Bathing,' of C. Duncker, stiff, false drawing, really frightfully painted. Further, the disgusting 'Bacchante' of S. Drummond, No. 511, taken from the best journal of the fashions, and say if our judgment is not a temperate one. Opaque, dirty, lead coloured, chalky carnations; no chiaro scuro, no modelling nor roundness, no toning of tints, no melting, no depth, no clearness, no harmony of colouring, flat, base as if rubbed over with a sponge; where the colouring should be bright and strong, there it is the most injudicious, like a French smatterer,—such is the 'Sea of Blood,' which J. M. W. Turner, the academician, undertook to paint. Subjects without selection or care; the domestic and familiar accessories to these confined representations of men, yet more negligent and licentious; plants, foliage of trees rather daubed than painted; nowhere study, industry, or finishing; glare without brilliancy, bustle without spirit; in a word, boyish slovenliness: this is the rule. Compare with this the spirit, and life, and power, in the spectacle pieces of the French romantic school, or the conscientious prodigality of technical Art attained by earnest study and unwearied perseverance in the finished productions of our German school. M. Waagen, in his work on 'Artists and Works of Art in England,' says, 'English Art is without technical ground-work, and it has no living, high spiritual direction.' This is proclaimed by every inch of canvass in the exhibition more or less loudly. Fortunately for the German critic, he can find even in England a judgment expressed on the miserable progress of Art; and we quote, with satisfaction, these words from the 'Edinburgh Review':—'England is only beginning to find how far she is behind in architecture, in painting, and in sculpture; in short, in all the Fine Arts.'

"Now, let us go nearer to see how the spirit of English Art expresses herself—only the more important works, by no means the exhausting sight of an exhibition of which the reader cannot judge, for to examine well the works of Art which cover the walls from the floor to the roof, the reporter must use his knees and a ladder.

"Among the historical representations there is not one of decided merit; they all fail in the great elevating power which, by a clear expression of the soul, attracts all the world towards it.

"Theatrical common motives, empty pathos, stiff attitudes, constrained and scattered composition; no depth of character, no style in the lines; tinlike or crushed draperies; bad colouring everywhere—these are the pretensions of the picture by J. R. Herbert, 'First Introduction of Christianity into Britain,' No. 11. No. 108, 'Belshazzar,' H. Boughton, is the complete head of a monkey; as bad is S. Drummond, 'The Wreck of the White Ship,' so is R. B. Haydon, No. 256, 'Mary Queen of Scots when an Infant,' &c.; and 'Edward the Black Prince,' &c., No. 404. Daniel Maclise, the academician, No. 62, 'The Play Scene in Hamlet'—theatrical composition untrue, cold, gloomy colouring, quite mistaken chiaro scuro, and superficial execution. No. 71, 'Ophelia,' R. Redgrave. This is better; here is expression and feeling, but careless in details, and the whole wants repose. No. 491, 'King Alfred sharing,' &c., W. Simson. The woman and child are rather coquetish. No. 548, A. Egg, 'Cromwell discovering,' &c. Two pictures by W. H. Furze, No. 441, 'The Christening of a Jewess,' and 'The Marriage,' &c., No. 1211, show excellent study. No. 485, 'The Covenanters' Marriage,' A. Johnston (the ceremony in the open country), is for composition, colouring, and execution, perhaps the best.

"The sentimental pencil appears next. No. 94, 'Dorothea and Don Quixote,' H. Le Jeune; No. 95, 'Dorothea,' &c., T. Uwins; No. 92, 'Poor Maria,' &c., by the same; 'Margaret alone,' &c., No. 269, J. Poole, disagreeable; No. 296, 'Maria,' &c., J. G. Middleton. The scene in 'Paul and Virginia,' where the body of Virginia, already begun to putrify (at least according to the painter), is thrown by the sea on the shore, and found by Domingo, by H. J. Townsend, No. 369, is not more disgusting than 'The Death of Romeo and Juliet,' No. 535, by Pickersgill. Juliet lies with her lead-coloured face across the ground; the mouth is stiff and without expression; the colouring everywhere bad.

"Yet more unfortunately are religious subjects treated. 'The Magdalen,' No. 6, W. Etty; No. 146, F. Danby; No. 174, T. L. Houlton; are not more sweetly distorted and coquetish than 'Faith, Hope, and Charity,' No. 84, by H. Howard. No. 207, J. Phillips, 'Innocence,' a little miss with a lamb; and No. 319, the insipid 'Madonna and Child' of Miss Emily Schmack. Crude and affected is the 'Hagar' of W. H. Geddes, No. 306; and disagreeably coquetish the 'Child Samuel,' &c., No. 315, by J. H. Wheelwright. H. S. Smith, No. 371, has painted 'Ruth and Naomi,' portraits of a lady and her daughter; at least more presentable is the picture by W. Collins, No. 294; and some style is in the drawing of that picture by J. Bridges, No. 1208, 'Joseph's bloody coat brought to his Father,' and excellent study is shown in No. 379, by P. Williams, 'The Convalescent.' Of Biblical subjects we have 'Aaron staying the Plague,' No. 294; 'The Adoration of the Magi,' No. 397; 'Christ blessing the little Children,' No. 399, by F. Howard, have no trace of religious dignity or holy earnestness. 'The Flight into Egypt,' by J. Martin, is a dawn in a solitary scene, with a singular effect of light. Nowhere is there a high consecration of the spirit to religious subjects.

"What is attained by the pictures 'de genre'? In this exhibition there are many, and almost in all there is a want of a clear view of nature and unconstrained humour. The following rise a little from among the mass, although not finished pictures:—'A weary Soldier,' by the way, with a somewhat coquetish woman and a naive child, by J. Goodall; No. 142, 'The Grandmother,' No. 257, 'The going to School,' by T. Webster; No. 181, 'Poor Arabs,' a fine sketch, by W. Müller; No. 293, 'An Italian Widow selling her Jewels,' by Severn; No. 421, 'Moses going to the Market,' from 'The Vicar of Wakefield,' by Stonehouse; Nos. 522 and 524, 'Mischief,' T. Woodward; No. 537, 'Who'll serve the Queen?' R. Farrer.

"Among the landscapes are not wanting a small number, that if they do not show much correspondence to the old masters, yet deserve to be placed in the rank of works that require no common talent. Among these we may distinguish, No. 1224, 'A Summer Landscape,' by Boddington; No. 1223, 'Baccarah,' by E. Dean; No. 1228, 'Corinth,' by Linton; No. 1204, 'A View of the Rhine,' by Stanley; No. 113, 'The Convent of St. Conmato, near Rome,' by Howell; No. 115, 'Evening on the Bank of the Thames,' T. Cooper; No. 180, 'River Scene, Crewick,' 'View of the Scheldt, at Antwerp,' H. Lancaster; No. 264, 'Whitby Pier,' by A. Clint; and lastly, 'Broeckenhaven on the Zuyder Zee,' Cooke, No. 310.

"In animals and still life the exhibition is poor. Some portraits of favourite horses and favourite dogs are not deserving of much notice. The exhibition wants pulse and life; and only a 'Siesta,' No. 262, by Calcott, the academician, deserves nearer observation. The critic has few words to spend on the 509 portraits: 190 are large, 319 are small. Portraits are the weak side of all exhibitions, especially here, where the want

of originality is great in the heads, still more in the pencils to make a portrait what it should be—an historical picture. Among all these long headed youths, fair haired ladies, misses, and rosy children, the most are done in a spiritless mechanical manner, and certainly often represented with an incredible technical awkwardness.

"The branch of architecture is very rich. The number of edifices, especially churches, excites the talent of this profession. The drawings and plans exhibited, place the English architects above the English painters. But even here closer studies, with the rule, compass, calculation, and object, suit English genius better than the consecration of the pencil to the beautiful. No very remarkable originality is seen in the buildings. Whether in the edifices generally, or in the sacred buildings, we see a varied series of the ancient form, the romantic, the German, and the modern, by which we see how the Anglo-German national style is adapted for churches, schools, hospitals, and other buildings, and is more and more felt to be so.

"Among 53 plans for the new church at Camberwell, only the greater part are in the romantic and national English style. There are also exhibited various plans for the Exchange and the Houses of Parliament. Among these last is one by the architect, W. Campbell, who, in contradiction to the surrounding buildings (Westminster), has liberally adorned his plan with cupolas, pillars, and Greco-Italian forms in a situation so little adapted for them.

"Among the 143 works of Sculpture, 100 pieces are portrait figures and busts. One of the most able artists appears to us to be W. C. Marshall. Of five works which he exhibits, we may notice No. 1270, 'A Girl with a Broken Pitcher,' No. 1286, 'Eve with her First-born,' but in this the conception is not an elevated one. No. 1287, 'Venus rescuing Eneas from Diomed,' a mere academy piece, theatrically treated. Not more happy is a group of 'The Graces,' T. Loft, No. 1281. There is something coquetish in the 'Prayer' of P. Macdowell, No. 1265. No. 1293, 'A Bacchante,' by L. Macdonald, is better; so is the old Satyr taking out a thorn from a young man's foot, No. 1303; a very fine bas-relief, representing 'Bacchus and Silenus,' is by J. Fillains.

"Further, we do not remark any work beyond the common academical rules and handywork. No soul or spirit passed into the marble, nor a Promethean spark struck by the chisel and hammer of creative artistic power from the patient mass."

Here then is the deliberately recorded Report of a German "Commissioner of Inquiry" concerning the state of the Fine Arts in England: perhaps it would be difficult to work out of a collection of newspaper slanders—if such a thing were collected—so garbled a statement, or one so utterly opposed to TRUTH—opposed to truth in the letter, and still more in the spirit.

We have no right to quarrel, and do not quarrel, with Dr. Henry Merz, on the ground of his opinion. His liking or disliking the productions of our British artists is a mere question of taste; we could scarcely have been justified in expecting the dull and heavy German to appreciate aught that was not as leaden in colouring, as stiff, formal, and inanimate (with but two or three exceptions), and as unmarked by originality as are the productions of his own school—coldly correct, it is true, but seldom enlivening the fancy, touching the heart, or invigorating the soul; borrowing all that is good in conception, all that is grand in invention, and all that is true in execution, from the rich legacy of the old masters; and bringing to bear upon the copied thoughts only such dry and spiritless (however necessary) knowledge as may be picked up by wooden-headed apologies for genius in academies for teaching drawing:—knowledge that is most essential beyond doubt, but which bears about the same analogy to veritable MIND as the power of computing numbers did to the invention of the steam-engine.

As we have said, we have no quarrel with Dr. Henry Merz because he did not like our Exhibition, and could see nothing but what was unequivalently wretched in the 1409 works of Art he examined in the gallery of the Royal Academy, some time in the month of May last. We know that often the senses have odd appetites; that some eyes derive pleasure only from objects that are black; that some ears prefer the braying of a donkey to the lulling music of the Æolian harp; and that others prefer the scent of a dung-heap to the odour of a bank of violets. We have a homely proverb—"Every one to his liking, as the old woman said when she kissed her cow;" no doubt Dr. Henry Merz was at perfect liberty to be pleased or displeased; he needs no other excuse than that of Shylock, when he preferred "a weight of carrion flesh" to a bag of ducats—"he'll say it is his humour!"

But we protest against this pseudo "Criticism"

upon other grounds. It is written in a most unworthy spirit, and with a deliberate resolve upon falsehood. No one who reads it can hesitate to arrive at this conclusion. In his five or six pages of "criticism" there is no mention whatever made of any of our leading artists, except Maclise, who is dismissed with an insult—but who has more of the greatest of all the intellectual faculties—INVENTION—than the whole of the German School put together. Not a word of Eastlake—an artist grander in conception and greater in execution than them all; and let them borrow the best of France to eke out the lot. Not a word of Landseer—the German "critic" saw his picture of 'the Sanctuary'—unless it be meant to apply to him the compliment that the exhibition "contained some portraits of favourite horses and dogs not deserving of notice." Not a word of Leslie, nor of Mulready, nor of Calcott, except that one work of his "deserves nearer observation" than some others. Neither Stanfield, Roberts, nor Lee, receive the smallest notice; and Crewick is dismissed with half a dozen syllables of the smallest possible praise. Etty, indeed, obtains a sentence—but only one of condemnation. Of artists who have obtained professional distinction, second to these, there is scarcely one which the "critic" condescends to name; we need not go through the list—it is a long one—of painters, who, in the higher qualities of the Art—however inferior they may be in its more mechanical branches—may be the masters of the masters of all those who "by earnest study and unwearied perseverance" have accomplished "the finished productions of the German School."

We have named the British artists—some of them at least—of whom Dr. Henry Merz does not speak: let us see of whom he does say something. There are four or five upon whom he falls foul, with whose existence this critic brings us, for the first time, acquainted. Such as Mr. Duncker, Mr. Boughton, and Mr. Houlton—painters who no doubt contributed to the Royal Academy; for we find their names in the catalogue; a fact of which we were for a time sceptical. These gentlemen, and Mr. Solomon, Mr. Drummond, Miss Emily Schmack, and half a score others of equal calibre, are selected by him from among the exhibitors to justify his censure upon the exhibition, and to prove his assertions as to the utterly worthless character of the whole mass. While for praise he pursues much the same course, when he does praise; and it appears that Messrs. Furze, Dean, and Howell—painters of whom we never heard until this "criticism" was laid before us—are the artists who are to be considered on a par with the artists of Germany.

This is not simply disingenuous, nor merely unfair: it is a fraud upon his countrymen; a dishonest breach of trust; a scandalous attempt to mislead their judgments by pandering to their vanity and stimulating their self-love.

We say nothing of the insult to this country and to its artists, to which M. Kugler has lent the sanction of his respected name. It is to be lamented—chiefly because much good might result from cultivating a kindly feeling and a mutual esteem between the artists of two countries, now more closely united than they have ever been; it is to be lamented also as an outrage upon that high principle which should distinguish men occupied in a high calling—in a pursuit which, above all others, demands generous sentiments; and it is to be lamented especially, as supplying another proof to the world how mean and degraded an intellectual man may become who is willing to sacrifice large and general, to narrow and partial, considerations.

We condemn the example; and shall be the last to follow it. We shall cordially welcome to England the collection of works of Art we are promised from Germany, and as cordially rejoice if it be found excellent.

We may, possibly, recur to this matter next month, and print a translation of the critic's comments upon the Society of British Artists in Suffolk-street; merely for the present observing that, if the acute, discriminating, and trustworthy critic is to be believed, it is far more honourable to Great Britain than the Exhibition of the Royal Academy.

H.

## REVIEWS.

**THE ENVIRONS OF LONDON, Part IV. By JOHN FISHER MURRAY. BLACKWOOD AND SONS.**

The maps contained in this number of the work are "The River Thames from Hampton to Staines," and the "South-western Railway from Nine-Elms to Weybridge;" and they comprehend the localities described in the text, among the heads of which are Bushy Park, Hampton, Wimbledon, Walton, Kingston, Chertsey, &c., &c.: the plan of the work being to describe the places according to the order of their contiguity, and to embody anecdotes and brief memoirs of persons, the memory of whom associates with the places. We are at Hampton accordingly reminded of Garrick, by a few paragraphs of light gossip about him and his villa, which, although presenting nothing new, are nevertheless agreeable. A cut is given of the villa, of which we believe Dr. Johnson made a remark to Garrick himself, who was showing the place in the pride of his heart, to the effect that such things tended to fix irrevocably the affections of men upon the goods of this world.

There is nothing in a varied course of light reading more winning than Topography, seasoned with the biographical sprinklings which are akin to it; and we envy not the man to whose heart the stones of a country church-yard are voiceless. "We are now at Wimbledon, and we must pause to look about us," says the text before us. The inhabitants of London know little of Wimbledon, save as the modern *pré aux clercs*—the scene of the honourable adjustment of disputes—a sort of trial by powder and shot, somewhat like the trials of the middle ages. When Ali Pacha asked an English guest, wearing a militia uniform, where he had served, the reply was, *ἐν τῷ Ψιμβλιδῶν Κομον*—"upon Wimbledon-common;" but Ali did not seem to remember the battle; nor is it here mentioned, although everything of local interest seems to be touched upon.

There is something highly interesting in the history of all these places, each having at one time or other been signalized by the residence of royal or distinguished persons. The Porch House, at Chertsey, was the abode of Cowley, the poet, whom Pope, in his "Windsor Forest," laments—

"Who now shall charm the shades where Cowley strung  
His living harp, and lofty Denham sung?"

St. Anne's Hill is known as the residence of the late Charles James Fox, to whose memory a cenotaph was placed by his widow in Chertsey church. The number contains numerous woodcut vignettes, many of which are of high excellence.

We shall review this work again—probably introducing some of its wood-cuts—when the volume is completed.

**GIL BLAS AND CAMILLA. Painted by T. M. JOY. Engraved by G. ZOBEL. Published by S. HOLLYER.**

A clever print, from one of Mr. Joy's capital pictures—of which he has painted many—from the story of Gil Blas. The scene describes the moment when the Lucretia of the tale admires and covets the glittering ring upon the finger of the simpleton. It is full of true character: the engraver has done it justice; the work is wrought with care and finish; and, as we imagine he is young in his profession, this production may be considered as affording safe promise of distinction hereafter.

**GUIDE TO THE COUNTY OF WICKLOW. BELFAST, AND GUIDE TO THE GIANT'S CAUSEWAY. Published by CURRY and Co., Dublin.**

These little illustrated guides are very neatly got up; and they afford ample information to tourists to the most beautiful and the most wonderful of the scenery of Ireland, a country rich in materials for the artists, to which we hope many of them will bend their steps. It is marvellous, however, how the guide-book makers manage to give us dry details, without ever finding their fancy awakened or their enthusiasm aroused. Here we have every fact worth noting—all needful instruction as to various routes, with exceeding accuracy as to distances—but not a line that may lure the traveller into visiting places so grand and picturesque—the bare thought of which, for a moment makes us long more to be among them than all

these pages put together. The works are from the press of Messrs. Curry and Co., of Dublin, to whom the literature of Ireland is largely indebted.

**HIS ROYAL HIGHNESS THE PRINCE ALBERT. Engraved by H. T. RYALL, from a Painting by G. PATTEN, A. R. A. Published by GRAVES and WARMESLEY, Pall-Mall.**

This is the large full-length portrait of the Prince, which our readers will recollect at the Exhibition of the Royal Academy in 1841. The picture has since, however, undergone considerable alterations and improvements; and Mr. Ryall has performed his portion of the work with the taste, skill, and judgment for which he is distinguished. It represents his Royal Highness dressed in princely magnificence as a Knight of the Garter; and his fine manly figure, gentlemanly bearing, and kind and intelligent countenance are aptly portrayed. The work is of great size, designed, we imagine, to class with the grand state portrait of the Queen, by Chalon, and as a "companion" to that work it will be an acquisition; for our own parts, however, we should prefer to look at an engraving from one of the exquisite miniatures by Mr. Ross.

**TRIBUTE TO THE MEMORY OF SIR CHRISTOPHER WREN. By C. R. COCKERILL, Esq., R.A. Publisher, ALEX. HILL, Edinburgh.**

Few publications of modern times are at once so interesting and valuable as this; a "tribute" indeed, to the memory of the great British architect. The issue of such a publication reflects honour upon the enterprising publisher of Edinburgh. It is a collection of the mighty works of the English master of the art, grouped with skill and effect, so as to place each in as favourable a position as was possible; to afford a correct notion of the particular character of each; and to produce an agreeable picture out of a mass of buildings. In the foreground are, Temple-bar, and the several structures of minor size; occupying the middle ground, are the several churches, &c. of London; and in the back ground, towers St. Paul's. It is difficult to conceive the exceeding beauty of the print; the artist has contrived to introduce into it, the most perfect harmony—distributing the various structures so skilfully and judiciously that at first sight every one of them seems to be in its proper place; and, in their happy combination, to form a grand city of noble and graceful structures—such as the imagination may create, or the glorious architect may have seen in his dreams. A finer tribute to genius has never been erected. Truly his works live after him. To the artist of any class this print is a most important acquisition; and equally so to all lovers of the sublime and beautiful. Few have an idea that the works of Sir Christopher Wren amounted in number to 62. They are all introduced into this assemblage—in London, Oxford, Cambridge, and elsewhere. The engraving—in line—has been executed by Mr. Wm. Richardson. In this respect also, it is the work of a master. We therefore cordially adopt a passage from the prospectus:—

"This magnificent work, which excited general admiration at the exhibitions of the Royal Academy of London in 1838, and of the Royal Scottish Academy in 1839, embraces, in one gorgeous and picturesque composition, exquisite and correct representations of upwards of sixty public structures, the work of that greatest of British architects, whose memory and genius it is designed to hallow and commemorate; and has been admitted to form one of the most elegant tributes ever paid by living to departed genius."

**THE EVE OF THE DELUGE. Painted and engraved by JOHN MARTIN, Esq. Publisher, GILBERT, Sheffield.**

This, also, is the publication of a provincial publisher; and affords evidence of a liberal and enterprising spirit. It forms an excellent companion to either of the many fine mezzotint prints executed by Mr. Martin—the designer and engraver. The picture is the property of the Prince Albert, to whom the print is dedicated. There are those who prefer Martin in "black and white" to Martin in colours; here, at least, his brilliant fancy has ample scope; and in poetic conception and fertility of invention he is certainly unsur-

passed, if he be equalled, by any living painter. In this work he has endeavoured to "pourtray his imaginings of the antediluvian world, and to represent the near conjunction of the sun, moon, and a comet, as one of the warning signs of approaching doom." In the distance are the ocean and the mountains; on a lofty promontory is the Ark; in the middle ground are the "forest trees;" and in the foreground are "caverns and tents—the people revelling." Upon a cliff, a group has assembled—Patriarchs and the family of Noah, anxiously gathered round Methuselah, whom, by a poetic licence, the artist has made to live until the "Eve of the Deluge." He is here represented as dying.

**THE WIDOW'S SON. Painted by OVERBECK; lithographed by LEON NOEL. Publishers, GRAVES and WARMESLEY.**

This is a work of the highest possible merit; and one which it is to the honour of the publishers to have introduced into England. It is a *chef d'œuvre* of the great German painter, copied with fine effect by a competent artist; and to all true lovers of the excellent in Art it will be a rare and valuable acquisition. The story is emphatically told; the figure and expression of the Saviour are admirable—a little less of calm confidence in the assembled group may be desirable; but the drawing is exquisitely fine, and the whole composition reaches very near perfection. We rejoice to find such works increasing among us: they will essentially serve the British artist, and gratify as well as instruct all classes.

**ELEMENTARY PERSPECTIVE. By F. J. RAWLINS. Published by TILT and BOGUE.**

This work contains six plates, with numerous diagrams and explanatory letter-press. The first three are devoted to parallel perspective, of which numerous examples are given—as of arches in perspective, arches from two centres, circles, &c. The three latter plates are similarly arranged with examples of angular perspective, and explain accidental points and proportional lines; the perspective of pediments or gables, circular fronts, crests, &c. &c. The work is an abbreviation of what has been, in many instances, expanded into volumes.

**HERALDRY OF FISH. By THOMAS MOULE. Published by JOHN VAN VOORST.**

We trust that the author of this work will reap from it a reward adequate to the amount of labour which he has bestowed upon his subject, although it appears scarcely a theme of sufficient general interest to create an extensive demand. By diligent and patient research, a mass of information is here collected, comprehending the bulk of piscatorial bearings and cognizances, and among them, of course, the *insignia* of the famous coat which *Slender*, in a boastful humour, multiplies into twelve lucas, but which Mr. Moule limits to three. In looking over the "Heraldry of Fish," we are forcibly reminded of the archaic devices to which our ancestors had recourse in professing themselves *armigeri*, so many of these distinctive adoptions being what are termed canting arms, or *armes parlantes*, or pictorial punning on names; and often erroneous and overstrained in their application. Among the simplest instances of these scaly quips, we may mention the arms of the family of Soles—three soles naient; the bearings of Shelley—sable, a fess engrailed between three wheels ore; which remind us of Scarron, who, when he went to Chalons to eat carp stewed in champagne, declared his arms to be—argent three carp naient in pale Champagne.

## TO CORRESPONDENTS.

For permission to study in the Dulwich Gallery, application should be made to S. Denning, Esq., the keeper; and to do so in the National Gallery, we presume, to — Segur, Esq.; in both these places, however, only a fixed number are allowed to study at the same time.

Our correspondent in "Worcester" may be assured that we shall obtain the information he requires as soon as we can.

R. H. must excuse our declining to prosecute the subject of "Vehicles" for a time.

## ARTISTS, PRINTSELLERS, AND OTHERS,

Are respectfully informed, that

**C. F. BIELEFELD**

Has formed

**A LARGE COLLECTION OF NEW AND ELEGANT  
DESIGNS FOR PICTURE FRAMES,**IN THE  
**IMPROVED PAPIER MACHE.**

The superiority of these Frames consists in their having all the effect of old carved work; many of the Patterns represent exactly the finest carvings of the 17th Century. The small Frames are far less liable to injury than pulley work, Papier Maché being a remarkably tough and hard substance, it never shrinks, and takes gilding very freely; the Frames do not weigh one quarter the weight of others, and the Price is below that usually charged. Many Specimens are now on View at C. F. BIELEFELD'S Papier Maché Works, No. 15, WELLINGTON-STREET NORTH, STRAND; where also Pattern-Books may be had, price 11s., consisting of a variety of Patterns of Picture and Glass Frames, and Window Cornices, already executed, and on Sale.

**PAINTING IN OIL.**

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**BROWN'S COLLAPSIBLE METALLIC TUBES**, for COLOURS, OILS, VARNISH, MAGYLP, ASPHALTUM, &c.—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

**DIMES AND CO. (LATE WARING AND DIMES), ARTISTS' COLOURMEN, 91, GREAT RUSSELL-STREET, BLOOMSBURY.**

**F. DIMES** begs to inform the Profession, that the PARTNERSHIP subsisting between himself and Mr. George Waring has been DISSOLVED by mutual consent, and that in future the Business will be continued under the name of DIMES and CO.

To those Gentlemen who have given their patronage to the late firm, he begs to return his grateful acknowledgments, trusting to have their continued support, assuring them that all the articles he manufactures and sells shall receive every attention to insure the best quality. Subjoined is enumerated a few Articles, to which attention is respectfully requested:—

**CANVASS WITH INDIA RUBBER GROUND.**—The eligibility of this article having been thoroughly acknowledged, and it having received the patronage of the first artists in the kingdom, those gentlemen who desire that the labours of their pencils should be preserved from the effects of time (too visible in some of the finest productions of the Art), this Canvass is particularly recommended, as it is never subject to crack or peel, and the surface is very agreeable to paint on.

**RAND'S PATENT COLLAPSIBLE METALLIC TUBES FOR OIL COLOURS.**—Mr. J. Rand, the Inventor and Patentee, and Manufacturer of the Collapsible Metallic Tubes, having thrown them open to the trade, D. and Co. beg to state that they can supply them filled with oil colours in any quantity; also, tubes of Varnishes, McGuelp, and Asphaltum.

**Zinc Tablets for Painting in Oil.**—The surfaces of these Tablets are well adapted for highly-finished paintings, and superior to panels or milled boards.

**Water-Colours in Cakes or Moist**, filled in mahogany or japanned boxes for sketching.

**Whatman's Drawing Paper**, all sizes and thicknesses. J. D. H., ditto.

**Tinted or Academy Paper**, in great variety of tints for chalk or pencil.

**Genuine Cumberland Lead Pencils**, warranted of pure lead.

**Chalks and Crayons** of all descriptions.

**French, Hog, and Sable Hair Brushes** for Oil and Water-Colour Painting.

**Marble Slabs mounted**, prepared for Miniature Painting.

**Drawing Boards, Easels, T Squares**, and every article for Architectural Draughtsmen.

**Drawings and Paintings lent to copy.**

**CHIMNEY GLASSES, PICTURE FRAMES, CHEVAL and TOILET GLASSES, CONSOLE TABLES, WINDOW CORNICES, SCREENS**, and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane.—P. G. manufacturing every article on the premises, is thereby enabled to offer them at such low prices that he defies competition. An extensive assortment of Ornamented Gilt and Fancy Wood Picture Frames kept ready. Regilding in all its branches in a superior manner, at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given free of charge. A list of the prices of Plate Glass, &c. sent, pre-paid, to any part of the Kingdom. A quantity of Picture Frames of every size, that have been some time on hand, at reduced prices.

**RAND'S PATENT****METALLIC COLLAPSIBLE TUBES  
FOR OIL COLOURS.**

**J. RAND**, the Inventor, Patentee, and sole Manufacturer of the above, during the time they were known to the profession solely under the name of "Brown's Patent," has made arrangements with Messrs. Winsor and Newton, of 38, Rathbone-place, by which that firm are supplied by him with Tubes of the same description as those so long supplied by J. Rand to Mr. Brown.—August 1st, 1842.

**WINSOR and NEWTON**, of 38, RATHBONE-PLACE, respectfully announce, that they have on sale Oil Colours in Rand's Patent Collapsible Tubes, wholesale, retail, and for exportation.

**THE PATENT EASEL.**

**WINSOR and NEWTON** respectfully inform the Profession and the Public, that this admirably-constructed Easel, the invention of M. BONHOMME, of Paris, is manufactured by them with considerable improvements on the French model, and with the advantage of the best English workmanship.

W. and N. are induced to submit this Easel to the Profession in England by the high encomiums and great patronage bestowed upon it in France, where the ingenious Inventor, not only obtained a prize for the merits of his Easel at the National Exposition of Manufactures and Inventions, but also received from the Government a liberal reward for the assistance he rendered to the Professors of Art.

Though possessing the advantages of the largest Easels, by standing firmly and holding steadily paintings of a very large size, M. BONHOMME's invention occupies no more space than the smallest of the Artists' Easels now in use, and certainly not so much as the greater number of them.

The position and height of a painting may be adjusted with the utmost facility by a novel arrangement, which permits even unusually large works to be, when placed on this Easel, as much under control as smaller ones. The painting can also be sloped or thrown forward to any angle most favourable for the view, and this forward inclination can be adjusted with ease and exactness.

It presents a neat and even elegant appearance, and is peculiarly fitted as well for all purposes of exhibition as for the studio; affording the utmost convenience for the advantageous display of large or small works. The connoisseur who desires to exhibit his gems of Art in a manner adapted to make the most favourable impression, obtains in the improvements here brought forward an auxiliary hitherto much required.

The Easel to be seen at WINSOR and NEWTON'S, Artists' Colourmen to Her Majesty and His Royal Highness Prince Albert, 38, Rathbone-place, London.

**MILLER'S SILICA COLOURS.**

The daily increasing patronage bestowed on these Colours by Artists of the first eminence, while it is gratifying in the highest degree to the inventor, is, at the same time, an acknowledgment of the soundness of those principles upon which they are manufactured. It will be sufficient to repeat that, being composed of substances identical or similar to those used by the old masters (the brilliancy of whose works, after the lapse of centuries, is an incontestable proof of the superiority of ancient colouring), the Silica Colours will ever retain their freshness, transparency, and gem-like lustre uninjured by atmospheric influence and unimpaired by time.

Prepared for Oil and Water-Colour Painting of the under-mentioned tints, viz:

Pale and Deep Red.	Crimson and Olive.
Pale and Deep Blue.	Pale and Deep Orange.
Pale and Deep Yellow.	Pale and Deep Purple.
Pale and Deep Green.	Pale and Deep Brown.
White and Half Tint.	Grey and Black.

**VAN EYCK'S GLASS MEDIUM.****FOR OIL PAINTING.**

No. 1. For first and second painting.

No. 2. For third painting, finishing, and glazing.

Any of the above Media may be thinned, according to the taste of the Painter, with Miller's Venetian Oil.

**MILLER'S GLASS MEDIUM.****FOR WATER-COLOUR PAINTING.**

No. 1. For first colouring.

No. 2. For second colouring, glazing, and finishing.

Any of the above Media may be thinned, according to the taste of the Painter, with Miller's Freyodor.

T. M. begs to call the attention of Artists to his new Drawing-Paper, made of pure linen only, without undergoing any chemical process.

**MILLER'S PROYDOR.****FOR SKETCHING AND PAINTING IN WATER COLOURS.**

This liquid is intended to supply the place of water in the above Art. It causes the colours to amalgamate and blend kindly with each other; removes all stains or greasy particles from the surface of Miniature Tablets, Ivory, or Paper; and if, in the progress of the painting, it be found desirable to take out or alter any portion of the Picture, the application of this Liquid by itself will accomplish it without injury to the surface.

MANUFACTORY: 56, LONG-ACRE, LONDON.

**TO MINIATURE PAINTERS, &c.—W. WARRINER, 39, GREAT CASTLE-STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.**

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

**ELEGANT AND ORNAMENTED PICTURE FRAMES OF A SUPERIOR DESCRIPTION, WARRANTED TO CLEAN.**

**J. ECKFORD, 45, FLEET-STREET,** corner of Mitre-court, Temple, opposite Fetter-lane, begs leave to inform Artists, the Trade, and Public, that they can obtain A LARGE AND CLEAR EXPLANATORY SHEET OF DRAWINGS, with numerous elegant Patterns, the Size and Prices attached to the various Frames, sent gratis and free of postage to any part of the United Kingdom.

Old Frames re-gilt; large and small Miniature Frames at proportionate prices. Fancy-wood Frames of every description. Orders from the country punctually attended to. ESTABLISHED 1792.

**SPLENDID AND SUPERIOR GILT FRAMES.**

**CHARLES M'LEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**TWO LETTERS to an AMATEUR or YOUNG ARTIST, on PICTORIAL COLOUR and EFFECT, and the means to be employed for their production.** By ROBERT HENDRIS, Esq., jun. Price 6s. Published and sold by Simpkin, Marshall, and Co., Stationers' Hall-court; and T. Miller, Artists' Colourman, 56, Long-acre.

Just published, price 16s.,

**THE SKETCHER'S GUIDE;** a light and portable Apparatus for Drawing Landscape, and other Outlines, in Perspective, without Elementary Knowledge. To which is added, a Compendium of the Rules of PERSPECTIVE and EFFECT.

By W. F. ELLIOT, Esq.

There are few persons, unacquainted with the art of Drawing, but have (either when travelling, or at other periods of their lives) had frequent occasion to lament that deficiency. The difficulties in the way of sketching objects correctly, without a knowledge of the laws which regulate Optical Perspective, have been so great, and hitherto so forcibly felt, as to be considered insuperable. Messrs. Fuller, however, are happy to announce, that, in "The Sketcher's Guide," they have perfected an apparatus, extremely simple, and as portable as a hand-book, by means of which those obstacles are overcome; and any person, by simply attending to the printed instructions, may draw Landscapes, or other objects, as faithfully as they are presented to the eye.

And, in order to simplify and encourage the study of Perspective and pictorial Composition, they have added to the above a Synopsis of the Rules of Perspective and Effect; clearly and popularly written, and containing numerous Illustrative Examples.

To persons travelling, either on the Continent or elsewhere, "The Sketcher's Guide" will be an invaluable companion; as, by its assistance, there is not a single scene of interest but may be secured, to give birth to pleasurable, if not useful, reminiscences at some future period. The student in Drawing and Perspective will also find it an important help. It will facilitate his progress by demonstrating practically the application of the rules he may have learnt theoretically. At the same time, the letter-press and illustrations will teach him the most approved methods of combining and treating his subjects to compose a picture.

Orders should be immediately given to Messrs. Fuller, 34, Rathbone-place, or through any Book or Print-seller in Town or Country.

London: Published by S. and J. Fuller, at their Temple of Fancy and Artists' Repository, 34, Rathbone-place.

**OAK CARVINGS for CHURCH DECORATIONS, &c.**—Messrs. BRAITHWAITE and CO., Proprietors of the patent method of CARVING in SOLID WOOD, beg leave to invite the Nobility, Clergy, and Architects, to view their Specimens of Oak Carvings, suitable to the Gothic Embellishments of Cathedrals and Churches, such as Stalls, Panelling, enriched Tracery, Chairs, Communion-rails, Tables, Altar-screens, Pulpits, Reading-desks, Lecterns, Stall-heads, Finials, Organ-screens, Gallery-fronts, &c., at one half the price usually charged.

Estimates given, and contracts entered into, for the entire fitting-up, restoration, or repairs, of any Cathedral, Church, or Mansion.

By their process a most important saving in expense and time will be found in the fitting or repairs of Churches or Mansions, either in the Gothic or Elizabethan style, in any description of wood. It is equally applicable to Elizabethan or Gothic Furniture, such as Chairs, Book-cases, Cabinets, Tables, Picture-frames, Coats of Arms, Mouldings, &c., &c.—No. 5, HENRIETTA-STREET, COVENT-GARDEN.

### CASE OF URGENT DISTRESS.—The

attention of the generous and benevolent is earnestly entreated to the following case:—Mr. JAMES EGAN, the eminent mezzotint engraver, died in the month of October, leaving three children, of the ages of 13, 11, and 7, utterly unprovided for. He had long struggled with difficulties in his profession, which he had just been enabled to overcome, having received the public approval, and that of the publishers, for his recent works, more especially for his engraving after Catermole's 'English Hospitality in the Olden Time,' when death deprived his family of a protector, the Arts of a valuable assistant, and his friends of an associate, for whose amiable qualities and considerable talents they entertained the highest esteem and respect. Under these circumstances, public sympathy and assistance are earnestly applied for; and it is confidently hoped that aid will be supplied by the charitable, who appreciate British Art, in order that his young and interesting children may be rescued from present want and future misery.

Subscriptions for this truly benevolent purpose will be received by Mr. F. G. Moon, Threadneedle-street, publisher; Mr. A. W. Bailey, Cornhill, publisher; Messrs. Graves and Worsley, 6, Pall-Mall, publishers; S. C. Hall, Esq., F.S.A., Barrister-at-Law, Rosery, Old Brompton; John Lucas, Esq., painter, 3, St. John's Wood-road, Regent's park; Mr. C. E. Wagstaff, engraver, 14, Hastings-street, Burton-crescent; Mr. E. Lloyd, printer, Pear Tree Cottage, Holloway.

In One Vol., small 4to., tastefully bound, price 31s. 6d.,

### THE BOOK OF BRITISH BALLADS.

Edited by S. C. Hall, F.S.A. This work consists of British Ballads taken from the collections of Percy, Evans, Ritson, Pinkerton, Scott, Motherwell, Jamieson, Buchan, Herd, and others, by whom they have been gathered with so much industry and care; and, also, from sources comparatively unexplored by the general reader. No attempt has hitherto been made to select, and arrange in a popular form, the best of these ballads from the several volumes in which they are scattered, and where they are mixed up with a mass of inferior or objectionable compositions.

CHEVY CHASE; illustrated by J. Franklin; engraved by Linton, Smith, Landells, Armstrong, &c.

THE CHILDREN IN THE WOOD; illustrated by J. R. Herbert, A.R.A.; engraved by Green.

FAIR ROSAMOND; illustrated by Franklin; engraved by T. Williams, Miss Williams, Walmsley, Evans, &c.

THE DEMON LOVER; illustrated by J. Gilbert; engraved by Folkard and Bastin.

THE NUT-BROWN MAYD; illustrated by T. Creswick, W. B. Scott, &c.; engraved by Williams, &c.

KEMPION; illustrated by W. B. Scott; engraved by Smith and Linton.

THE CHILD OF ELLE; illustrated by J. Franklin; engraved by Williams.

THE TWA BROTHERS; illustrated by W. P. Frith; engraved by Bastin.

THE BLIND BEGGAR; illustrated by J. Gilbert; engraved by Vizetelly.

ROBIN GOODFELLOW; illustrated by R. Dadd; engraved by Green.

SIR PATRICK SPENS; illustrated by J. Franklin; engraved by Armstrong.

GIL MORICE; illustrated by K. Meadows; engraved by Smith and Linton.

SIR ALDINGAR; illustrated by J. Gilbert; engraved by Gilks and Folkard.

SIR LANCELOT DU LAKE; illustrated by E. Corbould; engraved by Smith and Linton.

KING ARTHUR'S DEATH; illustrated by J. Franklin; engraved by Green, Nicholls, Williams, &c.

THE HEIRE OF LINNE; illustrated by E. M. Ward; engraved by Bastin.

LORD SOULIS; illustrated by R. Mc Ian; engraved by Smith and Linton.

LORD THOMAS AND FAIR ANNET; illustrated by H. T. Townsend; engraved by Folkard, Branston, &c.

FAUSE FOODRAGE; illustrated by T. M. Joy; engraved by Miss Williams.

GENEVIEVE; illustrated by J. Franklin; engraved by Armstrong and Nicholls.

FAIR MARGARET AND SWEET WILLIAM; illustrated by H. Warren; engraved by Jackson.

THE BIRTH OF ST. GEORGE; illustrated by W. B. Scott; engraved by Folkard, Vizetelly, and Armstrong.

THE MERMAID; illustrated by J. Franklin; engraved by Green, Nicholls, Branston, Walmsley, &c.

LORD ULLIN'S DAUGHTER; illustrated by E. Corbould; engraved by S. Williams and J. W. Whimper.

SIR AGILTHORN; illustrated by Redgrave, A.R.A.; engraved by Walmsley, Bastin, Branston, &c.

JOHNIE OF BREADISLEE; illustrated by Sibson; engraved by Linton.

THE DOWIE DENS OF YARROW; illustrated by J. Franklin; engraved by F. Branston and E. Evans.

Each ballad is preceded by two pages, giving its history, and supplying such information concerning it as the Editor has been enabled to obtain. Into these pages are introduced, generally, the airs to which the ballads are sung; and any pictorial illustrations that may serve to explain the text.

Each ballad is illustrated by one artist, and in every instance the design is drawn by him on the wood; and the work thus exhibits examples of the genius of a large proportion of the most accomplished artists of Great Britain.

The supremacy of our English engravers on wood is universally admitted: this important department of the Work has been entrusted only to artists of acknowledged skill and eminence; and the whole of the illustrations of a ballad have been confided, as far as possible, to one engraver.

The aim of all parties engaged in the production of the Work has been to render it worthy of the Country and of the Arts.

London: J. How, 132, Fleet-street.

**MR. T. R. DAVIS**, well-known as an ANIMAL PAINTER, having received, during 20 years' experience, the Patronage of the Nobility, wishes to give Private Tuition to any Gentleman who may feel desirous of receiving Instruction in that Branch of Art.

Address, Messrs. Winsor and Newton, Rathbone-place; or, at Mr. Davis's Residence, No. 2, Pieschell-place, Cambridge-terrace, Edgware-road.

**L'ALLIANCE des ARTS**, rue Montmartre, No. 178, Paris.—Administrator, M. A. Walois: Directors, Messrs. Paul Lacroix (Bibliophile Jacob), for Books; T. Thoré, for Pictures; Judiciary Council, MM. Boudier, Notary; E. Lacroix, Solicitor; Philip Dupin, Barrister; Bataillardi and Commandeur, Appraisers; London Correspondent, Mr. Joseph Thomas, 1, Finch-lane.

Objects of the Society:—The purchase in whole or part of libraries, picture-galleries, collections of art, &c., valuation of such collections, preparation of catalogues, simple, descriptive, and classified, by persons of the highest reputation in each department; publicity in the French, English, and other journals, as also in the Bulletin de l'Alliance des Arts; direction and care of sales by auction; commission for the guaranteed purchase at public sales of books, paintings, objects of art, &c.; exchange of these objects by private contract between individuals and public collections in France, England, and other countries.

**TO NOBLEMEN, GENTLEMEN, AMATEURS, and COLLECTORS of PAINTINGS, RARE BOOKS, and WORKS of ART.**—The following CATALOGUES, prepared by the Directors of the Alliance des Arts, rue Montmartre, Paris, may be obtained gratis, on application to Mr. Joseph Thomas, No. 1, Finch-lane, Cornhill, London; others are in course of formation:—Catalogue of the Numismatical and Archaeological Library of the late M. T. E. Mionnet, conservator of the cabinet of medals in the King's Library, member of the Academy of Inscriptions and Belles Lettres, author of the Description des Médailles Antiques, &c.; catalogue of drawings, by the great masters of Italian, Spanish, German, Flemish, Dutch, and French schools, from the cabinet of M. Villenave, member of several learned societies. The particulars as to place and time of sale are attached to the catalogues.—Le Bulletin de l'Alliance des Arts is published on the 10th and 25th of every month, and may be subscribed for at 12s. per annum, with Mr. Thomas.

**NOTICE.—PATENT RELIEVO LEATHER HANGINGS and CARTON-TOILE OFFICE,** 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foliage, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c., &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.

L. COMETTI and CO., 10, Rue Basse du Rempart, Paris.—May 25, 1842.

### NEWLY INVENTED SKETCHING PENCILS.

BB. Very black for the foreground.

HB. Middle tint.

N. Neutral tint, for distance.

E. WOLFF and SON beg to recommend their new invented BLACK CHALK PENCILS and CRAYONS, which will not rub off or smear. They are richer in colour and superior in working to any other Pencil hitherto known. The great advantage derived from these Chalks, are their capability of producing effect with little labour, combined with their adhesive qualities, which will admit of the drawings being kept in a portfolio without fear of smearing.

May be had of all Artists, Colourmen, and Stationers; and at the Manufacturer's, 23, CHURCH-STREET, SPITALFIELDS.

**POOLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razor-makers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

## WEST-RIDING ART-UNION.

THE extraordinary popularity and success which have attended the transactions of the Society, denominated "THE ART-UNION," in this country; the great benefit derived from its operations, both to Art and Artists; the talent which it has been the means of eliciting and fostering, and the feeling for Art which it has caused to be engendered in many cases, and in many others improved; the liberality with which it has been supported, and the various channels that have by its agency been opened for compensating the labours of British Genius; stamp this Institution as the most important existing evidence of the rapid growth of a taste for Art in this Kingdom.

It was, indeed, a happy idea, that a trifling individual subscription might accumulate a fund sufficiently large to purchase annually some of the best productions of the English School of Painting, the *chance* of possessing which should be within the power of every supporter of the Institution, at the same time that he had a *certainly* of an equivalent for his contribution, in a specimen of Graphic Art well worthy of acceptance: to the full value, indeed, of the amount of his subscription.

Under these circumstances, and with the view of rendering the advantages of the system above adverted to more directly available to his townsmen and others, Mr. GILBERT begs to announce that he has made arrangements for establishing an ART-UNION for Sheffield and the West-Riding. In embarking on an enterprise of so arduous a character, he ventures to solicit the support and co-operation of his Friends and the Public, confident that his plan offers advantages which merit their especial notice.

In the first place, without wishing to say anything to the prejudice of the Institution in London, the general scheme of which it is his intention to adopt, so far as circumstances will admit, he would observe that those subscribers to the West-Riding Art-Union who may happen to be Prize-holders, will be enabled to select Pictures without either having to incur the expense of a journey to London, or to delegate their choice to a Committee; who, however competent they may be to judge of the merits of Pictures as Works of Art, cannot be expected to suit the particular tastes of individuals for whom they may be commissioned to select, both as to style and subject, so exactly as the individuals themselves. Secondly, every Subscriber of One Guinea will, in addition to the chance of obtaining a Painting, receive an Engraving of such excellence, as will, it may be confidently asserted, very far surpass any of the Art-Union Plates which have been hitherto issued. And thirdly, *all the Subscribers will receive their Plates immediately on the payment of their respective Subscriptions*, instead of having to wait for them eight or twelve months, as is the case in similar Institutions. To this important feature of his plan Mr. GILBERT begs to direct especial attention: it is one which cannot fail to give universal satisfaction, inasmuch as the subscribers will be at once enabled to estimate the value of the work procured, which, to say the least, will be equivalent to the Guinea he subscribes; and at a subsequent and not distant period, he will have, in addition, the chance of obtaining a Painting by some eminent British Artist, *selected by himself*, of between the value of Ten Guineas and Two Hundred Guineas.

With reference to the Paintings to be submitted for competition, Mr. GILBERT begs to state that he has peculiar opportunities for obtaining from artists in London and elsewhere a number of Works of first-rate excellence, and of varied subjects and styles, for exhibition and selection; moreover, he wishes to be distinctly understood that Prize-holders will not have particular Pictures allotted to them, but that they will be allowed to select for themselves to the amount to which they may be entitled upon the drawing. The number and amount of Prizes will, of course, depend upon the amount of money to be subscribed. The Pictures will be submitted to Public Inspection at Mr. GILBERT'S "REPOSITORY OF

THE FINE ARTS," in the New Public Building in the Court opposite the top of Chapel Walk, Fargate, Sheffield, as soon as possible after the removal of Mr. Danby's Painting of 'The Opening of the Sixth Seal,' which is now exhibiting. The Drawing is intended to take place in the MUSIC-HALL, Sheffield, under the superintendence of a Committee, to be elected for the purpose on some day to be hereafter determined upon. In the meanwhile Mr. GILBERT begs to state, that it will be his object to conduct the undertaking on such spirited, and at the same time equitable and honourable, principles as will ensure for him the confidence and good opinion of all those who may favour him with their support.

Until the Opening of his Repository, in Fargate, Subscribers' Names will be received at his Book and Print Establishment, Eyre-street, corner of Charles-street. For every Guinea subscribed, parties subscribing will receive, at their option, a copy of Watt's splendid line engraving, after Leslie, R.A., of 'May Day in the Reign of Queen Elizabeth,' or the mezzotinto engraving by Lucas, after Isabey, of 'The Return to Port.' These Plates, it may be asserted without fear of contradiction, have never been surpassed in their respective styles by any that have yet been published. As the Plates will be delivered when the Subscriptions are paid, Mr. G. would impress upon those parties intending to subscribe the advantage of sending in their Names at as early a period as possible, in order to secure the best impressions. In order to convey to the Public some idea of the high character of the Engravings, Mr. G. may state that he has been honoured by receiving, in the course of a few days' stay in London, the Names of upwards of Fifty Subscribers, many of whom are eminent for their taste and skill in connexion with the Fine Arts. Subscriptions are received in London, by Messrs. GRAVES and WALMSLEY, Print Sellers to the Queen, Pall Mall; Mr. JAMES BORN, Bookseller, King William-street; Messrs. A. H. BAILY and Co., Publishers, 83, Cornhill; and Mr. How, at the Office of the "Art Union," 132, Fleet-street.

Mr. G. begs to state, that he has already made arrangements for receiving Pictures for his West-Riding Art-Union, from the following eminent artists:—

W. Allan, Esq., R.A.  
W. Brigstock, Esq.  
W. Brockedon, Esq.  
A. Clint, Esq.  
A. Cooper, Esq., R.A.  
T. S. Cooper, Esq.  
Ed. Corbould, Esq.  
T. Creswick, Esq.  
R. B. Davis, Esq.  
A. Frazer, Esq.  
H. Gastineau, Esq.  
S. A. Hart, Esq., A.R.A.  
B. R. Haydon, Esq.  
J. F. Herring, sen., Esq.  
T. B. Howard, Esq.  
T. M. Joy, Esq.  
W. B. Kearney, Esq.

Edwin Landseer, Esq., R.A.  
John Martin, K.L.  
R. R. McLan, Esq.  
D. M'Clise, Esq., R.A.  
H. P. Parker, Esq.  
J. B. Pyne, Esq.  
D. Roberts, Esq., A.R.A.  
W. Salter, Esq., M.A.F.  
W. Shayer, Esq.  
C. Simson, Esq.  
J. Simpson, Esq.  
C. Stanfield, Esq., R.A.  
F. P. Stephanoff, Esq.  
H. J. Townsend, Esq.  
J. Ward, Esq., R.A.  
W. E. Ward, Esq.  
and others.

In addition to these remarks, Mr. GILBERT presumes to direct attention to the fact that the County of York—the largest, and it may be said the wealthiest of the English Provinces—is peculiarly calculated to give prosperity to the establishment of an "ART-UNION" Society. It is indeed matter of astonishment that Yorkshire should have been so long without one, while they have flourished in so many other counties: and he calls upon his friends and the Public generally, to remove this reproach from their County.

### MR. GILBERT

Has the honour to Announce, that he is about to Publish immediately a most Splendid ENGRAVING, by JOHN MARTIN, K.L., from his Original Picture of 'THE EVE OF THE DELUGE,' in the Possession of His Royal Highness Prince Albert, which is to be Dedicated to His Royal Highness by his express wish. Price to Subscribers:—Proofs before Letters, £3 3s.; Lettered Proofs, £2 2s.; Prints £1 1s.

A Proof Impression may be seen, until the Opening of his Repository in Fargate, at J. G.'s Establishment in Eyre-street, Sheffield. As the Plates will be delivered in the strict order of Subscription, an early Application will be necessary to secure the finest Impressions.

## BRITISH INSTITUTION, PALL-MALL.— NOTICE TO EXHIBITORS.

All Pictures, &c., intended for EXHIBITION and SALE the ensuing Season, must be sent for the inspection of the Committee, on Monday, the 16th, and Tuesday, the 17th of January next, between the hours of Ten in the Morning, and Five in the Evening; after which time no Picture or other Work of Art will be received. Portraits and Drawings in Water-colours are inadmissible.

N.B. No Picture will be received for Sale that is not bona fide the property of the artist.

WILLIAM BARNARD, Keeper.

**TO THE PUBLIC.**—The COMMITTEE of the ART-UNION OF LONDON, having had their attention directed by numerous Correspondents to some recent announcements of Art-Unions—purporting to resemble in principle this and similar associations already established, but which are in reality commercial speculations for individual benefit—deem it their duty, in order to prevent misapprehension, by which serious mischief might be done to a valuable means of advancing the Arts, to state broadly, that this Society was established solely with the disinterested view of disseminating a love of the Fine Arts, promoting their progress, and elevating the public taste. No gentleman connected with its management has the slightest personal interest in the purchase of Works of Art, or can possibly derive any advantage, pecuniary or otherwise, therefrom; so that there is no subordinate end of an individual nature to serve. The Committee cannot but view with distrust any scheme which, under the guise of such a principle as this, seeks to assume for individuals actuated by pecuniary motives, an influence which might place Art and Artists in a state of thralldom likely to be productive of most serious consequences.

The Society's Prospectus, and all other information, may be obtained at the Office, No. 4, Trafalgar-square, Charing-cross, and of any of the local Secretaries throughout the Country. Subscribers of the current year will receive, in addition to the chance of obtaining a valuable Work of Art, a Line Engraving by Mr. L. Stocks, from Sir A. W. Calcott's Picture, 'Raffaello and the Fornarina.'—An early Subscription is invited.

THE DUKE OF CAMBRIDGE—President.

GEORGE GODWIN, F.R.S., F.S.A., } Hon.

LEWIS POCOCK, F.S.A., } Secs.

Nov. 22, 1842.

## THE ROYAL IRISH ART-UNION.—

TICKETS for 1843, may now be obtained in London, by applying to Messrs. D. and P. Colnaghi, Pall-Mall; Mr. C. Robertson, 51, Long-Acre; Messrs. Graves and Co., No. 6, Pall-Mall; Messrs. Colnaghi and Puckle, Cockspur-street; or Mr. Ackermann, 191, Regent-street.

**THE ARKAN FISHERMAN'S DROWNED** CHILD, by F. W. BURTON, Esq., R.H.A. This fine work, about to be engraved for the ROYAL IRISH ART-UNION, 1843, may be viewed for a short time at Messrs. Graves and Co., No. 6, Pall-Mall, where Tickets and every information may be obtained.

**DRAWING AND PAINTING.**—Artists and others are informed that the SCHOOL, at 14, TOTTENHAM COURT-ROAD, is now Open for the Winter Season. Antique Class on Monday, Wednesday, and Friday Evenings, from six to ten. Life Class, on Tuesday, Thursday, and Saturday Evenings, from half-past seven to half-past nine.—Terms: Life Class, One Guinea per Quarter; Antique, Half-a-Guinea. To both Classes, 25 Shillings.

WILLIAM BARTER, Hon. Sec.

ESTABLISHED 1829.

**THE ART-UNIONS OF GERMANY, BERLIN, DUSSELDORF, and DRESDEN,** under the Patronage of H.R.H. the Duke of Sussex, H.R.H. the Duke of Cambridge, and the Nobility. The price of a Subscription Ticket, in either of the above Associations, is 20s. each, which will entitle the holder to one copy of the Annual Presentation Engraving, which will be delivered IMMEDIATELY after the drawing, free of duty and carriage, and also a chance of obtaining a work of Art, value from £10 to £300.

The Engravings, which are executed in the very first style of Art, are exhibited daily at the German Repository, No. 9, Newman-street.

The Subscription List to the Art-Union of Dresden will close on Saturday, the 10th inst. Two beautiful Prints will be presented to each Subscriber on the 10th of January, 1843, viz:—

'The Power of Music,' after Professor Rietschel; and 'John of Leyden, administering Baptism to an adult Female at Munster, in Westphalia, in the presence of his enthusiastic Followers,' after Baehr. Size, 21 in. by 16 in.

A Prospectus can be obtained, or forwarded free, upon application to

HENRY HERING, Secretary,  
9, Newman-street, Oxford-street, London.

## FRAMES for ART-UNION PRINTS.—

As every Subscriber to the "London Art-Union" will very shortly obtain possession of the Print issued by the SOCIETY, and as to frame it in an elegant, and not costly, manner, will be a most desirable object to many of the possessors, Mr. BIELEFELD begs to announce that he has prepared a Frame expressly for the Print of the 'Saint's Day'—the presentation print of the London Art-Union. It is manufactured of Papier Maché, a lighter, more elegant, and more durable material than any hitherto used for this purpose.

Papier Maché Works, 15, Wellington-street North, Strand.

**UNDER THE SUPERINTENDENCE OF THE COUNCIL OF THE GOVERNMENT SCHOOL OF DESIGN AT SOMERSET HOUSE.**

(To be continued every alternate month) price 3s. 6d., The Fourth Number of

**A DRAWING BOOK;** containing Elementary Instructions in Drawing, and illustrating the Principles of Design as applied to Ornamental Art.

The Council have arranged that this work shall be sold at a price little exceeding the cost of production, so that, as far as possible, it may come within the reach of all classes of persons desirous of Instruction in Drawing and the Art of Design.

The First Part is to be devoted to Elementary Instruction, and will exhibit a course of Outline Drawing (including both Geometrical and Free-hand Drawing) and Shading, illustrated by numerous examples, as well modern as ancient, so as to form a complete Course of Instruction in Ornamental Design, preliminary to Drawing from Nature. The series of examples for Outline Drawing will be comprised in FIVE NUMBERS, each containing Fifteen Sheets, accompanied by Descriptive Letter-press.

Chapman and Hall, 186, Strand.

**TWO LETTERS to an AMATEUR or YOUNG ARTIST, on PICTORIAL COLOUR and EFFECT,** and the means to be employed for their production. By ROBERT HENDRIE, Esq., jun. Price 5s.

Published and sold by Simpkin, Marshall, and Co., Stationers' Hall-court; and T. Miller, Artists' Colourman, 56, Long-acre.

This Institution was founded in June 1842. Its object is, the establishment of a Fund for the permanent assistance of Picture-dealers, Printsellers, Coin-dealers, Picture Restorers, and Dealers in Works of Art and Curiosities, and their Assistants; and for the temporary assistance of members, their widows, and children—when in necessitous circumstances.

Persons properly qualified and approved, having been nominated by two members, paying a subscription of one guinea annually shall be members of the Institution; and every person so qualified and approved, giving to the Institution a Donation of Ten Guineas at one time, or two Donations of Five Guineas each in two successive years, shall become a life member of the Institution.

Any person who shall have kept a shop, show-room, or gallery, principally for the sale of Works of Art, for three years, or any assistant who shall have been six years in the trade shall be eligible as a member of the Institution; all the said members being residents within the United Kingdom.

The Committee shall have power to grant temporary or permanent assistance to a member, or the widow of a member, or the children of a member,—such assistance to have reference to the amount of subscriptions, to the age, to the time the member has belonged to the Institution, and other circumstances.

Books of the Rules and Regulations may be obtained from any of the above-named

OFFICERS OF THE FUND;

Or, from the Honorary Secretary, Mr. THOMAS DODD, 7, Great Newport-street, Long-acre; or the Assistant-Secretary, Mr. THOMAS C. MORTON, 8, Great Newport-street.

# THE NATIONAL ART-UNION.

TO EXTEND THE INFLUENCE OF BRITISH ART, BY CIRCULATING FINE EXAMPLES OF THE BRITISH SCHOOL OF PAINTING AND ENGRAVING.

Various circumstances have combined to suggest the establishment of an ART-UNION upon a more extended and comprehensive scale than that of the "SOCIETIES" at present in existence, with a view to associate, for one common purpose, persons of similar habits and tastes, however removed by distance; to increase the means of justly appreciating the Fine Arts, and participating in their beneficial influences; and, by circulating Works of unquestionable excellence, to give a right bias and a wise direction to that taste for the beautiful and instructive in Art, which is becoming, not gradually, but rapidly, universal in Great Britain.

The Societies which, within the last few years, have been called into existence in this country, originated, as our readers are aware, with the patrons of Art in Germany. The idea was borrowed first in Scotland, it was introduced thence into London, the spirit spread its influence to Ireland and the English provinces; and several such Institutions are now in operation—all stimulated by one great and honourable motive, but each having some peculiar characteristics, and all acting upon grounds independent one of another.

The vast advantages that arise to a community from a proper cultivation of the Arts, and the salutary enjoyments produced by them, are too obvious, and too generally admitted, to require comment. The astonishing increase of Institutions for their promotion, and of Societies for their encouragement, in this country, has only kept pace with the public sentiment. The spirit of the age, rejecting the less refined pleasures of former times, requires those that are derived from the cultivation of Science, Literature, and THE ARTS,—because it has been taught to appreciate their value. The aristocracy, of rank or commerce, are deriving their "home enjoyments" from the mind and hand of the Painter; while the taste, and, it may be said, the judgment, formerly confined to the higher, have spread to the middle classes of society, by whom the inferior productions of the graver are now almost invariably rejected. Fortunately, Science has been summoned to the aid of the Arts: the invention of the ELECTRO-TYPE will, by multiplying, to any extent, the productions of the burin, enable the producer of a fine Print to supply it at the cost, formerly, of the commonest engravings—such Electrotypes being, in all respects, as excellent as the originals, of which they are fac-similes; a result that rests upon indubitable authority, and is "established by the proof that it has been found impossible, by the most competent judges, to distinguish the one from the other."

The MANAGERS of the "NATIONAL ART-UNION" avail themselves of this power to answer the increased demand for Art of unquestionable excellence; and submit their PLAN with confidence to the Public.

In its leading provisions, it resembles THE SOCIETIES now in operation, and with which the Public are already familiar; *first*, in supplying an impression of a costly Engraving for each Guinea subscribed; and *next*, in distributing a collection of Works of Art, the productions of British Artists, as PRIZES—the prizes to be appropriated in the usual manner of drawing.

In the "NATIONAL ART-UNION," however, there will be some peculiar features, upon the importance of which, as serious and valuable improvements, its projectors calculate for success.

These they have now to explain:—

WITH REFERENCE TO THE PRINTS TO BE DISTRIBUTED,—ONE FOR EACH GUINEA SUBSCRIBED:—

1st, The Print will be DELIVERED to the Subscriber, *at the time his Subscription is paid*; thus removing the principal objection to existing Art-Unions, which have delayed the issue of one Print until long after another Print has been due; causing no inconsiderable disappointment and vexation by continual postponements.

2nd, As, at least, THREE OR FOUR Engravings will be submitted to the Subscribers, from which a choice may be made, for each Guinea subscribed,—and as these Engravings will be varied as to subject and size, the Subscriber will be enabled to select a Print that may be suitable to his taste, and will not be compelled, as in previously existing Societies, to accept a Print, the character of which may not be agreeable to him, or which may not possess sufficient merit as a work of Art. *In short, he will ascertain the true worth of the Engraving before he is called upon to become a Subscriber.*

3rd, The Prints to be issued by the NATIONAL ART-UNION will be greatly superior to any that have been hitherto published by a Society. They will be all *Line Engravings*; engraved, in every instance, by the most eminent of British Engravers, from the choicest works of the most famous of our British Painters; and the expenditure in their production will be at least *thrice* the amount that has been paid by any existing Institution.

WITH REFERENCE TO THE PRIZES FOR SUBSEQUENT DISTRIBUTION AMONG THE SUBSCRIBERS:—

1st, The sum to be expended in the purchase of PRIZES,—Paintings, Drawings, and Proof Impressions of fine Prints,—shall amount to the FULL HALF of the total sum subscribed, exclusive of the Engravings distributed at the time of subscribing; the number of Subscriptions being limited to 25,000; when the *whole* of the works of Art exhibited will be transferred, as Prizes, to the Subscribers.

[No Painting or Drawing will be selected as a Prize of less value than Twenty-five Guineas: but the smaller prizes will consist of the finest Proofs of rare and costly Prints, which cannot but be considered more desirable acquisitions than inferior Pictures of small price.]

2nd, The plan of drawing the Prizes will be precisely that adopted by the London Art-Union: to take place immediately after the completion of the Subscription List: but under no circumstances will it be delayed later than the 30th June, 1844.

3rd, The Paintings and Drawings shall be procured directly from the Artists,—native Artists only; and, as far as may be practicable, at once from the easel, so as to secure the latest production of the Painter, and to obtain novelty in an Exhibition. The Managers, however, reserve the right of making additions from private sources, when *very desirable works* may be offered them, or in case difficulties shall arise in procuring a sufficient number of really good works.

[Promises of zealous support and cordial co-operation have already been received from the Artists generally.]

4th, The Pictures so collected, for subsequent distribution as Prizes, will be publicly exhibited, first in London, and afterwards in nearly all the leading towns of the Kingdom; thus extending the fame of the Artist, and improving the public taste by the most certain and most effectual mode.

[While the Subscribers will at once receive a beautiful and valuable Print, they will, also at once, be enabled to test the beauty and value of the Pictures of which they will subsequently become the possessors. The Paintings so brought together will be collected from the studios of the Painters by gentlemen of taste and judgment, with regard only to their intrinsic merit, inasmuch as upon their intrinsic merit, and the exclusion of mediocre performances, must largely depend the success of the Institution.]

The advantages thus offered to the Public will be sufficiently obvious. While the Prints that will be issued may challenge competition with any that have ever appeared in this country, either from public or private sources, and will be procured at a cost commensurate with the importance of the undertaking, the objections that have been urged against Art-Union Societies will be in a great degree removed. These objections are twofold; first with reference to the choice of Pictures by "a Committee;" and next as regards the arrangement by which a Prizeholder selects for himself. In the one case, it has been asserted that partialities and personal regards have, at times, produced a bias injurious to the Arts generally; and have encouraged some Artists to enhance the prices of Pictures beyond their value, under the assurance of sales; and, in the other case, it is contended that the Arts are prejudiced by allowing incompetent judges to make choice of unworthy Pictures. Both these difficulties will be overcome; inasmuch as the Managers of the "NATIONAL ART-UNION" will be compelled to choose only such Works as are of acknowledged excellence; such only as are calculated to improve the general taste; and such only as will be really worth the value placed upon them. Upon the just and effectual working out of this portion of their Plan, they ground their expectations of success.

The period for drawing the Prizes will be duly announced. It will take place in London, and Subscribers will be invited to attend. The proceedings will be conducted under the superintendence of at least TWELVE of the authorized Town and Country Agents, who will represent the interests of the Subscribers.

## PRINTS FOR DELIVERY TO SUBSCRIBERS OF THE YEAR 1843:—

### I. ANCIENT ITALY.

PAINTED BY J. M. W. TURNER, R.A.; ENGRAVED BY J. T. WILLMORE.

### II. MODERN ITALY.

PAINTED BY J. M. W. TURNER, R.A.; ENGRAVED BY W. MILLER.

### III. & IV. (The Pair to each Subscriber of One Guinea.)

### THE LATTICE. — THE MASK. PAINTED BY E. LANDSEER, R.A.; ENGRAVED BY J. H. ROBINSON.

The two first-named are now on the eve of finish by the two eminent Line Engravers, Messrs. WILLMORE and MILLER; the size of each is 2ft. 4in. by 1ft. 9in. The interest and beauty of the subjects have been universally acknowledged; and as Engravings they will be classed among the most successful efforts of modern times. The Pair, after LANDSEER's exquisite Pictures, engraved by J. H. ROBINSON, are partially known; but the extreme delicacy and cost of the Engraving demanded a proportionate charge, which excluded them from the hands of all but a very few. The application of the Electrotpe has justified their introduction into this plan.

The Exhibition in London will take place at the Gallery of the "New Water Colour Society," Pall-Mall, early in January, when the Prints will be ready for distribution to Subscribers.

That this plan originates in private enterprise cannot be treated as an objection; inasmuch as IN THIS COUNTRY SUCH IS THE ORIGIN OF NEARLY EVERY GREAT AND PROSPEROUS NATIONAL UNDERTAKING—which can benefit its projectors only by really benefiting the Public.

OFFICE—26, Soho-square, London.

RICHARD LLOYD, }  
J. L. GRUNDY, } Secretaries.

The following London Agents have been appointed to receive Subscribers' Names, and will have on view Specimens of the above Engravings:—Messrs. ACKERMANN and Co., Strand; Messrs. A. H. BAILY and Co., 83, Cornhill; Messrs. S. and G. FULLER, Rathbone-place; Mr. SAMUEL HOLLYER, Chancery-lane; Mr. ROBERT JENNINGS, 62, Cheapside; Mr. F. G. MOON, 20, Threadneedle-street; Mr. T. M'LEAN, Haymarket; Mr. WATSON, Vere-street, Cavendish-square.

\* \* \* Country Agents are being appointed, and will be duly announced.

## THE NATION'S CALL.

THE National Committee on the Fine Arts having again published its Report, accompanied by a letter from the Secretary for the Home Department, it becomes necessary, at this stage of the inquiry, that our readers should be fully impressed with the importance of the subject, and clearly understand the nature and extent, as well as the force and authority, of a NATION'S CALL: that, fully aware of the obligation it entails, they may consider, deeply and feelingly, the various and peculiar circumstances under which such CALL may be made; and, when made, how emphatically every efficient member of the community is appealed to, to yield to it his ready and willing assent: whether such call be made for promoting the general good, for enforcing the maintenance of order, or for carrying into effect any great public improvement. By studying the history of NATIONAL CALLS they will arrive at data sufficiently certain, and be enabled to judge with accuracy of those silent movements which promote, preserve, and enlighten human institutions; and further, that it is only by imitating the bright examples of refined patriotism, which the pages of history present to us, that the standard of Art can be raised in our own country and among our own people.

If wealth and military conquests could awaken a genius for Art, Rome, in the days of her splendour, would have been mistress of that world also. But as, amid all her glory she infused a mercenary spirit into her artists, she has left us an example of powers misapplied—of genius degraded and debased. This opinion may be supported by examples. And, having recommended the study of NATIONAL CALLS, we shall instance such of them as seem deserving our more immediate attention.

1. When Darius meditated the absolute dominion of Greece, that country was divided into petty states, each following a distinct line of policy, often dictated by faction, and either opposed to the interests of all, or trenching upon the liberties of a weaker neighbour. To turn these

discordant elements towards the completion of his views was the great object of the Persian monarch's ambition. But even conquerors think it necessary to offer an excuse for making war a trade, and for enslaving a free people; and thus Darius sought to justify the attempt he was about to make, by alleging that the Ionians and Athenians had revolted; that they had intentionally, and not by accident, set fire to Sardis; and that they had put an insult upon him by throwing one of his heralds into a ditch and a second into a well.—(Herodot., l. v., c. 38—102; et l. vi., c. 46—494; et l. vii., c. 133.) He therefore fitted out a fleet of 600 ships, and sent them to Samos to receive on board an army already assembled there of 500,000 men (?), under the orders of his two generals, Datis and Artaphernes.—(Plut. in Moral., p. 829.) When these troops were embarked, they sailed to Naxos, and other islands, which they captured, and burnt their towns and temples. They next arrived at Eretria, a town in Eubœa, of which, after a siege of seven days, they were, through treachery, put in possession. Here too they pillaged and burnt the city and temples, in revenge, as they said, for the burning of Sardis. They likewise made slaves of the inhabitants, for which purpose they had been plentifully supplied with chains and fetters by order of Darius. The troops were afterwards disembarked in Attica, and were conducted to the plains of Marathon by Hippas, the tyrant of Athens, who, after his banishment, fled to the Persians.

The Athenians, apprized by heralds of their danger, asked succour of all the Grecian States; but only the Platæans answered the appeal, by sending them 1000 men. In this extremity the magistrates of Athens determined to make a CALL upon its entire population—including even, contrary to usage, the whole of the slaves—to arm and to march immediately against the invaders.—(Herodot., l. vi., c. 94—99.) The CALL was instantly answered: freemen and slaves ranged themselves under the banners of Miltiades, Aristides, and Themistocles; and, falling upon the Persian host at Marathon, with simultaneous violence, they gave a check to the advance of the enemy, and brought from the field of battle a large block of marble, which Datis and Artaphernes had conveyed thither, intending to erect a trophy to commemorate the victory which they expected to gain over the Athenians. Of this very block Phidias afterwards made a noble statue dedicated to the goddess Nemesis, the punisher of unjust actions.—(Pausan., l. i., p. 62.) Thus was Athens for the present saved from being burnt, and its inhabitants from being sent in chains and fetters (provided for the occasion) to Persia.—(Plut. in Moral., p. 829.)

2. As Darius died before he could equip his second great armament against Athens and Greece (Herodot., l. vii., c. 2 et 4; Justin., l. ii., c. 10; Plut. in Artaxerx. et Apothegm.), his son Xerxes, who had, before the death of his father, been named to the succession (Herodot., l. vii., c. 2 et 3; see also Justin., l. ii., c. 10; Plutarch. de Frat. Amor. p. 448), resolved to chastise the Athenians, and to carry into effect the entire project of Darius, though contrary to the wise counsels of Artabanus, the King's uncle.—(Herodot., l. vii., c. 5, 6.) Again, the Athenians and Lacedæmonians appeal to their countrymen: they were abandoned by all Greece except the Thespians and Platæans, who each sent a small force to their assistance. Hereupon, Themistocles made a CALL upon 4000 of the Athenian citizens to arm and assemble at the pass of Thermopylæ; while Leonidas, one of the Kings of Sparta, made a similar CALL upon 300 of his subjects, whom he chose by name.—(Herodot., l. vii., c. 148—163.) By these united and devoted bands was the Persian army, consisting of 2,641,610 men, including followers of the camp (Herodot., l. vii., c. 60, 72, 87), arrested, though the brave Leonidas and all his Spartans were slain (Herodot., ubi supra, c. 213—225, et

seq.; Diod. Sic., p. 7; Ctesias, in Persicis, c. 24) in the battle on the following day.—(Herodot. ubi supra, c. 229—231.) Nothing now opposing the Persians, they advanced into Attica. Whereupon, Themistocles made a CALL upon all the inhabitants of Athens to send their wives and children on board vessels, to be taken to a safer place, and then to abandon the city, and themselves to embark in other ships.—(Herodot., l. viii., c. 1—18.) Even this CALL was obeyed, and Athens was captured by the Persians, who plundered and burnt it.—(Idem, c. 51—53.) Themistocles, however, proceeded with his ships to the Straits of Salamis, and there overthrew the Persian fleet, Queen Artemisia with difficulty escaping.—(Herodot., l. viii., c. 68, 74—76, et 83—85, 86—88, et 92; Justin, l. ii., c. 12.) The reward of valour was given by all the captains to Themistocles.—(Herodot. ubi supra, c. 122, 123.)

This success was followed by one still greater at the battle of Platea, upon which occasion the Persian camp fell into the hands of the Grecians, with all its immense booty and wealth, a tenth part of which was bestowed on Pausanias, as an acknowledgment of his extraordinary valour.—(Herodot., l. ix., c. 31—69.)

3. These great victories, gained over a foe supposed to have been invincible, and whose power was neither exhausted or subdued, animated the whole of Greece with courage and hopes of freedom. A new and more extensive CALL was therefore made and submitted to, namely, a general taxation to defray the expenses of the war; to rebuild the temples and cities burnt by the Persians; and to raise troops to resist further aggressions on the part of Persia. By these means was Greece eventually delivered from the Persian armies, under Mardonius, who, prior to his evacuating the country, burnt every city and temple, in revenge, as it was alleged, for the burning of Sardis, which was accidental.—(Herodot., l. v., c. 38—102; et l. vii., c. 211, 212; Diod. Sic., p. 6; Ctesias in Persicis, c. 23.) The only temple which was not burnt by the enemy, was that of Diana, at Ephesus (Strabo, l. xiv.; Curt., l. vii., c. 5; Solin., c. 40), which was afterwards set fire to by Erostratus. Whether Xerxes was instigated by revenge, or by his religious zeal, cannot be learned. He had been instructed by Zoroaster and Ostanes, who held image-worship in abomination; and Cicero is of opinion that they instigated him to destroy the temples.—(Cic. de Legib., l. ii.) The Persians were iconoclasts of that day, about 480 years before our era.—(Clem. Alex.; Laert. in Proëm. Pocock, specim. Hist. Arab. pp. 148, 149.)

But Greece did not grow wise by the evils she had suffered and the dangers she had escaped. The smoke of her temples, which had darkened the heavens and reduced her gods to powder, acted not as a warning, but rather served to inflame old jealousies; and the animosities of rival cities were only at length allayed by submitting to the yoke of Alexander the Great, who declaring all Greece free, B.C. 334, by an edict, which he ordered Alcimalus, supported by troops, to enforce.—(Arrian, l. i., c. 18.)

4. When Hamilcar, the Carthaginian general, closely besieged Syracuse both by land and by sea, Agathocles, in order to create a diversion, embarked some troops, and, waiting the opportunity, proceeded with them to the coast of Africa. Having landed his men, he set fire to his own vessel: an example that was followed by all the commanders. Retreat being thus rendered impossible, he marched with his men to the very gates of Carthage, which, being unprepared for so sudden a descent, was thrown into the utmost confusion. A CALL upon every inhabitant was, however, instantly made; and being promptly and effectually answered, the city was saved.—(Diod. Sic., l. xx., c. i.; Justin., l. xxii.)

5. Rhodes was threatened by Demetrius, who was reputed one of the most experienced captains

of the age in conducting sieges. But the Rhodians were not dismayed: they CALLED upon all, whether free or bond, to defend the island; and, though the siege lasted three years, an honourable peace was finally concluded.—(Veget. de re militari.)

6. Syracuse was a second time besieged. This was by the Romans, under Marcellus. On this occasion a CALL was made on only *one* individual to defend the place; and that one (in himself a host) was Archimedes. For three years he alone defended the town; and had it not been for the treachery of a Spaniard, one of its principal inhabitants, he, whose mind was more powerful than armies, would have successfully resisted the utmost efforts of Marcellus.—(Plutarch in Marcell. Liv., l. xxv., c. 30.)

7. When the Roman army, under Marcius, passed into Africa, with the intention of destroying Carthage, the inhabitants, on the faith of a treaty, were induced to deliver up their arms and engines of war, which were sufficient to equip all Africa.—(Polyb. Legat., 142.) The Carthaginians thus deprived themselves of the means of defence, and, to his shame, Marcius took advantage of their situation to press harder conditions on the deputies sent from the city, and even desired them to return and command the authorities of the place to demolish their walls. The deputies, therefore, too late perceiving the treachery of the Roman general, recommended, at their return, that no confidence should be placed in the faith of the enemy. To make a CALL and to arm the inhabitants was the work of an instant. Temples, porticoes, and other public buildings, were immediately converted into workshops, where men and women laboured night and day, mutually encouraging each other, food being brought to them that no time might be lost. Thus 144 bucklers, 300 swords, 1000 darts, and 500 lances and javelins, were manufactured daily. In default of iron or brass for completing their balistæ and catapultæ, gold and silver ornaments, and even statues and sacred vases, were melted down; and, being without tow and flax for making ropes to work them, women, even of the first rank, cut off their flowing hair, and freely gave it for the purpose. In vain did the Romans attempt to take by assault a town, whose inhabitants were animated with such enthusiasm, and among whom the love of country prevailed over the love of life. So little progress, indeed, did the Romans make, that in the end, had it not been for the bravery and presence of mind of Scipio Æmilianus, then a subordinate officer, the whole Roman army would have been annihilated.—(Liv. in Epit.; Appian. in Pun., p. 55; Strabo, l. xvii., p. 832; Flor., l. ii., c. 15.)

8. Cleomenes and Demaratus attempted to possess themselves of Argos. There was at that time a lady in the city, of feeble constitution, who had been, some time before, directed by the oracle to apply herself to poetry, in which she made extraordinary progress. The influence she thus acquired was so extensive, that though there were only women in the place when the Lacedæmonians approached, she closed the gates, and CALLING on her countrywomen to defend the walls, she inspired them with so much courage and resolution by her example and intrepidity, that though Demaratus was already in possession of the suburbs, they obliged him to retire precipitately, and even to raise the siege. In memory of this glorious event, a feast was celebrated annually in Argos, in which women went about in men's clothes, and men put on women's habits.—(Herodot. Hist., l. vi., c. 76—80; Polyæn. Stratag., l. viii., c. 33; Plutarch, de Virtut. Mulier.; et ib. Apophth. Lacon.)

9. The CALL made in Sparta, and the noble conduct of its women, is too well known to need repetition here.—(Vide Plutarch, in Vit. Pyrrh.; Justin., l. xxv., c. 4.)

10. But though ancient historians afford us many other examples of NATIONAL CALLS, we

must pass them over in silence, in order to introduce the well-known and memorable CALL of Queen Elizabeth, in 1588. Philip II. was then equipping an immense force, which, with the flower of his nobility, he intended should invade England. "At that time," says Hume, "the chief support of the kingdom seemed to consist in the vigour and prudence of the Queen's conduct, who, undismayed by the present dangers, issued all her orders with tranquillity, animated her people to a steady resistance, and employed every resource which either her domestic situation or her foreign alliances could afford her."—(Hume's Hist. of England, vol. v., p. 336.)

It is, indeed, under feelings of strong excitement that our national character is fully developed; and upon such occasions it exhibits both firmness and purity, and even loftiness. It was, therefore, that "the citizens of London, in order to show their zeal in the common cause, instead of 15 vessels which they were commanded to equip, voluntarily fitted out double that number. The gentry and nobility hired, and armed, and manned 43 ships at their own charge; and all the loans of money which the Queen demanded were frankly granted by the persons applied to."—(p. 333.)

In all the cases of a NATION'S CALL which we have yet considered, some were made upon a whole people, some on classes, and some on particular individuals; and though none are of the precise kind which are contemplated by our National Committee, they are of value, as showing that *nations HAVE CALLED, and PEOPLE HAVE ANSWERED.*

11. But the nature of a NATION'S CALL is not so limited in extent as to be confined to cases of extreme necessity. It has been often confined to some specific object. Thus, when Demetrius Peliorctes besieged the city of Rhodes, as has been described, for a whole year, and growing tired, was reconciled to the Rhodians, to whom he presented all the engines of war he had employed against their city; the citizens sold them for 300 talents. And as they designed to commemorate the events of their own prowess in resisting the assaults of Demetrius, and likewise the generosity of that famous warrior in making them so large a present, a CALL was made upon the inhabitants generally, to contribute certain amounts towards the increase of the fund already created by the sale of the above-mentioned muniments. The sums were soon paid; and Chares of *Lindus* was then *chosen* to make the celebrated Colossus, which he was twelve years in completing. And when it had stood sixty years, it was thrown down by an earthquake, which also did great injury to the temple. The Rhodians, in consequence of this misfortune, sent ambassadors to all the provinces and states of Grecian origin, to represent the losses they had sustained; and to pray that contributions might be made to repair the injuries. Specific CALLS were, therefore, made by the Kings of Egypt, Macedonia, Syria, Pontus, and Bithynia, upon their several people; and so great was the amount subscribed, that the sum collected exceeded five times the value of the damages.—(Euseb. Chron.; Oros., l. iv., c. 13; Polyb., l. v., pp. 428, 429; Plin., l. xxxiv., c. 7; Strab., l. xiv., p. 652.)

12. As the Persians, on their retreat from Greece, burnt all the temples (with one exception) that of Juno, at Samos, where the Heræan games were celebrated, was also consumed; and the three wonders, admired and spoken of by Herodotus (Herodot., l. iii., c. 60), greatly injured or destroyed. The Samians, therefore, appealed to all Greece, when a general CALL was made for subscriptions in money and ornaments to repair the damages sustained at Samos. The consequence was, that the temple was made finer than ever, and so enriched with statues and pictures, that there was literally no room to contain them.—(Pausan. in Arcad.)

But where should we stop were we to continue

the history of NATIONAL CALLS and contributions—in money, in learning, and in the Fine Arts? Let it suffice to say that it was proclaimed in ancient Rome, when she had no enemy to fear, and temples adorned with paintings and statues everywhere appeared. It was heard in Tuscany, and the Labyrinth was built. And in modern Italy, it was published in Florence, and the Arts revived after having slumbered for centuries. It was but breathed in England, when, in the language of metaphor, the globe itself was CALLED upon to contribute its fatness! Our merchants were called on to cover the ocean with ships; to spread forth their arms to the most distant lands; and to withdraw from the Indies its silks, its dyes, and its perfumes. But this influx of luxuries did not enervate the character of our ancestors; their social system, indeed, was changed, but their enterprising spirit preserved their independence. In no respect does the civil polity of Great Britain differ from that of other countries than in this: that with us the public mind is kept in health by *wholesome* yet strong exercise; by enterprises of great national importance being entered upon by private individuals associated in companies, which require no encouragement or assistance from the Executive.

It is, however, true that we may trace the commencement of this feature in our national constitution to the issuing of BOUNTIES, began, it may be said, by Queen Elizabeth. After the destruction of the Spanish Armada, she perceived that the only effectual way by which her kingdom could be preserved from invasion was to extend its natural boundaries, and thus, by embracing the ocean within its limits, to "build upon the wave."

As a first step towards the accomplishment of this great project, she fitted out ships of war, and sent them to capture the galleons of Spain on their homeward way from the Americas; conceiving that the power which was most likely to injure her dominions would be thus crippled, while, at the same time, a stimulus would be given to her naval commanders to use their utmost vigilance and exertions against her enemy. Knowing, also, that numerous fleets, without rendering them effective, would but weaken her defences and invite plunderers, she offered premiums (see Spirit of Marine Law) as inducements to our merchants to build and fit out trading vessels and coasters, by which means a nursery for the education of seamen would be formed, from which a constant supply might be obtained for manning the British navy. The impulse thus given to trade, slightly fomented by her immediate successors, paved the way for the establishment of that wonderful empire in the East, where 100,000,000 of people own their subjection to a company of merchants in Leadenhall-street. Hence, also, our fur trade, our fisheries, our Russian, Turkey, and African companies; our West India property, our national bank, our docks, bridges, canals, and, lastly, our steam-boats. There cannot be a stronger argument in favour of the wisdom of rightly employing and directing the human mind to useful pursuits, to the maintenance of salutary laws, and to the security of settled institutions. These form the centre of our social system, around which, as in a circle, we may move without danger and without obstruction. Traitorous and unfaithful must that heart be which could thrill with pleasure at the ruffian shout of "Fortunam Priami cantabo."

It is not sufficient that our country become great and powerful: she must become polished likewise. She must, as having greater means at her disposal, be more distinguished than the nations whose people have long mouldered in the dust, and whose history we trace, not indeed in records which the worm may devour or the barbarian consume, but in their glorious ruins—those mighty works which genius has carved out of the living rock, and piled on the labouring earth.

Happily the throne of this kingdom is again occupied by a Queen whose strength of character we have witnessed, and whose firmness under trial has excited our highest admiration. She is allied to a prince distinguished by his taste and love for the Fine Arts, and by his practical knowledge of them. Moreover, the circumstances of the times are propitious, and are rendered still more so by the enlightened counsellors of her Majesty, who, perceiving that private patronage and individual exertion have been bestowed in vain in the attempt to give a healthy tone and character to Art in this kingdom, have received instructions from her Majesty to revive the expedient of public premiums, and to proclaim the NATION'S CALL, as published by the Commission and by the Art-Union.

Letter from the Right Honourable the Secretary of State for the Home Department:—

“Whitehall, 25th April, 1842.

“Sir,—Having received her Majesty's commands to notify to you that her Majesty has been graciously pleased to approve of the Report of the Commissioners on the Fine Arts; and her Majesty has commissioned the Lords Commissioners of the Treasury to submit to Parliament an estimate for the grant of £2000, to be given and distributed as premiums for the best Cartoons, in the manner proposed in the Report.

“I have the honour to be, Sir,

“Your faithful servant,

“J. R. G. GRAHAM.

“C. L. Eastlake, Esq.”

No doubt can be entertained of the intention of her Majesty's Government: that the CALL is general, and that all artists, without distinction, are invited to compete for premiums. Nor can it be doubted that the members of the Royal Academy, who are in possession of privileges which they owe to the bounty of her Majesty's ancestors, are in a peculiar manner appealed to, and CALLED upon to forward the views of her Majesty's Government, in reference to the proposed measure of competition; and as the President of the Royal Academy has, even by anticipation, called the attention of the Professors and junior members to this very subject, and his opinions are eloquently and even persuasively expressed, we take the liberty of repeating them.

“There may possibly be painters who have no relish for COMPETITION; and who would be better pleased to see the Government dealing out large commissions, in which the reward at least would be certain, however unskilful or disgraceful the work. Such persons, however, if there are such, must not be allowed to discredit their more able and honourable brethren, who desire no rewards but those which they may be found to deserve; who work for nothing more than an opportunity of generous emulation; and are willing to adopt, as the motto of their fortune and their fame,

*Palmam qui meruit ferat.*

“It must always be the interest, and I am convinced it is the inclination, of eminent artists to discourage every thing of a mercenary or mechanical character in the exercise of an art so noble as that which they pursue; and the manner in which the principle of direct competition obviously operates to produce this effect, forms one of the motives for particularly recommending it.

“It is desirable that the genius of the country should have a fair, public, and honourable trial, before it can be discredited by an injudicious or corrupt choice of those who may be appointed to furnish the world with examples of it; before the liberality of some future Pericles shall set on foot public works, to be undertaken, perhaps, in the spirit of a contract, and executed in the spirit of a tradesman.”—pp. 86, 87.

It would be a hopeless attempt to give more force to the subject of competition than is expressed in the foregoing remarks; but as all our artists of established credit may not be convinced by it, conceiving that it may be discred-

itable to enter the lists with the “merest tyro,” or that it would be foolish to tamper herein with an established reputation, we proceed to consider some of the cases in which such a trial as that afforded by public competition was found, in ancient times, to be fraught with the greatest benefit to literature and Art. As, however, the subject is of a complicated nature, we propose to divide it into three separate heads:—

First,—What were the means adopted by ancient Governments to encourage learning and Art?

Secondly,—Competition, considered as a means of national improvement; and

Thirdly,—Has the employment of foreign artists impeded or encouraged the development of native talent?

We think it proper to observe, that, in discussing a subject of this kind, it is impossible to place much reliance upon dates, especially during the Mythic period of time; and that even subsequent to the reign of Psammitichus, there is difficulty in fixing the period of many events. We shall, therefore, take facts as they are recorded, and in the order in which they best answer the purpose we have in view. With this apology, we proceed.

1st. The early form of government was patriarchal; for where could the children find a fitter ruler than in him who had sustained their early years, and who had shown a like tenderness for all? Such government would be exercised for their protection; and they would find in his control security to their peace, liberties, and fortunes. Thus, fathers of families might insensibly become political monarchs; and, if they chanced to live long, would leave able heirs, and lay the foundation of hereditary or elective kingdoms.—(Locke, on Government, treatise ii., c. 6, &c.) As, however, possessions extended, it might be expedient to intrust the government to one or to few hands, and the choice would naturally fall on the most worthy of the COMPETITORS.—(Justin. l. i., c. 1.) The wisest and most politic would gain the affections of the new subjects; and, thus united, they would form one government.—(Rollin, Hist. Ancienne, p. 3, &c.)

Thunder and storms would naturally beget superstitious fears, and this would lead to the establishment of a sacerdotal order, the members of which, being relieved from laborious occupations, would cultivate astronomy and other branches of learning. In Egypt the learning, philosophy and other sciences, as well as their religious and sacred rites, were deposited with their priests.—(Strabo, l. xvii., p. 1159; vid. Porphy. de Abstin.) All who desired to be instructed were obliged to apply to the priests.—(Clem. Alex. Str., l. i.; Diod. Sic., l. i., p. 86.) Hence, at a later period, the establishment of academies and colleges, one of which, at Heliopolis, Strabo visited, and saw the apartments where Eudoxus and Plato had studied.—(Strab. ubi supra.)

The corruption of historical records, which were deposited only in the memory, would suggest the necessity of some kind of writing; and would be especially necessary in respect to astronomical observations and judicial transactions. It is doubtful whether the Egyptians or Ethiopians were the first inventors of hieroglyphic writing. Both nations made use of the same symbols to express certain ideas. “Their writing is expressive of the subject, not by a composition of syllables, but by the signification of certain images delineated, and a metaphorical application of it impressed on the memory by exercise. For they write (*γραφουσι*) a hawk, a crocodile, a serpent, a part of the human eye, a hand, the face, &c. The hawk signifies despatch, because in celerity this bird exceeds almost all others.—(Diodor. Sic., l. iii.; Herodot., l. i.; Heliodor. Æthiopie, l. iv.; Clem. Alex. Strom., l. v., p. 567.) The practice of engraving astronomical characters upon columns was practised by Seth, which, says M. Monier (Hist. des Arts,

p. 4), survived the flood! At all events, a tradition of this method was preserved by the descendants of Noah. The Babylonians engraved their astronomical observations on bricks.—(Plin., l. vii., c. 56.) Democritus is said to have transcribed his moral discourses from a Babylonish pillar.—(Clem. Alex., ubi supra.) The most famous columns were those of Hermes, in Egypt, upon which he is thought to have engraved his learning, which was afterwards more fully explained by the second Hermes—(the first and second Hermes have been thought to be the same person)—in several books. From these pillars the Greek philosophers and Egyptian historians took their information. Plato and Pythagoras studied them, as did also Sanchoniatho and Manetho; and they are said to have existed to about the time of Proclus (Proclus apud Burmet; Iamblicus de Myst., sect. i., c. 2), in subterranean apartments near Thebes.—(Pausan., l. i., p. 78.)

In this we trace the progress of engraving on stone; and the invention of alphabetical writing was a necessary consequence of the improvements made in the former method: and hence the sacred books of the second Hermes.—(Selen. apud Iamblich. de Myst. Ægypt., § 8, c. 1; Manetho, apud eund. ibid; Clem. Alex., l. vi., p. 633; Euseb. Præp., Ev., l. i., c. 9.) In these public registers the priests inserted whatever related to astronomy, philosophy, laws, &c.—(Joseph. cont. Appian, l. i.)

The Kings of Egypt were often priests also; and therefore the arts of architecture and engraving would receive the utmost encouragement which the kingly office could bestow upon them. Hence, temples would be built upon a more magnificent scale, and, to satisfy the infirmity of man's nature, image-worship would be invented. This worship was, no doubt, at first confined to one image of the Supreme Deity; and as that Great Being is unchangeable, so their representation of Him in stone was reduced to the most exact rules of proportion. As an instance of this, I need only mention that Teles and Theodorus, the sons of Rhœcus, made the famous statue of Apollo Pythius, in Samos, after the Egyptian manner. It was divided in two parts, from the head to the groin, and thence to the feet; one half being cut by Teles, at Samos, and the other half by his brother at Ephesus; yet so nicely did the two parts correspond, that when brought together they fitted most exactly: and this was the more extraordinary, as the statue was represented in a moving posture, with the hands outstretched.—(Diod. Sic., l. i., p. 88.)

“Writers are agreed,” says M. T. B. Emeric-David, “that admiration of the works of the first statuary was one of the causes of idolatry. It was, doubtless, natural that men were represented according to their natural likeness, before they made their gods according to the image of man; and thus human idols preceded those of the gods.—(Berger, Orig. des Dieux du Pag., chap. iv. § 3) ‘For a father, afflicted with untimely mourning, when he hath made an image of his son, soon taken away, now honoured him as a god, which was then a dead man, and delivered to those that were under him ceremonies and sacrifices. Thus, in process of time, an ungodly custom, grown strong, was kept as a law, and graven images were worshipped by the commandment of kings; whom men could not honour in presence, because they dwelt from far, and made an express image of a king whom they honoured, to the end that by this, their forwardness, they might flatter him that was absent, as if he were present. Also, the singular diligence of the artificer did help to set forward the ignorant to more superstition; for he, peradventure willing to please one in authority, forced all his skill to make the resemblance of the best fashion. And so the multitude, allured by the grace of the work, took him now for a god, which a little before was but honoured as a man.’”—(Wisdom of Solomon, chap. xiv. 15–20.)

In accordance with the spirit of the age, and with the growing desire to raise temples, it became necessary, to prevent civil commotions, to direct the thoughts of the people to these objects. Accordingly, we find that a variety of oracles were established, whereat the Pythia exercised a moral control over the passions: the mind being also deeply impressed with a sense of awe by the grandeur and magnificence of these sacred buildings. Hence, the splendour of the temples of Hercules, Apollo, Minerva, Diana, and Mars; and more especially those of Jupiter and Latona; and still more recently of Serapis, at Alexandria. —(Herodot. ubi supra, p. 78.)

The influence of oracles on the Grecian and other people was also very powerful; and, lest their effect should be weakened or neglected by their distance from the person wishing to consult, an expedient was adopted, by the contrivance of the *vasōis* (*εὐρησσομεύουσιν*), or temples drawn by oxen.—(Eustath. in Iliad. A. Serv. ad Æn. vi.) These were travelling oracles, connected with the great ones, and their responses were understood by the motions impressed upon the vehicle. This was also a custom in Egypt and Lybia, as well as Carthagenia, and even ancient Germany.—(Tacit. de Sit. Mor. et Pop. Germ.) Perhaps the temple of Moloch was a machine of this kind. The image of Agrostes was carried about in this way.

But the Grecians were less superstitious than the Egyptians; and, lest they should grow to be weary of stationary oracles and their effects—the portable ones—Lycurgus, and other early legislators, turned the attention of the people to the celebration of Games, which might become the focus on which the genius of the people might fix and improve. "To the many causes which formed the taste and excited emulation, must be added the institution of the Olympic Games—that hotbed of glory which warmed and vivified all Greece. How shall we explain their effects upon genius? The image would be feeble, were we to liken it to the brightness of the solar rays piercing the Grecian host assembled on the Olympic stade between Mount Saturn and the river Alpheus. The Grecian citizens, each envious of the other, flocked to Olympia. Each city led thither its finest athletes and pentathli. It was rather an assemblage of *states* than of *men* at the Olympic Games. There poets sang their hymns; there historians recited their annals; there artists exhibited their *chefs-d'œuvre*. Modesty characterized the conqueror, his friends, his master, his father, and his happy country. And when the victor was conducted to his city, made proud by being his birth-place, a breach in its wall gave him a free entrance.—(Plutarch, Simpos., lib. ii., cap. 5.) Polycletus and Myron modelled his statue for posterity. In a word, Pindar chanted his victory; Pindar consecrated to the conqueror, to his ancestors, and to all Greece, palms more durable than marble or brass. No, never has the genius of legislation seized upon the soul with a more sublime institution.

"By such means was emulation excited and ennobled, and taste formed, directed, and preserved. But Greece presented a more extraordinary phenomenon still: the indifference of the greater portion of its people for these same Arts, which we now think constitute her glory." —(T. B. Emeric-David, sur l'Art Statuaire, pp. 96, 97.)

It is unfortunate that the register of victors at the Olympic Games has not reached our times; and equally so that Phlegon's 16 books, together with his epitome of them, in 8 vols., giving an account of all the victors at those games, have been lost. Pindar's praises of the victors at the Olympic, the Parthian, the Nemean, and Isthmian games (Suidas, p. 1671), relate, with perhaps one exception (in which he speaks of music) to wrestlers. Our accounts are, therefore, very imperfect. Strabo, speaking of the Olympic Games, says that an Ætolian colony,

in league with some of the posterity of Hercules, subdued many Pisæan towns, Olympia being of their number; and that there they instituted the games.—(Gregg., l. viii.) It is added, that the Pisæans being afterwards conquered by the Elians, the latter assumed the management of the ceremonies.

At an early period after their institution, they appear to have fallen into neglect; but on the return of Lycurgus from Egypt and Crete, he perceived in these games an agent highly favourable to the prosecution of his newly-formed project of legislation in Sparta. He therefore concerted with Cleosthenes and Iphitus respecting their reinstitution. It was accordingly decided that the games should be revived. At this time (about 884 years before our era) Greece was bleeding from the wounds inflicted during a civil war, and wasted by a fearful pestilence. Iphitus, of the family of Hercules, and grandson of Oxyllus, applied for advice to the Oracle of Delphi; the answer returned was, that an armistice should be proclaimed, and the festivals, anciently celebrated at Olympia, on the Alpheus, revived. By these means only could the anger of the gods be appeased. The reinstitution accordingly took place under circumstances of peculiar solemnity.

The office of hellenodick, or judge, was assumed by Iphitus alone, as being a descendant of Hercules, in honour of whom the games were originally instituted. In the 15th Olympiad, two judges were chosen out of the Elean body; and in the 75th the number was increased to nine. Three others were afterwards added (Pausan.); and when the Arcadians overcame the Eleans, the number again decreased. Yet even in the time of the Emperor Hadrian there were not less than ten.—(Cælius Rhodiginus, Antiq. Lat., l. xxii., c. 75; Alex. ab Alexand., l. v., c. 8.) "A show of hands often awarded the victory in poetry, music, sculpture, and painting; though Plato (de Legibus, l. 2) objects to this mode, as inferior to the appointment of judges. Among the Athenians, the judges of music were appointed by the archons, confirmed by the people, and held their office four years. Of theatrical pieces, the judges were five or seven in number (Lucian Harm.), sometimes ten (Meuricus Parath., c. 7); they were chosen by lot (Plutarch, in Cimon). In painting and sculpture the judges were *not always* artists. Diog. Laertius (l. i., in Anachar.) quotes the astonishment of the philosophers, that among the Greeks artists disputed the prize; but it was not *artists* who decided the claims."—(Catalogue of the Designs offered for the New Houses of Parliament, 6th ed., 1836.) The fiat of the judges was absolute, even to the exclusion of a whole people, as in the case of the Lacedæmonians, whom they excluded from partaking of the sacred rites, alleging that they had not paid the fine of 200 drachmæ, for having transgressed a certain rule.—(Thucyd., l. v.)

Alluding to the rewards bestowed upon men who distinguished themselves at the Olympic Games, M. T. B. Emeric-David makes these remarks: "Systems of rewards have their theories. The honours given by the Athenians were so graduated, that (competition) never flagged. With what various rewards does their history present us? The name of him to be honoured proclaimed in the theatre; proclaimed at the public games. A crown decreed by the senate; a crown decreed by the public; a crown given on the feast of the Panathæum.—(Demosth. et Æschin. de Coron.; Sam. Petit. Leg. Attic., lib. iii., tit. 6.) Portrait in the national palace; portrait in a temple.—(Pausan., lib. i., c. 3 et 21; Id., lib. x., c. 23.) Shield, bearing its owner's name and the occasion of his inauguration, suspended in a temple.—(Id., lib. x., c. 21.) Maintenance at the Prytaneum; maintenance for the father, for his children after him, and for their descendants for ever.—(Meurs. Athen. Attic., lib. i., c. 8.) Statue in a public place;

statue in the Prytaneum; statue in the temple of Delphos. Public and periodical games celebrated at the tombs. To these distinguished honours (rarely bestowed in days of freedom—profusely in those of slavery), the name of a hero given to the statue of a god, his image painted upon the curtain (veil) of Minerva, which is spread at the Panathænea.—(Aristoph. in Equit., act i., scene 6, vers. 562; Suidas, in *πρωτος*; Meurs. Panath., cap. 18.) These are but a part of the rewards to which in succession he is permitted to aspire. Perhaps we should pardon an enthusiastic people for one law to balance against this code of rewards: might it not be necessary to place ostracism as the counterpoise deification?

"Artists might obtain the greater part of these honours; indeed the Athenians were reproached for bestowing the same reward on a singer as on a general officer.

"The name of the artist was sometimes, by order of the magistrates, engraved at the side of a noble figure. Did they thereby intend to honour the inventor or direct the attention to the work? Truly, they did both. Three fine statues are seen in a temple of Ceres—one of Ceres, the second of Proserpine, and the third of Bacchus; and on the wall, near, is written: *Polycletus did these works*.—(Pausan., lib. i., cap. 2.)

"Parrhasius, who called himself the *prince* of painters, carried as the insignia of that royalty, a purple mantle, a staff inlaid with a spiral of gold, and wore a golden crown on his head.—(Plin., lib. 35, cap. 9 et 10; Elian. Var. Hist., lib. ix., cap. 11. Athen., lib. xii., cap. 11). Nor does it appear that public opinion was opposed to the conceit.

"When Polygnotus had painted, at Delphos, the taking of Troy, the Amphictyons gave him their solemn thanks, and decreed that he should be feasted (qu'il auroit sa nourriture) at every Prytaneum of Greece.—(Plin., lib. xxxv., cap. 9.) He received from the Athenians the freedom of the city.—(Plin. ibid.; Suid. in verb. *πρωτωνος*.)

"There was at Athens a particular law relating to the Fine Arts, expressed in these terms:—*THAT THE GREATEST PROFICIENT IN EACH ART SHALL HAVE HIS MEALS AT THE PRYTANEUM, AND SHALL TAKE THE HIGHEST SEAT*.—(Sam. Petit. Leg. Attic., lib. v., tit. 6.)

"The duration of this privilege depended upon superior merit. The same law adds: If a more proficient artist in the same department shall arise, the president shall concede the place of honour to him.—(Aristoph. in Equit., act iv., scen. 1, vers. 1224–1247, et seq.; ibid. act v., scen. ult., vers. 1401, et seq.; Sam. Petit. loc. cit. ad not. et lib. iii., tit. 6.)

"The system of emulation thus established daily encouraged the most established artists to strive for honours which Socrates regarded the highest that a mortal could obtain.—(Qui honos apud Græcos maximus haberetur: Cicer. de Orat., lib. i., cap. 54.) An additional reward yet awaited them: the praises which fame shed upon them; the pride of the cities which gave them birth."—Sur l'Art Statuaire, p. 161–168.

Of the Heræan and Nemean Games, or festivals, we will give a short account. The former, we are told, were established by Archineus, tyrant of Argos, though others impute them to Lynceus, King of Argolis, about the year of the world 2558. They were called Heræan, from the Greek word (Liv., l. xxvii., c. 30), *ἡρη*, signifying Juno, whom they worshipped in Argolis as their tutelary goddess, and in her honour this festival was first instituted, though the games were common also to other parts of Greece, and to the islands of Samos, Ægina, and Cos. At Corinth the ceremony was a mournful one, from a tradition that Medea, after killing her children, instituted other games in atonement for her crime.—(Pausan. in Corinth.; Suidas, Polyæn; Athenæus, &c.) The ceremony at Argolis consisted of a pompous procession. The statue of Juno, of ivory and gold, and said to be one of the best of the works of Polycletus, was carried in a

chariot, drawn by two white oxen; while the image of Trochilus, the first priestess of Juno Argiva, was placed in the driver's seat. The ministry to this goddess was granted to none but women of great distinction. When the religious ceremonies were over, the sports began. The conqueror was rewarded with a crown of myrtle, with which he paraded the streets several successive days, amid the acclamations of his fellow citizens; and parading also a shield or buckler, which he had won.—(Ubi supra.)

Of the Nemean Games, we are told by some that they were instituted in honour of Archæmus, the son of Lycus; and others say of Lycurgus, King of Thrace, to allay his grief for the death of a son. Many think they were instituted before the Theban war. At all events, they were revived by Hercules, and consecrated to Jupiter in thanksgiving for the victory he had gained over the Nemean lion.—(Pausan. ubi supra.) These games were common to the Argians, Corinthians, and the inhabitants of Cleonæ, who each chose a president by turns.—(Pausan. Athenæus, &c.; Euseb. in Chron.) The victor was rewarded with a crown of olive, and of smallage, which was made use of in funeral ceremonies, and here to renew the memory of the death of Archæmus. We are informed by Clemens Alexandrinus, that on these occasions a funeral oration was pronounced, and the judges appointed to distribute the rewards were clad in mourning.—(Polyæn. ubi supra.)

In addition to the games in Greece already mentioned were the Isthmian, Pythæan, Thesean, and others. But the object proposed in each was the same, namely, to promote literature and the Arts, and gymnastic exercises; the rewards being, as already shown, of a purely honorary kind, save only in respect to meals, which were given gratuitously to the victors.

As the ancient Roman system, in respect to competition and rewards, stands opposed to that of Greece, it will be necessary that we give some account of it here, in order that our readers may be prepared to judge of the merits of the two, and in how far the better one may be taken as a model adapted to our own times and circumstances.

The Romans were great imitators of the Grecians in their institutions, their customs, and their games. The first Tarquin introduced the *ludi magni*. And after Rome had escaped capture by Brennus and his Gauls, and the great Camillus had voluntarily laid down the dictatorship, the city became distracted by civil commotions and the quarrels of consuls, and the inhabitants, wasted by a pestilence, thought it advisable to institute fresh games to conciliate the favour of the gods, and as a means of allaying the irritated spirit of the people, and giving them a fresh direction.—(Liv., l. vii., c. 2.) An extraordinary day was, therefore, added to the *ludi magni*, and the name changed to *ludi maximi*. And though the temple of Concord was built for the occasion, the experiment was a failure.

Fifty years later, Fabius Pictor introduced the art of painting, and himself painted the temple of the Goddess of Health.—(Liv., l. x., c. 1.) But neither did this succeed, though Fabius was afterwards consul. Forty years afterwards the temple of Juno Monita was built; hence the word money.—(Suidas, in voce *μωνα*.) But the Fine Arts excited little attention till the arrival of the immense spoils in statues and pictures from Corinth and Carthage, B. C. 146, upon which occasion Grecian games were celebrated with extraordinary magnificence.—(Cic. in Brut.: Valer. Max., l. v., c. 7, et l. iii. et vii.; Ovid, *Fort.*, l. v.; Phil. in Mario et Sylla.)

But we must return to the period when the *ludi maximi* were established. A year after that event, a new kind of exhibition was invented, called the *Scenici*, from their being performed on a stage built in the shade.—(Liv., l. vii., c. 21.) The performers were brought from Etruria, and were called *hister*, which signifies, in their

language, a player. The *histriones* were dancers, and were at first unaccompanied with verses. Afterwards the Roman youth imitated these foreign dances, mixing up jokes and rillery. This was succeeded by satires written in verse; and some years later, Divius Andronicus turned these satires into regular plays. The farces were discontinued for a time, but were afterwards acted at the end of serious performances. Among the Grecians the profession of an actor was honourable; Æschylus, in his youth, acted on the stage at Athens.—(Demosth. in Orat. apud Quinctil., l. ii., c. 17.) Aristodemus, though an actor, was sent as ambassador to Philip, King of Macedonia, in the name of the republic of Athens. But the Romans, acting upon an opposite principle, sought to dishonour the stage performers. They prohibited the *histriones* from serving in war, or filling any post of honour in the state; and an actress was considered infamous: "Ait prætor," says Ulpian, "qui in scenam prodierit, infamis est."—(Ulpian, l. ii., par. 5, &c.)

The combats of Gladiators in Rome were truly ferocious. It is said they were introduced from Etruria, having come thither from Greece: their object being to supersede human sacrifices! According to Valerius Maximus (Valer. Max., lib. ii., c. 4; Liv. Epit., lib. xvi.), the first show of gladiators, called *munus gladiatorum*, was exhibited in Rome in the year of the city 484. They were introduced by M. and D. Brutus, upon the death of their father. In process of time the Romans grew so attached to these entertainments, that the heir of any great or rich citizen deceased, and all the chief magistrates, presented the people with shows of this kind, to procure their esteem. And thus the *ædiles*, *prætors*, and *consuls*, and every candidate for office, made court to the people by entertaining them frequently with these fights, which at first consisted of only three couple of gladiators, but afterwards to 320 couple (Dio Cass.; and in Trajan's time to 1000 couple. In the time of the republic the number of gladiators was so great that, when the conspiracy of Cataline broke out, the senate ordered them to be distributed to the strong-holds.—(Ubi supra.) The rewards to the conquerors were a crown of mastich and a palm branch; sometimes a small sum of money, and more rarely their liberty; the gladiators being for the most part slaves, whose masters let them out for hire at immense prices.—(Dio Cass., lib. xlvii.; et Suet. in August., c. 43.) They engaged them by the most fearful oaths never to give ground, but to fight to the last extremity. If one of them was exhausted in the fight, or horror-struck at the approach of death, held up his finger and laid down his arms, as appealing to the mercy of the assembled audience, which sometimes consisted of 200,000 persons of both sexes (Plin., l. xxxvii., c. 15), they not unfrequently took pleasure in giving him up to the fury of his adversary, denoting their wish by bending back their thumbs, and shouting *Recipe ferrum*, which resounded from every part of the vast amphitheatre.

Soon as the mournful sound of the trumpet proclaimed the death of a gladiator, an iron hook was fixed into his flesh, and his body was ignominiously dragged from the spot, through one of the gates of the amphitheatre, to the *spoliarium*, where it was rifled and stripped; and, if still breathing, inhumanly dispatched. Crowds of people then flocked thither to apply their mouths to the wounds and thence suck the blood before it congealed, out of a persuasion that it was a sovereign remedy for the falling sickness!—(Plin., lib. xxviii.)

Horrible as were these scenes, they were not revolting to the feelings of the Roman people; and even young men of family, who had dissipated their patrimony, were not ashamed to hire themselves as gladiators; nay, even knights and noblemen, and senators ended a life of infamy and debauchery as common gladiators. So

notorious and scandalous had it become, that Augustus published an edict prohibiting, under severe penalties, any one of reputable parentage from taking up this disgusting profession. In the reign of Nero, however, this law had become a dead letter; there being no fewer than 400 senators and 600 of the equestrian order who fought on the arena as gladiators.—(Suet. in Ner., c. 12.) At length Commodus entered the lists in this capacity, and took a pride in signing often his name, "The Conqueror of 1000 Gladiators." He was, however, at last strangled by Narcissus, a famous wrestler.—(Vit. Comm., p. 51.)

Even women of distinction engaged in these public conflicts, as we learn from the *Satirist*:—

"Quale dicus nerum, si conjugis auctio fiat,  
Balteus, et manice, et cristæ crurisque sinistra  
Dimidium tegmen? vel, si diversa movebit  
Prælia, tu felix, ocreas vendente puella.  
Itæ sunt quæ tenui sudant in cyclade, quarum  
Illicias et panniculus bombycinus urit.  
Aspice quo fremitu monstratos perferat ictus;  
Et quanto galeæ curvetur pondere; quanta  
Poplitibus sedeat, quam densa fascio libro!"—*Juv.*,  
satire vi., ver. 255, et seq.

From the disgusting to the ridiculous there is but one step, as exemplified in Rome by the combats of dwarfs, which diverted the people exceedingly, especially when any one of them engaged with a gladiatrix.—(Statius, l. vi., ver. 57, et seq.)

We are informed by Petronius Arbiter, that these combats were introduced out of superstition, but were maintained out of policy, that the people might look on blood and slaughter as matter of diversion, and thereby become valiant. But games and scenic representations seemed only, like the combats of gladiators, to brutalize and debase the mind of the Roman people: they engendered depravity of manners and corruption of morals through all classes, whatever the rank or sex. The exercise of the Fine Arts in Rome, as they failed of producing the morbid excitement occasioned by witnessing the combats of gladiators, found little favour, and, except one of its branches—architecture—would never have arrived at mediocrity, but for the genius of Vitruvius and Apollodorus. It may even be doubted whether Rome would have had a respectable literature had it not been for the academies at Athens, in which the Roman youth received their education. Brutus constantly attended the lectures of Theophrastus, the academic, and Cratippus, the peripatetic, in order to gain the affection of the young Roman noblemen, who studied under those philosophers, among whom was Marcus Tullius Cicero's son. In one of his letters to Tiro, Marcus thus writes: "I have hired a place hard by me for Brutus, and, as much as my poverty permits me, relieve his wants. I intended to declaim in Greek before Cassius, but before Brutus I will perform my exercise in Latin," &c. (Cic., l. xvi., ad famil. epist. 21.) Indeed, Cicero himself pleaded in Greek before Apollonius the Alabandian, who was not, as Plutarch informs us, well versed in the Latin language; and that he bestowed this praise on the Roman orator: "Take courage, Cicero: I both praise and admire you; but I am sorry for poor Greece, when I see the two only ornaments that were left us, learning and eloquence, transferred from us by you to the Romans?" (Plut. in Apollon.) And, while upon this subject, it may be mentioned that, in order to encourage polite learning, Augustus endeavoured to check the taste for the exhibition of gladiators.—(Discap., p. 531—534; Suet. in Octav.) Vespasian was the first, however, who settled salaries on professors of rhetoric both in Greek and Latin, to be paid annually out of the exchequer.—(Suet. in Vesp., c. 17, 18.) Antoninus Pius likewise bestowed great privileges and salaries upon such men as undertook the education of youth in every part of the province. After this digression, I proceed to the account of the Roman games.

Calligula began his third consulship at Lyons, and exhibited probably there the magnificent

sports of which Suetonius and Dio Cassius make mention.—(Suet., c. 25.) Upon this occasion he ordained a solemn contention of eloquence, both in Greek and Latin, and obliged those who were overcome to give rewards to their competitors, and compose a piece in their praise. Those who gave no satisfaction at all were condemned to be whipped like schoolboys, or cast into the Rhone.—(Suet., c. 20.) Hence also the verse of Juvenal.—(Juv., satire i., ver. 44.)

In the year A. D. 59 or 60, Nero instituted, at Rome, the Quinquennial Games, for the improvement of wit and genius, and for contests of eloquence and poetry, on which occasion the players and pantomimes, who had been banished in a preceding reign, were recalled and restored to the stage.—(Tacit. Annal.)

A. D. 87, Domitian, upon entering his 12th consulship, instituted the Capitoline Sports, in honour of Jupiter Capitolinus, the Emperor attending in person, with the priest of Jupiter and the college of the Flavian priests.—(Suet., c. 4.) The following year he celebrated the Secular Games. They were called *secular*, because celebrated only once in an age.—(Onuph. Lud.; Tacit. Annal., l. xi., c. 12.)

Having now alluded to the greater number of games which were instituted in Greece and Rome, I will follow the same plan, so far as it may be practicable, in treating—

2nd. Of COMPETITION, considered as a means of national improvement?

Before the system of competition was systematically established by the ancient Grecian philosophers and legislators, the inquiring mind of man was directed to the solution of riddles. Thus we find Samson proposing his riddle: "And Samson said unto them, I will now put forth a riddle unto you: if ye can certainly declare it me within the seven days of the feast, and find it out, then I will give you thirty sheets and thirty change of garments: but if ye cannot declare it me, then shall ye give me thirty sheets and thirty change of garments. And they said unto him, Put forth thy riddle, that we may hear it."—(Judges, xiv., 12 & 13.)

The Sidonians and Phœnicians were of a most happy genius and disposition. It has been said that arithmetic and astronomy were brought to great perfection by them (Strabo, l. xvi., p. 757); and that they conveyed them to Greece (Idem.) together with letters.—(Herodot., l. v., c. 58.) They were, indeed, from the beginning addicted to philosophical exercises of the mind; hence, Moschus, a Sidonian, taught the doctrine of Atoms before the Trojan war.—(Posidonius apud Strab., ubi supra.) They were great proposers and propounders of riddles also; for we find that Abdomenus, of Tyre, challenged Solomon, though the wisest king on earth, to answer the subtle questions he proposed to him.—(Renaud et Dios apud Joseph., l. viii., c. 2, et cont. Ap., l. i.)

Between Solomon and Hiram, King of Tyre, a great friendship subsisted, the love of wisdom being the chief motive to it.—(Joseph., ubi supra, et l. i., contra Appian.) They frequently interchanged certain riddles, the conditions being, that he who failed of the solution should incur a forfeiture. The same writer states, that Hiram, finding the questions too hard for him, paid the penalty; whereupon Abdomenus, the Tyrian before spoken of, resolved the said question, and, as we have shown, proposed new ones to Solomon. (Dios, as quoted by Joseph., l. viii., c. 2.)

Among the early Grecians, we learn that Chiron was skilful in horsemanship, astronomy, music, and poetry; that he taught Æsculapius physic, and Achilles music and poetry. When the Argonauts were on their voyage in pursuit of the golden fleece, they visited on their way the cave of Chiron, in order to leave the young Achilles under his care for education, and to receive some instruction in astronomy, to enable Jason and his crew to direct their course towards Æu, the capi-

tal of Colchis. Chiron received the fifty adventures, and entertained them with such hospitality as his frugal habits afforded; after which, "Achilles stretched his hand, and gave the beautiful shell, Which Chiron took, and sang the Centaur combat fell," &c.

Orpheus was then, as one of the Argonauts, invited to prove his skill, which he did with so much sweetness, that the stones rushed to the mouth of the grotto, as did also the wild beasts and the birds, to listen to the enchanting strain; which when,

"Amazed, the Centaur saw, his clapping hands he beat; And stamped in ecstasy the rock with hoof'd and horny feet."—(Maria Hack's *Grecian Stories*, quoted from specimens of classic poetry.)

These were, perhaps, the first examples of COMPETITION afforded by early historians or poets, and they are sufficient to show that the principle was acted upon at a very early period. Indeed I might have gone back to a much further time, had I conceived it to be necessary. I will therefore proceed with this portion of my subject without interruption.

The time at which Orpheus and Homer lived, and our historical notices of them, are all too uncertain to enable us to determine whether they wrote in competition with each other. With respect to Alcæus, we learn that he was contemporary with Sappho; but another Alcæus, about the 44th Olympiad, was the inventor of the Alcaic verse (Plutarch, in Vit. Flamin.); and for which it is probable he obtained the prize of poetry. There was another poet of this name, who, in a battle, is said to have betaken himself to flight, and left his armour behind him, which the Athenians, who gained the day, hung up in the Temple of Minerva, at Sigeum. The unfortunate poet lamented this disgrace in a poem, which he dedicated to Menalippus, who attended him in his flight.—(Herodot., l. v., c. 95.) Archilochus, of Paros, invented iambic verse.—(Horat. de Arte Poetica.) His verses were so satirical that Lycambes, against whom he wrote, hanged himself out of despair. The famous Stesichorus is said to have combined the dance with poetry.—Cicero informs us (Cic., act ii. in Verr.), that among the ruins of the old city of Himeria was found a statue of a stooping old man, with a book in his hand, which was supposed to be Stesichorus, and was deemed a masterpiece of Art. If this account be true, it is clear that he must have gained the prize; and if so, we may reasonably suppose that each of the former-named poets also gained prizes for their inventions; and that, if they gained prizes, they must have had COMPETITORS.

When the island of Scyras was reduced by the Athenians, under Cimon, he brought from thence the bones of Theseus; and, to commemorate that event, a yearly contest for *tragic* writers was instituted at Athens. On this occasion Sophocles brought his first performance on the stage, and won the prize, though he had Æschylus, his master, for his competitor; which the conquered poet—who till then had had no equal, and was, therefore, considered the best tragedian of his age—was unable to brook, and withdrew to Sicily, where he spent the remainder of his life. Æschylus had written, up to the period of his defeat, no less than seventy tragedies, of which twenty-five gained the prize. And Sophocles himself is said to have died of joy, in the 95th year of his age, at the unexpected success of one of his dramas at the Olympic Games. It was the success of Sophocles which induced Euripides also to retire from Athens. He then became the guest of Archelaus, King of Macedonia, the friend of learning and of learned men.—(Diod. Sic., l. xii.) With respect to Sophocles and Æschylus, it may be said that both possessed a lofty genius; but that the former was more sublime in his ideas, and in his expressions more intelligible. He also succeeded better in moving the passions; and, by the judicious mixture of terror and pity, awakened more lasting impressions in

the audience: whence he was called the Bee. Euripides, on the other hand, is considered more elaborate and correct; and he gave to his pieces a moral effect, which the other two did not aim at. And, so much was his muse admired, that after the last great defeat of the Athenians before Syracuse, many of the prisoners were released, by only repeating some of his verses.

One most important conclusion is to be drawn from the above examples, namely, that in the age of Cimon and Pericles, the GOLDEN AGE OF POETRY, poets of the most established reputation thought it no dishonour to compete for prizes with the "merest tyro;" and that to this cause may be imputed the *progressive improvements* which were made in poetry. "For Plutarch observes, in his life of Solon, who lived 593 years before Christ, that about this time began Thespis to set out his tragedies, which was a thing that much delighted the people for the rareness thereof, being not many poets yet in number to strive one against another for victory, as afterwards there were."—(North's Translation of Plutarch, p. 80.)

A great sensation was excited when Dionysius, the tyrant of Syracuse, competed for the prize of poetry at the Olympic Games: not because he was a king, and therefore an unexpected competitor, but because he was hated by the Athenians for his tyranny. The judges decided against his comedy, which want of success deeply mortified him.—(Diod. Sic., l. xiv.) He afterwards took fresh courage and wrote a tragedy, which was acted at Athens, and the prize of poetry was unanimously awarded to him. The Athenians were the best judges of this kind of poetry, and their award must be considered just, from the personal enmity in which the author was held. The transport of joy which this victory gave him was so immoderate, that he died from excess of delight.—(Diod. Sic., l. xiv., c. 12; Plutarch, Moral.)

In short, it was by the wholesome practice of COMPETITION that the genius of the three great tragic writers was unfolded; that comedy was brought to perfection by Aristophanes, Phrynichus, Aristarchus, and Crætenus (Philemon was the successful competitor of Menander); that the lyric muse of Pindar and Anacreon soared aloft. It was under the same stimulating influence that Herodotus, Thucydides, and Xenophon recited their histories. It was the persuasive oratory of Callistratus that awakened the emulation of Demosthenes, and that he himself was opposed by Æschines. It was emulation which raised Plato above the earth, and which sunk Diogenes beneath it; that made Heraclitus the "crying philosopher," and Democritus the "laughing philosopher." It was the love of glory, and the hope of having statues erected to them, which brought out the mental qualities of Myron, Polyctetes, and Praxitelles; of Polygnote, Zeuxis, Parrhasius, Protogenes, and Apelles.

Of literary competition at the Roman Games we can, perhaps, form no just idea. Publius, a slave, in the time of Julius Cæsar, acquired great applause for his wit, and for many comic pieces which he wrote, and which obtained for him his manumission. He challenged all the dramatic writers and orators at Rome, and carried the prize from every competitor.—(Macrob. Saturn., l. ii., c. 7.)

These remarks, although prolonged somewhat beyond our original design, must be considered but as pioneers to open the way to more pressing and immediate matters.

The subject is one of very vital importance, and imperatively demands to be treated in all its bearings; not alone in reference to its existing association with Art, but as influencing, generally, the public mind. The changes which have been produced within the last ten years have been greater than they had been during the previous century. The wonderful past is, however, but the parent of a far more wonderful future.

## OBITUARY.

ALLAN CUNNINGHAM.

This excellent gentleman—while, if not an artist, was for so long a period closely and intimately connected with the Arts—died at his house in Belgrave-place, Pimlico, on the 5th of November, at the age of 57. His death was almost sudden; although he had been, for a considerable time, in an ill state of health, his constitution having been shaken by two attacks of paralysis. He was born of comparatively humble parents, at Blackwood, in Dumfriesshire; and, when little more than a child, was placed apprentice to a stone-mason. Almost as soon, however, he began to cultivate acquaintance with the muses; his genius obtained reputation beyond the precincts of his home; and he made his way to the great mart of Talent, self-dependant, to achieve fame, obtain respect, and gather fortune. From time to time he published his works—novels, poems, and biographies; among the latter, his “Lives of British Painters, Sculptors, and Architects,” are deservedly popular: and aiding his “means” by his position in the studio of Sir Francis Chantrey, where he was occupied for several years as manager of his extensive concern. Mr. Cunningham had finished a life of his friend, Sir David Wilkie, only the day before his own death. This work, now on the eve of publication, we shall be called upon to review.

We should have much to say of this accomplished and estimable man; but that we are saved the labour by adopting the following notices of him, written by Mrs. S. C. Hall. They are extracted from the *Britannia*, an excellent, valuable, and ably-conducted weekly newspaper, where they were printed anonymously. Notwithstanding their length, the reader will, we hope, consider us justified in copying them:—

“So many of those who but a few months ago constituted a prominent portion of the present of my own time, are become so completely of the past, that I cannot look back without chronicling death after death, so as to force the considerations we too often try to put far from us, as to the uncertainty of life. We are all, indeed, ready to admit the uncertainty of this precious treasure, yet we act as if it were, at least, as enduring as the sky above us, or the earth upon which we tread.

“Wilkie, Chantrey, and Allan Cunningham—painter, sculptor, and poet—men eminent amongst their fellows, not only for talent, but for high moral worth and integrity of purpose—are passed away. It seemed as if, united as they were by the strong bonds of friendship in death they should not be divided. The completion of Chantrey’s works was intrusted to Allan Cunningham, who had finished a life of Sir David Wilkie only two days before he was struck, for the second time, with paralysis, which terminated fatally on Saturday last. This estimable man has left behind him an honourable name, and a noble example of what may be accomplished by those who, combining talents with industry, are capable of the great effort of concentrating their energies upon a given point, and are thus certain to conquer difficulties and achieve greatness, if God spare their health and life. The career of Allan Cunningham is one of the most encouraging instances of literary success in modern times; progressing steadily onward, not jerked forward by unnatural excitement, nor drawn back by any decided failure. True, it must be recollected that his occupation in Chantrey’s studio gave him a steady income (steadied from literary fluctuations), and that this was a great step towards victory; still his success, under all circumstances, was worthy of a strong and original mind.

“It is now about fifteen years since I first saw Allan Cunningham; and I can recall the interview as clearly as though but an hour had intervened. It was before I had been much in literary society, or become personally acquainted with those whose works had entered into my heart. I remember how my cheek flushed when he took me by the hand, and how pleased and proud I was of the few words of praise he bestowed upon one of the first efforts of my pen. He was at that time a tall, stout man, somewhat high shouldered, broad chested, and altogether strongly proportioned; his head was well and erectly placed; his mouth close yet full; his nose thick and firm; his eyes, of intense darkness, for I never could define their colour, were deeply set beneath shaggy yet moveable eyebrows, and were, I think, as powerful, and yet as soft and winning, as any eyes I ever saw. His brow was very noble and expanded, indicative not only of imagination and observation, but, in its towering height, of that veneration and benevolence which formed so conspicuous a portion of his character. His accent was strongly Scotch, and he expressed himself when warmed into a subject with eloquence and feeling, but, generally speaking, his manner was quiet and reserved; not, however, timid and gauche, like that of Sir David Wilkie, but easy and self-possessed, quiet from a habit of observing rather than a dislike to conversation. Admire him or not as you pleased, it was impossible not to respect the man who, so completely the architect of his own for-

tune, was never ashamed of being so, and would state the fact as an encouragement to those who needed his example to steady their progress. Burns cultivated his poetic vein while performing the laborious duties of a husbandman; and Allan Cunningham, while chiselling granite in his native country, breathed forth his soul in poetry. A gentleman, who for a long time conducted one of the most influential and the most fashionable journals of the day, told me that it was a letter from him to the young poet which brought him to London, some five-and-thirty years ago. Whether this was really so or not I cannot tell; but, whatever brought him to London, his own exertions kept him there, and his own steady, manly, and straightforward conduct, united to considerable and varied talent and most extraordinary industry, both in the acquirement and application of knowledge, rendered his society courted by the first people in the country. In after years, when it was my privilege to meet him frequently, it was pleasant to note the respect he commanded from all who were distinguished in Art and literature. Miss Landon used to say that ‘a few of Allan Cunningham’s words strengthened her like a dose of Peruvian bark;’ and there certainly was something firm and substantial rather than brilliant in the generality of his observations, except when roused upon a literary or political question: then, in the brief pause that preceded the utterance of his opinions, his mouth would open and his eyes dilate with those lightning-like glances that were sure to flash in unison with a bright rush of strong and natural feeling. He never referred to his own works in conversation. If any question were asked about them, or any compliment paid to them, he gave the required information, or received the praise, without any display or affectation. Constant and familiar association with persons of high mind and extensive cultivation creates, if not a harsh spirit, certainly a spirit of criticism, where pretensions are made by the unworthy or the feeble to a high intellectual position. Allan Cunningham was considered a severe critic; but, setting aside his knowledge of books, the friend of Scott, Southey, Wordsworth, and Wilson had a right to be fastidious. And, in addition to this, he entertained a most sovereign contempt—a decided antipathy—to every species of affectation, particularly of literary affectation, and certainly lashed it, even in society, by a terrible word or look, which could never be forgotten. But in the same degree that he abhorred affectation was his love of nature. ‘Wherever,’ he would say, ‘wherever there is nature—wherever a person is not ashamed to show a heart—there is the germ of excellence. I love nature.’ And so he did. His dark eyes would glisten over a child or a flower; and a ballad, one of the songs of his own dear land, move him, even to tears, that is, provided it was sung ‘according to nature,’ the full rich meaning given to the words, and no extra flourish, no encumbering drapery of sound forced upon the melody. One of the happiest and most interesting evenings of my life I passed at his house, about ten years ago, in the society of Captain (now Major) Burns (the poet’s son), and poor James Hogg, just at the time when the Londoners, glad of anything to get up an excitement, turned the head of the Ettrick Shepherd by a public dinner, at the period when the seven or eight hundred pounds so expended would have been of incalculable value to a man who, with some of Burns’ talents, inherited all his heedlessness. On that particular evening nothing could exceed poor Hogg’s hilarity; in person he was burly, of a ruddy complexion, with the eye of a Silenus, and one of those loosely-formed mouths that indicate a love of pleasure, be it purchased how it may. Captain Burns sang several of his father’s songs with a pathos and expression that added to their interest, and stimulated the Shepherd to sing his own. Nothing could be more opposite than the minstrelsy of these two men; but both were natural according to their nature, and so Allan Cunningham enjoyed both. I can recall James Hogg sitting on the sofa—his countenance flushed with the excitement and the ‘toddy,’ of which he was not sparing, more in his earnestness, his wildness, his irascibility (particularly when he alluded to ‘the poets’), certainly more like a half wild Irishman than a steady son of the thistle—shouting forth his songs in an untunable voice, rendered almost harmonious by the spirit he threw into it, and giving us an idea of the circumstances connected with the birth of each song at its conclusion; one in particular I remember, ‘The Women-folk.’ ‘Ah, ah!’ he exclaimed, echoing our applause with his own hands, ‘that is my favourite humorous song, sure enough! when I am forced by the ladies to sing against my will, which happens mair frequently than I care to tell; and notwithstanding that my friend Allan stands glowerin’ at me with his twa een, that might have been twins with those of Bobby Burns, they’re so like his. That song, notwithstanding my wood-notes wild, will never be sung by any so well again.’ ‘An’ that’s true!’ replied Cunningham, ‘that’s true; because you have the nature in you; but you’re wrong about the eyes; the only ones I ever saw flash fire like his father’s (alluding to Capt. Burns) were those of Michael Thomas Sadler.’

“This opinion I heard Allan Cunningham frequently repeat, and I suppose that both were right; for, certainly, there was a great similarity between the eyes, both as to colour and expression, of the then popular member for Leeds and Cunningham’s own. I had an opportunity of comparing them a few evenings after at my own house, where the same party were assembled, with numerous literary additions not easily forgotten.

There was Miss Landon, in a dress of scarlet cashmere, that rendered the purity of her complexion and the dark brilliancy of her hair and eyes a perfect atonement for the want of distinctive features; there she was, full of ready smiles and kind appropriate words; brilliant with an unwinding wit, and ready to withdraw herself to exhibit the perfections of others—the most generous of her sex and calling. There was Miss Jewsbury, new to the vastness and extent of London literary society, her quick and generous appreciation of excellence leading her to admire what deserved admiration, while, at the same time, her womanly vanity was wounded to see that she, the marvel of Manchester, was no wonder in London! There was Barry Cornwall, with his calm, philosopher-like repose of observation; Mrs. Hofland, true, earnest, and faithful; Lamman Blanchard, an animated epigram; Wilkie, whose pale, sad brow gave little intimation of the vigour of ‘The Chelsea Pensioners,’ or the humour of ‘Blind Man’s Buff;’ Miss Edgeworth, a rare visitor in London, but an honoured one wherever she is. Amongst them, Hogg, not quite so noisy as before, and anxious to see L.E.L., who well knew that he had written much and harshly about her. Their meeting was singular enough. Hogg edged towards where she sat, fidgeting as she always did upon her chair; he went up like a schoolboy that deserved a flogging, and half expected he should get it, instead of which the slight, girlish-looking poet extended her small white hand towards the huge red fist that seemed uncertain what to do. ‘The appeal, accompanied by her bright smile, was irresistible. ‘God bless ye!’ he exclaimed, involuntarily, ‘God bless ye!’ I did nae think ye’d been sae bonny!’ I ha’ written many a bitter thing about ye, but I’ll do so nae mair. I did nae think ye’d been sae bonny!’ In one corner poor Emma Roberts was talking orientally to Martin the painter; and in another, in deep under-toned discussion, sat Wordsworth, Sadler, and Allan Cunningham. I never saw three more striking heads grouped together: Wordsworth’s so expanded and full, sprinkled with hair too thinly to add to its size or change the character of its proportions; Sadler’s smaller and feebler, but beautiful, covered with folds of premature white hair; Cunningham’s, as full but not as white as Wordsworth’s—fuller, indeed, for the organs of observation were more developed—and the aspect of the head and face was darker, more concentrated than either; and then I compared the eyes of Cunningham and Sadler, having great faith in eyes, which are, according to my belief, the true indexes of a poetic temperament, and the most expressive of all the features. After their discussion was ended, so quickly were my ears attuned to catch their words, that I heard the deep, monotonous voice of the author of ‘The Excursion’ reciting some lines that forced his friends, who gathered in his words with bended heads, to exchange glances of admiration, until at last Allan could not help exclaiming, ‘Ah! but that is nature!’

“Those were brilliant hours—brilliant and full of pleasant memories. I often please myself by fixing my mind upon them, without suffering it to dwell upon the intermediate times, when so few remain of those who enjoyed with me that and other evenings as full of wit as mirth, and all that gives a zest and a relish to the realities of life.

“Where are they all now? Of the five literary ladies who were present on that evening only two survive (Miss Edgeworth and Mrs. S. C. Hall). The other three died prematurely in foreign lands—Miss Landon in Africa, Miss Jewsbury in India, and Miss Roberts in India too. Miss Jewsbury’s fate was, it is said, not much happier than poor Miss Landon’s. Be that as it may, there was no one to tell the tale to those who loved them in their native England. ‘They died and made no sign.’ Miss Landon’s existence was replete with performance. Miss Jewsbury’s was certain to bring forth a late, but abundant, fruitage. Her mind was a treasure-house of things as rich as rare. But now all is over for time in this world. The heather blooms upon the grave of the Ettrick Shepherd; Wallace, the amiable and kind harrister, whom all men loved, and, though he could hardly be called ‘literary,’ was so much with literary persons as to be so called, he is dead, and would, perhaps, have slept beneath a nameless grave, but for the generosity, as deep as it is true, of his friend Macready, who erected a monument to him at his own expense. John Banim also was there; poor Banim! his accent was as savoury of the Irish as Hogg’s of the Scotch; and when he lighted up he could be as racy as the best of them, and as original. He is gathered to his fathers in his own land. Wilkie found a grave amid the billows of the ocean—Michael Thomas Sadler died a linen-mauufacturer at Belfast; others have passed away, crowding the graves with their honoured remains. But a few days ago Allan himself was amongst us; at his post during the day to fulfil Chantrey’s wishes, and at night poring over his last great work. No man was ever more just or more unfinching than the poet Cunningham. He was a brave and sincere Conservative, firm to Church and State. Sir Robert Peel proved his respect for the man by providing for one of his sons. But, though Allan Cunningham was proud and grateful for such a distinction, he craved no favours—HE WORKED—and must have died with the comfort that his family were what the world calls ‘settled’ by the fruits of his honourable industry. I have often heard it said that he had good friends; and so he had, because he commanded respect; nor would Allan have

admitted any person to his house whom he did not think entitled to this distinction. It is difficult to portray any human being more perfect in all the relations of private life than Allan Cunningham; as a husband, a father, a friend, he was perfection; and, great as is his loss to the republic of letters, it is as nought when compared to what his family and friends must suffer. Some of his fugitive poems are unrivalled for purity of composition; they are delicate and exquisite in their delineations, and at the same time healthy and vigorous. His 'Lives,' I think, will increase in value. I should like to see a collected edition of his works; but whether such a publication would succeed during the present depression is uncertain.

"Another link of the chain is broken, another of our great ones passed into eternity, the eternity we all hope for. I shall long miss his cheerful voice, and the pressure of his friendly hand; for he was indeed, for truth, talent, and uprightness, one amongst a thousand. HE LOVED NATURE!"

WILLIAM BROMLEY, A.R.A.

On the 22nd of October, died this distinguished engraver—one of the associate engravers of the Royal Academy, and member of the Academy of St. Luke, Rome. He was in the 74th year of his age, having been born in the year 1769, at Carrisbroke, in the Isle of Wight. His apprenticeship was served to a person of the name of Wooding. For upwards of half a century Mr. Bromley has occupied a very prominent station in his profession; and the world will not cease to hold in high esteem the productions of his burin. Of late years, the public has seen but few of his works; although he was still pursuing his course honourably and profitably; but his recent engravings have been executed for the British Museum; and these find their way only into the folios of "collectors." They consist of copies of the Elgin Marbles, from the admirable drawings of H. Corbould, Esq.; and are as masterly in style and character as aught that proceeded from the graver of Bromley in his younger and more vigorous days.

His works best known and most popular are the plates for "Macklin's Bible," and for the "History of England," after Stothard; the 'Duke of Wellington,' as he appeared on the day of public thanksgiving at St. Paul's Cathedral, after Sir T. Lawrence; the 'Countess Lieven,' from a drawing by the same great master; 'Young Napoleon,' by do.; the portrait of 'Dr. Abernethy,' by do.; 'the Woman taken in Adultery,' after Rubens; the 'Duke of Wellington on Horseback,' after Sir T. Lawrence, &c. &c. His fame was great not only among the members of his own profession, the painters universally appreciated his abilities, and coveted to have their works engraved by his hands. Sir Thomas Lawrence used to say, that "his engraving was like painting;" and Flaxman and Fuseli were fervent admirers of his talents. He was a kind and indulgent parent, of a generous good heart, and modest—like all great men. He has died respected and beloved by all who knew him.

His son, whom he survived, was also an eminent engraver; and his grandson is daily rising into high repute.

KIRKMAN FINLAY, ESQ.

We have heard that it is the intention of the citizens of Glasgow to erect a statue to the memory of the late Mr. Kirkman Finlay; and that a liberal subscription for the purpose is already considerably advanced.

The late Kirkman Finlay was no ordinary man. In early life he embraced the profession of a merchant in Glasgow, his native city; and during the war distinguished himself by directing the commerce of his country into the channels most likely to defeat the machinations of her adversaries. At a later period he exerted himself in throwing open the trade with the British possessions in the East Indies, and himself embarked, with his usual zeal, intelligence, and success, in this branch of commerce. If we are not mistaken, the citizens of Glasgow were also deeply indebted to him for the zeal and alacrity with which he devoted his time and attention to the duties of the local magistracy; to those of an officer of volunteers and local militia during the war; and latterly as the representative in Parliament of the extensive and complicated interests of the great trading emporium of the west of Scotland. Mr. Finlay was a man of great natural shrewdness, and of a cultivated and intelligent mind. In society his manners were cheerful and vivacious, whilst in the relations of private life he was a pattern of excellence and virtue. During the time that he sat in

Parliament there was no man more respected in the House of Commons, or listened to with more attention on the subjects on which he addressed the house. We need scarcely add, that we cordially participate in the feelings which induce the inhabitants of Glasgow to desire to do honour to the memory of their distinguished fellow-citizen; and we trust we may be permitted to express the hope, that his monument may prove at once honourable to his memory, creditable to the taste and liberality of the subscribers, and afford a specimen of the best and highest style of British Art. We have heard that the testimonial pointed at is a full-length marble statue. In many respects this is unexceptionable, as combining the advantages of more moderate expenditure, and as affording a material in which the skill of the artist is shown to full advantage and effect. In a marble statue, however, in our northern climate, the work can only occasionally meet the public eye, for it must be placed within a hall or church, both of these situations being only at times accessible; and in which the mind of the spectator is apt to be otherwise preoccupied and employed, than in observing the beauties of a work of Art, or meditating upon its intents and purposes.

It occurs to us that a bronze statue, well situated, would be both an appropriate and desirable style of monument in the present instance. In George's-square the citizens of Glasgow already possess, in the statue of Sir John Moore, an heroic figure of a townsman whose deeds have placed his name in the historical annals of his country. In the same locality they have marked their appreciation of scientific eminence by the erection of the statue of the illustrious Watt. Why not fill up the vacant space on the south-east corner of the square by a bronze statue of the great citizen and merchant whom they are now desirous to honour?

The citizens of Glasgow are liberal in their subscriptions and donations for educational purposes. Could the youth of a great and exclusively commercial town have a nobler incentive to their exertions presented to their every-day observation than the likeness of a fellow-citizen, the architect of his own fortune, and devoted through life to the same pursuits and line of exertion to which they may be destined, in the shape and form usually appropriated to "the peers and princes of the land?" We trust that no feeling of misplaced economy may interfere to mar so desirable a result; and that the subscription in question may be on such a scale as to place a bronze statue of the great merchant in juxtaposition with those which Glasgow already boasts of—Wellington, Moore, Pitt, Watt, and Scott; thus affording to the youth of the west of Scotland a stimulus to exertion in their own walk in life, and an additional specimen of Art within their own city calculated to promote the refinement of their taste and manners.

We believe that there are two capital full-length portraits of Mr. Finlay by Graham, and an excellent likeness of him by Raeburn, at an earlier period of life, affording admirable materials for the composition of a statue. We do not know that any bust of Mr. Finlay was ever executed; but it is possible that such may be the case.

One word in respect to the selection of an artist, and we have done. Our readers are aware that the citizens of Glasgow have, in our opinion, committed an outrage on good taste and good feeling in, at the present day, selecting an inferior foreign artist to execute their statue of the Duke of Wellington. Let us hope that the hour has arrived in which, if they have not become sensible of their error, they may not be disposed to carry their patronage of foreign Art the length of downright persecution of the many talented and accomplished artists, and worthy and estimable men, to be found in the list of British sculptors; and that anything so monstrous as the erection of a second French statue within the walls of Glasgow may not be attempted.

JOHN HARPER, ESQ.

The Arts in general, and particularly those of York, have sustained an irreparable loss in the death of John Harper, Esq., architect, of that city, and Honorary Secretary of the Government Branch School of Design there, and to whom it is deeply indebted for his active co-operation. He died at Naples, on the 18th of October, having caught the malaria fever in Rome, from which he had partially recovered, when a relapse, brought on by a rough sea voyage from Civita Vecchia to

Naples, put a period to his important life in his 34th year, after making numerous drawings in different parts of Italy, &c. Active, zealous, and enterprising beyond his physical strength, he sank under an enthusiasm for Art, which, had he been spared, would have accomplished much for its interests. As an architect his talent has left several beautiful works in Yorkshire and Lancashire. As an artist and a draughtsman he was not excelled by any; but his native modesty kept in his folio, works which, as drawings, would have done honour to the best, and which, for taste, light, facile and elegant execution, as well as correct detail, are worthy to take the first rank as works of picturesque beauty. His numerous friends have to lament the loss of one who added to his brilliant and varied talents the most amiable, generous, and benevolent feelings of the heart, and who bade fair to be a lasting ornament of his country.

MR. J. B. CROME.

This excellent artist and estimable man died during the month—after a long and lingering illness—at great Yarmouth, Norfolk. He is well known by his 'Moonlight Views,' in which no artist surpassed him. We hope, next month, to procure for our readers some particulars of his life.

[We again beg to express a hope that correspondents will supply us with the means of rendering this department of our journal more complete than we have hitherto been enabled to make it. It is a department which, unaided, we cannot fill; and we really think that the relatives of departed men of genius owe it to their memories not to let them descend into the grave without some worthy tribute. The foreign journals supply us amply with biographies of their leading artists; but of those of our own country we find it exceedingly difficult to obtain any particulars.]

#### ART IN CONTINENTAL STATES.

ITALY.—BOLOGNA.—*Pinacoteca, &c., by Sig. G. Giordani. Bologna, 1842.*—The Director of the *Pinacoteca*, or Gallery of Bologna, has just now published a new "*Catalogue Raisonné*" of that classical and numerous collection of pictures. The learned director, Signor Giordani, author of many remarkable works on the Fine Arts, shows in the new catalogue his usual skill, exactness, and erudite criticism.

*Life of Domenico Zampieri, called Domenichino, by A. Roncagli. Bologna, 1842.*—The life of the great Bolognese master, who painted the St. Jerome, a picture deserving the honour to be placed in the Vatican, opposite to the 'Transfiguration,' is just now published with great care, elegance, and detail. The *Life of Domenichino*, one of the best pupils of the Caracci school, and then the immortally tremendous rival of them, and of his companions Guido, Albano, Tiarini, Lanfranco, Leonello Spada, Guercino, &c. &c., presents a quantity of facts of the greatest importance. Concluding with the horrible conspiracy against him by Spagnoletto, Lanfranco, Stanzone, &c. &c., and his lamentable fate, are all things of deep interest, and beautifully told by Signor Roncagli.

FRANCE.—PARIS.—*Works in Progress.*—The spirit of improving and adorning public buildings is a striking element of the course of things in Paris at the present moment, and of these ornaments and alterations the churches reckon for a large proportion devoted to them. The cold stone gives place to living walls of fresco or oil painting, while statues, bronzes, mosaics, wood carvings, and other decorations attest the lavish spirit of the epoch. We shall name a few of the works just completed, or now in progress.

M. Heim, with a firm, laborious, and practised hand, has just finished at Saint Sulpice the chapel devoted to the *Souls in Purgatory*. This great work has only occupied two years. In the same church M. Drolling is at work in another chapel, the painting of which he began in 1831, and it is not yet finished.

The chapel of the Virgin at St. Gervais, completed by M. Delorme, offers a curious union of painting, in the style of our epoch, with Gothic architecture; at Saint Merry, M. Amaury Duval has divided the 'Life of Saint Philomena' into three parts—'Prison,' 'Martyrdom,' and 'Beatitude.' These pictures are all in the most elevated style and purest design, and they breathe the

simple and reverential piety that charms us in the old masters. M. Chasserien is to execute, in the same church, and probably in the same style, the 'Egyptian Saint Mary.' At Saint Denis-du-Saint-Sacrament, M. Duscaigne has expressed on canvas the words of our Saviour, 'Suffer little children to come unto me.' The subject is treated in an interesting manner, and shows progress in the artist, as does also the charming landscape with which M. Aligny has enriched the church of Saint Paul. M. Jollivet has completed the paintings on glass and the historical compositions which adorn the chapel of Saint Louis-en-l'Isle, devoting his various talents to the same object. He was well assisted in the first part by M. Vigni. Pictures have been ordered during the last two months as follows:—At Saint Laurent, by M. Bremond; at Saint Ambroise, by M. Jouy; at Saint Medard, by M. Ludlin; at St. Pierre de Chaillot, by M. Janron; at Saint Merry, by M. Lehman. It would be easy to add to the list, but it is unnecessary.

We rejoice that the ancient sanctuary of Saint Germain des Prés is about to be restored by M. Flandrin to all its ancient splendour as it was, when it was the receptacle of the gifts of Kings and of the pious. We shall see it again with its painted ceilings, stained glass windows, statues, pictures, and all the rich adornments that before graced this famed old Basilica.

The old art of glass-staining seems revived in our days. In point of colour the beautiful works just finished by M. Thevenot at Saint Eustache, and by Messieurs Vignié and August Hesse at Saint Pierre Caillot, are not inferior to the stained glass of Notre Dame de Paris, nor as compositions to the famed windows of St. Florentin, in Burgundy; or Saint Gudula, at Brussels. M. Marechal's works in this style are also of very high merit.

Statuary seems consecrated to religion at present, or to the memory of great men. 'Saint Louis and Philip Augustus,' from the chisels of Messrs. Eten and Dumon, will be placed on the two columns at the Barrière du Trône. Four colossal 'Genii' at their feet are committed to the talents of Messieurs Desboeufs and Simart. Why, when M. Seurre, sen., has finished other works, are we still to wait for his statue of Molière? Perhaps the artist requires long reflection before he tries to create the statue of one whose own mind was so creative as Molière's.

**Gallery Agado.**—Many have been the rumours regarding the fate of this fine collection of paintings, peculiarly rich in those of the Spanish school. We believe it is certainly to be sold, but that it is to be sold, and intact, to the Emperor of Russia is not decided.

**Chapelle de Notre Dame des Flammes.**—On the 16th of November took place the ceremony of the consecration of a new chapel erected at Bellevue, on the spot of the terrible accident which occurred there on the railroad on the 8th of May.

The chapel is charming and original; it is triangular, having in the exterior part some columns also triangular. On the door of the front façade is placed this inscription, PAIX AUX VICTIMES DU VIII MAI.

Within is an altar, and a statue of the Virgin having as a base a flaming globe on which is engraved AUX VICTIMES DU VIII MAI, 1842.

The Bishop of Versailles, with many clergymen, officiated, and made a very simple but touching sermon. The families of the victims, with their friends, were present at the ceremony.

**STRASBURG.**—**Luther.**—**M. David.**—The bas-relief on the base of Guttenberg's statue here has been kept covered ever since the day of its inauguration, the "ultra-Catholics" of the town objecting to Luther being represented on it. In deference to their wishes, M. David has removed the bas-relief containing the figures of Luther and Bossuet, and has substituted for them Erasmus and Montesquieu.

**GERMANY.**—**LEIPSIK.**—**Meeting of Architects.**—We merely named in our last that this interesting meeting had taken place. The days occupied by it were the 10th, 11th, and 12th of September. Among many important subjects discussed, none appear to have excited more interest than the discourse of Herr Thier on the forms and style of architecture best adapted for Protestant churches, presenting at the same time to the

meeting five large plans for a church to be erected at Berlin.

He began by observing on the Protestant service, that the sermon being a prominent part of it, the position of the preacher and the number of persons who should hear him distinctly became the first consideration. The form most adapted for this is the half circle of the Greek theatres; but to weigh against its advantages is the consecration which time and other circumstances have given to other forms, and which, in regard to sacred edifices, cannot be safely disregarded. We cannot follow his long and interesting discourse on the various parts of the church. At the conclusion it appeared that much similarity to the ancient Basilica might be safely preserved, modifying the form, especially by enlarging the square in the middle of the cross. Herr Thier very strongly advocates a covered atrium as the proper entrance to a church to be devoted to the monuments of distinguished persons, a suitable preparation for the temple within, forming a scale, as it were, for the mind not to pass abruptly from the bustle of life without into the sacred precincts within. Beyond the atrium he would have as an approach a piece of ground adorned with trees and fountains.

Herr von Quast made an impressive appeal on the subject of ancient German architecture, congratulating the meeting on the zeal with which this branch of Art was pursued in many places both in the preservation and restoration of old buildings, and in the study given to the subject, and calling on those districts where this spirit was not excited to arouse themselves and do likewise.

**BAVARIA.**—**DONAUSTAUF, NEAR RATISBON.**

—**The Walhalla.**—Our readers are aware of the intention of this building. It is a temple to contain the busts of the great men of Germany, in whatever career they may have distinguished themselves. King Louis of Bavaria is its founder, and he has himself written a book describing it. The first name commemorated is that of Arminius; and the illustrious list is brought down to our own times. To give an idea of the selection of King Louis, we add the following names of personages admitted, nearly belonging to our own day:—Mozart, the Duke of Brunswick, Burger, Catharine the Second of Russia, Klopstock, Heinse, Herder, Kant, Schiller, Haydn, Wieland, Marshal Scharnhorn, John Von Muller, Barclay de Tolly, Blucher, Swartzenberg, Herschel, Diebitsch, Stein, Gneisenau, Goethe.

Oct. 18th, being the 12th anniversary since the foundation-stone of the German Temple of Glory was laid by King Louis, was fixed on for the solemn opening of the completed building, which is placed on a hill near the little town of Donaustauf, on the banks of the Danube. Crowds of persons had been arriving in the neighbourhood for some time previous, so that the assemblage on the spot was very great, and an immense number had accompanied the King from Munich. The day was cloudy in the early part, but about midday the sun shone forth with great splendour. The principal attraction was the procession, of which the Bavarian royal family formed a part, as it moved from Ratibson to Donaustauf, where it was received by the magistrates and clergy of that place; from thence it proceeded to the foot of the hill on which the Walhalla is situated. Here the King was received by thirty-two young ladies dressed in white, their hair flowing, and each bearing in her right hand a flag. These ladies typified the thirty-two united states of Germany; and at their head a tall female, with fair hair, a purple robe, and crown of gold, represented Germania. They lowered their flags as the King passed on to the portico of the temple, where the President, Zu Rhein, awaited him, and addressed a speech, thanking him, in the name of the German nations, for the erection of the Walhalla. The King replied in these words: "May the Walhalla extend and strengthen the sentiment of German nationality. May every German of every different race here present feel that he has, in common with all, a fatherland to be proud of. Let him seek to make it honoured." After uttering these words the King took the golden keys and threw open the bronze portals of the Walhalla, and the interior, bright with colours, brass, and marble, met the eye, while the singers of the choir poured forth the most inspiring strains. We need not say that the temple, with its dark marble walls and floor, its metal rafters, its glorious lines of busts of the

great and good for the first time opened to the public gaze, excited the most lively interest. The King soon called to him its architect, the Privy Councillor Von Kleuze. The illumination of the temple in the evening presented another magnificent spectacle.

**KELHEIM.**—**Hall of Freedom.**—The King of Bavaria laid the foundation-stone of the Hall of Freedom, commemorative of the German war of independence. The King made a short address, of which the last words were, "Combined Germany can never be vanquished." The building is to be circular, with a cupola in the Byzantine style.

#### GERMAN COMPLIMENTS TO BRITISH ART.

We perform our promise by printing a translation of the strictures of Dr. Henry Merz on our British School of Painting. The following is his criticism upon the collection of 1842, gathered in Suffolk-street, which he considers less reprehensible than that exhibited at the Royal Academy. So much for the honesty or judgment of the "critic."

The exhibition of the Society of British Artists (Suffolk-street, Pall-Mall East), is open simultaneously with that of the Royal Academy, but it is by no means so much frequented as the latter, although the entrance money is the same: its merits, however, demand comparatively a higher degree of consideration. The defects of which we have already spoken are again sufficiently apparent in the pictures of this Society, but yet their extreme faultiness is not without some redemption. The works of this exhibition do not certainly amount in number to 1409, as those of the Academy: there are no more than 804, and this deficiency alone appears to be the cause of the lower estimation in which those of the Academy are held, since it is notoriously the desire of the public of London and of England to see as much as possible for their money. Of the 423 names in the catalogue of this exhibition, there are about a hundred also in that of the Royal Academy; and 36 of the 423 are those of ladies. In the whole as above mentioned the number of contributions is 804, being 21 sculptural subjects, principally portraiture, and 783 pictures, of which 547 are in oil and 236 in water colours; 64 of these being the works of female artists. Among the works in oil are about 45 portraits, and in water-colour about 49, making 87 portraits in the exhibition. Upwards of 200 pictures were rejected in consequence of want of room. Thus we see that to England, wealthy in gold and manufactures, artists and works of Art are not wanting—it is only to be lamented that their works of Art should look like manufacture and machine work.

With respect to historical Art, the pulse of every exhibition, that department is not much better here than in the neighbouring institution of Trafalgar-square. To begin with Corbould's 'Delilah and Samson'—this unfortunate picture is in nowise calculated to afford a favourable augury. Delilah, having the lower part of the person covered, lies luxuriously, but not very seductively, upon a cushion: the light enters from behind, a circumstance which the artist has thought proper to bring forward by a chiaroscuro of the dirtiest and most opaque character. Samson, a little, dark, half-shaven cannibal, "*furchtbar grotesk bis zum lacherlichen*"—literatim in German as in English—"fearfully grotesque even to the ridiculous," stands on the left, bound, and vainly striving to tear asunder his bonds, while the Philistines are coming upon him. J. Zeitter, a German, it seems has, in No. 112, attempted the scene with the Capuchin in Wallenstein's camp; but the composition is vague. The Capuchin, a long, gaunt figure, is interested without intelligence, ergo, without character; and the soldiers stand listlessly around, without expression either of pleasure or vexation. The colouring is motley, the drawing feeble, the execution superficial, and the whole a failure. No. 397, 'The Good Samaritan,' by C. B. Morris, is nearly of the same standard. No. 401, 'The Departure of the Countess of Derby from Martindale Castle,' by Herring, sen.; No. 407, 'Chryses, the Priest of Apollo, petitioning the vengeance of the God,' by J. Wilson; and No. 417, 'A Scene from Guy Mannering,' Meg Merrilies in the cave with a torch in her hand betraying Dirk Hatterick, by J. Tennant, are distinguished by a straining for striking effects of light. Nos. 228 and 315, by J. A. Hawkes and J. S. Spencer, both versions of Juliet and Friar Lawrence, are instances of rapidity of work and abuse of colour; but above all does the elder Herring strive for the dismal in No. 521, 'A Naked Mazeppa bound upon a Wild Horse,' and in Nos. 4 and 16 his two pictures of 'Duncan's Horses,' which are destitute of animated impulse and action; despite the comet-like tails, flowing manes, and the headlong career which distinguish the animals in Nos. 521 and 4; in the former case over the waste, and in the latter beneath the arched gateway amid lightning and thunder; and in No. 16 furiously bounding onward in danger of mutual injury—despite all this and in addition all hectoring in fire and smoke, the freshness of life is wanting. Thus we learn from this exhibition that English Art, in the highest sphere of its activity, adheres to the insignificant, or,

where it would aspire to something beyond this, is lost in the hideous or the fantastic, being unable to determine the point whereat the ideal meets substance and form. The department of religious painting is not less deficient in intensity and substance: the conception of those who exhibit in this style runs into empty sentimentality. With respect to their poverty of spirit and thought, it is sufficient to observe, that the materials of the Royal Academy are here repeated similar in manner to those of the latter exhibition, as instance the agreeably 'Coquetting Magdalens'—Nos. 65, by G. J. Healey; 183, by H. L. Keens; and 288, by R. Jeffray. E. Latilla alone contributes nine pictures, and in No. 90 has painted the Virgin with the little St. John in an encaustic resembling fresco, invented by himself. The picture itself is of no value, and we may doubt the worth of the discovery, which possesses neither the forcible freshness of fresco, nor the tenderness of encaustic.

In this exhibition we find also the peculiar sentimentalism of the English school, in No. 129, 'Sterne's Poor Maria,' by F. Stacpoole; No. 63, 'Forsaken Innocence' (a coquetting young lady with a sheaf of gleanings in her apron), by H. Room; No. 77, 'The Rose of York,' by J. J. Hill; and No. 432, 'The Rose of Lancaster,' No. 12, 'My Dear Little Brother,' by F. G. Hurstone; No. 536, 'Sister, dear little Sister,' by A. Egg; No. 290, 'A Girl Feeding her young Bird,' by G. Stevens; and No. 302, 'The Poor Orphan's Friend,' by H. E. Dawe.

The execution in genre is of a happier character; we mention No. 45, 'A Falconer,' admirably drawn and painted by T. M. Joy; No. 83, 'A Slavonian Waggon on the road to Presburg,' by J. Zeitter—better than the other Hungarian scenes exhibited by him; No. 163, 'A Begging Monk,' by J. H. Carle; and 'Old Forester,' by J. Tennant. No. 187—he is reading a newspaper at an open window, with a glass of beer near him, and his fowling-piece supported by the chair. Nos. 259 and 271, 'A Passage in the Life of a Man,' are two small pictures, by E. Prentiss, distinguished by an admirable execution and great humour. In No. 1 he is going out; the clock shows the time to be a quarter-past five, and a small circular on the wall informs us that at half-past five precisely he must assist at an annual festive meeting. There stands the somewhat corpulent man in a blue coat, dark trousers, polished boots, and with a ruddy countenance; his carefully-brushed hat upon his head, a rose in his button-hole, a gold-headed cane under his arm, and wristbands drawn over his bright gloves. His wife with her right hand cautions him to return home early, and with her left gives him the key. In the background is seen the household tiger and other accessories. In No. 2 he is returning at half-past four, as shown by the clock, with blinking eyes and a hazy countenance; his hat significantly awry on his head, the rose crushed, his coat in disorder, and his cane borne in the left hand; and thus does he peer with an expression, half doubtful, half cunning, within, at his wife, who sits immovably by the fire-side, with a book and a daisy taper before her, nursing her wrath, in preparation of a warm greeting for him. These two humorous pictures are equal to Hogarth, and worth the entire collection. No. 527, 'The Consolation,' by the same artist, is an equally admirable production. In this work a mother, yet young, sits at her work-table, somewhat stiffly however, while her child reads from the Bible a chapter of consolation, and the clock behind her ticks its measured seconds. It is painted with feeling and skill, well composed, and carefully executed. No. 520, 'The Farewell,' by T. Clater, may also be accounted one of the better works, the subject of which is a soldier taking leave of his wife, child, and father. Also No. 304, by A. Egg, 'A Maiden at the Festival of the Madonna dei Fiori.'

In this exhibition landscapes are most numerous: of 547 works in oil, 265 are landscapes, being for the most part views. The compositions are few and unimportant, for English painters venture as little upon free composition as they do upon the grander style of history. The excellence of this depends not on extent of surface, it cannot be estimated by the rod, by the square foot, for the master is sufficiently evident even within a narrow limit, although his powerful genius craves a more free and extensive field to give suitable expression to his teeming ideas. In all the small pictures of this class there is no real earnestness or just impulse: money and amusement are declaredly the objects which stimulate the pencil. Among the better works we may mention No. 57, 'The Sands at Lancaster,' by D. Cox; No. 159, 'Sunday Morning—Returning from Church,' by H. J. Boddington; No. 173, 'The Ploughman's Dinner,' by W. Shayer; No. 191, 'The Hay-harvest in Italy,' by C. Josi; No. 250, 'Windmills at Ramsgate,' by J. C. Bentley; No. 117, 'A Stormy Sunset on the Coast of Normandy,' H. Lancaster; No. 171, 'View on the Scheldt at Antwerp,' No. 518, 'At Valery on the Somme,' No. 540, 'The Shore at Ostend,' and in Nos. 187, 214, and 512, J. Tennant has shown much ability. C. J. Tomkins exhibits many views, but they are deficient in warmth and life, as instance No. 264, 'Ehrenbreitstein'; No. 513, 'Hopart'; No. 372, 'Namur'; No. 351, 'Liege.' In No. 24, T. C. Hoffman has painted with much propriety the town of Salerno; also No. 373, 'The Vale of Langollen,' and in No. 406, 'Ulleswater in Cumberland.' In Nos. 70 and 199, A. T. Woolmer strives after effect in the manner of Salvator Rosa. W. Allen is

most prolific: he alone contributes 19 small pictures—English scenes, for the most part a great proportion supplied by materials from the picturesque county of Surrey; but, although his style is superficial, yet all his pictures are distinguished by freshness, harmony, and keeping.

Few artists profess still-life, flower, and animal painting; the works of these classes that are exhibited are scarcely worth mentioning; the best is No. 76, by W. Shayer, 'The Return of Cows from Pasture.' In English Art there is a universal want of study and technicality, a spiritless carelessness, never admitting of persevering research and earnest execution. There is an obtuse, unpoetical intelligence, which cannot apprehend the momentum of things inconsiderable in themselves, nor describe the imperishable life of inanimate objects; such inefficiency renders the pencil of English artists unequal to the cultivation of this department.

Among the few architectural pieces we find No. 130, 'St. Edmund's Chapel in Westminster,' by C. Hassell; and the 'Temple of Vesta at Rome,' No. 257, by J. G. Strutt.

Of the portraits we cannot speak very favourably. No. 418 is the only one marked by individuality; it is by J. Bradley, and is the portrait of a farmer upwards of 100 years of age.

We have yet something to say on the subject of the works in water-colour. The under-mentioned artists exhibit in this style (of the greater number of them we have already had occasion to speak):—Allen, Stewart, Zeitter, Turner, Lancaster, Tennant, Bell, Morris, Marshall, Hofand, Woolmer, Boddington, Dawe, Shayer, Pyne, Hurstone, Jeffray, Herring, Wilson, Smith, Bradley, &c.; and we may instance, as works of merit, No. 556, by Allen; No. 581, 'Mayence,' by Tomkins; No. 597, by J. Wilson; No. 609, by Tennant; Nos. 621 and 612, by Boddington; and No. 627, by Hofand. Women have naturally devoted themselves most to this branch of Art, the practice of which is consistent with the general faultiness of English Art. The working is decidedly easier, and a showy picture may be produced with less study than by the means of the more tenacious oil, for practice in which the English seem to be deficient in patience. This superficial manner, which in oil-paintings amounts to outrage—the rapidity which has so disgracefully abused oil-colour, has found here a more fitting field. From mature consideration we learn that oil-painting is pursued here rather as a luxury and an amusement than for its own sake. Water-colour is more favoured by omnipotent wealth, which lavishes upon a leaf of its travelling album pounds, weeks, and months. We cannot hope for any favourable development of Art from works so insufficient, which can by no means raise the English school above the low standard of West, Reynolds, Williams, and Constable, which has only been temporarily passed in the case of Wilkie.

The German "critic" has thus conveyed through Germany his opinions of British Art; and has, no doubt, given surpassing pleasure to his countrymen, by convincing them how much more excellent are the boys of Dusseldorf than the men of England. This is a step "backward in advance" of that which should be the grand purpose of all writers concerning Art—to render it UNIVERSAL. They are only weak persons who cannot bear to be told of their faults; we should have thanked Dr. Henry Merz if he had kneaded up with his unwholesome dough but a very little leaven. Either the motive of the Report was bad, or the ignorance of the writer is disgraceful to the journal that opened its columns to him. But to this gentleman we have nothing more to say: we shall, as soon as we can do so, procure M. Kugler's book concerning "English Art and Artists;" he is a more worthy quarry; upon *his* report our readers shall have our report.

Our business now is with our own critics. For certain it is that the German

"Hath found out  
A nest of hollow bosoms"

in England: the *Spectator* has already echoed his sentiments; and no doubt, ere long, we shall have the *Athenæum* following in its wake. Unhappily, both these journals, conducted though they are with great ability, labour continually to depreciate the Arts of their country, and try to make them appear insignificant in the estimation of all who should be their patrons. The former is stimulated, mainly, by its hatred of Academies; and the latter by its profound admiration of foreign kick-shaws: if a thing be German it must be good; if a thing be English it must be bad.

The *Spectator* of Nov. 5th, quoting from our journal the remarks of Dr. Merz, upholds his opinions as "in the main just;" as containing "but too much truth and justice." The *Spectator*, however, has called Mr. Haydon into the field; a powerful advocate at all times, and a very valuable one, when not under the influence of monomania concerning Academies and all that appertain unto

them. Perhaps, after all, he is like many others, who will not permit any persons to abuse their friends but themselves; and now that the Germans have taken it into their heads to assault the Royal Academy, who knows but Mr. Haydon himself may be found—armed to the teeth—standing in the breach.

That the "Royal Academy" as a body have not done all that they might have done—or, indeed, all that they should have done—few will attempt to deny; but no one knows better than Mr. Haydon, that in this Institution are the best of our British painters. He is justly and naturally indignant at the wholesale condemnation of the German critic. We have introduced these observations chiefly with a view to copy Mr. Haydon's letter into our columns. We pardon him for his egotism because of the bold manner in which he has come to the rescue.

"TO THE EDITOR OF THE 'SPECTATOR.'"

"London, 8th November, 1842.

"SIR,—Last Saturday you quoted from the German periodical on Art a remark from a Dr. Merz, on the exhibition last year, 'that there was not a work in it by the gentlemen of the Academy that the meanest pupil of the Dusseldorf school could not excel.'

"Come, this is pretty well for a beginning, Dr. Kugler and Dr. Merz (who is he?); this is throwing down the glove with a vengeance. We accept the challenge, and in answer, have the inexpressible pleasure, which we have long wished for, of hurling away the scabbard.

"The public will grant, I am quite sure, and many Germans in England too, that this was not the way I treated Cornelius and the German school at the Royal Institution; but, as in return for my courtesy to them, I and my 'Mary Queen of Scots' and 'Poitiers' come in for a share of the scurrility, I hope your readers will not attribute my taking up the question to a vain desire to obtrude myself, when I have so many more agreeable things in hand to accomplish at present.

"In the first place, I will defy the most able pupil of the Dusseldorf school, or any school in Germany, to equal or approach a 'Head of an Old Gentleman,' by Phillips, which hung between the two 'Dogs' of Landseer, and which for colour, half-tint, touch, tone, breadth, nature, sound art, drawing, and character, was never excelled since Reynolds. But what is in a head? What is in a head!—everything. A perfectly-formed human head is worthy to be the image of its Maker. I grant that neither in that, my own 'Poitiers,' or 'Mary Queen of Scots,' or Landseer's 'Dogs,' there was what the Germans call drawing—and God forbid there should be: the parts in neither were connected by the baby-feebleness of an outline, the leading-string of a timid hand, for fear of making a false touch. What is drawing? Every student in Germany will tell you, commonly, it is defining the forms of things correctly by a line. This is the common definition; but Raffaele, and Titian, and Velasquez, and Murillo, and Vandyke, and Reynolds, and Michael Angelo, would have told you philosophically, it was the power of planting the leading points of the objects imitated in their right places, leaving distance and atmosphere to unite the masterly abstraction, and defining boundaries not by a line, which does not exist in nature, but by planting other objects behind, before, or by the side of the object imitated; so that where the object imitated vanishes from sight, its boundary may be defined by the next object to it.

"On this immortal principle of imitation, there is more drawing, more power of comprehension, in a head by Titian, Raffaele in his Hampton Court Carroons, Velasquez, Rubens, Rembrandt, and Reynolds, than a head by Ness or a Nero by Cornelius, who are, in imitation of objects, but superior Deniers.

"What is painting? It is the art of conveying thoughts by the imitation of things; which imitation is best comprehended by the brain through the eye at that point of distance where the whole object can be perceived by the eye, and therefore comprehended by the brain, to be a resemblance of the thing imitated to convey the thought.

"Atmosphere and distance unite distant points, flatten roughnesses, and soften asperities in any object; and the greatest imitators in the art, knowing this optical peculiarity, have on philosophical principles, by touches on the leading points of objects, expressed proportion, colour, light and shadow, recession and projection, and by them, character, form, and expression, so completely for atmosphere to act on, that the mind of the spectator is never deceived as to the object meant, or the character or thought expressed by the imitation.

"This masterly power is the leading characteristic of all the greatest painters, Greeks and Italians, the world ever saw; and it is acquired by first learning to define all objects by a line; for till the power of defining objects by a line be acquired, neither the brain, eye, or hand, can plant the leading points of any object, if they have not been in the habit of defining by the closest imitation all the detailed parts which connect the leading points.

"Boys, therefore, begin by outline; and the art with every boy is always in its infancy; but for a whole great nation like the Germans to carry on the art of imitation, on the principle of A B C, is one of the most ridiculous as well as mistaken principles that ever infected a human fancy.

"Suppose in the Art of oratory, a man of talent should complain it was in a corrupt state, would the Art be improved or reformed by insisting that before an orator was allowed to speak, he should tell the letters of each word, and spell each syllable? Would not the audience reply—Correct, if you please, all corrupt redundancy of metaphor or high colouring; express fine thoughts in simple language; but do not bury your thoughts in useless detail. A B C is very well in the nursery to a child, but to tell us all the letters as a man, and to spell every word as you proceed in order to acquire simplicity, we shall lose the sense of your meaning in your copiousness of useless individualities. 'Simplicity is a very suspicious virtue,' says Reynolds, 'when so very artificial as to avoid the difficulties of the art.' And I, as an English artist, question very much the right of any other nation to speak of our Art with contempt, especially that one which rejects background, light and shadow, appropriate colour, and execution, which are the means of imitation to convey thought, and believe themselves to be in the road to heaven by sticking copper surfaces on gilt surfaces, carpet-bag draperies on Turkey carpet grounds, with flowers, lilies, and daisies, which for truth of imitation may justly rival, though they do not excel, the beauty of a Persian rug.

"It is extraordinary the tendency of the Germans to spend their great genius in labouring to prove a wrong principle a right one, instead of proving a right principle a sound one; and the most singular weakness in an heroic nation like the British, is their inherent cowardice in all matters of genius in Art. Undaunted as Britons are, and ever have been, in asserting abroad and at home their rights whenever attacked, yet let but some impudent foreigner deny their ability in music and painting, they cower under the imputation like a frightened spaniel.

"In this gross assault on English Art there is no lurking selfishness? It is well known, at present, there is great distress in the manufacturing districts of Fresco in Germany; and if Mrs. Kugler and Merz can persuade the English, who travel at this time of year sixteen miles an hour to get a new sensation, that English artists are unfit for a great work, they (the doctors) hope there will be a chance for their own gasping decorators.

"It would have been more philosophical in Dr. Kugler, to have shown his countrymen, how successfully the British power of imitation might be united with the correctness of German definition, and how more of German definition might be added to British powers of imitation—thus each school doing the other good—than presuming, in his corrupt and childish ignorance of what Art really is, to permit any correspondent to speak of us with mortified contempt.

"One letter more, with your leave, on the danger of decorative Art, which is not founded on sound Art; and on the superiority of the French system to the German system in the education of decorators, who (the French) made the figure and sound Art the basis in their school; and I retire.—I am, Sir,

"B. R. HAYDON.

"P.S. With your leave, it is fair I should be allowed to say, I defy Dr. Merz or any other German, to prove one single error in drawing in the 'Mary Queen of Scots,' the 'Poitiers' (now at the Pantheon, or the 'Lazarus,' on the staircase), or the 'Xenophon,' at the Russell Institution."

## CORRESPONDENCE.

### CARTOONS AND FRESCOES.

TO THE EDITOR OF THE ART-UNION.

SIR,—I would (with all the respect due to the Royal Commission, and to those intrusted with its execution) submit to your better judgment, whether the following passage in the Report does not appear to demand explanation, in order to render its object intelligible. The commissioners say, "We have, in the first place, directed our attention to the question, whether *fresco-painting* should be employed in the decoration of the new Houses of Parliament; but we have not yet been able to satisfy ourselves that the art of fresco-painting has hitherto been sufficiently cultivated in this country to justify us in at once recommending that it should be so employed. In order, however, to assist us in forming a judgment on this matter, we propose that artists should be invited to enter into a competition in cartoons."

Now, although it is sufficiently evident that correct drawing, appropriate costume, and good composition are essential to all Fine Art, in whatever manner executed, I think that in this instance the means employed do not appear to bear an appropriate relation to the particular question of which the commissioners require a solution, which is simply, whether a peculiar kind of material for, and method of, painting, hitherto not much known in this country, should be employed in decorating the new Houses of Parliament? It is, I think, quite clear that the production of mere designs on cartoon, and without colour, however excellent they

may prove, will still leave the question, "with what material are they to be realized?" that is, painted on the walls of the building, not merely unanswered, but absolutely unapproached. It appears to me that a more likely means of "forming a judgment" on *fresco-painting*, and on the probability of its being satisfactorily executed by the artists of this country, would have been to cause the production, not only of cartoons, but of paintings actually executed in fresco. An opportunity would thus have been obtained of comparing fresco with oil-painting, as to general effect and accordance in tone with stone-work and other architectural materials with which it is desirable that it should harmonize.

With this view, Fresco pictures might safely be executed on portable frames of wood and lath, on a scale sufficiently large to test, at the same time, the abilities of the artist and the capabilities of the material. The question, of Oil or Fresco? has, I think, been greatly perplexed by the admission of many irrelevant considerations into the discussion. That which is to be decided is not the question of the general superiority of one or the other method of painting, but simply, which is the best adapted to the purposes of Fine Art, employed as a means of architectural decoration? There is ample proof, in the most celebrated works of Art, that all the requisites of the didactic style of Art are fully attainable by means of either class of materials. It becomes, therefore, chiefly important to ascertain which method affords the means of producing a *coup d'œil* of best general effect in an interior, in which extensive polychromatic pictorial decoration is to be integrally combined with the other more essentially architectural enrichments, consisting chiefly of sculptured stone-work.

It is advisable that this point should, as far as possible, be made the subject of experiment before the matter be finally decided; for I feel assured that an important difference would be found to exist between the two materials. The peculiar quality of a fresco surface would be found to assimilate and harmonize with stone-work much better than oil-painting. The shadows of fresco-painting (the chief point in which it has been alleged to be inferior to oil,) would enter into a more effective union with the actual shadows of the architecture and of its decorative mouldings. We know that in apartments lighted by windows it requires considerable tact and experience to find the point from which any particular picture becomes tolerably visible. Now, as Mr. Barry is not building a series of picture-galleries, it is more than probable that by far the greater number of the apartments in the building he has designed will not be lighted in such a manner as the nature of an oil-painted surface demands; it may consequently be anticipated, that should that material be extensively used, under such circumstances, the result would eventually\* be, in many instances, a *coup d'œil* of unintelligible confusion. Under similar circumstances, as regards the admission of light, in fact, whether in a sky-lighted or window-lighted apartment, a fresco surface of large extent, whether plain or curved, would present an agreeable general effect, and be distinctly visible at whatever angle the light might impinge upon it.

With regard to the opposition of our leading artists to the system of competition, I think they are perfectly justified in acting as they may think fit. They owe their high standing, not to any gratuitous favour on the part of the public, but to their own superior talents and acquirements. The public has received its *quid pro quo* at their hands, and is not, I think, in any way entitled to call upon them to jeopardize their fair fame and hard-earned reputation by contending with each other for prizes, at the best a questionable and somewhat invidious kind of procedure to propose for the adoption of men of established reputation for genius in the Fine Arts.

It would seem that, in a case where the works to be executed are on a scale so extensive, as in the instance of the decorations of the new Houses of Parliament, there is ample room, not only for carry-

\* I say eventually, for although by using oil diluted with a large proportion of turpentine the picture might, at first, present a surface similar to that of fresco or distemper, they would, ere long, become dull in the lights and obscure in the shadows, so as to render a recourse to varnish, with all its distracting glare and glitter, inevitable.

ing out the views of the commissioners with respect to competition—which may have a desirable effect in affording an opportunity of distinction and encouragement to those men of talent whose abilities circumstances may have hitherto kept in comparative obscurity—but also of securing all the available established and tried talent of the country to this first great public effort for the advancement of the Arts. Might it not with this view be advisable to follow up the already-published proposals for competition, by offering commissions for designs to those artists whose high standing might entitle them to such a preference? and to render these appointments as free as possible from the semblance of invidious personal partiality. I think the commissions should be limited to those whom the general voice of the public and the profession has promoted to "high places;" I mean to such members of the Royal Academy as are known to have cultivated the style of Art required by the present occasion. If it be objected, that some of the elder members of the profession may shrink from the task of acquiring a practical acquaintance with a new kind of material, the manipulations of which do not appear to be of the most agreeable nature, the practice of many of the German artists proves that it is by no means indispensable that a design for fresco should be actually transferred to the wall by the hand of its author: it is sufficient to constitute it an original work, that it be carried out under his direction and superintendence. I should consider it highly requisite that the designs should not only be on a large scale, but carefully coloured with fresco pigments in distemper, a method closely resembling fresco in tone and general effect. I have been induced to venture these remarks, from a fear that a means of Art which has been highly appreciated and extensively practised by the greatest artists in the best eras of Art, and which appears to possess qualities peculiarly suitable to the purposes now under consideration, should be dismissed with no further trial or investigation of its merits than such as this cartoon competition can afford.

Sir, yours, &c.

J. H. M.

### THE ARTISTS' FUND.

SIR,—Allow me, through the medium of your guardian paper, to make a few cautionary remarks upon the declining state of the Artists' Benevolent Fund, since it seems to be regarded more from the sympathy it has created, than with any view to relieve it from its increasing difficulties; and the more especially as the admitted cause of its failure (the increasing number of its members) happens to be that which is thought necessary should still exist. If it is deemed just, notwithstanding, that the society should continue unlimited in its numbers, it will be the design to show that the attempt to do one duty at the expense of another may terminate in the sacrifice of both, and that the same cause operating in a different manner will eventually produce the same effects upon the joint-stock fund. That Art has experienced a great depression is implied from the very efforts making to restore it, and the society which undertakes for it will only be helping on the delusion so long as they look at the present condition of the funds, rather than the future condition of its members. Now, if you take into account that nearly one half of the society consists of engravers, the greater part of which in the most popular branch of the Art is almost without employment, and that the other departments are more intimately connected with it than it is comfortable to imagine, you may then anticipate all the disadvantages of an unmixed society, and find you must either stand or fall together. It is here you will experience the fatal reversion of that convenient adage, "Number is strength," without first considering there must be strength in numbers; and how possible it will be for the society, which set out with one emblem, to end with another, and that the old man and the bundle of sticks may be converted to one of straw, and prove no more at last than the embodying of want, or the associated brethren in "distress." Your actuary assumes upon the stability of Art, and is right in his abstract calculations without taking your more serious ones into account. Some symptoms have appeared in the society which is feared will turn out to be the result of anything but accident; and as to the tendency of allowing such things to take their natural course, you have but to notice them in succession, to find that want of employ-

ment will produce despondency, despondency will produce sickness, and sickness claims, as certainly as the necessary relation of cause and effect; and all this without one single chance of the necessities withdrawing from the funds, who would make any sacrifice to their subscription, rather than lose a life interest in a society which would experience anything but a diminution of its members. Whatsoever may be urged in favour of the joint-stock fund, as having hitherto preserved the balance of its accounts, that may only arise from the early payments and admission fees of young and untried members. In reference to the proposed limits, it should also be recollected, that it would be as unwise to those who are within, as unjust to those who are without, to invite any more to take refuge in what should be the ark of safety; instead of warning them of the danger of overcrowding the life-boat, at the peril of sinking altogether. However this seeming act of proscription may be looked upon as opposed to pledge or principle, let the sentiment be carried into the benevolent fund, and associate it with the last interest of a beloved wife in case of a probable event, and then imagine the small stipend to be reduced or withdrawn, which (little as it may be) would be just sufficient to stand between her and the last resource of wretchedness, or a state of abject, or perhaps insulted, dependence; and that consideration would surely decide the question. Every feeling at variance with selfishness seems to revolt at the thought; and it is believed that no one would enter the society (constituted as it is) without the paramount security promised to the benevolent branch of it, and which, if detached from it, leaves you at best with no more than the ordinary advantages of a common benefit club. As to the superinducing of subscriptions to meet your subsequent difficulties, let it be gratefully remembered that the patrons have acted nobly, and it would not be fair to expect of them more than a continuance of the same favours; besides, it has its resemblance in individual calamity which a few lessons in private life ought to teach us. Great sympathy is at first created by the novelty as well as from the circumstance of distress, which is weakened by every fresh application, till it either yields to some new claim, or the object and the impression go off together. You will perceive the sole intention of this is to relieve the fund from dependence upon contingencies, by the only apparent method, that of the restriction of its members; for, however broad and liberal the principles may have been upon which the society first set out, yet, like the human constitution, it will be found subject to influences it cannot control, and to which it must either accommodate itself or be in active operation against its own system. If anything could lessen the tone of confidence which has accompanied these remarks, it is the deference which is due to those active and praiseworthy members of the fund through whose excellent management and benevolent exertions it has arrived at its present importance; and it is only (I assure you) my great fears for its continuance and my anxiety for its progress and prosperity, could induce me to solicit your aid in extent to give it all the publicity which the subject demands.

Sir, yours, &c.,

A FRIEND TO THE INSTITUTION.

[We, of course, consider the subject a fair and just one for comment; but shall willingly insert the answer it will probably call forth. The Institution is one of very great importance; and upon its judicious conduct depends the welfare of many.]

#### EMPLOYMENT OF FOREIGN ARTISTS.

SIR,—In your late publication the notification of the committee on the "Decoration of the Houses of Parliament" appears, granting an extension of time for the competitors to present the cartoons required by a former resolution of the committee; and also intimating, that foreigners who may have resided ten years in Britain are to be considered as coming under the denomination of British artists. I perceive that you are disposed to coincide in the propriety of this last resolution, so that it is not without reluctance, and with the utmost deference, that I express a decidedly opposite opinion upon the subject.

If foreigners are to be allowed to compete in the matter of the cartoons, common sense and common fairness require that they should ultimately be permitted to compete for the decorations in

their finished state; and why a foreigner is to be considered a British artist because he may have resided ten years in Britain, I own I am at a loss to understand. I grant that, if fair play be given to British artists by the committee, that they have little to apprehend from the competition of foreigners; but you, as well as myself, Sir, know rather too much of committees to feel at all assured that this is to be the case; and I own that I am by no means satisfied that the mere sound of a foreign name, and the meretricious glare of foreign Art, may not weigh even with the committee in question in a manner most prejudicial to British Art and artists. By this resolution of the committee there is moreover a doubt implied, discouraging to British artists at the very outset of the proceedings; and I should also beg leave to ask, if the mere circumstance of being by birth a Briton, does not entitle an artist, in a case like the present, to feel certain that he is insured against the chances of preference likely enough to be conceded (through the prejudice, or want of taste, which has become inherent in the majority of those persons generally named as committeemen in cases like the present) to foreign artists? Besides, this is a great national work, which seems to strengthen the claim for its being confided to the hands of natives alone. In more private undertakings it would probably be illiberal and improper to debar foreign competition; but in the instances in question, it appears to me that British artists have a right to demand that the competition for the decoration of the Houses of Parliament be clearly and distinctly limited and confined to artists native-born subjects of Great Britain, or her colonies. Thus, we allow foreigners to establish themselves in trade in Britain, and to conduct private business; but because a foreigner has been ten years resident in Britain, he is not entitled to sit in Parliament, or to vote for members of Parliament!

Further, the very name of a foreign artist being permitted to go down to posterity as having executed this great work, or even a part of it, must have posthumously a prejudicial influence on British artists, let the character of the works themselves be what it may; for in each case will it not be inferred, and most justly, that British artists were found inadequate to the task; and will it not continue to be argued, as is at present done, by some of our own recreant and ignorant connoisseurs, that the natives of these realms are by nature denied the power of excelling in works of Art? Such arguments were seized upon by the Glasgow committee, as the ground of their most unfair and unpatriotic proceedings in regard to the Wellington Statue: the changes were rung upon the superiority of Vandike, and Kneller, and Lely, to British artists; and the notorious facts forgotten or kept out of sight, that there were no British artists when those artists lived, whilst it might now with equal truth be maintained, that in comparison with the British artists of the present day, there are no foreign artists deserving of the name.

I could, without difficulty, cite the causes of the unworthy partiality in favour of foreign Art displayed in Britain, not only amongst the *bourgeoisie*, but amongst persons of higher standing, and more enlightenment; but I hope I have said enough to rouse the artists of Britain on this point, and to cause them to demand that this resolution of the committee be rescinded; indeed, unless this be done, the artists of Britain owe it to themselves not to contribute a single sketch to the competition in question!

It is more than probable that the Houses of Parliament will not be in a state fit for painting within ten years of the present time; so that, very probably, an importation of foreigners may take place in quite sufficient time to enable them to get selected for this our great national undertaking.

Yours, &c.,

G. M.

[We confess we consider our correspondent a needless alarmist. There can be no danger of foreign artists coming to settle among us, upon the chance of obtaining employment in decorating the new houses; and there may be—we believe are—some artists, foreign born, who have lived in England almost since their birth, whom it would be unjust to exclude from competition. Indeed, the project of G. M. would go to the exclusion of Mr. Leslie, who is an American by birth.]

#### THE CHINESE COLLECTION, HYDE PARK CORNER.

WE have visited this most interesting collection twice, and would have noticed it before were it not that we waited for time and leisure to do it justice; and yet, upon looking over our memoranda, we find that we shall not be able to enter into its various merits as fully as we intended. The collection has been made, not only at enormous expense, but with care and judgment; and we have no hesitation in saying that a few hours spent in the magnificent apartment devoted to its exhibition will give a better idea of the Chinese character, and the customs, habits, and occupations of this singular people, than all the volumes that have been written on the subject. Before entering into the details of the exhibition, we cannot avoid observing upon two "ideas" that occurred to us during our progress through the collection—the barbaric rudeness of their musical instruments, and the awkwardness of their warlike weapons. Indeed, the expression of their countenances and the whole bearing of the people are exceedingly gentle and childlike, and during a very close inspection we saw nothing to induce us to change this opinion. We can fancy their turning, with determination, when injured or insulted; but their *physique* is certainly incapable of strong or sustained exertion, while there is a dogged positiveness in their downcast eyes that leads to a belief that it would be very difficult to turn them from an old, or give them a new, idea. This strong national peculiarity has kept them from some evil and much good, at least in European estimation. Our late warfare has subdued them, yet certainly will not convince them, of our superiority in humanity or justice. But this is a question upon which we have no desire to enter, our business being with the exhibition itself, not only as so fully and beautifully illustrating the character and habits of this people, but, of what is more important to our readers, its *pictorial* display—not in the pictures made by the Chinese, but the setting forth of the Chinese themselves, their occupations, implements, and habits, both at home and abroad. To artists this exhibition is of exceeding value; and some of our friends, while laughing at Chinese perspective, could not but acknowledge that they made admirable *ground-plans* of their own faces upon the cups and saucers which decorate our cabinets. The grand features of the empire have been mapped out for some time, and the works of Lord Macartney, the Abbé du Halde, Lord Jocelyn, and others, have given their every-day habits and the appearance of things in general. The newspapers every now and then give "Letters from China," which, for local, traditional, or personal information of the *Chinese*, might be written off Cape Clear, or New Zealand; their odd-sounding names are introduced, and a few observations touching the outline of the coasts and the progress of the war—and that is all. We are, therefore, deeply indebted to the gentleman who has placed before us, at so little trouble to ourselves, and at such a very moderate charge, a picture—all but living—of China and the Chinese. We wish particularly to invite consideration to the price of admission, which, while some complain of as too dear, we honestly consider too cheap. A collector's noble fortune, the energy of a life—and the life of an intelligent as well as an industrious man—has been devoted to bringing into the heart of Europe an epitome of the Chinese Empire. He places in a focus all their objects of national interest—their idols, temples, pagodas, bridges; their various arts and manufactures; their tastes; their whims; their reception-rooms; their dresses; weapons of war; their vessels; the natural and artificial productions of their country; their books; their paintings: he groups their figures truthfully and artistically together. You enter the noble apartment—in which he has absolutely *realized* the Celestial Empire: you find yourself in the midst of this exclusive people; you are invited to inspect their marts; to take coffee in their drawing-rooms; you may, if you please, weep with the widower who mourns in white: you may pore over manuscripts with the literary gentleman; or tangle the guitar with ladies—oh! rare advantage! who could never have been literary; you may inspect the tails of the mandarins; if given to seek a religion new to yourself, you may make acquaintance with "the three precious Buddhas;" and then, if you

are not what we should be sorry to imagine, you will rejoice a hundred-fold in the great privilege of Christianity. This, and ten times more than we can particularize in our notice, can be enjoyed for—half-a-crown. It is indeed truly said, in the well-written introduction to the catalogue, that a single article illustrates whole pages of written description—the mind becomes enlightened through the eye. As a means of education, the object is invaluable: it teaches by *things* rather than *words*, the Chinese Empire, with all its variety of light and shade; its experience; its religion; its *lanterns*; its oddities; its aphorisms—those texts of wisdom from which might have been expected a richer fruitage! the result of its practical and theoretical religion and policy—which has existed, unchanged, during a period of four thousand years—are concentrated, by the zeal and ability of one man, in a pavilion close to Hyde Park: supplying an exhibition more amusing, interesting, and instructive than any we have ever had in the British Metropolis.

It is singular enough, that to Mr. Catlin and Mr. Dunn—both natives of the United States—we are indebted for the most valuable assemblages of modern times: the one rescuing the memory and memorials of the Red Indians from oblivion; the other portraying China as it *was* five years ago, but, most probably, as it will never be again—for the European has entered its sanctuaries, and, the privacy of the Chinese once violated, they must become more assimilated to us in all things.

#### VARIETIES.

**THE ROYAL ACADEMY.**—Thomas Creswick, Esq., Francis Grant, Esq., and John Hollins, Esq., have been elected associates of the Royal Academy. As usual, the selection of these three gentlemen from among the candidates has given rise to considerable discussion; and, of course, there are, as there generally has been and will be, two opinions on the subject. In reference to Mr. Creswick and Mr. Grant, however, there can be but one feeling; the former stands deservedly high in public esteem, and he has long been regarded by his professional brethren with high respect; of Mr. Grant it would be scarcely too much to say that he is surpassed by no British painter of portraits, if indeed he be equalled by any artist in this particular branch. There will be many who think the Academy should have co-operated with the Nation in giving impetus to Historical Art; and who consider that body to already number among its members a sufficiently just proportion of painters in a department of the Arts which is undoubtedly better rewarded than any other; but, if a portrait-painter were to be elected, a worthier choice could not have been made. The observation, however, will not be thought to apply to the other portrait-painter, Mr. Hollins, who was elected at the same time, and, we have no doubt, to his own utter astonishment; for we imagine he little expected to have had his claims preferred before artists whose rank is unquestionably much higher. Mr. Hollins has indeed no pretensions to occupy a prominent professional place; in his own more immediate path he is a far way behind at least half a dozen competitors in the race; some friendly hands have enabled him to reach the goal before them; but it will be a serious question whether these friendly hands have not acted injudiciously as regards him, and prejudicially as regards the Royal Academy.

**THE QUEEN AND HER CHILDREN.**—Mr. Edwin Landseer has just completed a portrait of her Majesty, the Princess Royal, and the Prince of Wales; and it is about to be consigned to the hands of the engraver, by Messrs. Graves and Co., by whom the print is to be published. It is a very charming picture, and cannot fail of popularity, for it speaks to the heart of every English mother. The Queen is seen without state—apart from the forms and ceremonies of royalty, if not from the pomps and vanities of life; there is nothing to denote the power; nothing of the splendour by which she is usually attended; she sits alone, with no "peers" other than her children—no jewels but those which God has given

her, and of which she looks prouder than of the sceptre that sways her kingdom. She is, in fact, represented as an English lady, with a son and daughter, fair and healthy, and with the promise of long life, bravery, and virtue, strongly expressed in countenances indicative of intelligence and goodness. There are thousands of English homes to which this simple guise will be infinitely more acceptable than the robes, "Coronation" and "Dalmatic"—who will prefer the mother in her nursery-chair to the Queen seated on her throne, and love her all the better as the happy companion of her offspring children than as heading a council of Ministers. Her Majesty is dressed in plain black velvet, ornamented with point lace; the infant Prince rests in her lap on her left arm—a fine "burly" boy as any we might find in the green lanes of Kent; the Princess is leaning on "Mama's" shoulder, playing with a locket—a miniature of "Papa"—which she wears round her neck. The picture is a small one—about 18 inches high, and the same in breadth—for it is circular: the engraving will, therefore, be the same size, and will not have to undergo the process of reduction. It is, we believe, yet undetermined whether it will be engraved in line by Mr. Robert Graves, or in mezzotinto by Mr. Samuel Cousins: either will do it ample justice. Our readers will, perhaps, be, as we were, startled to learn, that for the COPYRIGHT of this cabinet picture the painter has received from the publishers no less a sum than *five hundred guineas*. The value of the painting is, we imagine, one hundred guineas, or at most one hundred and fifty guineas; for it is on a small scale, and is certainly not a work of time, thought, or labour. But, according to Hudibras—the couplet has grown into an adage,—

"What's the worth of anything?  
Just as much money as 'twill bring."

And we must assume that the publisher, who knows his own business fully, and made the bargain with his eyes open, considers himself justified in giving, for the painter's permission to make an engraving of the picture—about five times the value which the painter placed upon the property in the work: in other words, the publisher believes (and no doubt he is right) that the speculation "will pay." The demand certainly does appear to us to be enormous; and we cannot lose sight of the fact, that this five hundred guineas will have to be paid, not by the publisher, but by the public; for, of course, Mr. Graves, to cover this huge original outlay, must charge for the print double what he might have charged had the cost of copyright been somewhat within rational, or we should say reasonable, bounds. \* This principle—we cannot call it an *unjust* one, for it is admitted that a man may do what he likes with his own—works evil; it throws the publishers into the hands of some one or two artists, whom they are compelled to force into a popularity that shall remunerate the publisher at any rate; the consequence is that artists who have not been so fortunately circumstanced are excluded from the benefits which may be conferred upon them by the help of the engraver. The publisher makes a prodigious venture upon some one or two "great things;" and competition is out of the question. This is surely not a wholesome state.

\* We cannot avoid contrasting this fact with the conduct of De la Roche. When applied to, to engrave his noble portrait of 'Napoleon' (by which the publishers have realized a very large profit), he said, if it were engraved in *mezzotinto* he should require £70; but if it were produced *in line* he should be content with £35. It was engraved in line, and the sum of £35 was paid to him. What was the consequence? The print is published at the price of one guinea. It is one of the most exquisite examples of modern Art—the art of both painter and engraver; we believe above 2000 copies of it have been sold in England, and a much larger number in Paris. Such could not have been the case if the artist had expected to realize a small fortune by permitting a publisher to engrave his work; the publisher would have doubled the price of the print, and comparatively few would have been enabled to acquire it.

**THE COPIES FROM THE OLD MASTERS** have been exhibited at the British Institution, but among them there were few efforts of any promise; indeed, great names in this year's catalogue were rare; and works were few that could benefit the student; for the proverb about old Homer sometimes nodding is not less applicable to him, than to every other great man since his time. That materiality and roundness with which Vandyke has endowed so many of his figures and heads, though not all, can only be approached by veteran experience; it could not, therefore, be expected that a work by that master could be successfully imitated by those who are as yet but struggling to subdue the mechanical difficulties of Art. We mention Vandyke because there was a picture by him in the Exhibition, which we were well assured would be selected for copying, by some who would be first moved by the *prestige* of the name, and then enraptured, not less by the defects than the merits of the work. The very antipodes of these qualities of Vandyke, Sir Joshua has exhibited in very many of his works, where, in striving for the "ripe peach," he has forgotten roundness, in colour, and painted only brilliant masks. In painting, as in every-day life, the peculiar failings of some men sit upon them less objectionably than upon others, who have adopted them in their nakedness without the means of veiling them. We cannot, therefore, advocate copying any further than as mere mechanical practice; for if a picture be beautiful in proportion to its approach to nature, were it not better, at once, to apply to this source than to accept the version of another man, whose peculiarities we can never imitate, and which, if we could, would not possess the grand merit of originality? And as for the weaknesses of others, an artist ought first to dispose of his own before adding to his list: since those he would take upon him are sure to be more glaring than in his prototype; for it is scarcely less difficult to copy gracefully the defects than effectively the beauties of a work of Art. With respect to the copies exhibited, we would say nothing in discouragement to those by whom they have been executed; indeed their practical earnestness is much to be praised, but we could wish that it were directed into another channel. Those who have taken up the profession of Art will never arrive at any distinction unless their minds be furnished with ideas of their own; and few thus qualified could employ themselves in copying. To the **PUBLIC EXHIBITION** of these copies there are many serious objections; while there is no argument that can be urged in its defence.

**THE IMPERIAL ACADEMY OF ST. PETERSBURG** has elected as members three English artists—Mrs. Robertson (portrait painter), Mr. Raimbach and Mr. J. H. Robinson (engravers), and the diplomas have been recently delivered to them. To show, however, the mode in which such matters are expedited in Russia, it may be mentioned that Mr. Raimbach was elected twenty-five years ago, and Mr. J. H. Robinson seven years ago; although the "diplomas" have been only during the present month presented to these gentlemen. Nevertheless, they are members of a "Royal Academy," although it be but a Russian one—an honour for which they are considered not to be "qualified" in England!

**VIRTUOSI PROVIDENT FUND.**—We direct attention to an advertisement thus headed, in this number of the ART-UNION. It has the guarantee of several well known and highly respected names for its respectability. It is singular, and not very creditable, that when men of all classes of "trades" have their "Provident Funds"—from those of the East India merchants down to the "Licensed Victuallers,"—the dealers in the arts and in objects of virtu should have been so long without any. This reproach is now removed from them. They are composed chiefly of a class who, above all others, should be cared for under the pressure of poverty or sickness, for

most of them are men of education, intelligence, and cultivated minds; indeed, unless they possessed such advantages to some extent, they would be unsuited to the business they pursue. We shall take some opportunity of referring to this subject at greater length.

M. HULLMANDL has been honoured by the King of Prussia; his Majesty has transmitted to the lithographer the gold medal of the Fine Arts, in testimony of his approbation of the recent invention of lithotint.

SIR ROBERT PEEL has appointed one of the sons of John Martin, Esq., to an office under Government—a compliment to the painter and to the profession.

THE BOCCIUS LIGHT.—The cross roads opposite Northumberland House in the Strand have been defaced by a huge and unmeaning mass of iron framed to bear a lamp. The light is remarkably pure and brilliant, but the lamp-post, if we may so call it, is one of the most ungainly constructions of modern times—representing nothing and meaning nothing. It is indeed as ugly and un-English as the name by which it is distinguished. Surely this is intolerable, when so many graceful designs for purposes of the kind were at the command of the "architect." But Charing-cross and its vicinity appear destined to illustrate the bad taste of the nineteenth century.

FINE ARTS, IRELAND.—The Committee of the Royal Irish Art-Union have succeeded in securing the services of the eminent engraver, Mr. Richard Golding, for the charming subject by MacIac, 'The Peep into Futurity, or an Irish Girl trying her Fortune.' Mr. Golding's powers are so well known by those masterpieces, after Sir Thos. Lawrence, 'The Princess Charlotte,' and 'The Portrait of Sir Wm. Grant, late Master of the Rolls,' and 'Illustrations of Don Quixotte,' after Smirke, &c., that we need only mention his name, and connoisseurs in engraving will be able to appreciate at once the value of the acquisition to this Society of his undivided exertions. It is also, in some measure, a most happy restoration of an eminent engraver to the country. For Mr. Golding, being very independent, had ceased from pursuing his profession altogether, as far as publishers were concerned; his last work of any size was the 'St. Francis,' after Paul Veronese, in the National Gallery, undertaken at the instance of the Society of Engravers; and so pleased were these competent judges, that 100 guineas extra were awarded by them to mark, in some measure, their opinion of the success of this effort. Mr. Golding has been induced chiefly by the beauty of the subject at present in question to undertake it, so that a first-rate work may be confidently looked for. Great credit is due to the committee of management for their exertions and arrangements, by which this Society seems likely to keep the lead in this important branch.

#### THE ART-UNION SOCIETIES.

We find it a task of no ordinary difficulty to write upon this subject. The principle having become fashionable has, of course, like all other fashions, spread; and something like a mania, in reference to it, seems just now to exist in Great Britain. Still it is a wholesome and not an unhealthy fashion; the "rage," if it must be so called, is not for foolish, dissipated, or debilitating pleasures: its object is rational and intellectual; and although some unnatural excitement may be mixed up with it, we have very little fear of its producing other than great and extensive good. A community will be always awayed by some overruling "passion;" sometimes it will be licentious; sometimes extravagant; sometimes brutal; and sometimes dangerous to the general and individual health. We are not far removed from the age when a pair of ruffians, going to beat each other in a ring, could draw crowds of followers, and have their "doings" trumpeted in nearly every newspaper of the kingdom. We might refer to a hundred customs, projects, or inventions upon which the world has gone mad for a time, from velocipedes and kaleidoscopes to railroad shares and joint-stock companies. If the fashion for Art-Unions be a mania, it is at least one that can lead to no present evil; in no point of view can it be regarded as mischievous, much less pernicious; and it seems to us, that those who augur danger from them for the future are very greatly mistaken. They will inevitably create an appetite for works of Art, and a desire that cannot but go on increasing; and this effect will be produced

in places and among classes that could not be reached by ordinary modes, or be influenced by other than extra-ordinary proceedings. Take, for example, the town of Sheffield, and the broad province of Yorkshire. In that town, we know upon good authority, heretofore very few works of Art have been sold; the London print-publishers have scarcely any "accounts" there. An enterprising trader takes it into his head to adopt a plan by which he circulates two or three thousand fine engravings throughout the neighbourhood. This is not a matter of mere speculation. It has been done. Will any person contend that this is injurious to society, or that its working will be prejudicial to the Arts? Can he lose sight of the truism that the acquisition of one luxury begets a longing for another? Will he not reason that the possessor of one or two prints desires to possess more; and that so natural is the wish of men to go beyond their neighbours, that those who have the means to purchase them will obtain paintings—which the less wealthy cannot acquire. It is easy to prophesy concerning things incapable of proof; yet we venture to assert that five years hence a larger number of prints and pictures will be sold in Sheffield in one year, than have been sold there since the year 1800.

In this spirit we take up the case of the NATIONAL ART-UNION; the announcement of which (in our columns last month) seems to have frightened some of our contemporaries out of their wits; or we should, perhaps, say, *into their wits*: for the project has been met, not with serious consideration and argument, but with solemn jokes. Thus reasons the *Spectator*:—

"All prizes and no blanks," is the motto of these picture-lotteries: a print is to be given to each subscriber on payment of his subscription, just as you are presented with a playbill on taking a place at the theatre. Each individual print-collector *in esse* becomes a 'patron of Art' *in posse*: a turn of the wheel of fortune converts any dunce into a dilettante, with 'the galleries before him where to choose, and ignorance his guide': who would refuse a guinea to promote the Fine Arts in so delightful a manner?"

This plan of the "National Art-Union" is, no doubt, a private speculation; its projectors having mainly in view their own individual interests; as, indeed, is the case with every publisher of prints; but, with both, their advantages must entirely depend upon the advantages they give to the public. If the public are benefited, it is neither unjust nor unreasonable that those who benefit them should receive an equivalent. The directors of this establishment fully and fairly state that "the plan originates in private enterprise;" and they consider that it "cannot be treated as an objection; inasmuch as in this country such is the origin of nearly every great and prosperous national undertaking—which can benefit its projectors only by really benefiting the public."

This is in reality the only objection that has been as yet urged against the plan. We cannot attach any real value to it; inasmuch as it would equally apply to the company who made the railroad that conveys us to Liverpool between sunrise and sunset—in fact, to all inventors of utilities. We have then chiefly to inquire will, or will not this project benefit the public and promote the welfare of British Art? We have no hesitation in saying that it will—if there be judgment, taste, and integrity in the parties to whom the conduct and superintendence of the affair be intrusted; and as little do we hesitate to assert, that if either of these qualifications be absent, it will be a failure, injurious to the Arts and ruinous to its projectors. They must select judiciously; they must act uprightly; they must be liberal in all their dealings; they must, in short, satisfy the artists and the public, or they cannot even hope to prosper. We have from them a better guarantee than their resolutions and promises—the certainty that their success depends entirely on their well-doing. Their interests are deeply involved in the issue.

Competition is as the lifeblood of the great heart of the world. One consequence arising out of this plan will inevitably be, that the existing Art-Unions must bestir themselves; must obtain really fine engravings, and not such comparatively worthless things as they have given us heretofore; must supply the promised prints with greater punctuality; and must adopt some mode for preventing selections of inferior pictures.

We must draw a marked line of distinction between societies established wholly and solely for

the promotion of British Art, and those that have chiefly if not exclusively in view the personal advantage of the projectors. It is impossible to exaggerate the merits of the gentlemen who, in forming and carrying on the London "Art-Union," have conducted it to its present "high and palmy state." They have been actuated by the noblest motives; they have laboured long and hard without any reward, or the hope of any reward, beyond the satisfaction they have felt in finding their efforts crowned with success;—excluding even the small recompense of patronage. They have done immense good, and will do more; and it is undoubtedly they who have given existence to such Associations as that to which we at present more immediately refer; for they have excited an appetite which is not easily satisfied; and taught the public to demand better things than they have yet received. If they had not done this, indeed, they would have done little good; for this was after all the great and leading purpose for which they combined. Witness this passage copied from the first printed Report of the "Art-Union" of London:—

"The promoters of the 'Art-Union' desire earnestly to see similar Societies multiplied throughout the kingdom; were this the case, a great increase of public attention to the importance of the Fine Arts, as a matter of national and universal concern, would necessarily follow; and it cannot be too constantly remembered that before ART, in whatever path it manifest itself, can be duly honoured and its interests fairly protected, it must be generally and justly esteemed; towards this estimation such ASSOCIATIONS may in many ways effectually contribute."

In an advertisement, which appears in the columns of our journal of to-day, the Committee of the London Art Union "view with distrust" the associations which are "speculations for individual benefit;" but this alarm has been expressed before they could have seen the prospectus of the National Art-Union. It was published in the *Spectator* of Saturday; and, no doubt, will also be transmitted to us for publication before we go to press; although as yet we have not received it. To us this document appears fair, open, and just; and of the prints to which it refers as ready for the subscribers, we can, of our own knowledge speak, as fine, beautiful, interesting and instructive examples of Art. The London Art-Union cannot believe that the extensive circulation of such works can operate injuriously upon the great cause they are banded together to uphold.

We have occupied much space in the treatment of this subject—space which we can this month ill spare; yet we have left many points unreverted to, and many things untouched, upon which we ought to comment.

Again we say, that if this plan of the "National Art-Union" be fully, fairly, and honestly carried out, it will succeed, and it ought to succeed. If there be the slightest departure from a just and upright course, we shall be among the first to point it out. It will require a strict surveillance unquestionably, and, at least as far as we are concerned, it shall have it.

The artists—and much for or against the project will rest with them—may most materially advance the power and welfare of their profession, by aiding to turn the current of public-fancy, fashion, or passion, whichever it may be—into a right channel. To familiarize the general mind to what is really excellent is the only way to promote excellence extensively. As we have said, we take a favourable view of this new plan solely because its projectors dare not aid in the circulation, and the consequent sustenance, of mediocrity. Whatever their motives be, the results can be only beneficial to the Arts, unless the parties interested desire failure instead of prosperity; inasmuch (we quote from the advertisement) "as the managers of the 'National Art-Union' will be compelled to choose only such works as are of acknowledged excellence: such only as are calculated to improve the general taste; and such only as will be really worth the value placed upon them. Upon the just and effectual working out of this portion of their plan, they ground their expectations of success."

Our cry is, for "Art, cheap and good;" those who will supply it "cheap and good" have right to calculate on our support.\* A few years ago

\* Just as we are going to press we hear of another project of a really astonishing character. Mr. VINTAGE is about to publish, in monthly parts, a collection of engravings from the works of the old and moderu

"cheap and good literature" met with earnest and able advocates; the people responded to the call that was made upon them; and the consequence has been, that almost every cottage in England has its "library." A collection of the best works in the language may now be obtained by the weekly savings of a mechanic during a year.

As surely as we write, a similar result will be obtained for Art. This "National Art-Union" may be followed by others. We care not how many there may be—so that they give us

"ART CHEAP AND GOOD!"

#### PRINTING IN OILS.\*

THE INVENTION OF M. LEIPMANN.

We subjoin a brief account of this invention, sufficient to give "an idea" of the mode of the execution; but for the minute details of the machinery and mechanical contrivances, and manner of manipulation, we must refer the reader to the book published by the inventor, which seems to contain all that can be communicated to facilitate the process without seeing it. It appears to us a very difficult one, requiring in its present form such extreme care, accuracy, labour, and time, that, unless it can be modified, it is not likely to be of very general application. Still means may be devised to lessen these in the execution; and the principle has that simplicity which is so often the characteristic of really great inventions, and may be capable of various application.

It is several years since a strong sensation was excited in the world of Art by the appearance at Berlin of certain copies of a portrait by Rembrandt, marked in the catalogue of the Berlin Museum, 11, No. 335, 1ft. 9jin. (German) in height, by 1ft. 6in. in breadth. These copies resembled each other so perfectly that it was impossible to doubt that they were produced by machinery. The brilliant technical handling, the whole depth and power of the oil colours, and the strong impasto of the original, were all repeated in these copies. Conjecture grew weary in trying to discover what were the mechanical means employed; none known at the time were sufficient to produce such results. At the same time, the discoverer, Herr Leipmann, the painter, of Berlin, gave it to be understood that he was not himself satisfied with the means he had employed to produce the copies of the Rembrandt portrait, and that he had another quite different process in view.

There appeared, accordingly, at the Berlin exhibition of 1841 a new work in oil printing, being a copy of a small picture by Mieris, 11, No. 320 of the Berlin collection, 4½ inches in height, by 3½ in breadth.

As a picture, this new specimen had less merit than the copies of the Rembrandt portrait; but when the difficulties of the work were considered, arising from the small size of the original, the extreme delicacy of the blending of the tints, and the minuteness of the objects represented, it was, notwithstanding, acknowledged to be an advance in the art of oil printing.

Various offers had been made to the artist to induce him to disclose his secret for a certain advantage to himself; these offers were invariably declined, simply because he had not yet succeeded in bringing his discovery to the degree of excellence which he desired.

But he had struggled with privations for many years in order to attain his great object, his health became impaired, and it was feared his secret would sink with him to the grave. At this time the Prussian Government came forward, and Herr Leipmann agreed to communicate his invention to a person high in office. The judgment of this person was so favourable that a pension for life was immediately secured to Herr Leipmann, on the condition that he should make his discovery known to the public.

The result of this agreement was the publication of a book describing, in the most minute and masters—"THE BEST PRODUCTIONS OF THE BEST SCHOOLS." Each engraving will be in line, in size about eight or ten inches by six, with accompanying letter-press; and these he designs to publish at 3s. each part, i.e., one shilling for each print. He calculates, of course, upon a very large sale; and such large sale will no doubt have been induced by the almost universal feeling that has been recently stirred up in this country in reference to Art.

\* Invented and described by J. Leipmann. Berlin, 1842.

exact manner, everything regarding the invention, with directions for constructing the machinery necessary, &c. &c. The persons to whom Herr Leipmann has himself explained the process, and shown the mechanical means he had at command, consider it almost miraculous that with such means such results could have been produced, and express the greatest admiration for the patience, labour, and ingenuity required on his part. They also consider that, when so much was effected by the imperfect machinery his limited means placed within his reach, much improvement may be looked for by the application of the best machinery, constructed with the care and nicety that is seen in the mechanical contrivances of the present day.

Herr Leipmann was nearly led to his discovery by the observation, that the effects of colour produced, by the most celebrated colourists, the painters of the Venetian and Flemish schools, did not depend on an uncertain and undecided mixture of tones; that in these great works the colours were not mixed on the canvas by the inspiration of the painter's eye and wonder-working pencil, but were grounded on a deeply reflected and distinct arrangement of colour, by which the tones, whether transparent or in impasto, were brought out and blended together. It appeared, therefore, that by following this arrangement of colours and tones, and discovering means to give, according to the original, transparency or impasto to the picture, a perfectly similar work would be produced; but no machinery in use was adapted to these effects.

Ruminating on his desired invention, his first plan was to place together long pieces of colour exactly imitating mosaic work, the extremity of the pieces of colour forming the surface of the picture, and fixed in wax or soap, or some such material. He selected the colours and their most delicate varieties with the greatest care; but on attempting to make the impression the result was not satisfactory, and he turned his mind to a different mode of execution. This was to construct small tubes about an inch in length, and half an inch in breadth, having an opening in width of only half a line. These he filled with colour in rather a more fluid state than is usually adopted by painters. These were placed in an inclined position, so that the colour might always find its way to the small opening, and that impressions might be repeated as long as any colour remained in the tube. The tubes were placed, according to the colour of the picture, side by side, till the whole surface, which was to give the impression of the picture, was filled. It may be observed that the greatest accuracy is required in selecting the colours and arranging the order in which they are placed: for this purpose a drawing must be made indicating the distinct place of every colour in the plate.

A great difficulty here presented itself, namely, how to keep the colours in a fluid state within the tubes during the manipulation required to fill some thousands of these with colour. It was necessary to find an oil which should remain liquid during the operation, and yet dry quickly when it was completed. These qualities Herr Leipmann found in oxfoot oil, or bone oil, such as is used for the finest machinery. The colour thus prepared must be received on a ground which imbibes the oil, and which has received on the opposite side a coat of bleached linseed varnish (leinolfernis), and it will dry completely. Being satisfied with the result of experiments made on this plan, he proceeded to make accordingly the impression of the Rembrandt portrait.

Having first directed his attention to the preparation of the drawing, he took flat surfaces half an inch in thickness; in these he made holes, and in these holes he fixed the tubes of colours, fastening them at the back of the plates. On the front of the tubes was fixed a piece of thin tin, in which were openings cut corresponding perfectly to the drawing of the picture from which the colours were to issue. The impression was not given directly to the surface intended for the picture, but was first received on a sort of velvet stretched on a frame; from this the impression was taken, and the result was the fine blending of the colour seen in the Rembrandt portrait. As printground (druckgrund) for the picture, a thin paste was used. When the first impression was dry, the same means were used to give the glazings, but it will be understood easily that this was a much simpler process. To give the softer and harder

lines, and the complete form of the drawing, fine stripes of tin were used. The strong impasto was given, where required, directly from the tubes to the picture.

The impressions of the Rembrandt portrait testify the success of this experiment; at the same time Herr Leipmann felt that for many pictures it was not adapted, and that the difficulties and inconveniences of the process would prevent its ever becoming extensively used.

His former idea of placing the colours in the manner of mosaic now recurred to him as susceptible of improvement and adaptation to the desired end. The observation that a little oxfoot oil, mixed with very thick colour, rendered it sufficiently moist to give the impression to the velvet; the velvet by receiving a coat of this oil might be made capable of taking the impression from drier colours; and also that the mixture of some gluey substance with the colours to be used, might be employed to harden and make the mass fit for giving a sharp impression.

After experiments with various gluey substances, he found white of eggs the best adapted; and he applied it in greater or less proportion to the different colours, according to their peculiar dryness or moisture.

In this manner, when the mass of colours was united, it was as hard as gypsum. When the surface of the mosaic was to be applied to give the impression, a coat of oil was given. An important point of the discovery must here be noted. It was desirable that every tone of colour, besides being true in tone, should also have its due force of impasto. To attain this object he mixed the colours with finely sifted sand—such sand as is used for moulds—and he found that it was not transferred to the picture, but remained in the mass. He therefore mixed sand with the colour according to the degree of impasto he wished to give. If he wished any part of the picture to be without colour he used sand only; where he wished a strong impasto to appear he mixed no sand with the colour.

After these experiments he considered that the great difficulties were overcome, and he proceeded to attempt another picture. The book gives a full account of the machinery used in this second process, and it is impossible here properly to describe it; nor even the manipulation clearly. The copies of the Mieris portrait above mentioned were produced by it.

The first step, as before, was to make a drawing of the picture with the most perfect accuracy, and marked in a manner not only to indicate each tint, but also the degree of impasto belonging to each, to be exactly followed in the arrangement of the colours in the mass of mosaic. For this arrangement a peculiar machine is required.

The result shows a representation on the destined ground of the picture with the softest blending of tints entirely opposite to the hard cut effect of mosaic work. The proper form of the objects of the picture are produced by another machine, mostly of finely-rolled lead, which is carried into the mosaic mass of colour. The number of the impressions depends on the thickness of the mass of colour. It was two feet in length for the little Mieris picture.

The surface of the mosaic mass was covered with paper moistened with oil: from this it was given directly to the picture for the printing ground, of which, as before, a thin paste was used. After every impression the mosaic mass must be smoothed to take away the adhering sand.

The glazings were given by the same process when the impression was dry, only first received on leather stretched on a frame. Where stronger or softer lines were desired, a similar process was used: only the delicate lines were first received on thin leather, or some other material, the strong given directly. For the strong impasto lights the tubes with colour were used as in the former experiment.

We here close our imperfect account, necessarily so, because, without seeing the machines, many steps in the process cannot be comprehended. Of what modifications it may be susceptible it is impossible to say: at present we are inclined to think that the revolution in Art, which an easier process on the same principle may one day effect, is not yet completed; but it is possible that nearer observation may make the difficulties appear less.

## REVIEWS.

**THE CORONATION OF HER MOST GRACIOUS MAJESTY, QUEEN VICTORIA.** Painted by Sir GEORGE HAYTER. Engraved by H. T. RYALL. Publishers, GRAVES and WALMSLEY.

This great print is at length before the public, or rather the early proofs have just been issued; and, considering its magnitude and importance, and the immense number of portraits introduced into it, the wonder is not that it has been so long a time on hand, but that it has been completed within a reasonable period. It is, in truth, a national work—a grand record of the most important and interesting event of the age and country; and will be valued, not alone for its merits as a work of Art, but as a pictured representation of a memorable scene, and as a series of portraits of the worthies of the 19th century.

In criticising it as a picture, due regard should be had to the difficulties which the artist had to overcome; some of which no power of genius could have altogether surmounted. The incident was one that allowed no scope to fancy; the faculty of invention was of no use to the painter; he was compelled to be almost as literal a copyist as the engraver who was to follow him. Westminster Abbey could not be altered to meet his views; nor could the actors and actresses in the magnificent drama be changed or displaced to suit his purpose; the whole scene must have been painted—and was painted—exactly as it occurred. These difficulties, however, are by no means all to be treated as disadvantages: the place was a noble one, linked with glorious associations, and rich in actual architecture, as well as in memories of the past. The persons who met there on the memorable morning of "THE CORONATION" were the aristocracy of Great Britain—a congregation of—

"Fair women and brave men,"

headed by a young, beautiful, and most interesting maiden, who, scarcely more than upon the verge of womanhood, was about to assume the highest position in the realm—the proudest position in the world. She was surrounded by the noblest and most distinguished of her subjects; and among them were men of imperishable fame.

To picture such a scene was a privilege; and Sir George Hayter was fortunate that it fell to his lot. Perhaps it was fortunate for the public also; for, all things considered, we doubt if there be any British artist who could more ably and satisfactorily have discharged the arduous task. Imagine *seventy* portraits—every one of them "taken from the life;" grouped precisely as they stood at the moment selected from the impressive ceremony—each one habited as "upon the occasion;"—and, above all, let us bear in mind the severe test to which the painter must be inevitably subjected—for all this was known to thousands; and every looker at the picture was a judge as to the *likeness* of each individual pictured. Not to have failed, therefore, under such circumstances, would have been great merit; to have succeeded, is a great triumph.

We have had other occasions for describing the picture; and, inasmuch as it will be in a few weeks fully before the public, to go over the ground again would be superfluous. It contains *seventy* portraits; and, without a single exception, they are good *likenesses* of the parties introduced: this, in fact, constitutes the main value of the work; for all, or nearly all, are parts of British history. First is the Queen, seated in the chair of state, at the moment she has taken "the oath" administered to her by the Archbishop of Canterbury, standing on the steps of the altar; and her Peers are exclaiming with hearts in their voices, "God save the Queen." On her right are august members of her family; around her are the chief supporters of her throne; and the several high personages who witnessed the ceremony, and those who were officially engaged on the occasion.

Hereafter, this work will be an authority; when the historian has dealt with each individual present. How largely will the value of this print be then enhanced: what would we not give for a like record of the coronation of Queen Elizabeth—to see gathered together the famous worthies of her Court, who made her reign glorious, and gave their own names to immortality.

Sir George Hayter has been fortunate among painters; and certainly neither the Queen nor the

country have reason to regret that the task of perpetuating the memory of the most interesting and important event of the age was consigned to his hands.

God grant that none of us who are not children may live to see an artist employed for a like purpose! God grant that the reign of Queen Victoria may be as long as it promises to be happy!

It would be unjust to the engraver to dismiss this subject without admitting him to a large share of the honours it will obtain. It was an undertaking of vast labour and of very great responsibility—one that required ability, industry, and exceeding accuracy. And it has had them all. It will add to the already established reputation of Mr. Ryall. He has skillfully and very happily distributed the lights, so as to bring out the more prominent parts of the picture: the countenance of each person of the assembled group has been wrought upon with due care to the importance of preserving the likeness; yet the less essential portions of the work are made to harmonize with the leading features; and the tone that pervades the whole is in admirable keeping.\*

**STUDIES FROM OLD ENGLISH MANSIONS, &c.**

By C. J. RICHARDSON, F.S.A., M.I.B.A.

Published by T. McLEAN.

It is not in a metropolis like ours, wherein every year brings its notable changes, that we are to look for much that is venerable appertaining to the order of private dwellings; but that the country is rich in interesting remains is sufficiently shown by the many works of which they form the subjects. They have had their not less quaint contemporaries in cities, but these have been long ago swept away by the tide of innovation. The sources, therefore, whence we look for these *vestigia majorum* are generally the ancient patronies in the country. There is a class of self-esteemed antiquarians who lavish their cares and admiration upon all that is old, without regard to quality of execution or design. The publication, therefore, of such works as that before us, is desirable, for in them we find all that is beautiful, judiciously extracted from the cobwebs of several centuries, and they serve as hand-books to educate the taste of the aspirant, and assist him at need among such reliques as constitute their subject matter.

The descriptions of the buildings and other objects are arranged here in a novel manner upon the pages set apart for them; being printed within a florid border of various designs, around which are arranged fragments of ornamental sculpture and carving, and pieces of ancient furniture, among which are a variety of chairs from Allington Castle and Abington Hall; also a portion of the carved work of the staircase at Crewe Hall, remarkable for the chaste richness of its carving; and a garden bench from Holland House, said by Horace Walpole to have been designed by Francis Cleyn, the same person, we believe, who, in the reign of Charles I., conducted the tapestry establishment at Mortlake. Among the larger subjects are Gorbamby House, Hertfordshire; Park Hall, near Oswestry; the old Town-hall at Nantwich; Montacute House, Somerset; Burton Agnes, Yorkshire; the Carved Parlour, Crewe Hall, Cheshire; besides many other minor subjects in plate and ornamental furniture.

Of Gorbamby House all that remains worthy of the attention of the architect is the small porch, which is in the Italian taste, although the other portions of the building seem to have been Gothic. It was built by Sir Nicholas Bacon, who, in the reign of Elizabeth, held for 20 years the office of Lord Keeper, who was succeeded in the possession by his son, the famous Lord Verulam. The plate exhibiting Park Hall affords the finest specimen we have ever seen of the ancient manner of building houses of timbers with the intervals between them filled up with mortar or some other substance. It is not known when Park Hall was

\* The newspapers inform us that Mr. Ryall has had the honour of an interview with the King of France at St. Cloud, for the purpose of presenting to his Majesty his last work, "The Coronation of Queen Victoria," of which he was most graciously pleased to express his unqualified admiration. On the following day Mr. Ryall received a most flattering letter from General Athalin, aide-de-camp to the King, expressive of his Majesty's satisfaction at the beautiful engraving presented to him, accompanied by a gold box, of exquisite workmanship, with his Majesty's initials, surmounted with the crown of France.

built, but it is supposed to have been prior to the reign of Elizabeth. The interior is of the same character as the exterior, the rooms being panelled and the fire-places richly ornamented. There are in various parts of the building Latin inscriptions, among which appears the golden rule—"Quod tibi fieri non vis alteri ne feceris." At one end of the building stands a small chapel. There are in different parts of England, houses constructed in the manner of Park Hall: in an ordinary way it is a rapid, and cheap, but superficial manner of building, and has in earlier times been much practised in England; houses are still erected in this way in some parts of France, particularly in Normandy, where there is much in the economy of every-day life that has not improved since the days of the Conqueror. This plate is followed by an interior—the Drawing-room at Park Hall—the ceiling of which, given in a separate drawing, is extremely beautiful. Montacute House was begun in 1580, and finished in 1601, for Sir Edward Phelips, in the possession of whose descendants it still remains. Montacute was remarkable for its hospitality, as alluded to by the following graceful distich over the entrance:—

"Through this wide opening gate

None come too early, none return too late."

Burton Agnes contributes a view of the entrance to the staircase from the great hall. In this plate is seen a curious chair, the seat and back of which is made of a bull's hide. Burton Agnes lies between Hull and Scarborough, and is the property of Sir H. Boynton.

The Carved Parlour, &c., at Crewe Hall is a rich and elaborate plate, executed with such nicety as to give the minute details of the abundant carving and moulding. From Crewe Hall there is also a screen of the period of James I.: it seems to have been carved with extraordinary labour and constancy, the design in its ornamental parts involving the utmost complicity of detail.

Other plates in the work exhibit various valuable and curious objects, as the marble Font in St. James's Church, by Gibbons; the Nautilus Shell, from the Plate-room at Windsor, supposed by Flaxman to have been enriched by Benvenuto Cellini, &c. &c.

The work is executed in lithography with much care and an admirable crispness in parts well suited to describe the material of the objects pictured. All the plates are tinted, and the shadows fall into their places with all the necessary flatness and evenness of tone.

It is of great value to many classes—to the artist, the architect, and the antiquarian, more especially, and indeed to all who desire acquaintance with earlier English habits and character. Mr. Richardson has conferred an obligation upon his country by producing a volume that cannot fail to gratify, interest and inform all persons who may be fortunate enough to possess a copy of it.

**ANCIENT AND MODERN ARCHITECTURE.** Edited by M. JULES GAILLHARD. FIRMIN DIDOT and Co., Amen-corner.

If the word promise held to the ear by the title of this enterprise be not broken to the hope, it will prove a work of deep interest, and we may say almost endless labour—if we may for a moment be allowed to sit down within the pyramid of Cheops, and look thence up a dark vista of thousands of years to the light of our own days. "Ancient and modern architecture" is a vast title; however, to carry out its meaning in the matter to be arranged under it, we find the editor, assisted by a phalanx of *collaborateurs*, many of whom are already favourably known to the world. To convey a definite idea of the purposes of the undertaking, it is proposed to arrange and describe the structures of the Romans in this order:—1. Religious Architecture, consisting of Temples; 2. Civil Architecture, consisting of Palaces, Houses, Basilicæ, Fora, Columns, Triumphal Arches, Theatres, Circuses, Amphitheatres, Naumachies, Baths, Bridges, Aqueducts and Tombs; 3. Military Architecture, consisting of Walls, Gates, and Towers: whence we may infer, from the manner in which the descriptions in this number are written, that the work must contain a history of the civilization of the nations of whose edifices it may treat. From the earliest period to the middle ages its line of progress lies amid the wonderful edifices of the Egyptians and the mystic architecture of the Hindoos; the remains of the ancient Persian dominion, and of

the Pelasgic and Celtic tribes; and then amid the classic beauties of the Greek and Roman reliques. The middle ages supply the second period wherein the Byzantine and early Italian styles present themselves for consideration, followed by the luxurious taste of the Arabs. "The oriental arch," says the prospectus, "thus introduced into the west, caused a general revolution; and the architecture of this period, modified and enriched, becoming naturalized, produced those admirable monuments of Art which have been classed under the general appellation of Gothic—a class comprehending many of the noblest structures raised by religious zeal. In the 15th century the Roman taste prevailed in Europe, which, blending with the Gothic, produced a hybrid known as Italian architecture; whence arose that style called in France the *Renaissance*."

The first number of "Ancient and Modern Architecture" contains four steel plate engravings; two of which represent the façade, and the plan and sections of a *speos* dedicated to Athor, and situated in Nubia. The two latter are the Kailasa at Ellora, in the East Indies, together with its plan.

Ebsamboul is famous among travellers on account of its two temples sculptured out of the living rock. They are distinguished as the Great and Little Temples; and the former has long been used as a place of refuge for the inhabitants of the neighbouring district in cases of attack from the Bedouins who infest the deserts on the north and west. On such occasions the inhabitants take with them into these sanctuaries their flocks and herds, and successfully repel any attack which the marauders may venture to make. The ornaments and sculptures of the interior are blackened by the smoke of fires which have been lighted within the sanctuary on these occasions.

These temples are cut out of a mountain called Djebel Ebsamboul, and the smaller is on the bank of the Nile; but the larger is at some distance. Belzoni was the first traveller who succeeded in so far overcoming the scruples of the natives as to gain admission to the sanctuary; this was in 1817; since which time Ebsamboul has been visited by Lord Prudhoe, Major Felix, and Sir G. Wilkinson. It is to the Little Temple that the plates refer, the sculpturing of which is described as having been commenced by cutting an inclined plane of the length of 88 feet, and of the height of 39 feet; then, six deep and lofty niches were cut, leaving blocks for six colossal statues, which were afterwards sculptured with a high finish into figures of the usual Egyptian character. A pronaos was then cut to the depth of 75 feet in the solid rock; a naos; a sanctuary; and, lastly, two small chambers, one at each end of the naos or cella. The supports of the pronaos are large square pillars resting on a socle, and crowned by a woman's head, sculptured in relief, as at Denderah and Thebes. The utmost width of the temple is 52 feet, in every part of it hieroglyphics abound; all the ornaments, although smoked, are well preserved; and the ceiling is painted blue, with a border of three colours. The front of the temple is ornamented by six colossal figures, already alluded to, three of which are on each side of the entrance; inclusive of the head-dress, these stand from 33 to 36 feet high. With respect to the antiquity of this monument, it cannot be considered anterior to Rhamesses the Great, as there is a series of painted sculptures illustrative of military exploits during his reign.

The Kailasa, represented in the other plates of the number, is a monument dedicated to Siva, and intended to represent the heavenly abode of this deity. It is considered one of the most perfect of the remains at Ellora; and, although excavated and carved from the solid rock, it has the appearance of having been erected stone by stone, and the more so, as being entirely detached from the mountain out of which it has been carved, and, as consisting of a single mass of stone, is called *monolithic*. In the work before us it is thus described: "The façade presents two projections on the right and left, and in the centre an entrance pavilion ornamented with pilasters, between which stand gigantic figures. The entrance pavilion is composed of five rooms, and surmounted by a story which opens on the area by a window with a balcony, undoubtedly intended as a place for the musicians on solemn festivals. The five rooms of this pavilion are disposed three in depth from the portal, and the two others laterally, both of

which communicate with the upper story by a staircase. The three central apartments are decorated with sculptures, to the length of 42 feet; these serve as a passage, and lead to the inner court. From the two lateral rooms we proceed to the upper story, which brings us to a stone-bridge, 20 feet by 18, having a parapet 3 feet 6 inches high. From this bridge we look down into the inner court on the right and left. By a flight of seven or nine steps we then enter the chapel of Nardi, the companion of the god Siva. This chapel forms a square, the side of which is 6 feet 3 inches long; the sides are covered with sculptures, and the interior is lighted by two windows on the right and left, looking into the inner court. We leave the chapel by a door opposite the one by which we entered, and find another stone-bridge, 21 feet by 23; and from this we have a view of the principal temple, the height of which, measured from the floor of the inner court, is 90 feet."

This work will appear monthly, and it must be a useful and valuable serial if care be taken to avoid the errors into which so many writers have fallen on the same subject. The style of engraving is well adapted to architecture.

**PORTRAIT OF SIR ROBERT PEEL.** Painted by J. DEFFETT FRANCIS. Engraved by FREDERICK BROMLEY. Publishers, WELSH and GWYNNE. This is a good portrait—like, and pleasantly like, the distinguished statesman whom artists and lovers of the Arts are especially bound to honour; for, however varied may be the estimate that mere politicians form of his mind and character, at least it is certain that he is the only minister who has given serious thought to the advancement of the Arts of his country. A time will come—long may it be postponed—when this fact will be among the proudest recorded upon his tomb. The statesman is here represented standing beside the "Table of the House," addressing "honourable members" in his usually calm, collected, and impressive manner, and which forms so striking a contrast to his more fervent and energetic mood. The expression of the countenance has been happily caught; it is highly intellectual, yet sedate; eloquent, yet unimpassioned; and, as a likeness, it will be classed among the best of the many portraits by which the world is sought to be familiarized with his features. It is full length, and is drawn with considerable skill. The engraving too is by no means unworthy of the subject. Still the exquisite copy of Sir Robert by Sir Thomas Lawrence leaves all competitors far behind. We do indeed sadly want another great painter to picture great men—for posterity.

**THE SLAVE MARKET, CONSTANTINOPLE.** Painted by Sir WM. ALLAN, R.A., P.R.S.A. Engraved by W. GILLER. Publisher, F. G. MOON, London; and A. HILL, Edinburgh.

This is a noble work of Art—a work of the highest class, of that class which unfortunately meets with far too little patronage among us. It is full of incident and character; containing a large number of figures, all drawn with skill and grouped with judgment. The task was indeed an arduous one; and one that could not have been undertaken by an ordinary mind. In the foreground is a Turkish Emir, who has just concluded a bargain for a fair girl, designed for his son, a simple-looking youth, who rides at his elbow. The lover of the doomed maid has burst into the "market-place;" from which two slaves are forcibly ejecting him; while the maiden looks a sad farewell as she sinks upon the bosom of her mother. This is the leading episode of the picture; but it abounds in "stories;" every portion of it is indeed made to contribute to the whole. The treatment of so difficult a subject has been such as to add largely to the already high reputation of the accomplished painter. Mr. Giller has done it ample justice. Few productions of the pencil inculcate a lesson so powerfully, or with such marked effect. The print is a contribution to the cause of humanity.

**SKETCHES IN THE HOLY LAND, SYRIA, IDUMEA, ARABIA, EGYPT AND NUBIA.** By DAVID ROBERTS, R.A. Lithographed by LOUIS HAGHE. With historical and descriptive notices by the Rev. GEORGE CROLY, LL.D. Publisher, F. G. MOON.

As we have had, and shall have, other opportuni-

ties for "saying our own say" concerning this beautiful, interesting, and valuable work, we shall call to our aid a new reviewer—no less a personage than the Hon. Lord Cockburn, who, at the dinner recently given in Edinburgh to David Roberts, thus described it:—

"There was another land that lay in all its silence and desolation; and seemed by the very impressiveness of its silence to demand the hand, and eye, and mind of an artist worthy to convey its treasures to the latest posterity. That region is connected with such associations—is connected with so many solemn and interesting events, that, so far as we can at present presume, it would be impossible that equal interest should ever be imparted to any other portion of the globe. The architectural structures which time has yet spared are no doubt, in point of mere architecture, not to be compared with the more perfect productions of Greece or even of later ages; but then the sites, but then the conditions, but then the antiquities, but then the histories connected with them—these things were worthy of Mr. Roberts; and, if I may say so, it appears as if Mr. Roberts was born to delineate such scenes. To go into those countries required no inconsiderable perseverance and energy, and was not unattended with very considerable personal danger. But all that our friend has braved; he explored the recesses of that patriarchal land, and returned to this country laden with the richest treasures, after having completed the finest pilgrimage of Art which perhaps ever was performed by a single man. The result has been marked by the most distinct and unanimous verdict that the public ever pronounced on a mere triumph of taste; and no wonder that it has done so, because, in the first place, the scenes themselves are connected with our earliest, our deepest, our most sacred associations; and, in the second place, they are presented to us with all the accompaniments of scenery and figures, which are not only delineated with the fidelity of the painter, but are touched off with the finest feelings of poetry."

This was well said and truly said. A work more worthy of universal praise has never been issued in this country; and, perhaps, it is not too much to say that it never will be surpassed; for rarely, indeed, can there be so fortuitous a combination of circumstances to ensure excellence. These are sufficiently obvious; among them marked reference should be made to the manner in which the drawings have been lithographed; they are triumphs of the Art; and alone justify England in challenging competition from any state of the Continent. Nor may we forget the powerful and eloquent written descriptions which accompany the prints. The brief notices of Dr. Croly are wonderfully condensed—a volume of thought in a few pages. Add to these—many other facts that will occur to the reader, not the least of them having reference to the enormous capital expended in the production by the enterprising publisher—and we may be considered justified in believing literally, notwithstanding the advances the Arts are daily making, that "we shall not look upon its like again."

#### THE ANNUALS.

THE BOOK OF BEAUTY.

THE KEEPSAKE.

THE PICTURESQUE ANNUAL.

THE FRIENDSHIP'S OFFERING.

THE FORGET-ME NOT.

FISHER'S DRAWING-ROOM SCRAP-BOOK.

FISHER'S JUVENILE SCRAP-BOOK.

In their varieties of green and purple, and scarlet and gold—they come! those winter flowers of Literature and Art—most desirable acquisitions are they to all dinner-givers, who find them admirable reliefs during the dull half-hour that precedes or follows the great business of a meeting. Most pleasant sights are they upon drawing-room tables, where they suggest topics for conversation; most agreeable gifts to keep memory alive are they, when friends may be far off; most useful are they as associates of the pencil and the pen—as bringing the "fair sisters" into closer intimacy, and as enabling the one to secure a welcome for the other.

First—*place aux dames*—comes THE BOOK OF BEAUTY, depending far less upon our courtesy than upon its own intrinsic merits. The frontispiece is a befitting one: "The Queen, with her Children;" of no great value as a work of Art, but welcome as suggesting pleasurable sensations. Next, a portrait of "Mrs. Kynastone," by Miss Fanny Corbeaux, exceedingly light and graceful. Next, the "Hon. Mrs. Spalding," a proof of what A. E. Chalon can do, when he frees himself from those gossamer webs that ladies love to immortalize with their own sweet faces. This portrait is

very near perfection: the attitude, so unstudied; the dress, so simple; the head, so full of woman's dearest and best expression—all harmonized in excellent feeling. The print is charmingly engraved by H. Robinson. This, and Edwin Landseer's portrait of 'Miss Ellen Power,' are worth the price of a volume, which, without illustrations, would be still really valuable. The grace and purity of Lady Blessington's taste is as conspicuous in the "Book of Beauty" as in all she has given to the literary world; and her contributors have done their *devoir* to second her designs. Sir Lytton Bulwer is taking rapid strides towards the spirit world. His 'Episode in Life' is marvellous enough to make our flesh creep; and while he was busy with the 'Mysteries of Life,' Mr. D'Israeli undertook to give the readers of the "Book of Beauty" a lesson on the realities of geography, which he calls 'The Midland Ocean.' Lady Blessington's 'Rail-roads and Steam-boats' is exceedingly amusing, imparting an air of mingled novelty and reflection to every-day occurrences;—one of the most difficult achievements in literature.

Her ladyship's two nieces contribute gracefully and with ability, to this favoured book; and Barry Cornwall proves that his exquisite poetry and his quaintness are still united. The list of contributors contains the most distinguished names in English literature.

THE KEEPSAKE, under the same skillful management, although not so much to our fancy, as the "Book of Beauty," is nevertheless a beautiful drawing-room book, containing two of Catermole's fine specimens of Interiors; a speaking portrait by Sir William Ross; a most lovely subject, worthy of Gainsborough, by Poole; a portrait of Mrs. Fairlie, where the saddest expression is mingled with rare sweetness. The Literature has been supplied by nearly the same writers who figure in the "Book of Beauty."

The accomplished lady by whom these volumes are "constructed" is peculiarly calculated for the performance of such a task. Her own fine taste and just appreciation of excellence are evident throughout; and these are combined with a high moral tone that may produce profit as well as pleasure. Few have attained more general or better merited popularity.

THE AMERICAN IN PARIS, OR HEATH'S PICTURESQUE ANNUAL, by M. JULES JANIN, illustrated by M. EUGENE LAMI, is the greatest novelty of the season; for although *en suite* with the other volumes of this series, its character is most advantageously changed. Instead of often-repeated details of mountain, town, and river, we have vivid and animated sketches of France and the French; and the illustrations are in perfect and admirable keeping, although, perhaps, the one or two in the "Keepsake" from the same hand may be out of place. The author and artist draw together; and the letter-press is a brilliant panorama from first to last. Indeed, there are few works of modern times that will more amply repay perusal. The famous French author, Jules Janin, writing under the guise of an American, has written boldly and freely, and most eloquently. We have never read aught that so completely introduces us into Paris: it is worth all the "guide books" that have ever been penned; but it has merit far beyond this—it is full of a fine philosophic spirit. The book is, indeed, taken altogether, by many degrees the most important contribution to our literature that has been bestowed upon us by the annual tribe; and Mr. Heath has conferred an obligation upon the public by tempting to its perusal by the addition of a series of admirable prints.

"THE FRIENDSHIP'S OFFERING" has been, we believe, intrusted solely to the care of that very right-thinking and graceful writer Miss Camilla Toulmin, who has renewed the youth of one of our oldest friends. Her own contributions are not the least pleasing or powerful in a well-selected volume; and there is the same evidence of gentle yet highly moral superintendence, as in the golden age of the book, when that earnest and faithful Christian, Thomas Pringle, sanctified its pages by the purity of his own nature. The engravings are of little merit: we cannot find one among them that would justify praise.

"Hail!" Say we to the old "FORGET-ME-NOT!" the father of the Annuals, and still edited by its projector, Mr. Shober. Perhaps, after all,

this little volume comes more home to our hearts than any member of its numerous family. We presented our copy to a young lady just married, who was born the year the first "Forget-Me-Not" was published! Yet it has come forth as gaily as ever—a pretty book—containing some very good literary matter, and illustrations, which do no discredit to their parentage, if they be not of a noble race.

FISHER'S DRAWING-ROOM SCRAP-BOOK.—Poor L. E. L.!—This volume brings her before us—how she used to fuss and torment herself, and turn over and over, as she received them, Mr. Fisher's multitudinous prints—complain of the difficulty of illustrating them; and then, by the power of her active and vigorous mind, she would turn off her difficulties with a bright smile, and set with them, with as much rapidity as skill, the jewels of her rich imagination. Mary Howitt edited the publication with considerable industry and talent, but of late, she has not been as popular as we think she deserves—while Mrs. Ellis has grown greatly in the esteem of the more serious portion of readers. In the management of the present volume its new editor has evinced much skill and care: the contents are varied and interesting, and do equal honour to her understanding and her amiable and cultivated taste. In the

JUVENILE SCRAP-BOOK Mrs. Ellis has been less successful—as a *child's* annual, the matter and diction is too advanced, and young persons, from the ages of 12 to 18, hardly need an annual. It is, however, a pretty gift-book, but has no pretensions to utility. It is one of the most arduous efforts of a superior mind to write what will at once please and instruct a child.

Considered merely as works of Art—excepting five or six prints in the "Book of Beauty," and two or three in "The Keepsake," which are much above the average value—the only work that calls for particular remark is that which contains the illustrations of M. Eugene Lami—"THE AMERICAN IN PARIS." We have here 18 engravings, productions of the burins of our English engravers. They are all remarkably full subjects; and must have been produced at great cost; a cost probably which the present comparatively limited circulation of an annual could not have warranted, but for the sale which may be safely calculated upon in France. In execution they are worthy of the high and palmy state of the genus to which they belong; and confer great credit upon the abilities of Charles Rolls, Wallis, Stocks, Radcliffe, Allen, and others, as well as to the matured and universally-acknowledged taste and judgment of Mr. Charles Heath. As pictures, they are very valuable: they are marvellously lifelike, full of spirit, point, and character—introducing us into the very scenes they depict: enabling us absolutely to dance among the merry folk who throng the "Fancy Ball;" join the solemn procession that bears the bones of Napoleon to their "new" grave; become spectators of the magnificent show at the Tuileries during the "review;" be present at the soiree at the Duke of Orleans—alas! there we can never really be—mingle with a "Parisian Family at Home;" enter the green-room of the opera; grow devout in the fine old church, "St. Etienne du Mont;" and even relish the manifold dishes in the interior of a "restaurant."

Again we thank Mr. Charles Heath for a valuable contribution to our imported Literature and Art.

#### TO READERS AND CORRESPONDENTS.

The Title-page and Table of Contents of the Fourth Volume of the "Art-Union," which the present number (for December) completes, will be given with the next number—for January, 1843.

It will be desirable that subscribers, who wish to complete their volumes for the year, would procure such numbers as may be deficient with the least possible delay. The earliest numbers—those for January, February, March, and April, 1842—are "out of print;" the other monthly parts may be still obtained.

We must entreat the indulgence of some correspondents, who will receive "replies" next month.

Just published, 21s. silk; India proofs, £2 12s. 6d. morocco.

THE KEEPSAKE for 1843; Illustrated by a Series of beautifully engraved Plates of Historical Subjects, Portraits, and Landscapes, executed under the superintendence of Mr. CHARLES HEATH. Edited by the COUNTESS OF BLESSINGTON.

London: Longman, Brown, Green, and Longmans

HEATH'S PICTURESQUE ANNUAL for 1843.

Just published, 21s. silk; India proofs, £2 12s. 6d. morocco.

THE AMERICAN in PARIS; being a Picture of Parisian Life, in the Court, the Saloon, and the Family Circle. By M. JULES JANIN. With Eighteen Plates from the Designs of Eugene Lami.

London: Longman, Brown, Green, and Longmans.

Just published, 21s. silk; India proofs, £2 12s. 6d. morocco.

THE BOOK OF BEAUTY for 1843; a Series of Portraits of the Women of England the most distinguished for their Beauty and Rank, engraved under the superintendence of Mr. CHARLES HEATH. Edited by the COUNTESS OF BLESSINGTON.

London: Longman, Brown, Green, and Longmans.

#### FREDERICK THE GREAT.

Now ready, Part I. to III., price 1s., to be continued Monthly.

THE HISTORY OF FREDERICK THE GREAT, translated from the German of KUGLER by EDWARD A. MORIARTY, A.B., very neatly printed in super-royal octavo, and will be illustrated by nearly FOUR HUNDRED SPIRITED ENGRAVINGS, in the first style of German Art, by ADOLPH MENZEL.

London: George Virtue, and sold by all Book-sellers.

#### NEW WORK BY MR. CHARLES DICKENS.

On the First of January, 1843, to be completed in Twenty Monthly Numbers, price One Shilling each, the First Number of

THE LIFE AND ADVENTURES OF MARTIN CHUZZLEWIT, his Relatives, Friends, and Enemies. Comprising all his Wills and his Ways; with an Historical Record of what he Did, and what he Didn't: showing, moreover, who inherited the Family Plate, Who came in for the Silver Spoons, and who for the Wooden Ladies. The whole forming a complete key to the House of Chuzzlewit. Edited by "BOZ." With Illustrations by "PHIZ."

London: Chapman and Hall, 188, Strand.

#### BURNET'S ILLUSTRATED EDITION.

Just published, in 4to., price £2 2s. in French boards, and on Royal Paper, with Proof Impressions of the Plates, price £4 4s. half morocco, gilt tops.

SIR JOSHUA REYNOLDS'S DISCOURSES, Delivered to the Students of the Royal Academy. Illustrated by Explanatory Notes and Plates, by JOHN BURNET, F.R.S., Author of "Hints on Painting."

James Carpenter, Old Bond-street.

Published in 4to. price £4 10s. in French boards; and on royal paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, price £7 7s.

A TREATISE ON PAINTING. In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

The parts may be had separate.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Student in Art in the New Edition of the Encyclopædia Britannica—See the article "Drawing."

James Carpenter, Old Bond-street.

Preparing for publication, in one volume, Imperial Quarto,

MEMOIRS of the LIFE of JOHN CONSTABLE, Esq., R.A., with Selections from his Correspondence and other Papers, and Notes of his Lectures on the History of Landscape Painting. By C. R. LESLIE, R.A. Illustrated with the Twenty-two Mezzotinto Engravings, by D. LUCAS, from the Pictures of Mr. CONSTABLE, originally intended to form a work entitled "English Landscapes."

As the number of Copies printed will be limited to one hundred and fifty, the impressions of the Engravings, which are on steel, will all be equal to proofs, and the price of the work, to Subscribers, will be Two Guineas and a Half in boards; to Non-subscribers, Three Guineas.

London: Names of Subscribers received by James Carpenter, Old Bond-street; Paul and Dominic Colnaghi, Pall-Mall East; Mr. D. T. White, 28, Maddox-street, Hanover-square; and Mr. Tiffin, 434, Strand; at whose Establishments Specimens of the Engravings may be seen.

This day is published, in one volume royal quarto, with Eighteen Engravings and several Woodcuts, handsomely bound in cloth, price 15s.,

**THE NATURAL PRINCIPLES AND ANALOGY OF THE HARMONY OF FORM.** By D. R. HAY, Decorative Painter to the Queen, Edinburgh; Honorary Fellow of the Royal Institute of the Architects of Ireland, and Author of "The Laws of Harmonious Colouring," &c.

"Wherever the best taste differs from the worst, I am convinced that the understanding operates, and nothing else."—Burke on the "Sublime and Beautiful." William Blackwood & Sons, Edinburgh and London.

Now ready, in Imperial Folio, 44 4s.,  
**SKETCHES OF CHINA AND THE CHINESE.**—A series of 33 large and beautifully-executed Drawings in tinted Lithography. By AUGUSTUS BOASER. With Letter-press Descriptions.

The Work contains Views of—  
Island of Hong Kong. General View of Macao.  
Great Temple at Macao. View of Hong Shang.  
Temple of Buddha, Canton. Chinese Fortress, Island of Namoo.  
Aqueduct of Bamboo, Hong Kong. Chinese Passage Boat.  
The Factories, Canton. Chinese Encampment, &c.  
Tilt & Bogue, Fleet-street; Goupil & Vibert, Paris.

Just published by ACKERMANN and Co.  
**THE FORGET ME NOT** for 1843, elegantly and substantially bound in crimson morocco, price 12s. containing Engravings by Heath, Finden, Carter, Skelton, Periam, Motte, Hollis and Motte; painted by E. and H. Corbould, Franklin, Farrier, Wright, Tillotson, Bury; and the usual Compositions in Prose and Verse, by James Montgomery, Laman Blanchard, J. F. Dalton, Eden Lowther, Charles Swain, Dr. Mackenzie, N. Michell, Leigh Cliffe, Rev. H. Thompson, Miss M. A. Browne, Mrs. Sigourney, Miss Gould, Mrs. Lee, Mrs. Ward, Mrs. Walker, Mrs. Abdy, Miss Scaife, &c.

ACKERMANN and Co. have also just published, in royal 8vo., handsomely bound, 18s.,  
**AN EPITOME, HISTORICAL AND STATISTICAL, DESCRIPTIVE OF THE ROYAL NAVAL SERVICE OF ENGLAND.** By E. MILLS, with the assistance of Lieutenant LAWFORD MILLS, R.N. Embellished with eight highly finished coloured Views of Shipping, by W. KNELL; besides fourteen coloured Illustrations of the Flags, Pendants, and Ensigns, as worn by her Majesty's ships and vessels in communication.

**STUDIO, or COMMITTEE-ROOM, No. 13, BRUTON-STREET, BERKELEY-SQUARE.**—To be LET, at £120 a year, on the Ground Floor, a large and lofty ROOM, and a Room adjoining, suitable for an Artist or a Committee-room, with an office for a Secretary. It has a distinct entrance from the vestibule, and is enclosed by mahogany folding-doors. Particulars and cards to be had of Mr. Cox, Surveyor, 106, New Bond-street; or on the Premises.

**ELEGANT CHRISTMAS PRESENT.**  
**THE COMIC ALBUM, for EVERY TABLE,** printed in royal 4to., on tinted papers, illustrated with 250 Engravings, and bound in novel and splendid arabesque pattern of colours and gold, price 12s.

W. S. Orr and Co., Amen-corner, Paternoster-row.

**NEW WORK OF MESSRS. CHAMBERS.**  
On Saturday, the 3rd of December, MESSRS. CHAMBERS will commence the publication of a work entitled

**CHAMBERS'S CYCLOPEDIA OF ENGLISH LITERATURE,** consisting of a Series of Specimens of British Writers, in Prose and Verse, connected by an Historical and Critical Narrative. The CYCLOPEDIA OF ENGLISH LITERATURE is under the care of Mr. Robert Chambers, assisted by several gentlemen of suitable qualifications. It will be embellished with Wood Engravings of the heads of the principal authors, and objects connected with their history.

The work will appear in weekly numbers, consisting of a single sheet in royal 8vo, double columns, uniform with the "Information for the People," and costing three halfpence, and in monthly parts at sevenpence. It will consist of not more than 100 numbers, forming two massive and handsome volumes.

Published by W. and R. Chambers, Edinburgh; W. S. Orr and Co., Amen Corner, Paternoster Row, London; W. Curry, Junior, and Co., Dublin; and by all Booksellers intrusted with the sale of Messrs. Chambers's Publications.

**TO ARTISTS.**—The present EXHIBITION of PAINTINGS by BRITISH ARTISTS, at the ROYAL ADELAIDE GALLERY will terminate on the last day of FEBRUARY next, and the next Exhibition will commence on the 1st day of March, on which occasion Three Prizes of Twenty Guinea each—First, for the best Historical subject in Oil or Water-colour; secondly, for the best Landscape; and thirdly, for the best specimen of the Polite Domestic. No copies will be admitted. Pictures for Exhibition must be sent in on or before the 20th day of February. For further particulars inquire of Mr. T. F. Smith, Secretary.

**SPLENDID AND SUPERIOR GILT FRAMES.**  
**CHARLES McLEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs, made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All goods taken back, not approved of in three months.

**CHIMNEY GLASSES, PICTURE FRAMES, CHEVAL and TOILET GLASSES, CONSOLE TABLES, WINDOW CORNICES, SCREENS, and every department of CARVING and GILDING,** of superior quality, supplied cheaper than by any other manufacturer, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane.—P. G. manufacturing every article on the premises, is thereby enabled to offer them at such low prices that he defies competition. An extensive assortment of Ornamented Gilt and Fancy Wood Picture Frames kept ready. Regilding in all its branches in a superior manner, at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given free of charge. A list of the prices of Plate Glass, &c. sent, pre-paid, to any part of the Kingdom. A quantity of Picture Frames of every size, that have been some time on hand, at reduced prices.

## WEST-RIDING ART-UNION.

EXHIBITION OF THE PAINTINGS NOW OPEN, AT MR. GILBERT'S REPOSITORY OF ARTS, FARGATE, SHEFFIELD.

Mr. GILBERT begs to announce that he has made arrangements for establishing an ART-UNION for Sheffield and the West Riding. In embarking on an enterprise of so arduous a character, he ventures to solicit the support and co-operation of his Friends and the Public, confident that his plan offers advantages which are well worthy of their notice.

In the first place, without wishing to say anything to the prejudice of the Institution in London, the general scheme of which it is his intention to adopt, so far as circumstances will admit, he would observe that those Subscribers to the West Riding Art-Union who may happen to be Prizeholders, will be enabled to select Pictures without either having to incur the expense of a journey to London, or to delegate their choice to a Committee; who, however competent they may be to judge of the merits of Pictures as Works of Art, cannot be expected to suit the particular tastes of individuals for whom they may be commissioned to select, both as to style and subject, so exactly as the individuals themselves. Secondly, every Subscriber of One Guinea will, in addition to the chance of obtaining a Painting, receive an Engraving of such excellence, as will, it may be confidently asserted, very far surpass any of the Art-Union Plates which have been hitherto issued. And thirdly, all the Subscribers will receive their Plates immediately on the payment of their respective Subscriptions, instead of having to wait for them eight or twelve months, as is the case in similar Institutions. To this important feature of his plan Mr. GILBERT begs to direct especial attention: it is one which cannot fail to give universal satisfaction, inasmuch as the Subscribers will be at once enabled to estimate the value of the work procured, which, to say the least, will be equivalent to the Guinea he subscribes; and at a subsequent and not distant period, he will have, in addition, the chance of obtaining a Painting by some eminent British Artist, selected by himself, to the value of from Five to several Hundred Pounds.

With reference to the Paintings to be submitted for competition, Mr. GILBERT begs to state that he has made arrangements for receiving an extensive collection by the most eminent Artists of the day, for exhibition and selection. The number and amount of the respective Prizes will, of course, depend upon the amount of the money subscribed; but it may be stated, that ten shillings of every subscription will form part of the fund to be allotted for the purchase of Pictures, the remainder being devoted to the purchase of Engravings, and the payment of necessary expenses. Mr. G. moreover, wishes it to be distinctly understood, that

Prizeholders will not have particular Pictures allotted to them, but each one will be entitled to select for himself one Picture to the amount allotted to them upon the drawing.

The drawing is intended to take place in the MUSIC HALL, Sheffield, under the superintendence of a Committee to be elected for the purpose, on some day to be hereafter determined upon. In the meanwhile, Mr. G. begs to state that it will be his object to conduct the undertaking on such spirited, and at the same time equitable and honourable principles, as will ensure for him the confidence and good opinion of all those who may favour him with their support.

For every Guinea subscribed, parties subscribing will, in addition to their chance of obtaining a valuable Picture at the drawing, receive at their option a copy of Watt's splendid line Engraving, after Leslie, R.A., of "May Day in the Reign of Queen Elizabeth," or the Mezzotint Engraving by Lucas, after Isabeau, of "The Return to Port." These Plates, it may be asserted, without fear of contradiction, have never been surpassed in their respective styles by any that have yet been published. As the Plates will be delivered when the subscriptions are paid, Mr. G. would impress upon those parties intending to subscribe, the advantage of sending in their Names at as early a period as possible, in order to secure the best impressions. In order to convey to the public some idea of the high character of the Engravings, Mr. G. may state that he has been honoured by receiving, in the course of a very short time, the Names of upwards of Two Hundred and Fifty Subscribers in London, many of whom are eminent for their taste and skill in connexion with the Fine Arts. Subscriptions are received in London by Mr. JAS. BONE, Bookseller, King William-street; Messrs. A. H. BAILY and Co., Publishers, 83, Cornhill; Mr. HOW, at the Office of the ART-UNION, 132, Fleet-street; Mr. CHARLES BIELEFIELD, 15, Wellington-street North, Strand, London; Mr. SAUNDERS, 22, Lisle-street, London; Mr. ALLEN, Mercury Office, Nottingham; Mr. ROBERTS, Courier Office, Chesterfield; and Mr. DAVIS, New-street, Birmingham.

Subscribers' Names are received at Mr. GILBERT'S "REPOSITORY of the FINE ARTS," in the New Public Buildings, Fargate, in which the Painting of "The Opening of the Sixth Seal" has recently been exhibited, where the Exhibition is now open, and will remain until the time of drawing.

Mr. G. begs to state, that he has already received Pictures for his West Riding Art-Union by the following eminent Artists.

ALLAN, Sir W., P.R.S.A., and R.A.  
BROCKEDON, W., Esq.  
BRADLEY, W., Esq.  
BENTLEY, C. J., Esq.  
COOPER, A., Esq., R.A.  
COOPER, T. S., Esq.  
CORBOULD, Ed., Esq.  
CRESWICK, T., Esq., A.R.A.  
CHISHOLM, A., Esq.  
CALVERT, C., Esq.  
DAVIS, R. B., Esq.

DAVIS, J. P., Esq.  
GASTINEAU, H., Esq.  
GILBERT, J. F., Esq.  
HART, S. A., Esq., A.R.A.  
HULME, J. W., Esq.  
HERRING, J. F., Sen., Esq.  
HEPWORTH, J., Esq.  
HOFLAND, T. C.  
HOWSE, G., Esq.  
JOY, T. M., Esq.  
JUTSUM, H., Esq.

KENNEDY, W., Esq.  
KEARNEY, W., Esq.  
MULLER, W., Esq.  
MARTIN, JOHN, K.L.  
MARTIN, C., Esq.  
McIAN, R. K., Esq.  
McIAN, Mrs.  
MACLISE, D., Esq., R.A.  
PARKER, H. P., Esq.  
PYNE, J. B., Esq.

POLLITT, J., Esq.  
ROBERTS, D., Esq., A.R.A.  
SALTER, W., Esq., M.A.F.  
SHAYER, W., Esq.  
SAMMONS, J. C., Esq.  
STANFIELD, C., Esq., R.A.  
STEPHANOFF, F. P., Esq.  
TAYLOR, A. H., Esq.  
VICKERS, A., Esq.  
WARD, J., Esq., R.A.

**TO MINIATURE PAINTERS, &c.—W. WARRINER, 39, GREAT CASTLE-STREET, REGENT-STREET, Manufacturer of OR-MOLU FRAMES, MATS, MOROCCO CASES, and GLASSES, of all sizes, shapes, and patterns.**

W. Warriner, having been established more than a quarter of a century, begs to return his sincere thanks to those Artists and others who have undeviatingly patronised him; begs further to inform them that he has a variety of new patterns, which, for quality and price, defy all competition. A great variety of Mats, Cases, and Glasses always ready, or speedily made to order.

The Trade, Merchants, and Captains of Ships supplied on the most advantageous terms, and with the greatest punctuality.

**PICTURES AND ORNAMENTAL FURNITURE, No. 29, KENSINGTON-SQUARE.**

**MR. FREDERICK GODWIN will SELL by AUCTION, on the Premises, as above, on WEDNESDAY the 14th of DECEMBER, 1842, at 11 for 12 o'clock (by order of the Proprietor, going to the West Indies), a small but very choice collection of genuine PAINTINGS, selected during a lengthened residence upon the Continent, particularly a Murillo, a G. Douw, four by Watteau, exquisitely painted; and a very fine Interior, by F. Halls. At the same time, all the modern ORNAMENTAL FURNITURE throughout the house.**

May be viewed two days prior to the sale; and Catalogues had on the premises; of J. C. Burford, Esq., 10, King's-bench-walk, Temple; and at the offices of Mr. Godwin, Auctioneer, &c., 3, Halkin Terrace, Belgrave-square, near the Pantheon.

N.B. The LEASE of the HOUSE to be disposed of.

**OAK CARVINGS for CHURCH DECORATIONS, &c.—Mr. Mrs. BRAITHWAITE and CO., Proprietors of the patent method of CARVING in SOLID WOOD, beg leave to invite the Nobility, Clergy, and Architects, to view their Specimens of Oak Carvings, suitable to the Gothic Embellishments of Cathedrals and Churches, such as Stalls, Panelling, enriched Tracery, Chairs, Communion-rails, Tables, Altar-screens, Pulpits, Reading-desks, Lecterns, Stall-heads, Finials, Organ-screens, Gallery-fronts, &c., at one half the price usually charged.**

Estimates given, and contracts entered into, for the entire fitting-up, restoration, or repairs, of any Cathedral, Church, or Mansion.

By their process a most important saving in expense and time will be found in the fitting or repairs of Churches or Mansions, either in the Gothic or Elizabethan style, in any description of wood. It is equally applicable to Elizabethan or Gothic Furniture, such as Chairs, Book-cases, Cabinets, Tables, Picture-frames, Coats of Arms, Mouldings, &c., &c.—No. 5, HENRIETTA-STREET, COVENT-GARDEN.

## MILLER'S SILICA COLOURS.

The daily increasing patronage bestowed on these Colours by Artists of the first eminence, while it is gratifying in the highest degree to the inventor, is, at the same time, an acknowledgment of the soundness of those principles upon which they are manufactured. It will be sufficient to repeat that, being composed of substances identical or similar to those used by the old masters (the brilliancy of whose works, after the lapse of centuries, is an incontestable proof of the superiority of ancient colouring), the Silica Colours will ever retain their freshness, transparency, and gem-like lustre unimpaired by atmospheric influence and unimpaired by time.

Prepared for Oil and Water-Colour Painting of the under-mentioned tints, viz:

Pale and Deep Red.	Crimson and Olive.
Pale and Deep Blue.	Pale and Deep Orange.
Pale and Deep Yellow.	Pale and Deep Purple.
Pale and Deep Green.	Pale and Deep Brown.
White and Half Tint.	Grey and Black.

### VAN RYCK'S GLASS MEDIUM. FOR OIL PAINTING.

No. 1. For first and second painting.

No. 2. For third painting, finishing, and glazing.

Any of the above Media may be thinned, according to the taste of the Painter, with Miller's Venetian Oil.

### MILLER'S GLASS MEDIUM. FOR WATER-COLOUR PAINTING.

No. 1. For first colouring.

No. 2. For second colouring, glazing, and finishing.

Any of the above Media may be thinned, according to the taste of the Painter, with Miller's Proydor.

T. M. begs to call the attention of Artists to his new Drawing Paper, made of pure linen only, without undergoing any chemical process.

### MILLER'S PROYDOR.

**FOR SKETCHING AND PAINTING IN WATER COLOURS.**

This liquid is intended to supply the place of water in the above Art. It causes the colours to amalgamate and blend kindly with each other; removes all stains or greasy particles from the surface of Miniature Tablets, Ivory, or Paper; and if, in the progress of the painting, it be found desirable to take out or alter any portion of the Picture, the application of this Liquid by itself will accomplish it without injury to the surface.

MANUFACTORY: 56, LONG-ACRE, LONDON.

**ARTISTS, PRINTSELLERS, AND OTHERS,**

Are respectfully informed, that

**C. F. BIELEFELD**

Has formed

## A LARGE COLLECTION OF NEW AND ELEGANT DESIGNS FOR PICTURE FRAMES,

IN THE

**IMPROVED PAPIER MACHE.**

The superiority of these Frames consists in their having all the effect of old carved work; many of the Patterns represent exactly the finest carvings of the 17th Century. The small Frames are far less liable to injury than pulley work, Papier Mache being a remarkably tough and hard substance, it never shrinks, and takes gilding very freely; the Frames do not weigh one quarter the weight of others, and the Price is below that usually charged. Many Specimens are now on View at C. F. BIELEFELD'S Papier Mache Works, No. 15, WELLINGTON-STREET NORTH, STRAND; where also Pattern-Books may be had, price 14s., consisting of a variety of Patterns of Picture and Glass Frames, and Window Cornices, already executed, and on Sale.

"**PICTURE FRAMES.**—We direct the especial attention of all persons interested in this subject to the frames for pictures manufactured by Mr. Bielefeld. They are of papier maché; and the advantages they possess over the ordinary composition frames are so strong and so numerous, that they must, inevitably, be brought into general use. First, they are cheaper; being about two-thirds of the cost—much less, indeed, where the frame is of large size; next, they will not "chip" in carriage; and next, they are so much lighter in weight, as to supply an important item in their favour to those who are in the habit of transmitting large pictures from one place to another. This remarkable "lightness" is indeed desirable every where; for in many rooms, where the walls are thin or aged, it is impossible to hang large pictures in the usually ponderous frames. To exhibitors in provincial exhibitions these are no ordinary recommendations. But we refer chiefly to the *appearance* of these frames, which interests the collector as well as the artist, and, indeed, all persons who adorn their homes with pictures or prints, be they many or few. They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. The gilding *tells* with very brilliant effect; and, no matter how elaborate the pattern may be, they have a clearness and *sharpness* that we have seldom, or never, seen obtained in composition. Now that so many frames will be required for the prints about to be issued by the several Art-Union Societies, we conceive we may convey useful information to thousands, by recommending them to examine these frames; the patterns are infinitely varied; some have been designed expressly to meet these particular purposes; and their advantages are so obvious as to be at once appreciated by all by whom they are seen."—ART-UNION.

## ASSOCIATION

FOR THE

## PROMOTION OF THE FINE ARTS IN SCOTLAND.

FOUNDED IN 1833.

### COMMITTEE OF MANAGEMENT FOR THE YEAR 1842-43.

The Right Hon. the Earl of Stair.

The Hon. Lord Meadowbank.

The Right Hon. Sir George Warrender, Bart.

Sir Gilbert Stirling, Bart.

The Hon. and Rev. Grantham Yorke.

Professor Wilson.

William Murray, Esq., of Henderland.

Thos. Maitland, Esq., younger, of Duudreunan.

Professor Trail.

E. D. Sandford, Esq.

David MacLagen, Esq., M.D.

J. T. Gordon, Esq., Advocate.

Arthur Forbes, Esq.

Mark Napier, Esq., Advocate.

J. A. BELL, Esq., Secretary and Treasurer.  
Sir W. FORBES, J. HUNTER and Co. Bankers.

THE object of this ASSOCIATION is to advance the cause of Art in Scotland, by affording additional encouragement to its Professors, in the following way:—

A Subscriber of ONE GUINEA becomes a Member for one year, has a chance of gaining a valuable Work of Art, and the certainty of receiving a valuable Engraving.

An Annual General Meeting of Members is held in May, for the purpose of electing a Committee of Management, who are intrusted with power for one year, to purchase what may appear to them the most deserving Works of Scottish Art annually exhibited. At this Meeting, likewise, the different Works purchased for the Association become by Lots, publicly drawn, the property of Individual Members.

This Association, the FIRST ESTABLISHED IN THE UNITED KINGDOM for the encouragement of Art upon these principles, has increased in its Annual Fund from the sum of £728, subscribed in the year 1834, to the sum of £6500, subscribed in the year 1842.

Last year the Works of Art purchased for the Association amounted to 147 in number, at a total expenditure of nearly £4600. Besides this large sum, which in this form was distributed among Subscribers, a large amount was reserved, with a view to meet the expenses incurred by the execution of a very talented Engraving, to Copies of which ALL SUBSCRIBERS are entitled.

At one of the recent Annual General Meetings of the Association, the Honourable Lord Jeffrey said—"That the great aim of the Members of this Society was to advance a taste for Art, and to extend the fame and honour of Artists; and he was happy to say that, to a great degree, they had accomplished both these objects, by diffusing a taste for Art among the Scottish Public, and by raising a higher standard of excellence among Artists themselves."

Cordially agreeing in the sentiments expressed in the above quotation, the Committee take this opportunity of earnestly requesting the attention of all those who have not yet enrolled themselves as members of the Association, to its great importance and usefulness as a National Institution. The plan of uniting the efforts of individuals, by a small annual subscription from each, into one large fund for the benefit of all, has established in favour of Art a new and most valuable source of encouragement.

Members for this year, 1842-43, will be entitled to copies of a Line Engraving, now being executed by Mr. WILLIAM MILLER, after Mr. ROBERT S. LAUDER'S characteristic and interesting Picture of 'Italian Goatherds Entertaining a Brother of the Santissima Trinita.' Mr. MILLER is already far and skilfully advanced with the Plate, and as both the painter and engraver have acquired for themselves well merited professional distinction, it is not to be doubted but that this Engraving, when completed, will prove a fine specimen of combined native talent.

The members for last year, 1841-42, will very shortly receive copies of the Engraving executed by Mr. John Burnet, after Sir William Allan's admirable Historical Picture of 'Heroism and Humanity, an Incident in the Life of Robert the Bruce.' An impression from this plate may be seen on application to any of the Local Honorary Secretaries.

These engravings will cost the Association a large sum; and every copy will in itself be worth more than the usual Annual Subscription of One Guinea.

It is confidently anticipated, that the various Works of Art to be purchased by the Committee will this year surpass in merit and value those of any former year; and they will, as usual, be distributed by lot among the Members at the Annual General Meeting in May.

Subscribers' Names will continue to be received till April 1843.

Upon application to the SECRETARY, 69, York-place, Edinburgh, or to any of the LOCAL HONORARY SECRETARIES throughout the Country, reports and information may be obtained, and subscription paid. Edinburgh, Nov. 1842.

**LETTERS to an AMATEUR, or YOUNG ARTIST, on PICTORIAL COLOUR and EFFECT, and the Means to be employed for their Production, &c. &c.** By ROBERT HENDRIE, Esq.

"These 'Letters' contain many excellent precepts, and would be found by the Amateur a valuable auxiliary."—*Art-Union*, July 1842.

Published by Simpkin, Marshall, and Co., Stationers' Hall-court; and sold by T. Miller, Artists' Colourman, 56, Long Acre; and Mr. Ackermann, Jun., 191, Regent-street. Price 5s.

**NOTICE.—SPLENDID STOCK of GLASS and PICTURE FRAMES, the most modern and elegant patterns ever offered to the public, may be had at J. RYAN'S extensive Manufactory, 13 and 14, LONG-ACRE, at prices that will defy competition. Console Tables, Girandoles, Brackets, Cornices, and every article connected with the trade; Fancy Wood Frames of every description, of a superior quality, in great variety. Frames joined in the gold in the first style. A few fine Pictures for Sale.**

**NOTICE.—PATENT RELIEVO LEATHER HANGINGS and CARTON-TOILE OFFICE, 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foliage, Patteras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c., &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.**

L. COMETTI and CO., 10, Rue Basse du Rempart, Paris.—May 25, 1842.

**DIMES AND CO. (LATE WARING and DIMES), ARTISTS' COLOURMEN, 91, GREAT RUSSELL-STREET, BLOOMSBURY.**

**F** DIMES begs to inform the Profession, himself and Mr. George Waring has been DISSOLVED by mutual consent, and that in future the Business will be continued under the name of DIMES and CO.

To those Gentlemen who have given their patronage to the late firm, he begs to return his grateful acknowledgments, trusting to have their continued support, assuring them that all the articles he manufactures and sells shall receive every attention to insure the best quality. Subjoined is enumerated a few Articles, to which attention is respectfully requested:—

**CANVASS WITH INDIA RUBBER GROUND.**—The eligibility of this article having been thoroughly acknowledged, and it having received the patronage of the first artists in the kingdom, those gentlemen who desire that the labours of their pencils should be preserved from the effects of time (too visible in some of the finest productions of the Art), this Canvass is particularly recommended, as it is never subject to crack or peel, and the surface is very agreeable to paint on.

**RAND'S PATENT COLLAPSIBLE METALLIC TUBES FOR OIL COLOURS.**—Mr. J. Rand, the Inventor and Patentee, and Manufacturer of the Collapsible Metallic Tubes, having thrown them open to the trade, D. and Co. beg to state that they can supply them filled with oil colours in any quantity; also, tubes of Varnishes, M'Gueip, and Asphaltum.

**Zinc Tablets for Painting in Oil.**—The surfaces of these Tablets are well adapted for highly-finished paintings, and superior to panels or milled boards.

**Water-Colours in Cakes or Moist, filled in mahogany or japanned boxes for sketching.**

**Whatman's Drawing Paper, all sizes and thicknesses.**

**J. D. H., ditto.**

**Tinted or Academy Paper, in great variety of tints for chalk or pencil.**

**Genuine Cumberland Lead Pencils, warranted of pure lead.**

**Chalks and Crayons of all descriptions.**

**French, Hog, and Sable Hair Brushes for Oil and Water-Colour Painting.**

**Marble Slabs mounted, prepared for Miniature Painting.**

**Drawing Boards, Easels, T Squares, and every article for Architectural Draughtsmen.**

**Drawings and Paintings lent to copy.**

## RAND'S PATENT METALLIC COLLAPSIBLE TUBES FOR OIL COLOURS.

**J** RAND, the Inventor, Patentee, and sole Manufacturer of the above, during the time they were known to the profession solely under the name of "Brown's Patent," has made arrangements with Messrs. Winsor and Newton, of 38, Rathbone-place, by which that firm are supplied by him with Tubes of the same description as those so long supplied by J. Rand to Mr. Brown.—August 1st, 1842.

WINSOR and NEWTON, of 38, RATHBONE-PLACE, respectfully announce, that they have on sale Oil Colours in Rand's Patent Collapsible Tubes, wholesale, retail, and for exportation.

### THE PATENT EASEL.

**W**INSOR and NEWTON respectfully inform the Profession and the Public, that this admirably-constructed Easel, the invention of M. BONHOMME, of Paris, is manufactured by them with considerable improvements on the French model, and with the advantage of the best English workmanship.

W. and N. are induced to submit this Easel to the Profession in England by the high encomiums and great patronage bestowed upon it in France, where the ingenious Inventor, not only obtained a prize for the merits of his Easel at the National Exposition of Manufactures and Inventions, but also received from the Government a liberal reward for the assistance he rendered to the Professors of Art.

Though possessing the advantages of the largest Easels, by standing firmly and holding steadily paintings of a very large size, M. BONHOMME's invention occupies no more space than the smallest of the Artists' Easels now in use, and certainly not so much as the greater number of them.

The position and height of a painting may be adjusted with the utmost facility by a novel arrangement, which permits even unusually large works to be, when placed on this Easel, as much under control as smaller ones. The painting can also be sloped or thrown forward to any angle most favourable for the view, and this forward inclination can be adjusted with ease and exactness.

It presents a neat and even elegant appearance, and is peculiarly fitted as well for all purposes of exhibition as for the studio; affording the utmost convenience for the advantageous display of large or small works. The connoisseur who desires to exhibit his gems of Art in a manner adapted to make the most favourable impression, obtains in the improvements here brought forward an auxiliary hitherto much required.

The Easel to be seen at WINSOR and NEWTON'S, Artists' Colourmen to Her Majesty and His Royal Highness Prince Albert, 38, Rathbone-place, London.

### PAINTING IN OIL.

By her Majesty's Royal Letters Patent, and under the patronage of the President and Members of the Royal Academy.

**B**BROWN'S COLLAPSIBLE METALLIC TUBES, for COLOURS, OILS, VARNISH, M'GYLP, ASPHALTUM, &c.—THOMAS BROWN begs to return his sincere thanks to his numerous Customers for the approbation they have so universally bestowed on his Tubes. To the Members of the Royal Academy in particular he wishes to express his great obligations—he, his father, and his predecessor, having been the favoured servants of the Royal Academy from its formation, and having the honour to supply all the Presidents to the present time.

These Tubes combine the advantages of cleanliness, convenience, economy, and portability in the highest degree; any portion may be pressed out at a time, and the remainder will keep good for years, even in warm climates.

Manufactured and Sold, wholesale and retail, by Thomas Brown, Colourman to Artists, and Manufacturer of every Material for Painting in Oil and Water, 163, HIGH HOLBORN, London.

N.B.—The Trade are respectfully cautioned from dealing in any imitation of the above Tubes, as all vendors are equally liable with the maker to the penalties of an infringement.

The Genuine are made of Purified Tin, have the words "BROWN'S PATENT" on the Cap and Nozzle, and are warranted not to injure the most delicate colours.

In One Vol., small 4to., tastefully bound, price 31s.6d.,

**THE BOOK OF BRITISH BALLADS.**  
Edited by S. C. Hall, F.S.A. This work consists of British Ballads taken from the collections of Percy, Evans, Ritson, Pinkerton, Scott, Motherwell, Jamieson, Buchan, Herd, and others, by whom they have been gathered with so much industry and care; and, also, from sources comparatively unexplored by the general reader. No attempt has hitherto been made to select, and arrange in a popular form, the best of these ballads from the several volumes in which they are scattered, and where they are mixed up with a mass of inferior or objectionable compositions.

**CHEVY CHASE;** illustrated by J. Franklin; engraved by Linton, Smith, Landells, Armstrong, &c.

**THE CHILDREN IN THE WOOD;** illustrated by J. R. Herbert, A.R.A.; engraved by Green.

**FAIR ROSAMOND;** illustrated by Franklin; engraved by T. Williams, Miss Williams, Walmsley, Evans, &c.

**THE DEMON LOVER;** illustrated by J. Gilbert; engraved by Folkard and Bastin.

**THE NUT-BROWN MAYD;** illustrated by T. Creswick, W. B. Scott, &c.; engraved by Williams, &c.

**KEMPION;** illustrated by W. B. Scott; engraved by Smith and Linton.

**THE CHILD OF ELLE;** illustrated by J. Franklin; engraved by Williams.

**THE TWA BROTHERS;** illustrated by W. P. Frith; engraved by Bastin.

**THE BLIND BEGGAR;** illustrated by J. Gilbert; engraved by Vizetelly.

**ROBIN GOODFELLOW;** illustrated by R. Dadd; engraved by Green.

**SIR PATRICK SPENS;** illustrated by J. Franklin; engraved by Armstrong.

**GIL MORICE;** illustrated by K. Meadows; engraved by Smith and Linton.

**SIR ALDINGAR;** illustrated by J. Gilbert; engraved by Gilks and Folkard.

**SIR LANCELOT DU LAKE;** illustrated by E. Corbould; engraved by Smith and Linton.

**KING ARTHUR'S DEATH;** illustrated by J. Franklin; engraved by Green, Nicholls, Williams, &c.

**THE HEIRE OF LINNE;** illustrated by E. M. Ward; engraved by Bastin.

**LORD SOULIS;** illustrated by R. Mc Ian; engraved by Smith and Linton.

**LORD THOMAS AND FAIR ANNET;** illustrated by H. T. Townsend; engraved by Folkard, Branston, &c.

**JOHNIE OF BREADISLEE;** illustrated by Sibson; engraved by Linton.

**THE DOWIE DENS OF YARROW;** illustrated by J. Franklin; engraved by F. Branston and E. Evans.

Each ballad is preceded by two pages, giving its history, and supplying such information concerning it as the Editor has been enabled to obtain. Into these pages are introduced, generally, the airs to which the ballads are sung; and any pictorial illustrations that may serve to explain the text.

Each ballad is illustrated by one artist, and in every instance the design is drawn by him on the wood; and the work thus exhibits examples of the genius of a large proportion of the most accomplished artists of Great Britain.

The supremacy of our English engravers on wood is universally admitted: this important department of the Work has been entrusted only to artists of acknowledged skill and eminence; and the whole of the illustrations of a ballad have been confided, as far as possible, to one engraver.

The aim of all parties engaged in the production of the Work has been to render it worthy of the Country and of the Arts.

London: J. How, 132, Fleet-street.

## NOW READY, ROBERTS'S HOLY LAND;

## BRITISH INSTITUTION, PALL-MALL.—NOTICE TO EXHIBITORS.

All Pictures, &c., intended for EXHIBITION and SALE the ensuing Season, must be sent for the inspection of the Committee, on Monday, the 16th, and Tuesday, the 17th of January next, between the hours of Ten in the Morning, and Five in the Evening; after which time no Picture or other Work of Art will be received. Portraits and Drawings in Water-colours are inadmissible.

N.B. No Picture will be received for Sale that is not bona fide the property of the artist.

WILLIAM BARNARD, Keeper.

**THE EDINBURGH SOCIETY OF ARTISTS' SIXTH ANNUAL EXHIBITION** will OPEN on SATURDAY, the 28th of JANUARY, 1843, at the GALLERY, No. 97, GEORGE-STREET. Works of Art will be received there, addressed to the Secretary, on Wednesday, the 18th of January, from Ten till Dusk, after which none can be admitted.

N.B.—Five per cent. charged upon all Sales, and the carriage to and from Edinburgh must be paid by contributors, unless specially invited by circular.

By order of the Committee of Management,  
JAMES FERGOUSON, Sec.

**NOTICE TO PAINTERS, SCULPTORS, AND ENGRAVERS.**—The HISTORICAL ATTACHE, 14, Upper St. Martin's-lane, for the STUDY of the LIVING MODELS, is OPEN to Subscribers every Evening from Half-past Five to Eight o'clock.

This is the only Establishment in London, except the Royal Academy, wherein this important branch of high Art can be properly cultivated. There will be two or three vacancies for Members in a few days. The election will take place on the 9th of next month. Artists and Amateurs desirous of being Elected may obtain the requisite information as to the mode, by applying by letter to the Curator at the Atelier.

W. B. SANSFIELD TAYLOR, Curator.

December 27th, 1842.

**MECHANICS' INSTITUTION, LIVERPOOL.**—WANTED a TEACHER of DRAWING, &c., for the High School of this Institution. Salary, £200 per annum. Attendance six hours a day. Besides skill in Figure Drawing, which is considered of primary importance, and for instruction in which a large Gallery of Casts has been provided by the Institution, a general knowledge of Practical Perspective, Landscape and Ornamental Drawing and Painting in Oil and Water, Crayons, Chalk, &c., will be required. The successful candidate will, probably, be further engaged in the Evening School, at an additional salary, and in this department a knowledge of Ornamental Modelling will be very useful.

Applications, with testimonials of character, ability, and experience in teaching, to be lodged on or before Monday the 16th of January, 1843.

**THE AID OF AN ARTIST** is required to COPY some PAINTINGS from the Old Masters, in galleries at home and abroad. The occupation would suit a gentleman who desires to improve his study from the best sources, and at the same time to cover the expenses he will necessarily incur.—Apply (by letter) to T. B. M., Art-Union Office, 132, Fleet-street.

**THE GRAND VIEW OF LONDON**, Four Feet Four Inches by Three Feet, will be presented to every Six Months' Subscriber of the ILLUSTRATED LONDON NEWS, on the 7th of JANUARY, 1843. Subscribers must give immediate instructions to their News-agents to be careful and prompt in delivery, inasmuch as the Proprietors are anxious to prevent disappointment.—Office, 198, Strand.

**THE CHINESE COLLECTION**, Hyde Park-corner.—Consisting of objects exclusively Chinese, surpassing in extent and grandeur any similar display in the known world, entirely filling the spacious Saloon, 225 feet in length, and embracing upwards of Fifty Figures as large as Life, all fac-similes, in their native Costumes, from the highest Mandarin to the blind Mendicant; also many Thousand Specimens, illustrating the Appearance, Manners, and Customs of more than Three Hundred Million Chinese, is NOW OPEN, from Ten till Twelve.—Admittance, 2s. 6d.; Children under Twelve, 1s.

**INTERESTING AND CLASSICAL EXCURSIONS.**—CONSTANTINOPLE, the BOSPHORUS, ASIA MINOR, GREECE, EGYPT (the Pyramids, Thebes, and the Cataracts), NAPLES via MALTA, &c., may now be visited with increased comfort, and in a comparatively short space of time, by means of British Steam Navigation.

Information relative to these excursions, a programme of the routes, rates of fares, &c., may be had on application personally, or by letter, at the Peninsular and Oriental Steam Navigation Company's Offices, 51, St. Mary Axe, London; also of Mr. F. McGouran, 8, Burgh Quay, Dublin; or of Mr. Earle Langston, Manchester.

**DRAWING AND PAINTING.**—Artists and others are informed that the SCHOOL, at 14, TOTTENHAM COURT-ROAD, is now Open for the Winter Season. Antique Class on Monday, Wednesday, and Friday Evenings, from six to ten. Life Class on Tuesday, Thursday, and Saturday Evenings, from half-past seven to half-past nine.—Terms: Life Class, One Guinea per Quarter; Antique, Half-a-Guinea. To both Classes, 25 Shillings.

WILLIAM BARTER, Hon. Sec.

WILLIAM MULREADY, R.A.

In square 8vo, price One Guinea.

## THE VICAR OF WAKEFIELD.

With Thirty-two Designs by WILLIAM MULREADY, R.A. The whole engraved by John Thompson. Published December 20.

John Van Voorst, 1, Paternoster-row.

**LETTERS to an AMATEUR, or YOUNG ARTIST, on PICTORIAL COLOUR and EFFECT, and the Means to be employed for their Production, &c. &c.** By ROBERT HENDRIE, Esq.

"These 'Letters' contain many excellent precepts, and would be found by the Amateur a valuable auxiliary."—Art-Union, July 1842.

Published by Simpkin, Marshall, and Co., Stationers' Hall-court; and sold by T. Miller, Artists' Colourman, 56, Long Acre; and Mr. Ackermann, Jun., 191, Regent-street. Price 5s.

**MESSRS. DICKINSON and SON**, 114, NEW BOND-STREET, beg to announce to Artists generally, that they have made arrangements to supply them with all materials connected with the Fine Arts on very advantageous terms, having lately received great additions to their Stock of Drawing Papers, Brushes, Pencils, &c. Art-Union Print nearly ready.—"All Saint's-day."—Messrs. Dickinson have designed three elegant and low-priced FRAMES especially for this engraving, to which they invite inspection.

Just published, the portrait of Sir HENRY POTTINGER, Bart., her Majesty's Plenipotentiary in China. Painted by LAWRENCE. Lithographed by LOWES DICKINSON. Proofs, 10s. 6d.; Prints, 3s.—"The New Year's Gift," a beautiful and costly production, from works by Landseer, Lawrence, Newton, Briggs, &c. Part 1., 18s.; Part II., 10s. 6d.

Just published,  
**SUNDAY MORNING.**—Engraved in the most exquisite style in mezzotinto, by FREDERICK BROMLEY, from the beautiful Picture painted by ALEXANDER JOHNSTON, Esq.

Prints, £1 1s. Proofs, £2 2s.

Welch and Gwynne, Printers to the Royal Family, 24, St. James's-street, London.

Early in February will be published,  
**MEMOIRS OF JOHN CONSTABLE, Esq., R.A.**, with Notes of his Lectures on the History of Landscape Painting. By C. R. LESLIE, R.A. Illustrated with 22 Mezzotinto Engravings by D. Lucas, from Pictures by Mr. CONSTABLE, with a portrait. London: James Carpenter, Old Bond-street.

Fourth edition, 1s. or 4d. extra by post,  
**OXFORD UNMASKED;** or, an Attempt to describe some of the Abuses in that University. Dedicated without permission to Sir Robert Peel, Bart. By a GRADUATE. Effingham Wilson, 18, Bishopsgate-street Within.

New work on Afghanistan, dedicated by special permission to Lieut.-Gen. the Right Hon. Lord Keane.

**THE STORMING OF GHUZZEE AND KHELAT**, from SKETCHES taken on the spot by Lieut. THOMAS WINGATE, of the 2nd or Queen's Royal Regiment, drawn on stone by WILD TAYLOR. T. M'Lean, 26, Haymarket.—Subscribers to this work can now have their copies.

Now Ready,  
**THE NEW YEAR'S GIFT FOR 1843.**

**THE GEMS OF STUART NEWTON, R.A.:** containing the most choice Specimens of that highly-talented Artist, engraved in the finest style of Mezzotinto, with descriptive Letter-press to each Plate, and brief Memoir of the late Royal Academician, by HENRY MURRAY, Esq. Beautifully bound in purple morocco, and richly gilt, £1 11s. 6d.

London: Published by Henry Graves and Co., Publishers to her Majesty, 6, Pall-Mall.

Just ready,  
**ORIGINAL WHOLE-LENGTH PORTRAIT OF THE RIGHT HON. SIR ROBERT PEEL, BART., M.P., &c. &c.**—Just painted, by JOHN W. WALTON, Esq. (taken from life); engraved by C. E. WAGSTAFF, Esq., as a companion to Lucas's celebrated Trinity-House portrait of the Duke. Size, 21 inches by 32 inches high.

"The likeness is a good one, the attitude is characteristic of the original, and the whole is spirited and full of life."—Times.

"The countenance is most admirably portrayed, and is really a 'speaking likeness,' full of frankness of expression and high intellect."—Spectator.

Price to Subscribers: First proofs, before the letters, on India paper, £5 5s. Proofs, with the letters, £3 3s. Prints, £1 11s. 6d.

**TWENTY-SIX VIEWS OF THE COLLEGES, CHAPELS, AND GARDENS OF OXFORD.** From Drawings made expressly for this work, by W. A. DELAMOTTE.

"O ye spires of Oxford! domes and towers! Gardens and groves! your presence overpowers!" Executed in Lithography, by Mr. WM. GAUCI. With a Historical Account of each College, by C. OLLIER. Price: Bound, printed with Tints, £4 4s. Coloured, and mounted in Portfolio, £10 10s.

London: Thomas Boys, Printer to the Royal Family, 11, Golden-square, Regent-street.

## ART-UNION OF LONDON.

PRESIDENT,  
H.R.H. the Duke of CAMBRIDGE.

VICE-PRESIDENT,  
The Most Noble the Marquis of NORTHAMPTON,  
P.R.S.

The Committee have the gratification to state to the Subscribers of 1841, that a FINISHED PROOF of 'THE SAINTS' DAY' has been submitted to them, and that steps are taken to obtain the requisite number of copies for distribution. All possible expedition will be used; but it will probably be the month of March before the Prints are ready. Due notice will be given to each subscriber.

The Engraving for 1842, 'Una entering the Cottage,' will be completed in January; the Prints may therefore be expected in May or June. The length of time required for the execution of a line engraving of large size, and for obtaining the requisite number of impressions, will, if kindly reflected on, fully account for the apparent delay in the delivery of these prints. Miscalculation on the part of the engraver of 'The Saints' Day,' has led to expressions of disappointment, which the Committee were most anxious to prevent. For the future they have made arrangements in advance (not previously in their power), so as to ensure the annual delivery of a Print.

Subscribers for the present year will receive for each guinea, in addition to the chance of obtaining another valuable Work of Art, an Engraving by Mr. L. Stocks, from the picture by Sir A. Callcott, R.A., 'Raffaello and the Fornarina,' which is already far advanced. Arrangements have also been made with Mr. G. T. Doo, to engrave 'The Convalescent,' painted by Mr. W. Mulready, R.A., and with Mr. Goodall, to engrave 'Castello d'Ischia,' painted by Mr. C. Stanfield, R.A.

It should be borne in mind that all engravings issued by the Art-Union of London are executed expressly and solely for the Members.

Subscriptions may be paid daily, from nine till six o'clock, at the office, 4, Trafalgar-square, or to any Member of the Committee.

GEORGE GODWIN, F.R.S., F.S.A., } Honorary  
LEWIS POCOCK, F.S.A., } Secretaries.  
24th December, 1842.

## TO ARTISTS.—The Committee of the ART-

UNION OF LONDON beg leave respectfully to remind Artists about to EXHIBIT their WORKS in the London Galleries, that no Picture or other Works of Art, the price of which has not been left, at the first opening of the several Exhibitions, with the person appointed at such Exhibitions to communicate the same to public inquirers, can be selected by any prizeholder; and that any reservation, which may make the price required by the Artist doubtful, is considered as placing such Work of Art as though no price had been affixed to it, and consequently renders it ineligible for selection.

The Committee take this opportunity to refer Artists to their advertisements for Outline Designs, and for a Model for casting in Bronze.

Particulars may be obtained at 4, Trafalgar-square.

GEORGE GODWIN, F.R.S., F.S.A., } Honorary  
LEWIS POCOCK, F.S.A., } Secretaries.  
24th December, 1842.

## WEST-RIDING ART-UNION.

The Committee of the "ART-UNION OF LONDON" having issued a notice, the tendency of which is to prejudice the "WEST-RIDING ART-UNION," and other Institutions of the same nature, in the estimation of the Public, J. GILBERT feels called upon to offer a few observations in reply.

In the first place, the Committee of the London Society complain of the establishment of Art-Unions purporting to resemble their own in principle, "but which are, in reality, Commercial Speculations for Individual Benefit." In reply to this accusation, which is put forward with remarkable self-complacency by the Committee, it may be asked, why a project, undertaken by individual enterprise, is less worthy of encouragement, if it offers equal or superior advantages to the Public, than one undertaken by a Society? It is well known, that in this country many prosperous undertakings have owed their success to individual spirit and energy; and in several cases where Provincial Art-Unions have been established and conducted by Committees, the encouragement which they have afforded to the Fine Arts has been much less than might have been expected; whereas the West-Riding Art-Union, albeit a "Commercial Speculation for Individual Benefit," during the short period that it has already been in existence, has given unquestionable proof, by the number of its supporters, that it will undoubtedly do much for the advancement of the Fine Arts in an important district of the country. If it is asked how this has been effected, it may be stated in reply that every Subscriber receives, AT THE TIME OF PAYING HIS SUBSCRIPTION, an Engraving worth, at least, Half a Dozen of any one of those issued by the London Society, TWELVE OR EIGHTEEN MONTHS after the Subscriptions are paid. The worth of the West-Riding Art-Union Engravings is sufficiently attested by the fact, that there are already in London upwards of 250 Subscribers to it, many of whom are eminent Artists or Persons of great and acknowledged taste.

The Committee further state, that their Society "was established solely with the disinterested view of disseminating a love of the Fine Arts, promoting their progress, and elevating the public taste." This statement may, undoubtedly, be true; but in what way an Art-Union Society in London is to disseminate a love of the Fine Arts, promote their progress, or elevate the Public taste in other parts of the Kingdom, it is by no means easy to conjecture. Only a comparatively small number of persons in the country have it in their power to visit an Exhibition in London; and the Works of Art which find their way into the country through the agency of that Society, are too thinly scattered to exercise any very striking influence over the Public mind. It is, however, presumed, that by the establishment of Provincial Art-Unions, and the opening of Provincial Exhibitions, a love of the Fine Arts may be very extensively disseminated, and their progress promoted; and no objection can be fairly urged against such Institutions, on account of their being Individual Speculations, if they are fairly and honourably conducted.

## LONDON AGENTS.

MR. JAS. BOHN, Bookseller, King William-street; Messrs. A. H. BAILY and Co., Publishers, 83, Cornhill; Mr. HOW, 132, Fleet-street; Mr. CHARLES BIELEFIELD, 15, Wellington-street North, Strand, London; Mr. SQUIRE, 22, Lisle-street.

IMPORTANT to the SUBSCRIBERS to ART-UNIONS.—In consequence of numerous inquiries, the Committee of the ROYAL POLYTECHNIC UNION OF LONDON deem it right to state that the Resolutions passed at the GENERAL MEETING of ARTISTS and others, held at the Freemasons' Tavern, on Saturday Evening, the 17th inst., had no reference whatever to this ASSOCIATION.

The Attention of the Public is particularly directed to the PROSPECTUS, to be had of the Secretary, at the ROYAL POLYTECHNIC INSTITUTION, Regent-street.

## EXTENSION OF THE PRINCIPLE OF ART-UNIONS.

THE ROYAL POLYTECHNIC UNION of LONDON will, on the 29th of this month, be prepared to show to its Subscribers, and to the Public, some Specimens of the FINISHED ETCHINGS illustrative of the "SONGS OF SHAKESPEARE," and on the second or third week in January next, will present to each Subscriber of 20s. (a sum not more than half the price in the usual mode of publication,) this original Work complete, bound in an ornamental cover, consisting of Thirteen Etchings, on Ten Steel Plates, by the Members of the Etching Club, who have adopted an ENLARGED SCALE, as compared with their admired Edition of the "Deserted Village." The COMMITTEE think it right to call the particular attention of the Public to the Prospectus, in the arrangement of the Prizes to be drawn on the TWENTY-FIFTH DAY of APRIL next, and to other distinct advantages, to be had of the Secretary of the ROYAL POLYTECHNIC INSTITUTION, Regent-street, who receives the Subscriptions.

This day is published,

## THE MOST UNIQUE CHRISTMAS PRESENT.

Patronised by her Majesty the Queen,  
and all the Royal Family,

## SCHLOSS' ENGLISH BIJOU ALMANACK

for 1843. Poetically illustrated by Miss MITFORD, the Author of "Our Village," &c. Size 4 inch by 3; containing Portraits, engraved in a style of excellence which does honour to the palmy state of English Art, viz., H.R.H. the Prince of Wales, his Majesty the King of Prussia, H.R.H. the Duchess of Orleans, Samuel Rogers, Esq., Miss Adelaide Kemble, and Herr Döbler; with a complete Calendar for the ensuing year.

London: Albert Schloss, Publisher to H.R.H. the Duchess of Kent, 12, Berners-street, Oxford-street; and to be had of all Booksellers in the United Kingdom.

GENERAL MEETING OF ARTISTS.—At a very influential MEETING of upwards of Six Hundred ARTISTS, held at the Freemasons' Tavern, on Saturday Evening, December 17, 1842,

T. WYSE, Esq., M.P., in the Chair,  
The following Resolutions were agreed to:—  
Proposed by G. CLINT, Esq., seconded by F. Y. HURLESTONE, Esq., President of the Society of British Artists,

1. That it is the opinion of this Meeting, that the assertion contained in the prospectus of the National Art-Union, that "promises of zealous support and cordial co-operation have already been received from the artists generally," is unfounded, and therefore likely to convey to the public an erroneous idea of the opinion of the profession.

Proposed by H. WARREN, Esq., President of the New Society of Painters in Water-Colours; seconded by P. PARK, Esq., sculptor,

2. That the Art-Union of London, in its principles, is worthy of the cordial approbation of the artists; and that this meeting beg to tender to the President, Committee, and Officers of that Society, their warmest thanks for their constant exertions in promoting the interests of Art.

Proposed by E. HASSELL, Esq.; seconded by R. CULL, Esq.,

3. That copies of the foregoing Resolutions be forwarded to the Committee of the Art-Union of London.

Proposed by A. CLINT, Esq.; seconded by J. FRANKLIN, Esq.,

4. That a Committee be formed and a subscription entered into to defray the expenses of publishing these Resolutions.

(Signed) T. WYSE, Chairman.

Mr. Wyse having left the chair, E. R. Ward, Esq., proposed, and J. D. Harding, Esq., seconded, a vote of thanks to the Chairman, which was carried by acclamation.

By order of the Committee,  
JAMES FAHEY, Hon. Sec.

## NATIONAL ART-UNION.

## PATRON,

His Royal Highness PRINCE ALBERT.

The Managers of the National Art-Union, earnestly desirous of encouraging a higher class of Art than hitherto attempted by existing Art-Unions, announced, both by circular and advertisement, that—

"No painting or drawing would be selected as a prize of less value than twenty-five guineas."

This announcement, which would appear, has aroused the ire of those gentlemen who paint Pictures of low value, and who find a ready market for them through the agency of the numerous Art-Unions throughout the country. A meeting of artists and supporters of the London Art-Union has taken place, at which neither the President of the Royal Academy, nor few, if any, of the Academicians were present. At this Meeting, chiefly composed of persons naturally piqued at this determination, resolutions consonant to the feelings of the parties attending were, as a matter of course, easily carried, but which resolutions will not induce the Managers in the slightest degree to alter the announcement referred to.

The Exhibition of Works of Art (by British Artists) will take place in January 1843, at the Gallery of the New Society of Painters in Water-Colours, and afterwards in the principal towns in Great Britain.

The Managers of the National Art-Union repudiate the idea of entering into a controversy with rival Institutions; but, confident in the superiority of their claims, invite the Public to judge for themselves, by inspecting the Engravings given at the time of subscription, which may be seen at the offices, 26, Soho-square, or of any of the following respectable agents:—

Messrs. A. H. Baily and Co., 83, Cornhill; Mr. H. Bailey, 158, New Bond-street; Messrs. Fores, 41, Piccadilly; Mr. Samuel Hollier, Chancery-lane; Mr. Robert Jennings, 62, Chancery-lane; Messrs. Lloyd and Co., Harley-street, Cavendish-square; Mr. J. Mitchell, 33, Old Bond-street; Mr. F. G. Moon, 20, Threadneedle-street; Mr. T. McLean, Haymarket; Mr. Watson, Vere-street, Cavendish-square.

## FRAMES FOR ART-UNION PRINTS.—

As every subscriber to the "London Art-Union" will very shortly obtain possession of the print issued by the Society, and as to frame it in an elegant and not costly manner will be a most desirable object to many of the possessors, Mr. BIELEFIELD begs to announce that he has prepared a frame expressly for the print of the 'Saints' Day,' the presentation print of the London Art-Union; it is manufactured of Papier Maché, a lighter, more elegant, and more durable material than any hitherto used for this purpose.

Papier-Maché Works, 15, Wellington-street North, Strand.

"PICTURE-FRAMES.—We direct the especial attention of all persons interested in this subject to the frames for pictures manufactured by Mr. Bielefeld. They are of papier maché, and the advantages they possess over the ordinary composition frames are so strong and so numerous, that they must inevitably be brought into general use. They look exceedingly attractive, and are in reality as much so as if they had been passed through the hands of the carver, and been produced at about ten times the expense. The gilding tells with brilliant effect; and no matter how elaborate the pattern may be, they have a clearness and sharpness that we have seldom or never seen obtained in composition."—ART-UNION.

## MESSRS. HENRY GRAVES AND COMPANY,

Her Majesty's Printsellers and Publishers in Ordinary,

Have the honour to announce that they have now ready,

THE MAGNIFICENT ENGRAVING, FROM THE GRAND HISTORICAL PICTURE OF

## HER MAJESTY'S CORONATION,

Painted by her Majesty's command, by Sir GEORGE HAYTER, M.A.S.L., her Majesty's Principal Painter in Ordinary,  
and Engraved in the finest style of Art, by H. T. RYALL, Esq., her Majesty's Historical and Portrait Engraver.

Any attempt at description of this grand and noble work must be very imperfect; but the Publishers beg to state, that the **SPLENDID ENGRAVING** which they have the honour of publishing, will enable all the admiring Patrons of Art to possess this, the only Authentic Memorial of  
**THE MOST INTERESTING EVENTS IN HER MAJESTY'S REIGN.**

Price: Prints, £4 4s. .... Proofs, £8 8s. .... Proofs before Letters, £12 12s.

LONDON: HENRY GRAVES AND COMPANY, PRINTSELLERS AND PUBLISHERS, BY SPECIAL APPOINTMENT, TO  
 HER MAJESTY AND HIS ROYAL HIGHNESS PRINCE ALBERT, No. 6, PALL-MALL.

UNDER THE IMMEDIATE PATRONAGE OF HIS  
 ROYAL HIGHNESS PRINCE ALBERT.

**THE ART-UNION OF SCOTLAND,**  
 formerly the NEW ASSOCIATION for the  
 PROMOTION of the FINE ARTS. Established in 1837.

COMMITTEE FOR 1842-43.

The Right Hon. the Lord Provost.

John Learmonth, Esq.

J. G. Hopkirk, Esq., W.S., Great King-street.

Baitie Richardson, Pitt-street.

J. Whiteford M'Kenzie, Esq., W.S., Scotland-st.

George Farquharson, Esq., W.S., Wemyss-place.

Mark Sprott, Esq., of Garnkirk.

Patrick Shaw, Esq., Advocate.

Dr. Malcolm, F.R.C.P.

Professor Miller, York-place.

Mark Sprott, Esq., of Riddell.

William Napier, Esq., W.S., E. Claremont-street,

H. Pyper, Esq., Advocate, Royal Crescent.

J. P. Bertram, Esq., W.S., Walker-street.

W. H. Lizars, Esq., Regent-terrace.

A. Clapperton, Esq., Princes-street.

Number of Subscribers for 1837-8, 340;—for 1839, 811;  
 —for 1840, 1011;—for 1841, 1228;—and for 1842, 1290.

The following is the Plan:—

I. That the Subscriptions be One Guinea each Share.

II. That the whole of the sum subscribed up to the month of February next (when the Subscriptions close), after setting apart a sum for Engraving and necessary expenses, will be divided into Large and Small Prizes, and drawn for during the second week after the opening of the Royal Scottish Academy Exhibition; after which, each Prizeholder will be entitled to select a Picture, or other Work of Art, from either the Royal Scottish Academy Exhibition, or that of the Edinburgh Society of Artists, then open in Edinburgh, to the amount of his Prize.

III. That all sums collected during the present year, will be lodged in the National Bank of Scotland, in the name of the Treasurer.

IV. For the convenience of Subscribers residing at a distance, and who may not have friends in Edinburgh to whom to delegate their choice, a Sub-Committee, consisting of gentlemen of acknowledged taste, is appointed to select Pictures for, and otherwise comply with the wishes of, the Prizeholders thus situated; and the Committee will proceed to make purchases for such of the Prizeholders as shall not have themselves selected Pictures within one week of the closing of the Exhibitions.

V. The Committee considering it more beneficial for the promotion of the Fine Arts, have, after mature con-

sideration, resolved, That no Prizeholder shall be entitled to divide his Prize in the purchase of more than one Picture or other Work of Art.

VI. The Committee retain to themselves the power of selecting any Picture, purchased by a Prizeholder, for the purpose of Engraving for the Subscribers for next year.

VII. The Committee have this year (with permission of the Proprietor), selected the national Picture of 'The Flowers of the Forest,' painted by the late Mr. Andrew Somerville, S.A., for the purpose of Engraving for the Subscribers of 1842 and 1843.

VIII. The Picture is now placed in the hands of Mr. H. Haig, to be engraved in Line on Steel, in the first style, which he is bound to have done within 15 months. Size of the Engraving will be sixteen by eleven inches and a half.

IX. Each Subscriber will be entitled to a Copy of the Engraving; and a Subscriber for Two Shares will be entitled to One Proof. Subscribers for Five Shares will be entitled to Two Proofs and One Print.

The Engraving will be on a Steel Plate, so that every Subscriber will be certain of a good impression.

JOHN LEARMONTH, Treasurer.  
 JOHN MUNDELL, Secretary.

The Committee beg to call particular attention to the beautiful Line Engraving of the 'Expected Penny,' from the admired Painting by Alexander Fraser, Esq., A.R.S.A., engraved by Mr. R. Bell, lately delivered to the Members for last year; and which, while it is the production of native talent, is considered to be by far the finest Engraving that has yet emanated from any Association connected with the Fine Arts in Scotland. Subscribers for 1842 and 1843 will be entitled to the line engraving of 'The Flowers of the Forest,' from the painting by the late Andrew Somerville, R.S.A., at present being engraved on steel, in the first style of art, by Mr. Henry Haig.

Members and the Public are informed, that the Collection of the Subscriptions has now commenced, and as the drawing of the Prizes will take place early after the opening of the Royal Scottish Academy Exhibition in February, it is requested that the Subscriptions be paid to the Collector when called for, it being of great importance that no time should be lost in completing the Lists, to enable the Committee to ascertain the extent of their resources, and make the necessary arrangements. Ladies and Gentlemen desirous of being enrolled as Members, are requested to forward their names to the principal Book and Print Sellers, Gilders, &c., in town; and parties at a distance may obtain

Shares, by applying to Charles Roberson, 51, Long-acre; Kowney and Co., Rathbone-place; Graves and Co., Pall-mall; Reeves and Son, Cheapside; (Colnaghi and Puckle, Cockspur-street; W. Booth, 53, Charlotte-street, Fitzroy-square, London; from the different Honorary Provincial Secretaries throughout Scotland, England, and Ireland; or by a remittance of One Guinea to the Secretary here.

JOHN MUNDELL, Secretary.

Edinburgh, 60, Prince's-street.

Dec. 26, 1842.

\*.\* The Public are particularly requested to observe, that the Art-Union of Scotland is conducted upon the same plan as that of London, and the leading Provincial Art-Unions. The funds are divided into large and small sums of money, which are balloted for; and, to avoid all ground of complaint on the part of Artists, the choice, from the Works of any Artist, is left entirely to the taste of Prizeholders themselves, or a friend, not limiting the selection only to the Rooms of the Royal Scottish Academy, Mound, but also from those of the Edinburgh Society of Artists; thus holding out inducements to English and provincial Artists to send their Works for Exhibition and Sale in the Scottish Metropolis.

UNDER THE SUPERINTENDENCE OF THE  
 COUNCIL OF THE GOVERNMENT SCHOOL OF  
 DESIGN AT SOMERSET-HOUSE.

To be continued every alternate Month, price 3s. 6d.,

**THE Fourth Number of a DRAWING-BOOK;** containing Elementary Instructions in Drawing, and illustrating the Principles of Design as applied to Ornamental Art.

The Council have arranged that this Work shall be sold at a price little exceeding the cost of production, so that, as far as possible, it may come within the reach of all classes of persons desirous of instruction in Drawing and the Art of Design.

The First Part is to be devoted to Elementary Instruction, and will exhibit a course of Outline Drawing (including both Geometrical and Free-hand Drawing) and Shading, illustrated by numerous examples, as well modern as ancient, so as to form a complete course of instruction in Ornamental Design, preliminary to drawing from nature. The series of examples for Outline Drawing will be comprised in Five Numbers, each containing Fifteen Sheets, accompanied by Descriptive Letter-press.

Chapman and Hall, 106, Strand.

## NEARLY READY.

## MESSRS. HENRY GRAVES AND COMPANY

Have the honour to announce, that on the 1st of FEBRUARY next, their very beautiful and interesting work of the

## SKETCHES IN TURKEY, SYRIA, AND EGYPT,

BY THE LATE SIR DAVID WILKIE, R.A.,

WILL BE READY FOR DELIVERY.

This splendid work consists of *fac-similes* of the original drawings Sir David intended as studies for composition, but which his untimely death prevented, including The Beautiful Subjects of the Letter-Writer, and 'The Tartar Announcing the Fall of Acre,' the 'Portraits of the Sultan,' 'The Paasha of Egypt,' and many others, not less beautiful in costume than striking for Eastern character.

Price: Twenty-six plates, Imperial Folio, half Morocco, 44 4s. .... Coloured and mounted, in imitation of the original Drawings, £10 10s.

LONDON: PUBLISHED BY HENRY GRAVES AND COMPANY, PUBLISHERS IN ORDINARY TO HER MAJESTY AND HIS  
 ROYAL HIGHNESS PRINCE ALBERT, 6, PALL-MALL.

## MILLER'S SILICA COLOURS.

In introducing these Colours to the notice of Artists and of the Public, it will not, perhaps, be deemed obtrusive, if the Manufacturer presumes to offer a few remarks upon the subject, seeing that, by the application of many years' experience, aided by numberless experiments, he has, at length, most successfully accomplished his object, in bringing back to light a long buried secret of ancient Art.

The countless and laborious efforts that, from time to time, have been made by modern Artists, to produce Colours that might bear comparison in point of brilliancy and durability, with those of the Old Masters, are sufficiently known to need no further comment. It is likewise, unfortunately, but too well acknowledged how fruitless these efforts have been. For although, at first, their works might appear to vie successfully with the antique originals, yet when placed, a twelvemonth afterwards, by the side of their prototypes, how great a falling off was there! What a universal degeneracy of tint and tone! While the ancient productions seemed as fresh and vivid as if they were the creations of yesterday, and appeared by their undecaying brilliancy and clearness to deride alike the attacks of time and the feeble competition of modern Art.

The injurious effects of light and atmosphere on the colours of the present day, are very clearly evidenced by the contrast of Ultramarine, which being manufactured on the same principle as the Colours of the Old Masters and the Silica Colours, has been erroneously supposed to have derived an accession of brilliancy from age. Such, however, is not the fact. The phenomenon of its apparently increased vividness, is the result of its simply retaining its original lustre, whilst that of the other colours of the picture has invariably declined and faded. Were any one, sceptical of the superiority of ancient colour, every doubt might be easily removed by a glance at the two pictures of Francia, recently added to the collection in the National Gallery, and painted between three and four hundred years ago. The transparency and freshness of their tints have that time-defying character and gem-like lustre, that modern paintings seldom perhaps possess, and never retain.

In the early periods of Art, the painter, having no colourman to prepare his colours for him, was compelled to seek and compose them himself, from whatsoever substances were at hand, from earths and stones; and chiefly from the use of such imperishable materials, unimpaired by chemical agency, may be inferred the great durability of his productions.

The present Silica Colours, now confidently submitted to the ordeal of public opinion, have already been severely tested by Artists of the first eminence, and by persons of scientific attainment, whose judgment has been unequivocally expressed in their favour; and who do not hesitate to affirm that they reveal the mystery of ancient colouring; and that they possess all the invaluable qualities of transparency, brilliancy, and durability, which are so eminently conspicuous in the works of the ancient painters.

The SILICA OIL COLOURS, which will be found greatly superior to the common Oil Colours now in use, are prepared in collapsible tubes, and can be forwarded per post to any part of the country, on receipt of an order, for any of the under-mentioned tints, viz.:

Pale and Deep Yellow.	Pale and Deep Brown.
Pale and Deep Red.	Pale and Deep Green.
Pale and Deep Orange.	Pale and Deep Blue.
Pale and Deep Purple.	White and Half Tint.
Crimson and Olive.	Pale and Deep Grey.
Citrine and Russet.	Pale and Deep Black.

## MILLER'S GLASS MEDIUM.

## FOR OIL PAINTING.

This Medium, having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'Guelps, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

No. 1. For first and second painting.

No. 2. For third painting, finishing, and glazing.

Any of the above Media may be thinned, according to the taste of the Painter, with Miller's Venetian Oil.

It may be requisite to remark, that while Artists continue to use colours as commonly prepared in Oils, they only reap half the advantage resulting from the great improvement in the Art—which the Media are acknowledged to be by upwards of one thousand Artists who have already tried and approved them.

**MILLER'S SILICA POWDER.** If this powder be mixed stiff upon the palette with a small portion of Miller's Venetian Oil, it will enable the Artist to lay colour, pile upon pile, and to dip his pencil in water or oil at pleasure. It will also dry so hard that it may be scraped with a knife on the following day.

**VENETIAN GROUND CANVASS.** This Canvass, not being prepared in the usual method with common oils, causes all colours used on it to dry from the bottom, and not from the surface, as is now the case, thereby, in the painter's phrase, giving a light within.

**VENETIAN VARNISH.** This varnish, not being made of soft gums, like the ordinary varnish, neither is it acted on by the atmosphere, which frequently occasions the effect of a thick bloom, similar to that of a plum, thereby entirely destroying the effect of the picture. All these evils are completely obviated by the use of the Venetian Varnish.

T. M. has great pleasure in informing Painters that he has on sale all the Colours made by G. Field, Esq., author of "Chromatography," &c. &c.

He has also all the remaining stock of Ultramarines, manufactured by the celebrated Italian maker, the late G. Arzone.

## PUBLIC NOTICE.

Whereas, I have received a communication acquainting me that an Artists' Colourman of London has caused to be circulated at Boston, in America, an invidious report with the view to prejudice the trade and the public against articles of my manufacture. I hereby advertise the present caution, in order to prevent a repetition of the same, either there or elsewhere, as, in the event of my sustaining any loss or losses by the influence of such like reports, I shall immediately bring an action or actions at law to recover damages against the person or persons who may have circulated them.

(Signed) THOMAS MILLER,  
56, Long-acre.

Dated this 27th day of December, 1842.

T. MILLER has great pleasure in informing Artists and the Public generally, that he is now engaged in the preparation of a test which has long been felt to be a desideratum of immense importance to the Painter, and which has never yet been supplied either in this or any other country.

The test alluded to will be called the Painters' Register, and will consist of more than a thousand mineral tints, which, having been subjected to the process of vitrification, will never alter by time.

The utility to artists in general of a permanent means of comparison will be sufficiently obvious to require no comment. For, at present, whatsoever conviction may exist in the mind as to the fading of some of the colours of a picture, or the apparently increased brilliancy of others, such conviction can only rely upon the memory for support, there being no means of testing the extent or character of the change. Against such a state of uncertainty the Painters' Register will supply an unerring remedy—acting as an infallible guide, the plan being simply to compare the tints of the picture with those of the Register, noting down those of the latter, which, at the time of comparison, are precisely similar to the former; and upon being referred to at any subsequent period (however remote) the alteration, if any, in the tints will be precisely indicated.

It is now in progress, and will be ready on the 1st of March next.

## MILLERS' VENETIAN OIL.

The mode of preparing this oil having been made known to one of the greatest painters of the present day, he pronounced it to be one of the most valuable discoveries of modern times. Pictures painted entirely with this oil, upon being submitted to the action of the blowpipe, will vitrify, showing they possess the properties described as belonging to Venetian Pictures when put to the same test.

If a picture should become dull from the action of the atmosphere, or be covered with a bloom, through the use of indifferent varnish, by washing it with cold water, and then applying a little of the above oil with an old silk handkerchief, it will entirely remove the bloom, and bring out the colours in all their original lustre.

**MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.**

The SILICA WATER COLOURS are prepared in small squares, which possess many and great advantages over the Cake and Moist Water Colours, at present in use; and can be forwarded per post to any part of the country, on receipt of an order for any of the under-mentioned tints, viz.:

Pale and Deep Yellow.	Pale and Deep Brown.
Pale and Deep Red.	Pale and Deep Green.
Pale and Deep Orange.	Pale and Deep Blue.
Pale and Deep Purple.	White and Half Tint.
Crimson and Olive.	Pale and Deep Grey.
Citrine and Russet.	Pale and Deep Black.

## MILLER'S GLASS MEDIUM.

## FOR WATER-COLOUR PAINTING.

It is well known that some preparation for giving brilliancy and depth to Water-Colour Painting, and for enabling the Artist to repeat his touches without disturbing the colours already laid on, has been long sought after; this new vehicle possesses all these advantages. When mixed with the colours it has a most brilliant effect, and will preserve delicate tints unimpaired; in durability it will approach nearer to Oil Painting than anything hitherto in use.

No. 1. For first colouring or laying on masses of colour. This dries so hard that the second colouring or finishing will not disturb it.

No. 2. For second colouring, glazing, and finishing. Any of the above Media may be thinned, according to the taste of the Painter, with Miller's Anthydor.

MILLER'S ANTHYDOR,  
FOR SKETCHING AND PAINTING IN WATER COLOURS.

This liquid is intended to supply the place of water in the above Art. It causes the colours to amalgamate and blend kindly with each other; removes all stains or greasy particles from the surface of Miniature Tablets, Ivory, or Paper; and if, in the progress of the painting, it be found desirable to take out or alter any portion of the Picture, the application of this Liquid by itself will accomplish it without injury to the surface.

T. M. begs to call the attention of Artists to his new Drawing-Paper, made of pure linen only, without undergoing any chemical process.

## MILLER'S PREPARED LEAD PENCILS,

Of different degrees of hardness,

## MARKED

H	Moderately hard, used for sketching.
HH	A degree harder, used for outlines.
HHH	Ditto ditto, used for architectural drawing.
HB	Moderately hard and black, used for sketching.
B	Black, used for shading.
BB	Softer, with extra depth of colour.
EBB	Ditto ditto (double thick lead).
F	Rather soft, but firm for drawing.
FF	Ditto ditto (double thick lead).

TO WATER COLOUR and MINIATURE PAINTERS.  
MILLER'S MINIATURE TABLETS.

To be used instead of Ivory for Miniature Painting, &c. They take colour freely; hold it with tenacity, and are obviously incapable of change through time, or the effects of heat or damp. Ivory, it is well known, becomes yellow, and in hot climates often splits or warps, and is with difficulty obtained of a large size, whereas the Tablets can be had of any dimensions.

## DISSOLVING VIEWS.

Colours prepared in small boxes, for painting the Dissolving Views. The same Colours are also applicable for painting the slide glasses of Magic Lanterns, and devices or ornaments on ground glass, in imitation of the old masters.

14. REVIEW OF PUBLISHED WORKS .....	23

We commence, to-day, a FIFTH VOLUME of the ART-UNION. We do so with some pride as well as pleasure; for the fact affords sufficient evidence that we may retain the consciousness of having discharged our duty, while it supplies satisfactory assurance that public approbation has followed our labours.

The past year has been prolific in proofs that the vast and vital interests of British Art are making way into the minds and hearts of the Community; that the welfare of the Arts is no longer cared for, exclusively, by the Aristocracy, but that, among the Middle Classes, the benefits they confer, the enjoyments they produce, and the instruction they bestow, are generally felt, acknowledged, and appreciated.

Until this great object was achieved it was vain to demand, for the Arts, National protection and encouragement. Its extension—and it is rapidly extending—must inevitably obtain for the Artists of Great Britain advantages equal to those enjoyed by Artists of other European states.

Even the existing excitement that so largely prevails in reference to Art—whatever difference of opinion there may be as to its invigorating, or unhealthy, influence—must be accepted as an unequivocal sign of increased, and increasing, desire to receive it as a substitute for pleasures out of keeping with the growing intelligence of the age.

Our own progress, for the future, may be anticipated from the past: several improvements suggest themselves, which time will gradually develop. We shall studiously resort to every available means of obtaining information—pursue the same independent, and generous, course to which we owe our success—endeavour to retain the confidence of the Artists on the one hand, and the Public on the other—and labour continually, so that the interests of British Art may be more firmly upheld, more systematically encouraged, and more universally appreciated.

NOTES ON BRITISH COSTUME.  
PART THE THIRD.

BY FREDERICK W. FAIRHOLT.

## THE PLANTAGENETS.

WHAT lover of the "olden time," be he either artist or antiquary, upon entering for the first time some venerable "structure consecrated to God," whose very walls speak of past centuries and command respect, has not felt his heart "moved more than with a trumpet," upon catching sight of the effigies of knight and lady enshrined beneath its time-beaten roof? There they lie, boldly delineated by the hands of their contemporaries, "in their habit as they lived," faithfully given to the minutest point, and yet with that power that only belongs to Art when based upon its vital principle—truth—looking as if about to start into life and re-enact the gorgeous scenes of Froissart and the elder chroniclers. Venerable mementoes of our forefathers! who can help an involuntary aspiration, as he ponders on your mail-clad hands clasped in prayer, and reads the touching "Orate pro me" inscribed upon the quiet resting-place of you, whose actions "stirred the nations!" Links that bind us to the past, memorials of the life and Arts of ancient England less perishable than the brain that could conceive, or the hand that could fashion you; long may you be preserved from the barbarism of the despoiler, and remain piously preserved as a sacred bequest from our progenitors, to gladden posterity; and to prove that the utilitarianism of a boasted "march of intellect" age has not quite dried up all respect for the ancestry who have made us what we are, and whose governing principles we are frequently obliged to acknowledge as unwisely forgotten!

To those "silent monitors" I must now direct the reader's attention, as they will be our best and surest guides from whence much valuable information may be obtained relative to the subject we are to discourse upon.

We are indebted to that excellent artist and judicious antiquary, the late C. A. Stothard, for the conception and execution of his beautiful work, the "Monumental Effigies of Great Britain," and which, for the first time, did full justice to these subjects. His own opinion of their value he thus expressed:—"Among the various antiquities which England possesses, there are none so immediately illustrative of our history as its national monuments, which abound in our cathedrals and churches. Considered with an attention to all they are capable of embracing, there is no subject can furnish more various or original information." With the enthusiastic desire of rendering our national series of royal effigies as complete as possible, he journeyed to Pontevraud, in Normandy, where, previous to the Revolution, the earliest monumental effigies of English sovereigns were to be seen, and which were depicted by Montfaucon\* and Sandford,† but which were confidently reported to have been destroyed during that disgustingly awful period the first French Revolution. "An indiscriminate destruction," says Mr. Stothard, "which on every side presented itself in a tract of 300 miles, left little hope on arriving at the Abbey of Pontevraud; but still less, when this celebrated depository of our early kings was found to be but a ruin. Contrary, however, to such an unpromising appearance, the whole of the effigies were discovered in a cellar of one of the buildings adjoining the Abbey. For, amidst the total annihilation of everything that immediately surrounded them, these effigies alone were saved; not a vestige of the tomb and chapel which contained them remaining." This was the chosen burial-place of a few of our early kings, until they lost the provinces of Anjou and Maine, in the time of John. Henry II., who loved the banks of the

\* "Antiquities de la Monarchie Française," vol. 2.

† "Genealogical History of the Kings of England."

Loire, and frequently resided in the Castle of Saumur, dying in that of Chinon, both in the neighbourhood of the Abbey—was buried here with his Queen, Eleanor of Guienne; as also were Richard I., and Isabella of Angoulesme, the Queen of John. All their effigies are beautifully engraved by Mr. Stothard, and are particularly valuable as records of the regal costume of the period.

Henry II. is represented lying upon a bier, his head supported by a cushion. The character of the face is strongly marked by high cheek-bones, and projecting lips and chin (the nose has been knocked away); the beard is painted and pencilled like a miniature, to represent its being close shaven; the mantle is fastened by a fibula on the right shoulder, its colour has been of a deep reddish chocolate; the dalmatic is crimson, and appears to have been starred or flowered with gold. The mantle probably was originally ornamented in a similar manner. The boots are green, enriched with gold, on which are fastened with red leathers the gilt spurs: upon his hands are gloves, with large jewels fastened upon the back of each of them. This effigy, in accordance with the usual custom at that time, appears to have been a literal representation of the deceased king, as if he still lay in state. Matthew Paris, describing this ceremony, says, "On the morrow, when he should be carried to be buried, he was arrayed in the regal investments, having a golden crown on the head, and gloves on the hands; boots wrought with gold on the feet, and spurs; a great ring on the finger, and a sceptre in the hand, and girt with a sword; he lay with his face uncovered." His account exactly agrees with the effigy. The right hand, with the ring and the sceptre, has been destroyed. The only variation from this description being in the sword, which is not girt, but lies on the bier on the left side, with the belt twisted round it.

His Queen, Eleanor of Guienne, is attired in regal vestments, with a crown upon her head, which is also enveloped in a close kerchief hanging in folds upon her shoulders. A long gown, with a close collar at the neck, and fastened round the waist by an ornamented girdle, envelops the body; the sleeves being tight to the wrist, where they become slightly wide and pendulous. A portion of the under tunic is visible at the neck, where it is fastened by a circular brooch. A capacious mantle falls from her shoulders, supported by a strap, or band, across the breast; it is wound about the lower part of the figure, and partially upheld by the right hand. The pattern upon the Queen's dress consists of golden crescents, in pairs, placed point from point, within a lozenge formed by the crossing of the diagonal bars of gold that cover the whole surface.

Richard I. wears a crown, the trefoils of which are filled up with a honeysuckle pattern, which various architectural remains of the same period show to have been then much in vogue. His royal mantle (fastened in the centre of the breast) is painted blue, with a richly ornamented gold border; his dalmatic or super-tunic is red; his tunic is white, and under this appears his camise or shirt: the borders of all these articles of dress being richly and variously decorated. The boots are adorned with broad riband-like stripes of gold, which appear to have been intended to express the earlier mode of chaussure sandals. The leathers of the spurs are visible.

The corpse of Richard was, according to his own request, divided, and bequeathed to three different places. His body was buried at the feet of his father at Fontevraud. His entrails, brains, and blood were given to Poitiers. His heart, as a "remembrance d'amour," was bequeathed to Rouen. "He was not one of those ordinary dead whom a single spot would contain," says the "Chronicle of Normandy." At Rouen his heart was magnificently interred near the principal altar of the Notre Dame, and over it was placed an effigy of the king, surrounded by a balustrade

of silver. In 1250 the Dean and Chapter of Rouen ordered this to be melted down to partially pay the ransom of St. Louis, at that time captive among the Saracens. In 1733 the tomb was wantonly demolished by the order of the Dean and Chapter in order to raise the high altar, &c. In July 1838, at the suggestions of Mr. Deville, an antiquary of that city, the spot where the tomb formerly stood was excavated, and the result was the discovery of the box containing the heart of Richard, and the effigy here engraved, from a drawing I made shortly afterwards while

staying at that "Herculaneum of the Middle Ages," as Rouen has been aptly styled by a modern French writer.

The face of the king is much more expressive than that of the effigy at Fontevraud. The nose has been broken off, and the face otherwise injured, but still enough remains to form a satisfactory and characteristic likeness. He wears a crown very similar to the Fontevraud effigy; his hair is parted in the centre of the head, and falls in curls upon the shoulders; a long dalmatic, confined by a girdle at the waist, and closed by a brooch at the neck; and a capacious mantle falls in folds over the left arm, leaving the right one free, which has formerly held a sceptre. His boots are strapped across the instep: the effigy altogether being more simple than that at Fontevraud. The details engraved beside the figure, on a larger scale, are—1, the crown which has escaped damage, where it rests upon the pillow; 2, the pattern upon its outer rim; 3, that upon the girdle; and 4, the boots, the toes having been broken off.

The effigy of Queen Berengaria was delineated by Mr. Stothard from the remains of her tomb in the Abbey of L'Espan, near Mans, which the sacrilegious fury of revolutionary Vandalism had destroyed. When the artist visited the Abbey, in 1816, he found the church converted into a barn. "The architectural parts of Queen Berengaria's tomb were discovered lying about the place, but the effigy was concealed beneath a considerable quantity of wheat. After many difficulties, and the delay of a twelvemonth, it was uncovered, and found placed upright in a niche in excellent preservation. By the effigy were lying the bones of the Queen, the silent witnesses of the sacrilegious demolition of her tomb."\* The Queen is

\* I have been thus careful to note the unceasing perseverance in the midst of the slenderest foundation for the hope of fortunate results, that was a characteristic feature in this enthusiastic artist, in order that the full share of honour may be awarded him by every reader of his name and conduct, and as a useful stimulant to untiring perseverance. It is not a little singular that

represented with her hair unconfined and flowing,

but partly concealed by the coverchief, over which is placed an elegant crown. A large and ornamental fermail or brooch, richly set with stones, confines her tunic at the neck. To a decorated girdle, which encircles her waist, is attached a small *aulmonière* or purse, to contain alms.\* The Queen holds in her hands a book, singular from the circumstance of having embossed on its cover a second representation of herself, as lying on a bier, with waxen torches burning in candlesticks by her side. The details engraved beside the effigy are—Fig. 1, part of the crown; 2, the *aulmonière*, as attached to the girdle; 3, the brooch.

During this period of English history the changes that occurred in civil costume were few or none. The age was a military one, and in the improvement of arms and armour the chief and most important changes were effected. The

his death should be so mournfully peculiar as it was; he perished in the 34th year of his age, in the full possession of health and vigour, by a fall from a ladder placed against one of the windows of the church of Bere Ferrers, in Devonshire, while tracing the painting upon it of the founder and his lady. His head came in contact with the slab upon which the figure of a knight is placed in the chancel wall; and he was, in all probability, killed on the spot by a concussion of the brain—receiving his death-blow from one of those very effigies from which, through his talents, he will receive a sublimity immortality.

\* It was the custom at this period and previously for ladies of distinction and wealth regularly to distribute money or food to the poor. The title of *lady* is derived from the Anglo-Saxon, and literally signifies *giver of bread*. The purse, with similar meaning, was named as a receptacle for *alms*, and not as an invention for the preservation of money.

dress, described and depicted in the last part of these notes, was that still worn, or modified a little, as in these examples selected from the Sloane collection of manuscripts in the British Museum, and marked No. 1975. It gives us the costume of the youth and elders of the community. The young man wears an ornamental tippet round the neck; a plain bordered tunic, tight at the waist, and which varies from those worn at the commencement of this century, in being shorter and closed all round, instead of open at the right side, as described in the last part of these notes. High boots now seem to have become the general fashion, and the youth wears a pair reaching above the ankle. The elder figure, which in the original represents a medical practitioner, wears a hood of a peculiar form; a long gown reaching to his feet, over which is a tunic confined by a girdle at the waist; while a mantle, fastened as usual on the right shoulder, and leaving that arm free, envelopes the entire body. The beard appears to have been shaved, or at least trimmed closer than at the previous period to which we have just referred.

The ladies seem to have retained the same costume, but to have shortened their trains and sleeves, which now hang but six or eight inches from the wrist. The long plaited hair, enclosed sometimes in its silken case of embroidery, appears to have been also discarded, and moderation to have reigned.

The earliest *monumental* effigy of an English sovereign in this country is that of King John, in Worcester Cathedral. It is of ruder workmanship than the continental effigies before described, and was probably the work of a native sculptor. He wears a super-tunic of crimson embroidered with gold; a golden belt richly jewelled confining the waist, and descending beyond the knee. The under tunic is cloth of gold, of which material the mantle appears to be formed, which is lined with green. His hose are red, and the shoes black; gilt spurs are fastened over them by straps of a light blue colour, striped with green and yellow. The peculiarity of the costume being its shortness, as contrasted with earlier effigies. The mantle is fastened upon the shoulders so far back as not at all to interfere with the full sleeve of the tunic; or, indeed, to be more than just visible at the sides of the figure. His beard is closely trimmed, and the face stern of feature.\*

The effigy of Isabel d'Angoulesme, the third and last wife of John, who took the veil, and died at Fontevraud, is regally attired, and varies but little from that of Queen Berengaria. She wears a close gown with embroidered cuffs and collar, confined by a slightly ornamented girdle. A mantle, with a border held by a narrow band crossing the breast, envelopes the figure. A plain crown is upon the head, a kerchief falls over the shoulder from beneath it, and a band passes round the chin.

From what little we can gather of the costume of this period, it would appear that splendour of appearance and costliness of material, rather than quaintness of shape, was studied by the nobles. The mantle in particular was splendidly adorned. Strutt tells us, that "Robert Bloet, Bishop of London, made a present to King Henry I. of a mantle of exquisitely fine cloth, lined with black sables, with white spots, which cost £100 of the money of that time;† and Richard I. possessed a mantle still more splendid, and probably more expensive, which is said to have been striped in straight lines, ornamented with half-moons of solid silver, and nearly covered with

\* The effigy is beautifully given by Stothard. Upon opening the tomb in the year 1797, the body of the king was discovered in all respects similarly habited, the exception only being that upon his head was a monk's cowl: thus confirming the accuracy of the ancient chroniclers, who affirmed that the king adopted this habit in his dying moments, in accordance with the faith of the age, which believed the evil one to have no power over a body so sacredly invested.

† Which he computes at £1500 of present money.

shining orbs, in imitation of the system of the heavenly bodies.\*

Henry II. introduced a short mantle, known as the Cloak of Anjou, and obtained by that means the *sobriquet* of "Court Manteau," as Richard I. got that of Cœur-de-Lion from his bravery, and John that of Sans-terre from his supposed poverty, as the younger son of his father.

The ancient leg-bandages are still occasionally seen, and the leg fitted with close scarlet hose, and crossed all the way up by these garters of gold stuff have a very rich and elegant appearance. Gloves, jewelled at the back, became a characteristic distinction with the higher classes, both in church and state.

The commonalty dressed much as usual. Plain tunics, strong boots, and a hood for the head, or else a hat of cloth, leather, or felt; and coarsely made, warm gloves, without separate fingers, completed their costume. The women wore long gowns, and swathed the head in kerchiefs or hoods that fell over the shoulders.

The effigy of the next English monarch, Henry III., is at Westminster, and is chiefly remarkable for its great simplicity.† A long dalmatic, over which is thrown a capacious mantle, fastened by a brooch as usual on the right shoulder, are the robes in which he is dressed: no ornament or border appears on either; the crown is also very simple. The only splendid articles of apparel are the boots, which are covered by fret-work, each square being ornamented with a figure of a lion. Boots of this kind, of scarlet and embroidered fancifully in gold, were fashionable among the nobles of the land. Many rich stuffs were introduced about this time, such as cloth of Baldeckins, a rich silk woven with gold, and so termed, because it was made and imported from Baldeck, or Babylon. It became the fashion to ornament the edges of the garments by cutting them into the shape of leaves, or series of half-circles (and of which we shall see many instances a little further on), and which obtained for the dresses so ornamented the name of *cointoise* or *quintis*, a word derived, as the garment probably was, from the French, and indicative of the *quaintness* or capricious fancy displayed in this article of dress.

The reign of Henry III. extended over 56 years; but during the whole of that period little or no change of *form* is perceptible in the civil costume of the people. A glance at the drawings in Matthew Paris's "Lives of the Offas," which is believed to have been executed by his own hand during this reign, will show this fully, and which are engraved in Strutt's "Horda Angel Cynan," vol. i. The original MS. is in the Cotton Library, marked Nero. D. 1. The copies occupy 33 plates, and will supply the artist with authority for the costume of all grades of society during this reign.

The same amount of simplicity is visible during the next reign. Edward I. is reported to have declared the impossibility of adding or diminishing real worth by outward apparel. For himself he enforced the remark by always dressing in a plain and unostentatious manner, little differing from a common citizen. His only magnificence was noble and heroic deeds. However costly the stuffs of which the dresses of this period were composed, they always appear to have been of the simplest and most unpretending form. Of this monarch no monumental effigy exists. He was buried at Westminster; and the tomb was opened in 1774, when the body of the monarch was discovered regally habited in a dalmatic of red silk damask,‡ a crimson satin

\* These half-moons appear on the dress of Eleanor of Guienne, and were probably a family badge. They occur on the great seal and coins of Richard I.

† A portrait of this monarch, nearly the size of life, and copied from this effigy, is given in Gaigh's "Sepulchral Monuments."

‡ Damascus was celebrated during this period for the manufacture of ornamental stuffs; and hence the name of "damask" was applied to them, as diaper is also derived from "D'Yprea," of Yprea, a town noted for the rich stuffs and fine linen there fabricated.

mantle fastened on the shoulder by a gilt fibula, decorated with precious stones; a stole\* of white tissue, ornamented with gilt quatrefoils and knots of pearl, crossed the breast, and jewelled gloves decorated the hands. The lower part of the body was wrapped in a piece of cloth of gold, which was not disturbed.†

The effigy of his beloved Queen Eleanor is remarkable for a majestic simplicity. A long gown with a loose sleeve, beneath which appears that of the under garment tight to the waist, and a full mantle secured over the breast by a cord held in the left hand, and the folds of which envelope the feet, complete the dress, which is utterly devoid of ornament. It bears a strong resemblance in grace and elegance to the figure of the Queen in one of the niches of Waltham-croft, erected to her memory by the King. It has been engraved in Flaxman's "Lectures on Sculpture."‡ He says of the statue placed in this cross, and of those at Northampton and Geddington, "The statues have considerable simplicity and delicacy; they partake of the character and grace of the school of Pisano; and it is not unlikely, as the sepulchral statue and tomb of Henry III. was executed by Italians, that these statues of Queen Eleanor might have been done by some of the numerous travelling scholars from Pisano's school."§

The general male costume during this reign appears to have consisted of a long gown reaching to the heels, and fastened round the waist; or a tunic coming down to the knee, with wide sleeves descending a little below the elbow; the tight sleeves of the under tunic reaching to the wrist, and confined by a row of buttons (which are generally set close together from the elbow to the wrist); a capacious hood, and close fitting boots, or tight stockings (sometimes richly embroidered) and shoes; with a wide and flowing mantle, complete the dress as generally worn. The ladies' costume may be seen to advantage in the annexed engraving from the Sloane MS., No. 3983. A wim-

ple or gorget is wrapped round the neck, and is fastened by pins at the sides of the face, which are covered above the ears; a gown of capacious size, unconfined at the waist and loose in the sleeves, trails far behind in the dirt. The under garment, which is darker, has sleeves that fit closely; and it appears to be turned over and pinned up round the bottom; the unnecessary amount of stuff that was used in ladies' robes

\* The stole was an article of priestly costume. A good example occurs upon the figure of John de Campden, engraved and described in the account of the ecclesiastical costume worn during this period.

† Upon his great seal the king is depicted in a dalmatic, super-tunic, and mantle; fastened on the right shoulder. Except in the shape of the crown and orb, very trifling varieties occur in the seals of Henry II., Richard I., John, or Henry III. The three first hold swords in the right hand; Henry III., and all since then, carry sceptres. Henry II.'s seal varies most from the others, and is the most interesting.

‡ The Queen's effigy has been engraved by Stothard, and a portrait from the same source is to be seen in Gaigh's "Sepulchral Monuments."

rendering them obnoxious to the satirists of that period.

A friend has favoured me with a translation of a Latin story of the fourteenth century, recently printed in Mr. Wright's collection, published by the Percy Society, which is so curious an instance of monkish satire that I cannot resist presenting it to my readers. It runs thus:—

"Of a Proud Woman.—I have heard of a proud woman who wore a white dress with a long train,\* which, trailing behind her, raised a dust even as far as the altar and the crucifix. But, as she left the church, and lifted up her train on account of the dirt, a certain holy man saw a devil laughing; and having adjured him to tell why he laughed, the devil said, 'A companion of mine was just now sitting on the train of that woman, using it as if it were his chariot, but when she lifted her train up, my companion was shaken off into the dirt: and that is why I was laughing.'

The luxuriousness in apparel of Edward II. is not visible upon the effigy of that monarch on his tomb in Gloucester Cathedral, which is remarkably plain and unostentatious. A long dalmatic covers the entire body, hanging in simple folds from the breast to the feet, unconfined by a girdle and perfectly unornamented; it is slit in the centre to the knee, exhibiting the long gown or tunic beneath. The sleeves of the dalmatic terminate at the elbow, from whence they hang dependant, the sleeves of the tunic continuing to the wrist. He wears boots reaching to the ankle, and carries a plain sceptre and simple ball, one in each hand. The only trace of foppiness is in the hair, which is carefully cut across the forehead, and hangs from the sides of the head in waving ringlets on the shoulders: a fashion that appears most vividly on the coins of this monarch and his father, and which continued to be copied on our national series until the reign of Henry VII. His beard and moustachios are equally redundant, and are parted and curled in separate locks with great precision.†

Piers Gaveston, the unworthy and effeminate favourite of the youthful monarch, whose friendship for him had alarmed Edward I., and produced a sentence of banishment against Piers; and whose bigotted attachment, after the death of his father, effectually estranged the love of his subjects, was remarkable for his love of finery. "None," say the old chroniclers, "came near to Piers in bravery of apparel or delicacy of fashion." Under the rule of this favourite the court swarmed with buffoons and parasites; and at his death the king was speedily enthralled by his new favourites the Despencers. The twenty eventful years of his reign originated a great change in dress; but it appeared chiefly at court,

\* Cauda—literally, tail: the tail of a gown.

† More traces of splendour occur in the figure of the monarch upon his Great Seal. The sleeves of the super-tunic are wide, and ornamented with a deep rich border; the waist is confined by a girdle, and the mantle fastened on the right shoulder and covering the left arm, not, as in the effigy, falling over the back from the shoulders, upon each of which it is secured.

the troublous times not allowing of that general diffusion that else might have occurred; it, however, was silently working, and appeared in full splendour during the next reign. But the germs of all the remarkable changes originated in the court of this unfortunate king.

The figures here copied from Royal MS. 14, E. 3, (see p. 7) will give us the ordinary costume of the commonalty during this reign. The male figure is habited in a long gown buttoned from the neck to the waist, and having loose hanging sleeves to the elbow, beneath which appear the tight sleeves of the tunic. A hood covers the head and shoulders which is frequently seen folded back or hanging down behind.

Scarcely any instances occur of girdles confining the waist of male or female. Sometimes the super-tunic is slit at the sides, or in front to the hips, displaying the under-garment. Shoes generally are worn reaching to the ankles, with pointed toes, and slightly ornamented.

The female carries a distaff, and wears a hood or kerchief swathed round the head and tied in a knot at the side; a full gown, rather short, which, being caught up under the arm, displays the under-garment, and the high boots reaching to the calf of the leg, which are fastened by rows of buttons up their fronts.

The chief feature in the costume of this period was the hood, which exhibits a great variety of form, as if the ingenuity of fashionable changes had been chiefly directed to decorate the heads that invented them. Specimens have been selected from Sloane MS. No. 346, and exhibit some of the commonest forms. Fig. 1 displays the hood closely fitting the head and neck, the point that hangs down the back when the hood is withdrawn projecting over the forehead. Fig. 2 is a flat cap with a narrow border, that just covers the upper part of the head, sinking in the centre and thence rising to a point, as if to form a convenient handle for its removal. Fig. 3 shows an equally common form of hood which is more capacious, hanging loosely over the shoulders, being a comfortable combination of tippet and hood, no doubt exceedingly warm and convenient in bad weather; it is closed tightly about the head by the "liripipe" or long pendant tail of the hood that hung down the back, when the hood was thrown off, and was wound like a bandage about it when placed over the head. Fig. 4 exhibits the hat now worn, and which is precisely similar to a modern countryman's; it is slung round the neck by a string; the head being generally uncovered except in bad weather, when the capuchon or hood was brought over the head, and the hat placed over that, giving it a double protection. Fig. 5 is a conical flexible cap of woollen or cloth, turned up round the edges, and very similar to the nightcaps still worn by the lower classes of the community. Some dozens of cuts might be given if all varieties were shown, but those most in use are here depicted.

A good specimen of the costume of a female of the higher classes is here given, from an effigy of a lady of the Ryther family, in Ryther church,

Yorkshire, engraved in Hollis's "Monumental Effigies."\* She wears a wimple, covering the neck and encircling the head, the hair of which is gathered in plaits at the sides, and covered with a kerchief, which falls upon the shoulders, and is secured by a fillet passing over the forehead. The sleeves of the gown hang midway from the elbow and the wrist, and display the tight sleeve with its rows of buttons beneath. The mantle is fastened by a band or riband, secured by ornamental studs. The lower part of the dress consists of the wide gown, lying in folds, and completely concealing the feet, which have been omitted, in order to display the upper part of this interesting effigy to greater advantage.

The general costume, up to the this period, had been exceedingly plain, and abundant examples may be found in a very common book, Strutt's "Sports and Pastimes of the People of England," as republished by Hone, with wood-cut facsimiles of the original delineations of ancient games and amusements, given in manuscript illuminations, many of which were executed at this period, such as those copied from Royal MS. 2, B. 7, &c.

The brilliant reign of Edward III. was favourable to the full development of the display that began during that of his unfortunate father, and to the fostering of a good taste for its regulation. The effigy of Edward at Westminster is remarkable for its simple, yet rich and majestic costume. A long dalmatic, open in front to the thigh, displays the under-tunic, the sleeves of which reach to the root of the thumb, and are buttoned closely all the way from the elbow; his mantle and dalmatic have rich borders, and the shoes are splendidly embroidered.

\* This work is intended as a supplement to that of Stothard, left incomplete, as far as his original intention was concerned, by his unfortunate death. It was an undertaking of no little difficulty for Mr. Hollis to attempt the completion of a work so celebrated for its accuracy and beauty. The able and spirited manner in which he has effected it, as far as he has yet proceeded, is creditable to him in no small degree. Those only who know the difficulty and trial of collecting materials

The ordinary costume of the better classes, during the early part of this reign, will be well displayed in the figures here given. The gentleman wears a close-fitting tunic, called a *cote-hardie*, with tight sleeves and considerably shorter than the dresses worn during the previous reign. It does not reach the knee, and leaves room for the full display of the embroidered garter, which encircles the leg and hangs from the buckle after the fashion of the usual representations of that of the knights of the Garter. His girdle is confined by a large circular buckle in its centre; and he wears, suspended from it on the left side, an ornamental purse (or *gipciere*, as it now generally termed), and a small dagger. His shoes have long pointed toes, and are fastened up the centre with rows of buttons, an exceedingly common and fashionable mode of securing and ornamenting any portion of the dress that required fastening. Not the least curious part of this figure is the hood, carried over the left shoulder, and which shows fully the peculiar shape of this head-tire. It is in this instance so slung, that the pendant or *liripipe* hangs in front of the breast; the opening for the face is seen, and the double border ornamenting the neck; it must have been an exceedingly warm article of clothing, incasing head and shoulders, with but a slight oval opening for the face. The lady wears a long gown, over which is a *cyclas*, or tightly-fitting upper-tunic. She carries in her hand her gloves, which at this period were very commonly worn, and are as commonly depicted in the illuminations either carried in the hand, or tucked in the girdle, when not actually worn. Her hair is fastened in a reticulated caul, and from it streams the long *contoise* so fashionable during this reign and the preceding one, and which frequently floats from the jousting-helmet of the knight, some yard or more in length. It was no unfrequent thing for the noble ladies to decorate their long gowns with the armorial bearings of their family. A good example occurs in the following cut; copied, as were the two figures just described, from the illuminations in the famous Psalter executed for Sir Geoffrey Luttrell, who died 1345. It represents that nobleman, armed at all points, receiving from a lady of his family his tilting-helmet. The cut will

widely asunder, and the painful and expensive journeying necessary to such collecting, can understand the ardour and enthusiasm that must be brought to the task, and the laborious patience, the truthfulness of eye, and accuracy of hand, that must then unite to render the result successful. To say that many of the plates in this work would in no degree disgrace Stothard, is to award them their just desert. As I have no personal acquaintance with Mr. Hollis, or any of the gentlemen whose books or plates I quote, I shall be at least enabled to pass a honest and unbiased opinion; and it gives me much gratification in being enabled to recommend warmly a work so deserving of patronage from its own intrinsic merits.

show the constant repetition of his coat of arms on every article where it could be introduced; and embroidered on a large scale, upon the flowing dress of the lady. The frequent tournaments and jousts so much patronised by the king—who, indeed, re-established, at Windsor, the "Round-Table," and encouraged to the utmost the chivalric feeling of the nobility—rendered a great display of heraldic gorgeousness a necessary means for detecting the knight who was so completely concealed by the arms he wore. The brilliant exhibition of so much coat-armour, with all its quaintness of form and figure and splendour of colour, must have presented a *coup-d'œil* of great beauty and magnificence, and may still be useful to the painter who desires rich masses of colour and variety of tint on portions of dress generally monotonous; the forms and lines of heraldic fancy may also frequently be brought to bear usefully, if judiciously introduced in a composition.

To the pendant streamers from the hood were now added others from the elbow. They first appear as narrow elongations from the sleeve of the upper-tunic, or *cote-hardie*; they afterwards assume the form of long narrow strips of white cloth, and were called *tippets*, generally reaching from the elbow to the knee or lower. They

are seen upon one of the figures in the cut here introduced. This figure wears a hood, with a border of a different colour, and cut into escalops. His *cote-hardie* fits tightly to the waist, and is party-coloured, half being with its sleeve of one colour, the other half with its sleeve of another. The stockings also are of different tints; the shoes of rich workmanship. The other figure, which is an excellent example of the ordinary costume of a gentleman of the day, is from an illumination of this period in my own possession, which, with some others, have been ruthlessly cut from a copy of the famous "Roman de la Rose." His hair, (which during this period was generally cut close over the forehead, and allowed to flow at the sides, encircling the shoulders) is luxuriant. His hood, less ample than that of the other figure, embraces the neck, and hangs behind; it is of crimson. His tightly-fitting *cote-hardie*, of dark blue, is encircled at the hips by a baldric, or ornamental girdle, which is never represented, either on male or female figures, as encompassing the waist, and is generally divided into a series of square compartments, exhibiting ornamental patterns, many of which are of great beauty; a small dagger or anelace hangs from the baldric. The right stocking is white; the left one red; and the shoes (of the general fashion) are open at the instep, and fastened round the ankle.

The party-coloured dresses were especially obnoxious to the clergy and satirists; the *red side* of a gentleman, they declare, gives them the idea of his having been half-roasted, or that he and his dress were afflicted by *St. Anthony's fire*! The clergy were strictly enjoined to eschew the heterogeneous fashion, and church canons were

levelled at those whose love of finery induced them to it.

The beautiful bronze figures of the children of Edward III., that are on the south side of his sumptuous tomb in Westminster Abbey, may be cited as fine examples of the costume of this era; two are engraved above. The lady has her hair arranged in square plaits at the sides of the head, similar to Queen Philippa's; a band ornamented with jewels encircles the forehead; her tight-fitting gown is plain and un-ornamented, hanging in folds over the feet; long streamers fall from the upper part of the arm to the ankles, and the hands are placed in *pockets*, which now begin to appear in ladies' dresses, and into which the hands are generally thrust, in the manner that a modern French girl places her's in the pockets of her apron. The male figure is exceedingly simple, extravagant in nought but buttons. Indeed, that this is the most beautiful of the various dresses worn in England has long been my opinion; and if we omit the ugly streamer from the lady's costume, it must be granted that both figures for elegant simplicity could not be exceeded by anything of classic times.

A long mantle was occasionally worn over this dress, and was fastened on the right shoulder by two or more buttons, or ornamental clasps; it completely enveloped the wearer, hanging to his feet; its border was cut into the shape of leaves—a fashion very common at this time, and which has before been alluded to. This mantle was generally allowed to hang over the breast loosely pendant, and it was thrown back over the left shoulder. It may be seen worn both ways on the figures upon Edward's tomb. For specimens of the costume of the middle classes and merchant-men during this period, I may refer to the brasses in St. Margaret's Church, Lynn, engraved by Cotman, and which are the finest and most elaborate in the kingdom. They represent Adam de Walsokne and Margaret his wife, 1349; Robert Braunch and his two wives, 1364; and Robert Attelath, 1376. The ladies' dresses are particularly splendid, being covered with embroidery of the richest description. Many other examples may be found in Cotman, Stothard, Hollis, and in a work now in course of publication, entitled, "A Series of Monumental Brasses extending from the Reign of Edward I. to that of Elizabeth," by I. G. and L. A. B. Waller, which will add much to the information already possessed from a careful examination of these monuments. The plates are beautifully executed, and for accuracy are all that the most fastidious antiquary could desire.

[There are so many matters pressing upon our attention this month that we are reluctantly compelled to divide this Era in the History of British Costume.]

## OBITUARY.

MR. JOHN VARLEY.

The death of this gentleman took place on the 17th November, at the house of a friend in the vicinity of Cavendish-square. Few men are better known in our water-colour school of Art than Varley, and few men have more virtuously withstood the temptations of glare and colour which have cut off the rising reputations of so many. In all that Varley has done, there is an uncompromising severity of treatment, an unflinching assertion of character, which make us respect even his manner for his oneness of purpose. John Varley was distinguished among his schoolfellows for his personal strength and courage, and very early evinced a strong love of drawing, which, although encouraged by his mother, was discountenanced by his father, who said that *drawing was a bad trade, and none of his children should follow it*. He was, therefore, sent to a silversmith's, to whom it was his father's intention that he should be apprenticed; but the death of the latter happening soon afterwards, young Varley was left to follow his own inclination. Being determined to pursue Art as a profession, he obtained employment for some time with a portrait-painter in Holborn, and afterwards, at the age of 15 or 16, received instruction from a drawing-master of the name of Barrow, with whom he made his first sketching excursion, during which he made a drawing of Peterborough Cathedral, which acquired a degree of consideration, inasmuch as he began to be regarded as an artist of much promise.

He afterwards made the acquaintance of Arnold, who subsequently became A.R.A., and with him made a tour in North Wales about the year 1799, after which Dr. Munro invited him to his house at Fetcham, in Surrey, where he employed him in making coloured sketches of views in the neighbourhood. Dr. Munro was a great admirer of Varley's talent, and was of essential service to him, as well by his observations and suggestions as by the assistance and encouragement he held out to him. About this time he found another patron in the Earl of Essex, who invited him to his seat at Cashiobury Park. In 1801 he again visited North Wales, and it was during this year and the following that he collected the Views in North Wales, which were so long favourite subjects with the public; some of which, under different treatment, were among his latest and most finished productions. After this, he visited Yorkshire, Northumberland, Devonshire, and other parts of England; and in 1803 he married.

The earliest members of the Water Colour Society formed among themselves, in 1804, a friendly society, meeting at the house of each in rotation, there to spend the evening in sketching, composition, &c. &c. Varley was not one of the original members, but he was always invited to these meetings, his talent as an artist, social qualities, and liberality in imparting information to his brother artists securing him always a welcome as a visitor.

The first exhibition of this society took place in 1805; and from 1815 to 1818 oil paintings formed a part of the exhibition. Upon the lists of his pupils, during so long a career, there occur many well-known names, as Linnell, Turner (of Oxford), Wm. Hart, F. O. Finch, who became members of the same Society. De Wint also, and Copley Fielding benefited much by his advice and communication. These gentlemen were not his pupils; but Varley had a thorough contempt for everything like concealment in matters relating to Art.

In 1824 Mrs. Varley (who was the daughter of an old friend,) died, and in the following year, a short time before his second marriage, his house in Titchfield-street was burnt, and, singular enough, he suffered five years afterwards the like misfortune. The genius of this celebrated water-colour painter was not enfeebled by years, for during the late period of his life "his lamp burnt on," and even more brightly than at any period of his career. His last drawing from nature was a sketch of the celebrated cedar-trees in the Botanical Garden at Chelsea; but from the dampness of the ground he caught a severe cold, which seems to have settled upon him, and terminated in his death.

To a large number of persons John Varley had become known as an Astrologer; and some singular stories are recorded of him. His studies of this abstruse subject became, at length, almost a mania; of late, he could scarcely look at a person without "spacing" his fortunes and predicting his futurity. He would inquire eagerly concerning the day, hour, and minute of a birth, and proceed at once to cast the horoscope of the party questioned. Some of his "guesses" were very remarkable. We have heard, upon good authority, that he predicted the fire which consumed his house some months before it occurred. Once, when his friend Cotman was ill, in Norwich, Varley happening to be in the town, called upon him. The following odd dialogue has been reported to us. Varley, "Mr. Cotman at home?"—Servant, "Yes, Sir; very ill indeed, going to die."—Varley, "Die; impossible; he won't die these ten years. Let me see your mistress."—Mrs. Cotman appears with a melancholy air and manner. Varley, "What's the matter?"—Mrs. C., "Poor Cotman is given over by the doctors."—Varley: "Pooh, nonsense. They know nothing about it; his time is a long way off. Let me see him." Varley was introduced into the sick chamber, and addressed his friend, "Why, Cotman, you are not such a fool as to think you are going to die. Impossible! No such thing. I tell you there are ten years for you yet to come." The prediction, as usual, operated to its own fulfilment, and Cotman did recover. Many anecdotes as singular might be added to this.

#### LADY CALCOTT.

This estimable and accomplished lady, the wife of Sir A. W. Calcott, R.A., died at her house at Kensington Gravel Pits, after many years' severe suffering. She was born in 1788, and was the daughter of Captain Dundas, and became at a very early age the wife of Captain Graham, with whom she travelled in India, whither she had gone in 1809, and whence she returned after a sojourn of about two years. On her return home she published an account of her travels, from which it would appear that the period of her visit to India must have been spent in some of the most remarkable localities of the country, of which she must have seen more than thousands who pass their lives in it. She visited the Island of Salsette, the cave of Elephanta, the excavations of Carli, in the Maharratta country, and Poonah, the capital of the same district. She then returned to Bombay, whence she proceeded to Madras, from which place she went to Calcutta, and in the year 1811 embarked for England. After a residence of some time in Italy, she published two works, one entitled "Three Months in the Environs of Rome," 1820; the other, "Memoirs of Poussin;" and ten years after her return from India she embarked with Capt. Graham for South America, but that officer died on the voyage, and was interred at Valparaiso. Some years afterwards Mrs. Graham became the wife of Mr. Calcott, and again visited Italy with him. Lady Calcott, by lengthened study, had acquired a knowledge of Art which falls to the lot of few of her sex. Evidence of this is given in her "Essays towards the History of Painting," published in 1836. Her death resulted from the rupture of a blood-vessel, and her remains are interred in the cemetery of Kensal Green.

#### BENJAMIN HICK, ESQ., OF BOLTON.

We have to record, with deep regret, the death of Benjamin Hick, Esq., of Bolton, Lancashire, one of the most liberal of the provincial patrons of Art—a class of the community of which, alas, there are far too few. Mr. Hick was the early friend and patron of Liverseege, of whose works his collection contains perhaps better specimens than any other. Mr. Hick was a patron of Art in the true sense of the word; encouraging genius and artistic worth wherever he found it; and his loss will be much felt by a number of the artists of the present day, with many of whom he was on terms of intimacy. The collection of pictures and drawings which he has left displays a refined and cultivated taste, and comprises specimens of most of the principal painters of the British school. As an engineer, Mr. Hick was one of the best practical men of the day; and, being a capital draughtsman himself, he introduced almost a new era in the exterior forms of the steam-engine and other large mechanical works, combining elegant and tasteful designs for the ponderous and unsightly forms pre-

viously made. Mr. Hick died on the 9th September, and was interred in the parish church of Bolton-le-Moors; and notwithstanding the wish of his family, that the funeral should be strictly private, upwards of five hundred persons, including a great number of influential gentlemen of the neighbourhood, followed his remains to the grave, showing how highly they revered his memory and respected him as a man.

A still more interesting fact illustrates the beauty of his character. The workmen in his employ have subscribed a sum of nearly £200 to erect a monument to commemorate his worth and virtues in the church of his native town. They have had, we understand, offers of contributions from several quarters, but have resolved unanimously to keep this honour to themselves. What nobler comment could be made upon his life? What higher, loftier, or more enviable inscription could his tomb contain than the simple recital of this touching incident?

Unhappily his fine and valuable collection will be scattered. They are advertised for sale in another column of our paper. Among them, we believe, are many admirable examples of British Art, and all of them are of considerable excellence.

#### J. B. CROME, ESQ.

On the 15th of September, in the 49th year of his age, died Mr. John Berner Crome, eldest son of the late eminent artist, the founder of the Norwich School. Mr. J. B. Crome was educated at the Free School of that city, where, under Dr. Foster, and subsequently under the Rev. E. Valpy, he showed much talent and attained considerable classical acquirement. On the termination of his education he pursued his father's art, and taught drawing in Norwich and throughout the country. As an artist, Mr. Crome's talent was of no mean order. He made "moonlights" his peculiar study, and at the time of this his early death, had elevated himself to high celebrity in this particular branch. In private life he was greatly and deservedly esteemed for his generous kind-hearted nature. The writer of this brief notice was his playfellow in childhood, and the friendship then formed continued to the last. He suffered dreadfully from an incurable disease, but his spirits were buoyant, and enabled him to maintain much of his original vivacity amid his suffering. He had an elegant and classical turn of mind, and deserved a much better fortune. Mr. Crome was twice married, and leaves a widow, but no children. His daylight scenes are not very numerous, but one of "Rouen," exhibited some years since at the British Gallery, is no doubt still in the recollection of many. It was purchased by the late Countess de Grey, and was esteemed one of the leading attractions of the exhibition.

We have had frequent communications from Mr. Crome, and all his letters left upon our mind impressions, not only of his large general ability, but of his exceeding amiability and generosity of nature. He had promised us, indeed, some particulars relative to the career of his accomplished father, the production of which his health compelled him to postpone from time to time. We lament his loss, therefore, as that of a personal friend, as well as a worthy member of the profession.

A younger brother of Mr. J. B. Crome is also an artist, settled, we believe, in Edinburgh. He has rarely, or never, exhibited in the metropolis, and seldom, indeed, makes his public appearance anywhere; but we have seen productions of his pencil that evidence genius of a very high order, and leave conviction that, if he pleased, he might hold rank with the ablest painters of the age and country.

#### CORRESPONDENCE.

##### THE KUNST BLATT CRITIQUE.

SIR,—In reading the translation of a Dr. Merz's criticism, which appeared in your last two numbers, I was struck with its inadequacy as an entire view of "British Art," with its too sweeping assertions, and its dictatorial, confident tone and self-satisfied style. Leaving for the present the author's taste and judgment out of the question, these errors are great, and (in my humble opinion) enough to have secured a rejection of the "Report" from the pages of the "Kunst Blatt." But I was sorry to

see that the treatment which the "Criticism" received in your pages was neither judicious with respect to the sinning writer and his readers, nor as regards the improvement of yours. There were remarks in Dr. M.'s production which are unfortunately true though not new, and admitted to be so by candid critics, whether English or German; but Dr. M. mixed error with truth, and in condemning his opinions in wholesale, "H." has done the same, and besides, has recriminated (not on Dr. M., but) on German Art in a manner too much resembling that of Dr. Merz. Thus: Dr. Merz complains "of want of correctness and freedom of invention" in English Art; "H." retorts, "You dull heavy Germans." Dr. M. speaks of the coquettish sentimentality which he observed (and who has not?) as a glaring error; it profiteth nothing to reply, "Your countrymen borrow all that is good in conception, all that is grand in invention, all that is good in execution!" Again, Dr. M. intimates that our style is not severe, and our drawing not accurate, which lead to "constrained reminiscences, and airy dreams, and truthless whimsicalities," which, I apprehend, induced "H." to remark that the Doctor's countrymen are "coldly correct; that they have knowledge, but it is dry and spiritless—to be picked up by wooden-headed apologies for genius in drawing academies;" and so on. These things I point out to show that the great evil of unhesitating condemnation and most sweeping judgments is not confined to one side of the question: it ought to be found on neither. We see even from this how soon error spreads itself, how soon wrong is answered by wrong, and how soon prejudice (and especially national) arises and shuts out the power of apprehending truth when it *does* exist. The infection has reached as far as Mr. B. R. Haydon, who has written two or three letters on *himself* and the pictures *he has made*, on Dr. Merz, Art in general, &c. &c. He says he has long been wishing, and now enjoys, the "inexpressible pleasure of not only drawing his sword, but hurling away the scabbard," that he may cut all German Art and artists into small pieces! This acknowledgement—if nothing else did—would account for his matter and manner; but more of Mr. Haydon anon.

For my own part, I find in Dr. Merz's "Report" much whereby the English reader may profit, and I think unfairness has been imputed to him without sufficient grounds. I do not say that vanity, or other bad motive *did not* direct his pen and warp his judgment, but I cannot say it *did*; and so I would treat him as any other man who sees and speaks as he sees and as he has been educated to see. Many of his remarks are just what you would expect—the impression of one accustomed to and studying the severe German school to produce, and as such they are valuable. His aim (I suppose) was to give an account of the *general character* of the May exhibitions, and from them arrive at the state of Art in England. Now, first, as to his plan; and secondly, as to his results. Dr. M. has not selected paintings for criticism by the names of their authors; and it is hardly to be expected that a foreign visitor would choose exactly the same men as an English newspaper critic, who meets year after year the same names, and who has his attention attracted by means which would not act on the other; and no one is ignorant that many a painting is brought forward to notice by the name in the catalogue, which otherwise would have remained unobserved amongst the rest of glare and flash and frames. A critic having observed the "general character" and learning of the different classes of works, is at liberty to select those examples which best represent those classes. A false system of education and of practice in a whole class, may be so pre-eminently displayed by one individual, that he may become the object of comment, though for standing and talent, or other notice-attracting qualities, he would be passed over by ourselves. As far as I see, Dr. M. has certainly *not* passed by all our best artists and chosen all our worst; nor does he place Messrs. Furze, Dean, and Howell on a par with the *first German artists*. It does not even appear that he conceives his countrymen superior to ours in all the different branches of Art; and if, indeed, the Doctor has any powers of observation and decency, he would not dare to think of doing this; nor of comparing the Munich Stieler with our Phillips, any more than a man of taste, or even a jockey, would admire an academi-

cally accurate German's arrangement and construction of a party of horses or cattle with the noble animals of life and spirit and expression and feeling of Landseer and Cooper. It would have been but right, on the other hand, to have noticed at greater length, the works of those artists, whom Dr. Merz might easily have discovered, and whom the English taste places first and admires most.

But I must now advert to the results which our critic comes to. In the first four paragraphs, he remarks on "the spirit and degree of development Art has attained in England;" and he exaggerates greatly when in his conclusion he attempts to generalize sophistically, and lay down so decidedly, "that the English public only reckons in Art by number and measure;" and he is to us equally ridiculous when he asserts "that to an Englishman the ideal is, if not an object of horror, at least considered by them idle and useless talk," &c. &c.

Now here, though he is wrong, without a doubt, as he has expressed himself, yet it is his unqualified language which makes him wrong; for those who know our deficiencies best would not hesitate to say that, were Art less a pounds, shillings and pence matter, and less adapted to catch the vulgar eye; and that, were the *general character* of English Art founded on a more correct notion of the ideal, the great obstacles to its rapid progress would be done away with. Is the fancy duly and rationally cultivated by us? and is there sufficient of the severe study and accurate observation to realize with power and truth what she suggests? With one or two exceptions, (may we not say with *one* only?) has English Art a "living, high, and spiritual direction?" Has it sufficient technical groundwork? A living ideal?—I had thought that now was a period when these points were not so much subject of dispute amongst the well-wishers to English Art, as of attention, that they might be severely noted by ourselves and carefully corrected. We ought not to reject all the comment, or rather deny *in toto* some truth, because we *doubt* the spirit of the maker. That is merely to hurt ourselves because we think another is wicked or foolish enough to try to hurt us. Good can be extracted from evil, but too frequently the evil is reduplicated instead.

It was well remarked by you, Sir, "that much good might result from cultivating a kindly feeling and a mutual esteem between the artists of the two countries, now more closely united than they have ever been;" but I fear that neither the "Kunstblatt" nor the ART-UNION will be made the agents of such "kindly feeling" and "mutual esteem," unless the tone of the criticisms of each other are different to those on this subject. If German artists and amateurs come over with Dr. Merz in their eyes, they will not be able to see the good in English Art and profit thereby; but, catching hold of its too prominent vices, contrast them with *their own* excellencies, and so become, through dread of annihilating them, confirmed in those vices, which they have not judgment, or courage, or candour to admit, find no place with us. And if, on the other hand, we, dreading illiberality, and being very sensitive of our honour, only harden our hearts against the opinion of our neighbours, and blind our eyes to their beauties, we may expect mutual improvement to give way to unworthy reproach and injurious recrimination. I will not now enter into the subject of where and how we might mutually be gainers in impartial study of the productions of the respective schools; but I may remark on one thing which bears relation to this, and of which an observation of Mr. Haydon, in a letter to the *Spectator* (a continuation of the one which was copied into the ART-UNION), reminds me. Mr. Haydon found, or rather made, an opportunity of abusing the system of German Education on Painting. He states that nothing could be more awful (I write from memory) than the condition of an English artist studying at Munich. Now, supposing that correctness in drawing and severity in composition are necessary for a student who wishes to become a real artist, any one who knows the system of education pursued, both in the Munich Academy and more especially out of it, would admit that there is no place where these objects can be so well achieved. But I do not mean to impute any knowledge of the real state of the case to Mr. Haydon. It appears that, BY LETTER, he got some information of which he was in want, to talk about, and

how does not know how to use it with propriety. One might, perhaps, be able to explain to him the comparative merits of the German and English systems of education; but it would be thrown away; and my space will not allow me to do more than to beg the attention to this point of those who are willing to look into a subject most important to National Art. Mr. Haydon's Anti-German feelings are so fearfully excited just now, that to discuss any question with him, and to afford him any information, is but to find fresh food for the hot fire of his prejudice, and new matter for his lavish abuse. But I cannot forbear alluding to the strange fancy he has in his head—I do not apprehend for a moment from any extensive personal observation—of how the Germans paint. He tries to make his readers believe, that a German painting is all outline—where "background, light, and shadow, appropriate colour and execution, *which are the means of imitation to convey thought*," are rejected; and further, that "they believe themselves in the road to heaven by sticking copper surfaces on gilt surfaces, carpet-bag draperies," and such like trash. There is in fact not one paragraph in Mr. Haydon's two letters which would not admit of refutation or correction, as being totally untrue and unjust, or inaccurate or ridiculous. This appears harsh to say; but let any one be as angry as he pleases with Dr. Merz, and opposed to his views, yet he must see with displeasure and distrust such a champion as Mr. Haydon. He is not sufficiently careful and skilful to conceal the incentives to his "drawing his sword and joyfully throwing away the scabbard." "The 'Mary Queen of Scots,' Poictiers (now at the Pantheon, and the 'Lazarus' on the staircase)," and the 'Xenophon' at the Russell Institution, form one important cause for his upholding of "ENGLISH Art;" and Mr. Haydon lets out another, by his alarm lest "the distress in the manufacturing districts of fresco-painting" (as he is pleased to call them) in Germany may not be alleviated by employment which Mr. Haydon could much better dispose of. Really, with him, I am very much ashamed of the "grasping decorators and their *lurking* (?) selfishness." The English gentlemen who "travel at 16 miles an hour" in Germany, appear to be in conspiracy with certain Germans to produce this result, so much feared by Mr. Haydon. This fact of the rate of travelling in Germany, and especially in Bavaria, would show, if his ignorance did not, that Mr. Haydon has forgotten, if he ever knew aught of it, all about the country whose Art he wishes to describe.

Yours, &c., I.

[We insert this letter, not only because it is in some respects sensible and judicious, but because it has been, and always will be, our desire to hear both sides upon any subject. The principle is essentially English. It is the only way to arrive at truth. Of German Art we know but little in this country; we know it, indeed, almost exclusively, through the engravings we receive from thence, and which we shall rejoice to welcome among us; for, with many and glaring faults, they are generally of a class that we desire to see prosper, and undoubtedly afford valuable hints to our British artists. We may not, therefore, have been justified in using the terms against which our correspondent objects. The whole of the case was not before us; we may have pronounced a hasty verdict, without having sufficient evidence. But upon one point there can be no second opinion: the gross injustice and palpable absurdity of the criticism of Dr. Merz appearing in a Continental journal of character. For ourselves, we shall readily and gladly contribute to cultivate "a kindly feeling and a mutual esteem between the artists of the two countries;" to promote a generous emulation, and endeavour to prove our superiority by more unequivocal testimony than words. We shall endeavour to inform ourselves better on the subject; for, after all, we more than suspect that the boasted superiority of the German *school* is little better than moonshine. The school of the Royal Academy, the Cartoons, and the Elgin marbles, surely go far to suffice for all the purposes of education in Art. In truth, we believe it is the idle or incompetent who are always complaining of want at home, shifting the trouble of thinking for themselves to the advantages of foreign instruction. There are many able judges who consider that the bad taste inculcated at Paris and Munich largely deduct from the advantages to be obtained in these places. "What," inquires one of our correspondents, "is the use of the highest power of drawing, if under the influence of a *corrupt view of nature*, which is sure to be generated at Paris and at Munich?"

#### THE GERMAN CRITIC.

SIR,—Will you permit me to convey to the artists of England an extract in a letter from one of the most distinguished German critics of Art on the Continent? At present I am not authorized to communicate his name, except privately. His taste and judgment are indisputable; his respect for England and her genius unqualified; and I hope his opinion may be considered as satisfactory to the profession.

Yours, &c.

B. R. H.

#### EXTRACT.

... "December 4, 1842.

... The name of Dr. Merz I met with the first time in your last letter. He may enjoy some credit amongst the readers of daily papers, but I fear he has no right to give you the least uneasiness. I shall take care to procure the paper, and, if it seems worth the while, I will answer to that polemical disquisition in defence of England and her Art. I hope you will not take great notice of the petty production of an impertinent writer."

\* \* \* \* \* In concluding, he says, "I cannot bear the thought of such a work (the Houses of Parliament,) executed by foreigners, even if Raffaello and Lionardo were procured." \* \* \* \* \*

#### LESLIE'S BIRTHPLACE.

SIR,—I was surprised to find the common mistake about Leslie's birthplace repeated in the Art-Union. Leslie has no more title to be called an American than you or I: he was born a cockney, in the parish of Clerkenwell. He was taken early to America, by his parents; not so early, however, as to prevent his having a perfect recollection of the voyage out, of which I have heard him relate many particulars. He was afterwards apprenticed to a bookseller in New York; during which time his greatest delight was to open the parcels that came out from England, for the sake of the beautiful engravings with which the books were at that time decorated. Stothard, Smirke, Cook, and Uwins were the artists who first inspired Leslie with that love of Painting which has been matured by study into excellence. No sooner had he emancipated himself from his short apprenticeship than he returned, yet a youth, to his native country, and entered as a student of the Royal Academy, where he soon distinguished himself. His first works were of a serious and heroic character; and it was not till the real heart of his genius displayed itself in the picture of 'Sir Roger de Coverley coming from Church,' that he took the rank to which his great talents so eminently entitle him.

You will see by this statement, that Leslie is not only not an American by birth, but not in any shape an American artist, inasmuch as his knowledge of Art was obtained in the schools of the Royal Academy of London.

It is not, after all, of much consequence where a man of genius is born, or where educated; but it is of importance that a journal like yours, which is looked to as authority, should contain nothing but fact.

#### A FELLOW STUDENT.

##### ATTACKS UPON ARTISTS.

##### TO THE EDITOR OF THE ART-UNION.

SIR,—As I consider your journal the proper channel through which to publish answers to attacks that may be made upon artists, I call on you to give insertion to the following letter:—

##### TO THE EDITOR OF THE "MORNING POST."

In your comments upon the meeting of Artists held at the Freemasons' Tavern, September 17, you seem anxious to separate Art from artists. Now, Sir, it seems to me that they are even more closely united than the Siamese twins, and can in no wise be separated. You might as well expect honey without bees as Art without artists; but as you acknowledge that you "do not care for artists individually," perhaps you would not object to their being subjected to the same treatment as those industrious insects.

You say that you are opposed to the Royal Academy, and you charge that body "with the unpardonable crime of injuring Art," and that it shows a consistent determination to discourage high Art, and chill young genius, when it will not walk in academical paths." Now, Sir, I do not

see what reference these charges have to the subject, nor the propriety or consistency of making them unsupported by a single proof.

You also state that "there are enough of artists disposed to hold themselves up as martyrs, and parade their troubles and their woes in the presence of the public." This is another unsupported calumny: we are a patient race, and in silence and sorrow have we borne privation and misery for years, manfully struggling against the apathy and ignorance of the public, more especially that of the critics. Did Proctor parade his misery before the public? No; he bore his privations with manly silence, and in lonely wretchedness yielded up his life as a sacrifice to his art. Did Pitts obtrude his sorrows on the town—sorrows so great that they caused him to step out of life unbidden? Poor Forster and Boaden too, are examples of the patient endurance of our martyrs unto death.

In your opinion, "the only way to encourage Art itself, is by the attempt universally to create a purer taste." "Give the public purity of taste for Art," say you, "and great artists must naturally spring from the patronage of that taste." But who is to give the public this most desirable thing? who is to lead the public to appreciate what is good, and true, and beautiful in Art, and repudiate what is gross, sensual, and low? Why, the artist, and the artist only. Knowledge of Art does not spring up, as Sheridan Knowles says love does, "consummate in the bud;" "it takes its time to stem, to leaf, to bud, to blow;" it is a tender plant of slow growth, requiring great attention and care in its tenders and its planters—and its tenders are the artists. Was it the diffusion of a poetic taste in the Elizabethan age that produced a Shakspeare? or the prevalence of learning and philosophy that called forth a Bacon or a Newton? Were Raffaele or Michael Angelo before or after the taste of their age? were they the instructors or the instructed? What foolishness is this? What "dirt have you been eating?" to expect refined taste in Art to come first, and refined Art to come afterwards.

Your obedient servant,  
AN ARTIST.

### ARCHITECTURE FOR THE POOR.

We are quite certain that one of the most powerful physical means of raising the moral state of our poorer fellows and improving their condition generally, consists in the improvement and decoration of their dwellings. Order will not engender disorder, nor disorder, order: but its like; and the man who passes his time amidst inconvenient and tasteless arrangements, exposed to continual discomforts, and utterly unable to maintain an appearance of respectability, will gradually lose any desire to do so which he formerly felt, and find the external disorder result in a moral disorganization, lamentable in its consequences, if not fatal. "Slaves, through slavery, lose even the desire to be free:" so men, becoming accustomed to badly-constructed, inconvenient, and ill-arranged habitations, lose their perception of excellence and goodness; and are lowered, not merely in their physical state, but mentally. Watch the progress of many a respectable and industrious young couple, placed in one of the miserable hovels still dignified with the title of a labourer's residence in some parts of the kingdom—damp, ill-drained, ill-ventilated, pervious to the rain, and void of everything which could make home happy. For a time, strenuous efforts are used to remedy the evils; but, as they are gradually found to be unconquerable, the wife, abandoning the task, becomes inevitably a slattern herself; habits even of decency are disregarded by the children; and the husband, finding no enjoyment in his own house, seeks it in the beer-shop, and becomes a drunkard and a desperado. On the other hand—a tidy, well-arranged dwelling leads to observances of better manners and feelings of self-respect; induces neatness and industry, and elevates in tone the character of all its occupants.

In no way can a landowner more advance the interests of society than by attending to the domestic residences of his tenants, whether in town or country; and we seriously call upon all those who have not yet given consideration to this most important point to set about doing so forthwith. A very great improvement in many respects has been

effected in different parts of the country. Mr. Loudon, the estimable author of the "Arboretum" and the "Encyclopedia of Cottage Architecture," has contributed most largely to this desired end; but very much yet remains to be done. Mr. Edwin Chadwick's late excellent "Report on the Sanitary Condition of the Labouring Population of Great Britain," which ought to be in every one's hands, shows an amount of disease and demoralization resulting from inattention in this respect quite frightful to contemplate. This work contains a number of designs and suggestions for cottages, which cannot fail to be productive of improvement. The subject however, at present, is but opened; as Mr. Chadwick observes, "Every detail of the materials with which the cottage is constructed, and the mode of its construction, deserve, and there is little doubt will obtain most careful attention; for it is only by considering their comforts in detail that they can be improved, or the aggregate effect on the immense masses of the community can be analyzed and estimated."

Some of the chief points to be considered in the construction of residences for the poorer classes are, complete ventilation and perfect drainage; walls of such a nature as to prevent sudden alternations of temperature; a roof to supply the same condition, with absence of all matter likely in decaying to generate unwholesome gases; a sufficient elevation above the ground to prevent dampness; and floors of such a material as, while it may be a bad conductor of heat, will admit of washing without long retaining moisture. A plentiful supply of water and an advantageous mode of warming the house are also most important points, and the whole must further be considered with the strictest regard to economy.

The amount of improvement in the public health that has in all cases followed ameliorations in the dwellings of the poor, is so great as would hardly be believed by any at first sight. Even in this respect, then, all have a personal interest in promoting it, sufficiently great, it might be believed, to induce their strenuous aid. But there are higher motives than merely personal fears, as we have already seen, and to these we would rather trust for arousing public feeling. We would, too, go further than simply providing the labourer with comforts: we would furnish him with *adornments*—we would make his home ("there is a magic in that little word") not merely tidy, but tasteful, and endeavour to hang upon its walls a few fine prints to work silently but surely; believing thoroughly, as we do, that the beautiful and the good are very closely connected, and that if you improve taste you go very far towards increasing virtue.

GEO. GODWIN, Jun.

### SOCIETIES IN CONNEXION WITH ART.

**THE GRAPHIC SOCIETY.**—This agreeable and most useful society held their second meeting on the second Thursday of the month, at Willis's Rooms, in King-street, St. James's, to which they have removed during the rebuilding of the Thatched House Tavern. A large collection of works of Art was laid upon the tables: several miniatures of marvellous merit, by Sir William Ross, attracting universal attention. They were seen here to greater advantage than upon the walls of the Academy; and it was impossible to examine them without being strongly impressed by a conviction of the genius of the painter, who has given to this branch of the Art a degree of spirit and vigour, of which it is usually considered incapable. A still more interesting object, however, was a "Cartoon of Overbeck,"—a novelty, the exhibition of which was, in truth, a treat to the majority of the persons present; for very few of them have been enabled to see that of which they have heard much. It is a fine and masterly drawing; wonderfully correct; but it contributed little to remove the notion that the great German masters work as if the chisel, and not colour, was to follow the outline. This example may be calculated to stimulate, but it is not of so high a class as to alarm, our British artists; sure we are, that within a few months our own painters will approach it, and that, in a few years, they will surpass it—if, that is to say, they receive such encouragement as that by which their rivals have had "greatness thrust upon them." The "Graphic" is a delightful meeting at all times; it is useful, not only as

exhibiting curious and suggestive works, but as bringing together men who cannot often associate in that refreshing intercourse which all require, and none so much as those whose lives are spent in close study.

**ROYAL INSTITUTE OF ARCHITECTS.**—This Society has begun the session very satisfactorily. At the first meeting, held December the 5th, a letter was read from Mr. Godwin, on the pulpits of Belgium, accompanied by a drawing of the pulpit in the cathedral at Malines. Professor Hosking read an account of the Church of St. Mary, Redcliffe, at Bristol; and a report on the present state of the building drawn up by himself and Mr. Britton, with a view to certain restorations contemplated by the parish authorities. At the second meeting of the Society, Mr. Hosking completed his paper; and Mr. Godwin laid before the meeting a description of the Cathedral of Tournay, a building of remarkable character, belonging, in part, to the eleventh century, and but little known to English travellers. A discussion arose relative to ancient Gothic spires, and Mr. Poynter expressed an opinion that their outline is usually not straight, but curved slightly outwards about the middle. Observations on this point are desirable.

**THE AMICABLE SOCIETY.**—This Society dined together a few weeks ago: it was a pleasant and social meeting, divested of form. The Institution, the establishment of which they met to commemorate, is similar, in its general purpose, to the Artists' Annuity Fund; but differing from it, inasmuch as it does not require specimens of works produced prior to admission—proof only being demanded that the candidate practises some branch of Art as a profession, or is studying to that end. It was founded in 1841; and has now 120 members, and a small funded capital. It originated in consequence of a law of the Annuity Fund, which demands a standard of talent not attainable generally by young men. Many young men were consequently excluded from participating in its advantages; and there can be little doubt, the consequence has been, that not a few high spirits have been crushed and hearts broken, which a small timely aid might have preserved to become "great hereafter."

There is, therefore, no Society connected with Art which advances stronger claims to general support among the members of the profession. The older and more independent should protect it as an asylum of help and hope to rising but obscured genius; and the younger and more liable to danger should revert to it as a valuable help until time and labour have enabled them to command a still better. We gladly tender our best services to advance its admirable purpose in any way that can be pointed out.

There is another subject connected with this to which we ought to direct the attention of artists; the imperative duty of effecting insurances upon lives. In the heyday of health and prosperity, people too generally forget that they must die—and that death may come suddenly, and when little preparation has been made for the awful change. The dedication of a few pounds annually—a sum easily saved out of luxuries—may leave the future of a whole family amply provided for; easing the pangs of a deathbed, and giving the happiest of all reflections—the consciousness that duty has been done. To this topic we shall recur, for it is of very vital importance.

**ARTISTS AND AMATEURS' CONVERSAZIONE.**—We learn with regret that the members composing this Society have dwindled to a few; and that they are insufficient in amount to justify the usual meetings at the Freemasons' Tavern. Some attempt, we believe, was made to effect a junction between it and the older Society—"the Artists"—but it was unsuccessful. Under existing circumstances, we understand it is the intention of the Hon. Sec., Mr. H. Graves, to open his large rooms in Pall-mall, to the members who have remained steadfast; and that the meetings of the season will, during the present year, be held there. Upon this subject we shall remark hereafter.

The first meeting will, we understand, take place on Wednesday next, the first Wednesday of January; and it is intended to invite various artists and amateurs who are not members.

## THE WALHALLA.

WHILE only a few forlorn columns upon the Calton Hill, at Edinburgh, stand as a memento of the grand national monument—the Scottish Parthenon that was to have been,—another Parthenon, commenced about ten years after that project had miscarried, has been completed upon a scale of magnificence never contemplated in the other case. Never, perhaps, was greater honour paid to Art and to Genius than has been done by Ludwig of Bavaria, in erecting a most noble architectural work, expressly for the purpose of commemorating the illustrious men whose busts are and will be deposited within its walls. Other galleries and repositories of Art, whether in regard to the buildings or the collections, have generally been of slow growth, as in the Vatican, where the Museo Pio-Clementino is separated from Raphael's Loggia and Stanze by the interval of three centuries; but the Walhalla has burst into life at once—like Minerva from the head of Jove;—may be said to have risen like a vision, but not destined, like a vision, to disappear: it being one, if not of the most colossal, of the most stupendous structures reared in modern times—and reared aloft on massive cyclopean walls rising tier over tier, and with terrace succeeding terrace, till is gained the summit where stands the temple itself, composed of no meaner nor less enduring materials than marble and metal; and of the solidity of construction in other respects some idea may be formed, when we say that the main walls are very little less than nine English feet in thickness, and in some parts considerably more! Surely such a work—accomplished, too, within so short a time—may, without any disparagement to our patriotism, be hailed as a proud achievement, worthily accomplished by German enthusiasm, German earnestness, and German energy.
